TABLE OF CONTENTS

Initial letter "H" from the beginning of Exodus in a Latin Bible, France, 12th century. The illumination shows Jacob and his sons going down to Egypt. Amiens, Bibliothèque Municipale, Ms. 21, fol. 27.

Her–Hy

HERACLES (Latin: **Hercules**), mythological Greek hero whom Philo praises as a benefactor of mankind and for his courage and determination. The historian *Cleodemus-Malchus (cited by Josephus (Ant., 1:240–1) from *Alexander Polyhistor) relates that the sons of Abraham by *Keturah campaigned with Heracles against Libya and that the daughter of one of them married Heracles and bore him a son. Plutarch, without mentioning that Heracles' wife was the granddaughter of Abraham, has a similar account (*Life of Sertorius*, 9).

[Howard Jacobson]

°**HERACLITUS** (c. 500 B.C.E.), Greek philosopher. Philo asserts that Heraclitus stole his theory of opposites from Moses, but condemns him for not believing in a divine agency beyond the world. "Heraclitean" views on the constant motion of all things and on the origin of the world in fire were known to and sometimes opposed by medieval Jewish philosophers, e.g., *Saadiah Gaon.

°**HERACLIUS**, emperor of the Byzantine Empire from 610 to 641. He is known for his repression of the Jews as a punishment for their sympathy, aid, and collaboration (alleged and actual) with the Persians during their conquest of Jerusalem in 614. Information on such conduct comes mainly from monastic sources. When Jerusalem was recaptured by Heraclius in 629 he encouraged the indiscriminate slaughter of Jews and ultimately their expulsion from the city. After Edessa was retaken by Heraclius, the Jews continued to resist even after the Persians had surrendered and therefore they were expelled on Heraclius' orders. Shortly afterward the Arabs conquered Syria, Palestine, and Egypt. In 632, motivated by exaggerated stories of Jewish sympathy for Islam, Heraclius decreed the forced baptism of all Jews in the empire, but the decree was enforced only in Carthage. He also put into effect *Justinian's novella 146, which interfered with synagogue services and found an echo in contemporary apocalyptic texts. Some scholars consider that Heraclius appears as the notorious King *Armilus destined to be slain by the Messiah according to the

Hebrew apocalypse *Sefer Zerubbavel*, written in the 630s. It is reported that Heraclius advised Dagobert, king of the Franks, to kill Jews who would not accept Christianity. Despite his anti-Jewish acts, the Jews of Constantinople were in a strong enough position after his death to participate in a street riot during which they invaded Hagia Sophia. The emperor and his retinue during their stay in Ereẓ Israel were entertained by the wealthy and prominent *Benjamin of Tiberias, who later converted to Christianity. (See Israel, *History.)

[Andrew Sharf]

HERALDRY. Seventeenth-century writers on heraldry claimed that the origins of coats of arms could be found in Numbers 2:2: "The Lord spoke to Moses and Aaron saying 'The Israelites shall camp each with his standard under the banners of their ancestral house.'" Although this theory has been abandoned, it would seem that the standards borne by the 12 tribes served the same purpose as heraldic devices. The colors (Num. R. 2:7; Ex. 36:17–21) and emblems were as follows: Reuben – red; emblem: mandrakes (Gen. 30:14). Simeon – green; emblem: the town of Shechem (Gen. 34:25f.). Levi – white, black, and red; emblem: the Urim and Thummim (Deut. 33:9). Judah – azure; emblem: a lion (Gen. 49:9). Issachar – black; emblem: a strong-boned ass (Gen. 49:14) or sun and moon (I Chron. 12:33). Zebulun – white; emblem: a ship (Gen. 49:13). Dan – sapphire; emblem: a serpent (Gen. 49:17) or a lion's whelp (Deut. 33:22). Gad – grey; emblem: a tent (Gen. 49:19) or a lion (Deut. 33:20). Naphtali – rose; emblem: a hind (Gen. 49:21). Asher – aquamarine; emblem: an olive tree (Gen. 49:20; Deut. 33:24). Ephraim and Manasseh – black, embroidered with a picture of Egypt; emblem: Ephraim, a bullock (Deut. 33:17) and Manasseh, a wild ox. Benjamin – 12 colors; emblem: a wolf (Gen. 49:27).

Modern heraldry is founded on a system of heraldry which developed in feudal Western Europe at the time of the Crusades and was based on the principle that only the landowning class, which formed the nobility, was entitled to bear arms. The extensive use of emblems by Jews for seals sometimes led to a design similar to a coat of arms, such as the 14th-century seal used by Kalonymus b. Todros of Narbonne which consisted of a shield charged with a lion rampant; and the king of Portugal, Alfonso Henriques (1094–1185), was said to have granted a coat of arms to a Jew. Nevertheless, the system which prevented Jews from bearing arms was not relaxed until the 16th century. By then, in most countries of Western Europe grants of arms had become the prerogative of the sovereign, who could confer them as a reward for services rendered; they did not necessarily carry with them the status of nobility. The first Jew to receive a grant of arms, Jacob Batsheba Schmieles, was ennobled at the same time, having in 1622 been made a knight of the Holy Roman Empire with the title of *Bassevi of Treuenberg.

The largest group claiming armorial bearings were those Jews of *Marrano descent whose ancestors had adopted the name of the persons sponsoring them for baptism. This would not have given them the right to bear the same arms, although Isaac da Costa argues that the Christian and Jewish branches of these families were indistinguishable. Others inherited arms which had actually been granted to their Marrano ancestors. Among these were Isaac Lousada (d. 1857), who was confirmed by the Spanish government in 1848 in the title of duke and grandee of Spain of the first class; Isaac da Silva *Solis, whose father was made marquis of Montfort in 1673; Antonio Lopez *Suasso (Isaac Israel Suasso), made baron of Avernas de Gras in 1676; and the de *Pinto family descended from Manuel Alvarez Pinto, who was made a knight of St. Jago in 1640. Manuel (Isaac Henriques) Pimentel obtained a declaration in 1674 signed on behalf of the Spanish king that he was entitled to use the ancient arms of Pimentel. The original arms of Pereira and Teixeira contained crosses and were accordingly modified by Jewish families of that name.

The English College of Arms raised no difficulty about granting or registering arms for Jews who had been born in England or had been naturalized or endenizened. The earliest record in this connection, that of 1568 concerning the New Christian family of Anes (JHSET 11, 18), is of only slight Jewish significance, and the first patents of arms for Jews relate to the ancient canting arms of Da *Costa: "gules six broken bones, two two and two barwise and the joynts almost meeting each other in pale argent." These were registered in 1723 and 1725 with variations for Leonor da Costa, her cousin Catharine da Costa Villareal, and her nephew Anthony *Mendes; the first two declared that the arms had been borne by their late husbands before they settled in England, while Anthony Mendes claimed them through his father Dr. Fernando Mendes. The arms registered for de *Aguilar, *Castello, and *Salvador were also of Spanish or Portuguese origin. The grant of arms to Sir Morris *Ximenes, dated May 5, 1807, recites that the arms which his family had always used were similar to those borne by Cardinal Ximenes from a branch of whose family he was traditionally descended, a claim which today would be received with considerable doubt.

Some of these coats of arms contain Jewish features. Both the Belilios and the *Mocatta arms include a seven-branch candlestick. The Franco (*Lopes) arms were confirmed in 1760 by the College of Arms to Jacob Franco, "his ancestors having used for their armorial ensigns on a field a fountain proper thereout issuant a palm tree vert… represented on a marble monument in the synagogue of the Jewish nation in the City of Leghorn." The arms granted in 1819 to Moses *Montefiore were based on the family badge embroidered on an Ark curtain presented to the Levantine synagogue at Ancona in 1635 by Judah Leone Montefiore. In 1831 Moses Montefiore obtained as an augmentation to the banner on his crest the word

Jerusalem in Hebrew characters of gold to commemorate his visit to the Holy Land in 1827. In 1841 after his intervention with the sultan at Constantinople about the *Damascus Affair, he recorded details of the affair as well as a copy of the sultan's firman at the College of Arms. At the same time he received an additional crest, and Queen Victoria granted him the right to bear supporters, "being desirous of giving an especial mark of our royal favor… in commemoration of these his unceasing exertions on behalf of his injured and persecuted brethren although the privilege of bearing supporters be limited to the peers of our realm, the knights of our orders and the proxies of princes of our blood" (Sir Moses was then only a knight bachelor). Each of the supporters carried a flagstaff with the word *Jerusalem* in Hebrew characters of gold. The *Sassoon arms were usually emblazoned with the motto in Latin and Hebrew, but the Hebrew motto is not mentioned in the grant of arms made in 1862 to David Sassoon. The priestly blessing is referred to in the motto, "the Lord bless them," adopted by Sir Samuel Sydney Cohen of Sydney, Australia, in 1947. The emblem of the tribe of Benjamin forms the basis of the coat of arms granted, also in 1947, to the descendants of Sir Benjamin Benjamin of Melbourne, Australia: "Azure, a wolf passant between three stars of six points argent."

Naphtali Basevi, maternal grandfather of Benjamin *Disraeli, earl of Beaconsfield, used an unregistered coat of arms, the charges on which were a lion, supposed to be for St. Mark of Venice, an eagle for Austria, and a crescent for Turkey; according to family tradition, they were the arms granted to an ancestor, Solomon ben Nathan *Ashkenazi (1520?–1602), in reward for his services in negotiating a peace treaty when serving as Turkish ambassador to Venice. A similar device is used as a printer's mark in the Midrash Tanḥuma printed by Abraham Basevi at Verona in 1595 and on Basevi tombstones in that city. Disraeli himself adopted the lion and the eagle and added a castle for Castille. According to him the lion represented Leon and was the device of his Lara ancestors, but in fact his Spanish lineage was fanciful.

In contrast with conditions in England, there were few instances of Jews receiving grants of arms on the Continent prior to the 19th century. When the four *Rothschild brothers, Amschel, Solomon, Carl, and James, were ennobled by the emperor Francis II of Austria in 1816, the first somewhat ambitious design for their coat of arms was rejected by the Austrian Heralds' College with the comment that it was "necessary to proceed with the greatest caution particularly in the case of members of the Jewish nation for various reasons and more especially because they are not familiar with the prerogatives of nobility." The coat of arms granted in 1817 had as charges: a half eagle and an arm bearing four arrows, not five, because Nathan, the English brother, was not included (E.C. Corti, *The Rise of the House of Rothschild*, 1 (1928), 193). He himself was granted a different coat of arms by the English College of Arms in February 1818, consisting of a "lion passant guardant grasping with the dexter forepaw five arrows." The de *Worms family, who were kinsmen of the Rothschilds, had a hand grasping three arrows in their coat of arms to represent the three de Worms brothers. In Italy the Jews followed the practice common among families of all classes of adopting family badges. Some of these, as in the cases of Franco and Montefiore, were later incorporated in coats of arms, but in their original form they were extensively used on seals, marriage contracts, tombstones, and personal effects.

[Alfred Rubens]

HERAT, city in N.W. Afghanistan. Jewish settlement there goes back to early Islamic times. The recent discovery in Firuzkuh, near Herat, of 20 Judeo-Persian tombstone inscriptions covering the years 1115–1215 indicates the existence of a Jewish settlement with a cemetery. Firuzkuh was destroyed by the *Mongol invasion (1221), and the Jewish survivors may have fled further east, perhaps to China. From 1839 the community in Herat absorbed many refugees from *Meshed across the Persian border, victims of a forced conversion decree. The outbreak of Anglo-Persian hostilities in the second part of the 19th century caused many of these Meshed Conversos to be expelled from Herat, forcing them to settle in the vicinity of Baba Qudrat. Ephraim *Neumark found in Herat in 1884 about 300 Jewish families, engaged in commerce, handicrafts, and trade with India and Central Asia. In 1898 E.N. *Adler discovered in the city some Hebrew manuscripts written in 1773. Many Jews from Herat emigrated to Palestine in the early decades of the 20th century, among them R. Garji and his family, and the Shauloff family. They brought with them manuscripts of Judeo-Persian literature which they printed in Jerusalem. In the late 1960s the Jewish community in Herat had dwindled to only a few families.

[Walter Joseph Fischel]

HERBERG, WILL (1909–1977), U.S. theologian and social critic. Herberg was born and reared in New York City. A child of assimilated Russian Jewish intellectuals, he joined the Communist Party in 1924 and broke with it in 1931. From 1934 to 1946 he served as educational director and labor analyst for the International Ladies Garment Workers Union. Returning to academic life in 1946, he held academic positions at major universities and from 1955 was on the faculty of Drew University, becoming professor of philosophy and culture. Herberg was reared as an atheist and became a Marxist at the age of 15. On breaking with the Communist Party, he began a serious study of theology and was deeply influenced by Karl Barth, Emil Brunner, and Reinhold Niebuhr. Niebuhr's political and theological thinking had a profound impact on Herberg. The Jewish thinkers who influenced Herberg were Buber, Rosenzweig and, to a lesser extent, Solomon Schechter.

His return to Judaism, if it can be called a "return," for there was no Judaism in his background, took place around 1944 and was documented in a major article, "From Marxism to Judaism," published in *Commentary* magazine in 1947. This was followed in 1951 by *Judaism and Modern Man: An Interpretation of Jewish Religion*. Herberg's contribution to contemporary Jewish thought has been the rediscovery of the central importance of the covenant for Jewish existence and the conception of idolatry for modern man. Denying emancipation views of Jewishness as synagogue affiliation (Western views) or as *shtetl* citizenship (East European views), Herberg saw Jewishness as covenantal existence, an existence that makes sense of Jewish specificity-particularity and Jewish universality. The rediscovery of idolatry, that the biblical conception of idolatry was not simply the rejection of the worship of sticks and stones but the denial of the claims of all human absolutes, led him to see that "idolatry" remains a permanently relevant category of Jewish thought. Like thinkers before him, such as Samuel David Luzzatto, Herberg distinguished between the Greco-Oriental and Hebraic religions, and includes Christianity, since it is rooted in Hebrew Scripture, as a Hebraic religion. Following F. Rosenzweig, he had a view of the double covenant in terms of Judaism and Christianity.

Stemming from his interest in social, political, and theological matters Herberg published *Protestant-Catholic-Jew: An Essay in American Religious Sociology* (1955; revised 1960); and three monographs, "The Jewish Labor Movement in America" (1950), "The Political Theory of American Marxism" (1951), "Religion and Education in America" (1961). Herberg later wrote *Judaism and Modern Man* (1970) and *Faith Enacted as History: Essays in Biblical Theology* (1976). He edited *The Writings of Martin Buber* (1956), *Four Existentialist Theologians* (1958), and *Community, State and Church: Three Essays by Karl Barth* (1960). *From Marxism to Judaism: The Collected Essays of Will Herberg* was published in 1988.

BIBLIOGRAPHY: Arthur A. Cohen, *The Natural and the Supernatural Jew* (1962), ch. 3, sect. 6. **ADD. BIBLIOGRAPHY:** M. Marty and H. Ausmus, *Will Herberg: From Right to Right* (1987); H. Ausmus, *Will Herberg: A Bio-Bibliography* (1985).

[Monford Harris]

HERBS, MEDICINAL. In ancient times herbs were the main source of remedies. According to the Book of *Jubilees (10:12), the angels revealed the various remedies to Noah, who wrote them down in a book. *Asaph the physician adds that Noah, having been taught by the angel Raphael the remedies obtainable from trees, plants, and roots, recorded them in a book which he gave to his son Shem and which was used by the ancient physicians (Asaph, ed. Venetianer, 6). Apparently in olden times books of remedies were common among the people. One of them, mentioned by Maimonides as having supposedly been written by Solomon (Maim., commentary on Pes. 4:9; cf. Jos., Ant. 8:45ff.), was suppressed by order of Hezekiah, king of Judah, for which action he was praised by the sages (Pes. 4:9); his purpose, so commentators explain, was that people should pray to the Almighty for mercy and not rely solely on remedies. Maimonides, however, rejects the legend. Except for צֳרִי (*ẓori*, "balm"), stated to be efficacious in curing wounds (Jer. 8:22, 46:11, 51:8), no medicinal herbs or prophylactics are mentioned in the Bible. It is suggested that the story of the *mandrakes (Gen. 30:14–17) alludes to this plant's properties in promoting pregnancy, but the passage seems specifically intended rather to point out that pregnancy is a gift of the Lord, for Leah, who handed over the mandrakes, became pregnant and not Rachel, who received them. The Bible several times mentions toxic plants from which poisons were extracted, such as ראשׁ or רושׁ (*rosh*, "*hemlock"; AV, JPS, "gall") and לַעֲנָה (*la'anah*, "wormwood"), these having apparently also been used in minute quantities as remedies, as testified by Greek and Roman medical writings. Of the toxic plant פַּקֻּעוֹת (*pakku'ot*; AV, JPS, "gourds"), colocynth (see *cucumber), it is told that during a famine in the days of Elisha one of the disciples, intending to gather אורות (*orot*; AV, JPS, "herbs"), that is, according to R. Meir, roquet, a medicinal herb especially efficacious in eye diseases, instead collected and boiled a dish of colocynth. After eating of it, the disciples cried out: "There is death in the pot," but by adding flour to the dish Elisha made it edible (II Kings 4:39–41), the flour having absorbed, some contend, the fruit's bitter toxic substance.

Whereas the Bible speaks very little about medicinal plants, talmudic literature mentions many herbs, some regarded as cures, others used as a prophylactic against various ailments. From time immemorial popular medicine has used numerous herbs, particularly wild plants, as remedies. The classical medical literature of Theophrastus, Pliny, Dioscorides, Galen, and others shows that different remedial qualities were ascribed to the vast majority of herbs, some of which were used by many peoples. In talmudic literature close upon 70 plants are mentioned as having medicinal properties, including plants mainly used as food, such as olives, dates, pomegranates, quinces among fruit – and garlic, *beet, *hyssop, *cumin, and *fennel-flower among vegetables and spices. In addition wild plants are mentioned which were used principally for remedial purposes. The following are some of the medicinal plants enumerated in the Talmud: for a liver ailment, יוֹעֶזֶר (*yo'ezer* "maidenhair fern"; *Adiantum capillus veneris*; Shab. 14:3; Shab. 109b); as an antidote for snake poison, אַבּוּב רוֹעֶה (*abbuv ro'eh*, "knoodweed," *Polygonum aviculare; ibid.*); for eye ailments, scurvy, and intestinal worms, גַּרְגִּיר (*gargir*, "roquet"; *Eruca sativa*; Shab. 109a; Git. 69b); recommended for intestinal worms are the leaves of עָרָא (*ara*, "bay"; *Laurus nobilis*; Git. 69b) and אֵזוֹב (*ezov*, "hyssop"; *Majorana syriaca*; Shab. 109b); for intestinal ailments, שַׁחְלַיִים (*shiḥlayim*, "garden cress"; *Lepidium sativum*; Av.Zar. 29a; Git. 57a); for skin disease, תְּרֵד (*tered*, "spinach beet"; *Beta vulgaris* var. *cicla*; Shab. 133b f.), considered efficacious in many ailments, it having been said that "a broth of spinach beet is beneficial for the heart, good for eyes, and still more so for the bowels" (Ber. 39a); for דְּמָא דְּרֵישָׁא (*dema de-reisha*), apparently blood pressure in the head, הֲדַס (*Hadas*, "myr-

tle"), and the wild rose (*Rosa canina*; Git. 68b) are recommended; for stopping hemorrhage, כַּמּוֹן (*kammon*, "cumin"), תַּחֲלֵי (*taḥalei*; garden cress), and seeds of סְנֶה (*seneh*, "the raspberry"; *Rubus sanctus*) are suggested (Shab. 19:2; Av. Zar. 28 a–b). There is in addition a long list of medicinal plants, potions, and remedies from the plant world which are prescribed in the Talmud. A number of remedies were known for restoring virility, for increasing seed, for aphrodisiac purposes, for inducing temporary sterility, or for preventing conception. Several herbs are prescribed as cosmetics. Opium is mentioned once – as a plant dangerous to buy from gentiles (TJ, Av. Zar. 2:2, 40d).

The pharmaceutical importance of the herbs mentioned in the Talmud has hardly been investigated. Apparently the vast majority of them have a significance no greater than the potions and remedies that were used until the development of modern pharmaceuticals. Although Jacob b. Moses Moellin and others warned against the use of the remedies mentioned in the Talmud, some are apparently worth studying and examining by modern scientific methods.

HERBST, KARL (1865–1919), one of the founders of the Zionist movement in Bulgaria. Born in Czernowitz, Bukovina (according to one source his place of birth was Brno, Moravia), he grew up in Adrianople, where his father served as a railroad inspector. Later he moved to Sofia, became a senior Bulgarian government official, and for a time served at the Bulgarian embassy in Istanbul. He became one of Theodor *Herzl's first adherents in Bulgaria and, together with J. *Kalef, translated *Der Judenstaat* into Bulgarian (1896). He attended the First Zionist Congress (1897) and was the chairman of the first Zionist conference to take place in Bulgaria in Plovdiv (Philippopolis), December 1898. Herbst became the chief spokesman of Zionism in Bulgaria and, together with J. Kalef, he established and edited *Kol Israel*, the organ of the Zionist organization in that country, which appeared in Bulgarian and Ladino. He was known as "the father of Bulgarian Zionism."

HERBSTEIN, JOSEPH (1897–1983), South African jurist. Born in Graaff-Reinet, South Africa, he was the son of Morris Isaac Herbstein who had gone from Romania to Palestine with the Bilu pioneers in the early 1880s, but had been forced to leave the country because of malaria and blackwater fever. Joseph Herbstein practiced at the Cape bar. He became a king's counsel in 1939 and was the first Jew raised to the bench in the Cape Division (1946). As senior judge, he acted for a time as judge president of the Division. He retired in 1963 and settled in Israel. His writings include two authoritative legal works, *The Civil Practice of the Superior Courts in South Africa*, with L. van Winsen (1954) and *The Magistrates' Courts Act* with A.W.E. Baker and S. Aaron (1954). A Zionist from youth, Herbstein founded the first Students' Zionist Society (at Rhodes University) in South Africa. Forthright and outspoken in his views, he was an ardent public worker, led many fund-raising campaigns for Zionism, and held high office in the South African Zionist Federation. He was a governor of the Haifa Technion and of the Hebrew University of Jerusalem.

[Lewis Sowden]

HERDAN, KURT LUCIAN (1922–), Chilean artist. Born in Romania, Herdan spent from 1941 to 1944 in concentration camps. He moved to Israel in 1950 and had his first exhibition in Tel Aviv in 1953. In 1954, he moved to Santiago, Chile, and became director of a private art academy. From 1956 to 1959 he made interior decorations for the Municipal Theater in Santiago, Chile. In 1964, he founded with other Chilean artists the Group "Form and Space" in Santiago.

°HERDER, JOHANN GOTTFRIED (1744–1803), German philosopher, author, critic, and translator and as such one of the central figures of 18th-century German intellectual life. He exerted his widest influence as *Generalsuperintendent* in classical Weimar (1776–1803), winning a reputation particularly as a preacher. Few Protestant theologians have devoted so much admiring attention to the Old Testament at the expense of the New, or considered the Bible and the Jewish people with such remarkable objectivity. While acknowledging the Divine inspiration of the biblical writers, Herder saw them as spokesmen for humanity; and, in his pioneering aesthetic comparison between the poetry of the Bible and that of classical antiquity or of writers like Milton, he proclaimed the superiority of the Hebrew genius. His opinions were expressed in the *Aelteste Urkunde des Menschengeschlechts* (2 vols., 1774–76) and in his translation and commentary *Lieder der Liebe* (1778). More importance is, however, attached to his incomplete *Vom Geiste der ebraeischen Poesie* (2 vols., 1782–83; *The Spirit Of Hebrew Poetry*, Vermont, 1833), which regards all Hebrew literature from Genesis to rabbinic times as a single unit, endowed with unique quality and power. *Vom Geiste der ebraeischen Poesie* was written in dialogue form, a device borrowed from *Judah Halevi's *Kuzari*. Herder greatly admired the medieval Spanish poet (whose *Ode to Zion* he translated into German), and other post-biblical Jewish writers and philosophers, such as *Maimonides, Isaac *Abrabanel, and Solomon *Maimon. His familiarity with rabbinic literature, particularly the Midrash, is seen in his various "Juedische Parabeln." Herder was friendly with Moses *Mendelssohn and in his essay "Ueber die Bekehrung der Juden" (*Adrastea*, 4 (Leipzig, 1802), ch. 7) called for the total emancipation of the Jews. His own religious philosophy developed in contemplation of *Spinoza's thought, though Herder himself always rejected the Deist position. N.H. *Wes-

sely wrote his *Shirei Tiferet* in response to Herder's challenge that no epic had yet been written about Moses.

[David Baumgardt / Marcus Pyka (2nd ed.)]

HEREFORD, county town in S.W. England. Jews lived there from the middle of the 12th century, and later it possessed an *archa. Ten members of the community contributed to the *Northampton Donum in 1194 for ransoming Richard I. Hamo of Hereford (d. 1232) was one of the most affluent financiers of his day; the duties payable on his estate amounted to 6,000 marks, a good part of which went to the building of Westminster Abbey. Under Henry III, a dispute between the king's officials and the local bishop for jurisdiction over the Jews necessitated royal intervention. In 1272 the entire community was imprisoned to compel payment of a tallage. In 1275, the community was increased by Jews expelled from *Worcester with their *archa*. Among the latter was Isaac of Worcester, who became one of the most prominent local financiers. Twenty-four burghers were appointed "Guardians of the Peace" on behalf of the Jews in 1282. Relations with Christians were good and as late as 1286 several prominent citizens were invited to attend a Jewish wedding but were prevented by the bishop. The community comprised about 40 prominent householders at the time of the expulsion from England. The debts due them, amounting to over £2,000, fell into royal hands. There has been no organized Jewish community in Hereford in modern times, although the Liberal movement hosts a local group for Jews in the area.

ḤEREM (Heb. חֵרֶם), the status of that which is separated from common use or contact either because it is proscribed as an abomination to God or because it is consecrated to Him (cf. Ar., *ḥaruma*, "be forbidden, become sacred"; *ḥaram*, "holy precinct"; *ḥarim*, "women's quarters"). In the second sense it is similar to qodesh, "sanctity," from which it differs only in being irredeemable. To declare or treat as *ḥerem* is expressed by the verb *heḥerim* (passive, *hoḥoram*), henceforth rendered "proscribe." Things in the status of *ḥerem* are also called *ḥerem.*

Categories of Ḥerem

The laws of the Torah declare the following to be *ḥerem*:

1. Israelites who worship other gods, whether individuals or an entire community; idols and their accouterments. These are an abomination to the Lord: Human beings are to be put to the sword; inanimate objects are to be burned. This severest degree of *ḥerem* is contagious: hence all the property of a proscribed community is condemned – livestock must be put to the sword, the rest burned "as a holocaust to the Lord," and no spoil may be taken of the idols or the proscribed community (Ex. 22:19; Deut. 7:25–26; 13:13–19). An individual, too, who incurs the severest degree of *ḥerem* contaminates everything that comes into contact with him (cf. Josh. 7:24–25).

2. The seven nations inhabiting the land promised to Israel – the Hittites, Girgashites, Amorites, Canaanites, Perizzites, Hivites, and Jebusites (Deut. 7:1–2; cf. 20:17). Not a soul of these is to be left alive "lest they lead you into doing all the abhorrent things that they have done for their gods and you stand guilty before the Lord your God" (20:18). The motive and the context of this law (cf. 20:13–14) indicate that the spoil of these nations was not *ḥerem* (cf. Deut. 6:11).

3. Whatever one privately devotes to the Lord as *ḥerem*. Such things are sacred in the highest degree (*qodesh qodashim*), and their status is irrevocable: they may neither be sold by the sanctuary nor redeemed by the devoter (Lev. 27:28). They belong to the priests (Num. 18:14; Ezek. 44:29). The situation envisaged by the law of Leviticus 27:29, that a human being in *ḥerem* must be put to death and may not be redeemed, is obscure. Some take it to refer to a person condemned for idolatry (1, above), others, to the victim of a private vow (see above; cf. the case of *Jephthah's daughter (Judg. 11:34ff.); see also d. below).

The cases of *ḥerem* recorded outside the laws conform only partially to those set forth in the laws:

(a) Having been defeated in an attempt to invade Canaan from the south by the Canaanites of Arad, Israel vowed to proscribe them should God grant a victory over them. Later, victorious Israel did proscribe "them and their towns" (Num. 21:1–3). Thus, the *ḥerem* of these Canaanites, at any rate, stemmed from a public vow, rather than from the blanket decree (see 2. above). Harmonizers suggest that the vow simply supplemented the law by including the booty ["their towns"] in the *ḥerem*, in addition to the population.

(b) Several proscriptions of Canaanites, conforming with the law of number 2 (see above) are recorded: The Transjordanian populations subject to Sihon (Deut. 2:34) and Og (3:6), and the Cisjordanian inhabitants of Makkedah, Eglon, Hebron, Debir, and Libnah – in general, the towns of the south (10:28–40) and those of the north (11:10ff.). Livestock and booty were taken, and the towns were left intact.

(c) Exceptionally severe was the *ḥerem* of Jericho: Animals as well as human beings were put to the sword, the city was burned down, its spoliation banned, and its silver, gold, copper, and iron vessels dedicated to the sanctuary treasury (Josh. 6:17ff.). *Achan's encroachment on this *ḥerem* was punished by his being stoned and burned, along with his family, livestock, and property (cf. 1. above). The Midrash represents Achan as exculpating himself on the grounds that Joshua's *ḥerem* decree went beyond the law, which indeed it did (see 2. above; Num. R. 23:6; cf. Sanh. 44a). Exceptional, too, is the burning down of Ai and Hazor, though both were despoiled beforehand (Josh. 8:26; 10:39; 11:13).

(d) The population of Negebite Zephath was slain, and the town proscribed (Judg. 1:17).

(e) Most of the Jabesh-Gilead was proscribed in accordance with a public oath condemning to death any who failed to join the sacred battle against Benjamin (Judg. 21:5–11). Perhaps such a situation underlies the *ḥerem* law of Leviticus 27:29. This is, at any rate, an antecedent to the coercive *ḥerem* applied within the community in post-exilic times (see h. below).

(f) God bade Samuel to charge Saul with a war of extermination against *Amalek for its ambush of Israel at the Exodus. Amalek and all its property were proscribed; Saul's failure to execute the order fully resulted in his rejection (I Sam. 15; I Chron. 10:13).

(g) The end of the proscription of enemies is signaled in Solomon's impressment into state service of such elements of the indigenous population as escaped proscription at the time of the Conquest (I Kings 9:21; cf. Josh. 15:63; 17:12; Judg. 1:19–35). Though not put to death, the presence of a class of "Solomon's slaves" down to the Restoration (Ezra 2:55) indicates that this element remained segregated in the Israelite community for generations.

(h) The latest biblical attestation of the *ḥerem* as a practical measure is its post-exilic use as a penalty to coerce individuals to obey communal authorities. "The property of anyone who does not appear within three days [to answer the summons of the Jewish authorities]… will be proscribed, and he himself separated from the community" (Ezra 10:8). By "proscription," destruction may be meant, though (in light of 3. above) expropriation by the Temple treasury is usually understood.

Whether or not the absence of *ḥerem* terminology in cases where it would fit is significant is hard to say. The slaughter of the inhabitants of Beth-El and Laish (Judg. 1:25; 18:27) is not called a proscription, though it resembles the case of Zephath (1:17), which is. Was the former not religiously motivated, then, in contrast with the latter? (cf. what is said below on the divergent representations of the wars conducted against Sihon and Og in Num. and Deut.). Moses' condemnation of the calf-worshipers is not called a proscription (Ex. 32:27), though it conforms precisely with the terms of number 1 (above). Nor is "the Lord's vengeance on Midian" (Num. 31:3) so called, though it resembles the war against Amalek, which is. Thus, the suspicion exists that the narrative did not always choose its terms precisely, and that more instances of *ḥerem* may in fact exist than are so designated expressly.

In the literature of the later monarchy and the Prophets *ḥerem* terminology is used loosely in the sense of "utter destruction," without its specific, religious context. Thus, for example, Sennacherib can be said to have "utterly destroyed (*heḥerim*) all countries" (II Kings 19:11; in II Chron. 32:14, "all gods!"), or God-sent destruction may be expressed in *ḥerem* terms (Isa. 34:2; Jer. 25:9; Zech. 14:11 (*ḥurban*, "ruin," see *Kimḥi); Mal. 3:24). Something of the early notion of dedication to God appears in Micah 4:13.

The Evolution of the Term Ḥerem

The evolution of the conception and practice of the *ḥerem* in Israel may be surmised as follows: The *ḥerem* as a private irrevocable dedication of property to the sanctuary (3. above) so directly expresses its character of "separation from common use" that, although it is found in a stratum commonly dated to late (even Exilic) times – the priestly code – there is no reason to suppose it is a late practice.

The antiquity of the notion that that which was an abomination to the Lord was *ḥerem* is vouched for by the early law of Exodus 22:19; proscribing the worshiper of other gods. This punitive application of *ḥerem* within the community appears in the case of Jabesh-Gilead (e. above) and Ezra (h. above), and eventuated in the later, modified form of Jewish excommunication.

The practice of declaring an enemy to be *ḥerem* combines both of the foregoing aspects. Ancient warfare, especially the wars fought by the tribal league of Israel in pre-Davidic times, had a religious grounding. The battle was God's (I Sam. 17:47), the enemy was God's (Judg. 5:31), and Israel's forces were God's helpers (Judg. 5:23). It was, therefore, natural to regard the enemy as *ḥerem* and his destruction as an act of devotion to God. Yet the actual instances of enemy *ḥerem* are too few and special to warrant the assumption that it was a rule of ancient Israelite warfare. Nor must every destruction of an enemy be counted as a religious proscription – Gideon's slaughter of the Penuelites (Judg. 8:17) and Abimelech's of the Shechemites (9:45) were not. The laws of Deuteronomy (2. above) and narratives in Deuteronomy and Joshua (b) and (c) above) speak of the natives of Israel's land as *ḥerem*; other cases are very rare – none occurs in the wars of the period of the Judges or from the reign of David on. But even the limited *ḥerem* of Deuteronomy (and its narrative reflexes), in its present form of a blanket, antecedent proscription, does not seem to have been an early conception. The laws prior to Deuteronomy do not mention such a *ḥerem*. Exodus 23:27–33 indeed speaks of the expulsion of the Canaanites and forbids coming to such terms with them as will allow them to remain in the land, "lest they cause you to sin against me, for you will serve their gods" (so too 33:2–3; Num. 33:50–56). Exodus 34:11–16 adds a ban on intermarriage, "lest [the Canaanite wives] cause your sons to lust after their gods." The injunction is to expel and dispossess, and is given a religious ground; there is no command to slaughter the population. The first case of enemy *ḥerem* results from a vow taken by Israel to proscribe the Canaanites who defeated them at Hormah ((a) above). In return for a victory, the people dedicate to God all the fruits of battle. By this solemn, awful, and self-denying undertaking the people seek the favor of God after a military reverse. There is no suggestion of a blanket, antecedent proscription of any and all Canaanites on religious grounds. The wars with Sihon and Og, according to Numbers 21:24, 35, ended with an annihilation of the enemy's forces and the seizure of his land; the *ḥerem* is not mentioned. Only Deuteronomy 2:34 and 3:6 speak of "proscribing every town – men, women, and children" – while

retaining the booty (in accordance with 2. above; but note that the Deuteronomic account states that Moses offered peace to Sihon (2:26) in accordance with Deuteronomy 20:10 (see Naḥmanides ad. loc., but see also 20: 15ff.). The *ḥerem* of Jericho is represented as an ad hoc injunction of Joshua (Josh, 6:17–19); it goes well beyond the Deuteronomic law, and makes no reference to it. This *ḥerem* has the character of a firstfruits offering: The first spoils of Canaan are wholly devoted to God. The terms of Ai's *ḥerem* are likewise represented as an ad hoc instruction of God to Joshua (8:2, 26–27), without reference to the Deuteronomic rule enunciated by Moses (though conforming to it). Samuel's proscription of Amalek diverges too widely from the Deuteronomic law to serve as an attestation of it. Amalek is not one of the nations condemned in the law; the total proscription exceeds that of the law; the ground of the proscription is revenge (I Sam. 15:2) rather than concern over purity of the faith.

The evidence suggests that the enemy *ḥerem*, eventually codified in a very special form in Deuteronomy, originated as a dedicatory proscription designed to win God's favor by totally devoting to Him His (and the nation's) enemy. It was declared in situations of particular stress – after the national army had suffered a defeat (Hormah, Ai), or when a crucial test of arms was imminent (Jericho, Amalek). The persistent tradition that, by and large, the Canaanites were evicted from the land occupied by the invading Israelites (cf. Amos 2:9) indicates that the reported proscription of towns by Joshua, though doubtless over-systematized, reflects a typical feature of the wars of conquest. The land-hunger of the invaders must have made the battles over Canaanite towns bitter. Since the citizenry realized they were to be dispossessed, they resisted desperately; the no less desperate invader thereupon sought to enlist God's help by devoting the enemy as *ḥerem* to him. Judging from the cases of Ai, the soldiers' behavior in the battle against Amalek, and the Deuteronomic law, the normal *ḥerem* allowed spoliation but proscribed the enemy population. Its effect was to clear an area for Israelite occupation (and doubtless to panic into flight or surrender the inhabitants of nearby towns; cf. the Gibeonites, Josh. 9).

The sole extra-biblical attestation of *ḥerem* is of just this kind. *Mesha, king of Moab, reports that when he won back from Israel long-lost territory north of the Arnon, he massacred the Israelite inhabitants of some towns – those of Nebo expressly because he "had proscribed it [*hḥrmth*] to [the god] Ashtar-Chemosh"; he then resettled Moabites in their stead (*Mesha Stele, lines 10–21, in Pritchard, Texts, 320). Classical writers provide analogies from the practice of the Celts (Diodorus, 5:32), Gauls (Caesar, *De Bello Gallico*, 6: 17), Teutons (Tacitus, *Annals*, 13:57), and early Romans (Livy, 8:9).

Deuteronomy's Reinterpretation of the Enemy Ḥerem

After the reign of Saul, the enemy *ḥerem* seems to have fallen into disuse. The national-religious fervor of the wars of settlement declined; the armies of Israel consisted more and more of professional soldiers (cf. I Sam. 14:52); and offensive wars became imperial – so that subject populations were desirable. Solomon's impressment into state service of Canaanites who survived the wars of settlement demonstrates this disuse ((g) above). Subsequently, the concept appears only rarely, and then only in prophetic speech (e.g., the condemnation of Ahab for having released Ben-Hadad, God's "*ḥerem*-man"; I Kings 20:42; cf. Isa. 34:5; Micah 4:13). It had become archaic, evocative of a bygone enthusiasm, fit for the high-strung, affective idiom of prophecy. As described above, the enemy *ḥerem* was not a peculiarly Israelite practice. However, another representation, informed by Israelite ideology, is found in Deuteronomy and related literature. This representation exemplifies Deuteronomy's penchant for systematizing and rationalizing traditional conceptions. The religiously motivated injunction against coexistence with the Canaanites is combined with the old enemy *ḥerem* into a new law: So as not to fall into the debased ways of the Canaanites, Israel must not only expel and dispossess them (Ex. 34:11ff.; Num. 33:51ff.) but also exterminate them as *ḥerem* (Deut. 7:1–5; 20:16ff.). Thus an *ad hoc*, quasi-theurgic war measure was converted into a fixed religious duty. At the same time, a status which in practice could be invoked against any enemy was restricted by Deuteronomy to the inhabitants of the promised land, for they alone threatened the purity of the faith. Accounts of past wars were modified accordingly: The realms of Sihon and Og were treated in conformity with the *ḥerem* law (Deut. 2:32–35; 3:6–7; contrast Num. 21:24, 35); Joshua automatically and everywhere proscribed the Canaanite towns he took – "as God had commanded Moses" (Josh. 11:12, 15, 20). Only a trace of the primary nature of the enemy *ḥerem* survives in the summary notice that the proscription resulted from the determined resistance of the enemy (Josh. 11:20).

The severest degree of the old enemy *ḥerem* inspired Deuteronomy's expansion of the proscription of alien cults in Exodus 22:19. Not only an individual, but a whole community, with all its property, must be proscribed for apostasy (Deut. 13:13ff.; the non-ethnic, purely religious basis of Deuteronomy's *ḥerem* concept manifests itself in this application of *ḥerem* to Israelites; later jurists denied that the law was practicable: Tosef., Sanh. 14:1; Sanh. 71a). The notion of contagiousness reached its extreme in this case and in the rule of Deut. 7:25–26 that even the precious metals of idols must be destroyed on penalty of incurring *ḥerem*. While the metals of Jericho were devoted to the sanctuary, those of idols were a contaminating abomination.

Deuteronomy's revision of the *ḥerem*, an aspect of its intense concern over keeping Israel free of alien influences, cannot be precisely dated. Its execration of idols contrasts with the Samuel narrative's unruffled reports of David's taking the abandoned idols of the Philistines (II Sam. 5:21) and the crown of the Ammonite god Malcam (Milcom; II Sam. 12:30). I Chronicles 14:12 adjusts the first report to conform with the Deuteronomic law (the idols were burned), suggesting, but not proving, that the law came in between. The blanket proscription of the Canaanites seems to be a theory,

and the accounts of its systematic application, a tendentious revision of history. Critics have sought to connect it with the religio-military revival of Josiah's time; however, the express restriction of the *ḥerem* to the seven nations of Canaan, who posed no threat to Judah's religion in Josiah's time, does not speak for that connection. Any time after Solomon, in whose reign the extinction of the old enemy *ḥerem* is attested, may have seen the birth of the Deuteronomic concept. To assume that it is the reflex of a reformational movement like that of Josiah (or Hezekiah) is unnecessary.

Later jurists drew the final inferences from Deuteronomy's reinterpretation of the enemy *ḥerem*. They reasoned that since the express intention of the law was to protect Israel against the allure of a debased way of life, if the Canaanites gave up their polluted cult, they were exempt from the *ḥerem* (Sif. Deut. 202; Tosef. Sot. 8:5). The rule of Deuteronomy 20:10 is therefore universal: even campaigns against the Canaanites must begin with an offer of peace, the difference between far-off towns and theirs being that, to escape destruction, they must agree, upon surrendering, to abandon idolatry and accept the *Noachide Laws. And that is how Joshua dealt with them: Like Moses, who offered peace to Sihon in spite of God's order to start a war with him, Joshua preceded his campaigns with a proclamation published throughout Canaan, inviting the population to choose between leaving, making peace, or fighting. The Gibeonites chose peace, gave up idolatry, and became temple servants (Deut. R. 5:13, 14). Solomon's failure to proscribe the remaining Canaanites in his realm was probably due to their having abandoned idolatry (Kimḥi, to II Chron. 2:16).

Thus, the ancient, rude notion of enemy *ḥerem* underwent continued revision long after it had ceased to be applied in practice. Originating as a votive proscription of the enemy – any enemy – and made under the stress of war to propitiate God, it was transformed by Deuteronomy into an ordinance to protect the purity of Israel's faith in Canaan. Against the background of the Jewish institution of conversion, its operation was later qualified again by being made contingent upon a prior offer of peace on condition of conversion. Religious-rational tendencies inherent in biblical thought did away with the application of the *ḥerem* limitlessly and automatically to populations who had no choice in the matter.

[Moshe Greenberg]

In Later Jewish Law

The *ḥerem* of Ezra, mentioned above, is the first indication of a *ḥerem* operating by way of excommunication. Indeed, the criminal jurisdiction vested in Ezra included a power to root out (*shoreshu*: JPS "banishment": Ezra 7:26) which was interpreted in the Talmud to mean persecution (*hardafah*) by *niddui* and *ḥerem* (MK 16a).

Niddui is the term employed in tannaitic literature for the punishment of an offender by his isolation from, and his being held in enforced contempt by, the community at large. A precedent for such punitive isolation and contempt is found in the Bible (Num. 12:14) and was described as *niddui* (Sif. Num. 104). Some hold that the tannaitic *niddui* was the expulsion of a member from the order of the Pharisees: "If he failed to maintain the standards required," he would be expelled from the order and "declared *menuddeh*" ("defiled"), and his former comrades would withdraw from his company "lest he defile them" (see bibl., Finkelstein, p. 77). This theory is based mainly on the records of infliction of *niddui* on renowned scholars for non-compliance with the rules of the majority (Eduy. 5:6; BM 59b), but it takes no account of the fact that *niddui* was, even during the tannaitic period, inflicted or threatened also on laymen (e.g., a hunter: Shab. 130a, Kid. 72a) and for offenses or misconduct unconnected with any rules of the Pharisees (Ta'an. 3:8; Pes. 53a). While *niddui* may well have implied expulsion from scholarly or holy orders, the sanction as such was a general one, applicable at the discretion of the courts or of the heads of academies. As it was a criminal punishment, a great scholar who was threatened with *niddui* rightly protested that before he could be so punished it had first to be clearly established on whom might *niddui* be inflicted, in what measure, and for what offenses (TJ, MK 3:1, 81d). Later talmudic law reintroduced the *ḥerem* as an aggravated form of *niddui* (MK 16a): First a *niddui* was pronounced, and when it had not (on the application of the *menuddeh*: Maim. Yad, Talmud Torah 7:6) been lifted after 30 days, it was extended for another 30 days; after the 60 days had expired, a *ḥerem* was imposed (MK 16a; Maim. loc. cit.; Sh. Ar., YD 334:1, 13). Another innovation was the *nezifah* ("reprimand") which was to last for seven days (MK 16a): The commentators were not quite certain about the implications of the *nezifah*, and surmised that while *niddui* and *ḥerem* implied compulsory isolation, the seven days' isolation inherent in the *nezifah* was rather a voluntary one, dictated by shame and remorse; and while *niddui* and *ḥerem* remained in force until lifted by the Bet Din (Rema, Sh. Ar., YD 334, 24), *nezifah* expired automatically after seven days (*Piskei ha-Rosh* MK 3:7).

Niddui differed from *ḥerem* mainly in that with the *menuddeh* social intercourse was allowed for purposes of study and of business, whereas the *muḥram* had to study alone (so as not to forget what he had learned) and find his livelihood from a small shop he was permitted to maintain (MK 15a; Maim. *ibid.* 7:4–5; Sh. Ar., YD 334:2). Otherwise the restrictions imposed on the *muḥram* were (*a fortiori*) those imposed on the *menuddeh*, namely: He had to conduct himself as if he were in a state of mourning, not being allowed to have his hair cut or his laundry washed or to wear shoes (except for out-of-town walks). He was even forbidden to wash, except for his face, hands, and feet; but he was not obliged to rend his clothes (notwithstanding the contrary report in BM 59b) nor to lower his bedstead (MK 15a–b; Sem. 5:10–13; *Piskei ha-Rosh* MK 3:4); and he had to live in confinement with his family only, no outsider being allowed to come near him, eat and drink with him, greet him, or give him any enjoyment (*ibid.*; Sh. Ar., YD 334:2). He could not be counted as one of the three required for the special *grace after meals formula

nor as one of the 10 (*minyan) required for communal prayers (Maim. *ibid.* 7:4; Sh. Ar. YD loc. cit.); and after his death his coffin would be stoned, if only symbolically by placing a single stone on it (Eduy. 5:6; MK 15a; Maim. loc. cit.).

Both *niddui* and *ḥerem* appear in the Talmud at times in the Aramaic form *shamta* – a term which, by being retransliterated into Hebrew, was interpreted as indicating the civil death (*sham mitah*) or the utter loneliness (*shemamah*) involved in this punishment (MK 17a). Notwithstanding its potential severity, however, *niddui* was apparently regarded as a relatively light penalty, reserved mainly for minor offenses, perhaps because it could so easily be lifted and terminated. Talmudic scholars counted 24 offenses for which *niddui* was prescribed (Ber. 19a), listed by Maimonides as follows (loc. cit. 6:14):

(1) insulting a scholar, even after his death;

(2) contempt of an officer of the court;

(3) calling any man a slave;

(4) disobedience to a court summons;

(5) disregarding any rabbinic prescription (such as the washing of hands (Eduy. 5:6; see *Ablution));

(6) nonpayment of judgment debts;

(7) keeping dangerous dogs or other dangerous things without properly guarding them;

(8) selling land to a gentile in disregard of a neighbor's right of preemption (see *Maẓranut*);

(9) recovering money on the judgment of a gentile court, where the money was not due under Jewish law;

(10) failure by a priest to give other priests their dues;

(11) non-observance of the second festival day customarily observed abroad (see *Festivals);

(12) doing work in the afternoon of Passover Eve;

(13) mentioning God's name in speech or oath in trifling matters;

(14) causing the public to profane God's name (*ḥillul ha-Shem*);

(15) causing the public to eat sacrificial meals outside the Temple;

(16) establishing the calendar, i.e., fixing the lengths of months and years, outside the Land of Israel;

(17) placing any stumbling-block before the blind (Lev. 19:14);

(18) obstructing the public in the performance of any precept;

(19) negligence in ritual slaughtering; (20); failure to have knives used for ritual slaughter periodically inspected;

(21) willful sexual self-stimulation;

(22) such business relations with one's divorced wife as might lead to intimacy;

(23) connections or activities of a scholar which bring him into disrepute;

(24) imposing a *niddui* without sufficient cause.

The list is not exhaustive (Rabad ad loc.), and was supplemented in the Shulḥan Arukh by additional offenses among which are the following:

(1) breaking a vow;

(2) doing work while a corpse lies unburied in town;

(3) disobedience to Torah precepts on the strength of spurious analogies or arguments;

(4) demanding the performance of the impossible;

(5) insisting on minority views overruled by the majority;

(6) usurpation by a disciple of his teacher's functions;

(7) applying to the king or a leader with a view to evading or circumventing the authority of the competent court (YD 334:43). (The *niddui* for disobedience to law on spurious analogies or arguments might be identical with the ban referred to in John 9:22, 12:42.)

The existence of an offense of imposing a *niddui* without sufficient cause indicates that, under talmudic law, the *niddui* could be imposed not only by the court but also by individual scholars and even by laymen: for instance, creditors used to impose a *niddui* on delinquent debtors (MK 16a), and in later periods we find debtors agreeing in writing beforehand to be placed under *niddui* by the creditor in the event of non-payment (e.g., *Maḥzor Vitry* 567). Individual scholars used to impose a *niddui* for their own vindication from insults (MK 16a), a practice which persisted throughout the ages (cf. e.g., Resp. Joseph Colon 168–9; Resp. Maharyu 163), although deprecated in no uncertain terms (Maim. *ibid.* 7:13; Tur, YD 334; Sh. Ar., YD 243:9; and cf. Kid. 32a; Meg. 28a). There is a strong opinion to the effect that this power of individual scholars is now obsolete (Rema, Sh. Ar., YD 243:8); it was never recognized for any purpose other than as a punishment for insults, and the scholar was forbidden to use it for his business purposes (TJ, MK 3:1, 84d; YD 334:19).

Normally, *niddui* would be pronounced by the court; it is only by order of a court that a man is regarded as a *menuddeh*; non-judicial *niddui* renders him only "half-*menuddeh*" (*menuddeh la-ḥaẓa'in*) from whom the public at large need not dissociate itself (Sh. Ar., YD 334:12). Where the offense charged was civil disobedience or nonpayment of debts, the court would first warn the delinquent that unless he obeyed or paid a *niddui* would be pronounced against him, but no warning was required where the offense was of a religious nature (MK 16a and Rashi ad loc.). The *niddui* and its causes had to be publicly announced (*ibid.* interpreting Judg. 5:23), but could be pronounced in the absence of the accused (Maim. loc. cit. 7:2, 13; Sh. Ar., YD 334:29). No formal procedure nor any adduction of evidence was required: The court could act on its own knowledge or on evidence that would be otherwise inadmissible (Rema YD 334:43). The formulae used for the pronouncement as well as for lifting of the *niddui* could be very short (Maim. loc. cit. 7:2–3; Sh. Ar., YD 334:23); but it would be enlarged and embellished with curses and imprecations when a *ḥerem* was imposed (*ibid.*; Shev. 36a). The ban could be lifted by any court, not necessarily the court which had imposed it (Maim. loc. cit. 7:9), but a *niddui* imposed by an individual had to be lifted by that same person or – where he was unknown or unavailable – by the *nasi* or leader of the

community (MK 17a; TJ, MK 3:1, 81d; Maim. loc. cit. 7:10). The delinquent had a claim as of right to have the ban against him lifted as soon as he had done the act or rectified the omission of which he had been accused, or ceased to do that which he had been accused of doing (Maim. loc. cit. 9) – hence *niddui* was a coercive as well as a punitive measure.

Courts were urged not to pronounce *niddui* against judges (*Takkanat Usha*, MK 17a), scholars (Resh Lakish, *ibid.*), or notables (*zaken*; TJ, MK 3:1, 81d), but rather to ask them to stay at home; only if they persisted in and repeated their offenses was *niddui* pronounced against them to prevent *ḥillul ha-Shem* (by insinuations of discriminations and privileges; *ibid.*). *Flogging is considered a more suitable punishment for judges and scholars than *niddui* (MK 17a and Rashi *ibid*); but where a scholar's misconduct is due to a failure of his memory by reason of old age or sickness, he should rather be treated as if he were "the Holy Ark holding fragments of the broken tablets" (TJ, MK 3:1, 81d and *Korban ha-Edah*, *ibid.*).

In Post-Talmudic Law

The distinction between the punitive and coercive functions of *niddui* and *ḥerem* became more clearly marked: On the one hand they grew into the most deterrent, and often very cruel, punishment for past misdeed or past misconduct; on the other they were invoked for purposes of future law enforcement, either by warning potential individual offenders of imminent excommunication, or by attaching the threat of excommunication to secure general acceptance of and obedience to a newly created law: Several such laws have thus become known by the name of *ḥerem* (e.g., *ḥerem de-Rabbenu Gershom*; see *Bigamy).

From the geonic period and throughout the Middle Ages until recent times, courts added further and greater hardships to the living conditions of the *menuddeh* as laid down in the Talmud – the talmudic provisions being regarded as a minimum which the court could increase according to the severity of the individual case (Sh. Ar., YD 334:10; Rema YD 334:6). Among such additional hardships were prohibitions against performing circumcision of the *menuddeh*'s children or their marriages; expulsions of his children from school and of his wife from synagogue; and prohibitions against burial of the *menuddeh* and according him any honor due to the dead (Rema, *ibid.*). He was to be treated as a non-Jew, his bread and wine were forbidden like those of a heathen, his books were regarded as magicians' trash, his *ẓiẓit* were to be cut off and the *mezuzah* removed from his door (e.g., *Sha'arei Ẓedek* 4:5, 14). Treating a Jew as if he were a non-Jew amounted, within the closed Jewish community, to civil death; and indeed it is said that a man on whom a *ḥerem* lies can be regarded as dead (cf. also the precept in the Karaite "Book of Precepts" by Anan b. David, after describing the ban to be imposed for capital offenses: "In short, we must treat him as if he were dead": L. Nemoy, *Karaite Anthology* (1952), 13).

The constant growth and increasing frequency of the *ḥerem* as punishment was in no small degree due to the predominant role excommunication played as a punishment in the Church: Some features of the later penances inflicted on excommunicated Jews were even borrowed from practices of the Church (see bibliography, Abrahams p. 66f.). It happened also that the ecclesiastical or secular gentile authorities enjoined Jewish courts from imposing or enforcing a *ḥerem*, as for instance where it had been imposed for having recourse to non-Jewish courts: In such cases the law was laid down that in monetary matters the Jewish court would have to give in, whereas in religious matters the Jewish court had to insist on its authority even at the risk of incurring punishment for disobedience (Israel Isserlin, *Terumat ha-Deshen* 276; and cf. YD 334:44, 48). Visiting the guilt of the *menuddeh* on his innocent wife and children and making life in general unbearable for him, shocked the conscience of many a great rabbi (cf., e.g., Resp. Ribash 173, 185; *Yam Shel Shelomo* BK 10:13). Not only did they and many others try to mitigate the hardships of the *ḥerem* when they had to impose it, but they endeavored to abstain from imposing it at all. Thus, Asher b. Jehiel says that he never imposed a *ḥerem* without the previous consent of the congregation (Resp. Rosh 43:9); Jacob Levi Moellin imposed only one single *ḥerem* during his lifetime (*Minhagei Maharil*, quoted by Assaf, *Onshin* (see bibliography), p. 34); and Israel *Bruna relates his father's last will enjoining him from ever imposing a *ḥerem* (Resp. 189).

The severity and cruelty of total *niddui* or *ḥerem* led to the creation of lighter punishments, involving only partial excommunication and not inhibiting the offender in his daily life – such as permanent or temporary expulsion from town or province, expulsion from the synagogue, change of the synagogue seat for an inferior one, and public denunciations and reprimands. Application of graver or lighter punishments was left entirely to the discretion of the courts (cf. Resp. Rashba, vol. 5 no. 238; *Zikhron Yehudah* 63; et al.); and the same or similar offenses are found punished at one place or time with *niddui* and another place or time with floggings, expulsions, or reprimands. Among the many and varied offenses for which *niddui* was imposed, mention may be made of a husband's refusal to divorce his wife though ordered to do so (*Or Zaru'a BK* 161; Resp. Maharam of Rothenburg, ed. Prague, 927, and see *Divorce), and of a bridegroom's refusal to marry his bride (Resp. Maharam of Rothenburg, ed. Prague, 250) – as well as property offenses ranging from theft and receiving stolen property to bankruptcy, fraud, and forgery (cf. e.g., *Takkanot Medinat Mehrin*, ed. I. Halpern, p. 161). On the other hand, assaults (including wife-beating) and offenses against morality were more often visited with the lighter expulsions (many illustrations in Assaf, *Onshin* (see bibliography), passim). So it was laid down that the straying disciple who is found in possession of profane books and frequents theatrical and musical entertainment should be flogged rather than excommunicated (Tur, YD 334).

The Procedure of Pronouncing a Herem

The minor forms of the *ḥerem, nezifah*, and *niddui*, were pronounced by the head of the rabbinic court. A severe *ḥerem* was

pronounced in the synagogue either before the open Ark or while holding a Torah scroll. The proclamation was made with the sounding of the *shofar*, while those present held wax candles which were symbolically extinguished after the excommunication was declared. The person was anathematized, excommunicated, and several biblical curses were evoked upon him. The proclamation contained a public warning not to associate with the anathematized and concluded with a plea for the welfare of the congregation of the faithful.

In Later Centuries

Ḥerem and *niddui* became so common in later centuries that they no longer made any impression and lost their force. They became the standard rabbinic reaction to all forms of deviation or non-conformity considered incompatible with or dangerous to Orthodoxy. As such, they are sometimes imposed by extreme Orthodox authorities in the present day, but as neither the persons afflicted nor the public at large regard themselves as bound by them, they have ceased to be a terror or have much effect. (It is arguable that the imposition of *niddui* or *ḥerem* by persons acting in unison – e.g., a court of three – amounts to a criminal conspiracy to cause injury to a person or the reputation of a person and to injure him in his trade or profession, which in Israel is punishable with two years' imprisonment: Section 36, Criminal Code Ordinance, 1936.)

ḤEREM BET DIN (Heb. חֵרֶם בֵּית דִּין, "ban of the court"), the shortened and accepted form of *ḥerem bet din ha-gadol*. This was the social and legal concept and *takkanah* originally prevailing in Western and Central Europe that gave to the court of the local community rights and competences which, according to talmudic law, pertained only to the High Court of the *Sanhedrin and later, by right of custom, to the High Courts of the *exilarch and the *geonim. In practice, this extension of the rights of the local court applied to its competence to summon defendants before it even when they came from a different locality. At first this was envisaged in a fairly simple fashion:

> If a man passes through a community where there is a *ḥerem bet din* and he is summoned to court under the *ḥerem* in the presence of proper witnesses, even if he be in the market place, the *ḥerem* is upon him until he repairs to the court to plead his case. Even if no witnesses are present, the *ḥerem* applies, for witnesses are needed only as a protection against deceivers, but a writ of insubordination [for not appearing in court] can be issued only on the testimony of witnesses. After having made his plea, the defendant may proceed on his way. The plaintiff is responsible for seeing that the decree of the court reaches him (*takkanah* attributed to Gershom b. *Judah).

Though *ḥerem* here means a *takkanah* sanctioned by a *ḥerem*, custom certainly preceded the enactment. Central institutions, such as those envisaged in talmudic law and those which were active in the old centers of Jewish settlement in Mediterranean countries, were never within the scope of communication of Western Europe. *Ḥerem bet din* was a practical expression of the problems of communication and security which, in increasingly perilous times, faced small communities dispersed over relatively wide areas. On the social and leadership levels *ḥerem bet din* is one of the earliest Jewish manifestations of the spirit of the commune-city with its insistence on having justice dispensed within the city walls. In the course of time, the authority of each locality and its *bet din* became so well established that *Samson b. Abraham of Sens (13th century) stated:

> The custom of the *ḥerem ha-gadol* in our town operates in the following manner. If one of our townspeople summons another to court, he is compelled to litigate here. He cannot refuse and say: 'Let us go to the college of scholars or to the Great Court.' He is, however, entitled to have three days before presenting his case. Judges, though, must be chosen immediately; each party chooses one judge [and they elect the third judge]. If a visitor summons a townsman, or two visitors summon each other, they must appoint the judges and plead their cases forthwith.

By this time the need for a specific *takkanah* or *ḥerem* to authorize the local court was abandoned. In 1272 it was stated in France that any town that was known to have had a scholar residing in it at one time or another was accorded by this very fact the presumption of full competence for its local court, as if it had an express and documented *takkanah* of *ḥerem bet din*.

[Isaac Levitats]

ḤEREM HA-IKKUL (Heb. חֵרֶם הָעִקּוּל, "ban on confiscation"), a prohibition against a person retaining an article entrusted to him as a bailee even though he has a subsequent claim against its owner. Because of the dangers of medieval travel, and the consequent lack of security and the fact that Jewish property consisted mainly of cash and movables, there was frequent need for a bailee. This custom, which became generally accepted law, was designed to protect the commerce which was developing as a result of the rise of towns.

[Isaac Levitats]

ḤEREM HA-YISHUV (Heb. חֵרֶם הַיִּשּׁוּב, "ban on settlement"), the concept, *takkanah*, and institutions pertaining to the corporate right of regulating settlement in many communities which existed in certain countries in the Middle Ages and early modern times. Underlying and governing the *ḥerem ha-yishuv* was the assumption that a community belonged to its members, who might or might not permit other Jews to settle in their locality. A newcomer had to acquire the right of settlement – termed *ḥezkat ha-yishuv* or *ḥezkat ha-kehillah* – from the community, its authorities and its members, wherever *ḥezkat ha-yishuv* came to be accepted. The most common manner of acquisition of this right was by purchase or hire; other ways involved inheritance or undisputed residence over a certain period. The leadership alone or the entire community could grant such a right anew, especially if a vacancy occurred in the fixed number of settlers. It was assumed that the original settlers in a community had created for themselves a property right in the opportunities for profit-making offered by that settlement. They were enabled to do so by the local autonomous rights granted to them by king, overlord, or bishop. In Italy a person could claim permanent rights on the grounds of a temporary grant. The institution was found in northern France, Germany, Bohemia, England, and all of Eastern Europe. Its time of origin has not been definitely established, although it was known in the Rhine communities in the 11th century and an actual case is recorded in the 12th century. This was the period of the rise of the commune-cities in Western Europe, in which the inhabitants saw themselves as a closed unit governing entrance to the town and settlement in their midst. It was also the time of the origin of Jewish community life and law in the Rhineland area.

Most Jewish communities gradually became closed to newcomers. As early as the first half of the 12th century, the Paris community enacted a *gezerat ha-yishuv* ("ordinance about settlement"): "Lest someone will stay in the city, in addition to the citizens who were there at this time and their children who will be born unto them, the male only, excluding the female" (S.D. Luzzatto (ed.), *Bet ha-Oẓar*, (1847) 58a). *Ḥezkat ha-yishuv* was thus parallel to the communal practices prevalent among the non-Jews, who strictly regulated the right to reside and trade in their communities. Jews who pioneered as merchants and artisans in the cities and were responsible as a body to king, lord, or bishop considered themselves entitled to regulate residence rights. The unfair competition of outsiders who were not responsible for toll or tax had to be eliminated. Since one of its main purposes was the protection of trade, there were many who could settle freely even under *ḥerem ha-yishuv*: non-practicing ordained rabbis, students, personal servants, rentiers who received a fixed income without trading, wholesalers, and refugees, but the last were permitted to stay only temporarily. Exempt also were nonresidents who came to a local fair, although they were often restricted to selling to out-of-towners only and their activities had to be confined to the market place.

This tendency to close the community to outsiders soon clashed with the opposing Jewish tradition of granting shelter and communal assistance to Jews without regard for locality. Great leaders and scholars tended to limit the use of *ḥerem ha-yishuv* to exclusion of Jews on moral grounds only. The tosafist Jacob b. Meir *Tam (12th century) stated that "our earlier authorities instituted the *ḥerem ha-yishuv* only against violent men and informers, and those who refused to obey communal enactments or to pay their share of communal taxes. But against others there is no *ḥerem*." In 1266 the Canterbury community accepted this view, writing to the royal authorities in a Latin text, "The community of Jews of Canterbury… have bound themselves by oath that no Jew of any other town than Canterbury shall dwell in the said town, to wit, no liar, improper person, or slanderer…" (Rigg-Jenkinson, Exchequer). R. *Eliezer b. Joel ha-Levi of Bonn (13th century) insisted on the validity of the custom. *Meir b. Baruch of Rothenburg (13th century) dealt a great deal with the problem in his responsa, since during his time the *ḥerem ha-yishuv* became generally accepted. By the 14th century it was agreed by the general authorities that the Jews were the sole arbiters of the matter. In some cases the newcomer, after admission by the Jews, had to be introduced to the bishop and the town council. Jacob b. Judah *Weil in the 15th century ruled that a community might strictly enforce the rules against a *nokhri* ("alien"), a Jew temporarily staying in town.

Records of the institution exist down to the 18th century. In Italy, where it seems to have appeared in the 13th century, moneylending rather than trade was the main prize sought in settling rights. In Poland and Lithuania (16th–18th centuries) the *ḥerem ha-yishuv* was so well entrenched that a particular community did not need to enter into the bond of excommunication against recalcitrants in order to enforce the rule: it became a recognized right of every *kahal*. The added rationale was advanced that an excessive increase of Jews would arouse ill-will among the gentiles. In 1623 the Lithuanian Council decreed that "no man from another country is entitled to establish his residence in the Lithuanian provinces without the

knowledge and approval of the provincial chiefs… he shall be relentlessly persecuted and driven out of this land." The rule was temporarily relaxed after the *Chmielnicki massacres in 1648. The Jews did not hesitate to enlist the aid of the civil authorities in enforcing these regulations. *Jus Gazaga*, the right not to let or sell a house, was combined with the prohibition to trade with an intruder. As settlements increased in size, newcomers were welcome, especially if they were wealthy, to help carry the burden of taxes and other obligations. Every means was employed to detain the wealthy. If they left, they were still held responsible for their share of the community's fiscal burden. Simultaneously, the poverty-stricken were encouraged and pressed to leave town. In fact, the alien poor were kept constantly on the move, thus compounding pauperism. In Russia, which took over much of Lithuania and Polish territory, *ḥezkat ha-yishuv* probably lasted down to the 20th century. The story was told of a Jew who, refused permission to settle in Dubrovno asked indignantly, "But how will I make a living?" The reply was, "Well, does Dubrovno itself make a living?"

The restrictions imposed by *ḥerem ha-yishuv* created many problems in practice and in law. The right which protected the tradesman and craftsman thereby discriminated against the consumer. Hence there was a body of opinion among Jewish jurists which held that an outside trader, prepared to sell his goods considerably cheaper than at the prices prevailing locally, was entitled to do so. Further, when the Jews of Rome refused to admit the Spanish refugees, it was adjudged by many a highly unethical act.

[Isaac Levitats]

ḤEREM SETAM (roughly translated as "anonymous ban" or "imprecation"), a geonic innovation that gained wide acceptance in later rabbinic literature, particularly in Spain and North Africa, although it was more sparsely used in Franco-Germany as well. It served primarily as an instrument of judicial proof in situations where there was no obligation to impose an oath. *Ḥerem setam* could be utilized to reveal assets in a variety of situations (lost, stolen, or hidden assets), to locate witnesses concealing their testimony or trying to withhold it, or to reveal informers – this last application seems to have predated the use of *ḥerem setam* in an evidentiary capacity.

Historically speaking, *ḥerem setam* was apparently applied in two different ways at different times: Common to both was their style and their imposition where there was no legal obligation to administer an oath; they differed, however, as to context and purpose. In the early stage, *ḥerem setam* was used during the course of judicial proceedings to expose false or deceptive arguments and to reach a final decision. In the later stage, it was also used to force the exposure of assets or to locate witnesses, in which cases it did not necessarily close the proceedings.

Ḥerem setam, invoked as part of the judicial proceedings in a wide range of situations, was generally used in civil cases. These may be divided into five categories: (1) Situations in which the plaintiff presented a claim that was positive (*ta'anat bari*) but otherwise unsupported, for if the claim had some concrete basis (*derara de-mamona*) an oath would have been mandatory. Such cases are discussed in several responsa of Rav Hai Gaon (see, e.g., *Sha'arei Ẓedek* 59a, §30), although at an earlier stage he held that an oath should be administered even in the absence of concrete basis (see his *Mishpetei Shevu'ot* 7b–8a); (2) Where the plaintiff presented a doubtful claim – it was in such cases that the *ḥerem setam* was most commonly applied (e.g., in the commercial field, in claims contested by husband and wife, etc.); (3) Where, for various reasons, the court would not impose an oath – for example, if one of the litigants had perjured himself on a previous occasion, if one of the litigants refused to take the oath, if the litigant was a married woman (this restriction was not universally accepted), and in a few other cases. This category also included the imposition of *ḥerem setam* when a clause in a contract exempted one of the litigants from the obligation to take an oath, his word alone being accepted; (4) A defendant contesting a claim could demand that *ḥerem setam* be imposed on the plaintiff to ensure that the claim was genuine. As a further development of this category, *ḥerem setam* could be imposed upon the plaintiff to ensure that he was not forcing the defendant to take an unnecessary oath. Maimonides refers to this as "a minor enactment enacted by the last *geonim*" (Yad, Sheluḥim ve-Shutfin 3.11); (5) *Ḥerem setam* could also be imposed upon witnesses to force them to testify and warn them not to withhold their evidence – this case is somewhat related to the oath of testimony.

The term *ḥerem setam* also referred to an imprecation pronounced "upon whosoever…" without specifying a particular name (this being the meaning of the Hebrew word *setam*); the imprecation itself was abbreviated and only the gist of the suspicion included. This generalized formula seems to have paved the way for the later medieval invocation of a ban to reinforce a special enactment, in order to deter "whosoever should act" in violation of the enactment.

The institution of *ḥerem setam* is attributed in post-geonic literature (R. Judah of Barcelona, R. Solomon b. Adret, R. Isaac b. Sheshet Perfet, R. Simeon b. Ẓemaḥ Duran, and others) to a geonic enactment. Solomon b. Adret writes: "Whosoever is in doubt about a matter may invoke *ḥerem setam*, according to the enactment of the *geonim*, of blessed memory" (*Resp. Rashba* 11, §79; and elsewhere quite frequently). But while *ḥerem setam* was undoubtedly a geonic innovation, as implied by a responsum of R. Sherira Gaon (Groner, *Resp. Rav Sherira*, p. 16), the statement that it was instituted by a special enactment (*takkanah*) is inconsistent with its historical development. The evidence emerging from geonic responsa is that the anonymous ban evolved gradually in the

geonic academies, as the *geonim* themselves note in some of their responsa. For example: "The courts were accustomed in cases of doubt to impose a *ḥerem* without specification [of the deponent's name]" (*Teshuvot ha-Geonim,* ed. Assaf, 1927, §16); "In general, wherever there is no concrete basis for the claim (*derara de-mamona*), the matter depends on custom" (Groner, *Resp. Rav Sherira*, p. 18).

As stated, the innovation of *ḥerem setam* was a gradual process. Early *geonim* substituted an imprecation (*alah*) for a mandatory oath. Subsequently, some early *geonim* (Rav Natronai and Rav Hilai) began to use the imprecation even where an oath was not required; however, the deponent's name was still specified, as it normally was in an oath, and at this stage the borderline between imprecations invoked in cases where an oath was mandatory and those where it was not was still unclear. Only later, especially in the writings of R. Paltoi and R. Naḥshon, do we find the imprecation applied even when an oath was not mandatory, but without specifying the deponent's name. These *geonim* used the term *shamta setam* or *shamuta setam* ("anonymous ban") for what was later known as *ḥerem setam*. Another term sometimes used was *pitka delutata* ("letter of curse").

R. Saadiah Gaon seems to have been the earliest authority to distinguish explicitly between an imprecation substituted for a mandatory oath and one applied even when an oath was not mandatory. He also noted the distinguishing features in the application of these two measures. Where the imprecation took the place of a mandatory oath, the name of the deponent would be included in the imprecation. This imprecation was referred to as *ḥerem* or as *ḥerem ba-shem*. However, where the imprecation was not substituting for a mandatory oath, the name of the deponent was not included, and in such cases the term used was *ḥerem setam*, apparently coined by R. Saadiah himself in recognition of the fact that no name was specified – hence *setam*, meaning roughly "anonymous." Other distinguishing features in the case of an imprecation replacing a mandatory oath were the necessary presence of the deponent, the requirement that he respond "*Amen*," and the holding of a Torah scroll during the ceremony. These features were common when the imprecation was first introduced, but gradually disappeared with the expanding use of *ḥerem setam*.

The indications that R. Saadiah's school should apparently be credited with the above distinction are the following: (1) Only in R. Saadiah's time was a credibility clause inserted in deeds in order to exempt one of the parties from *ḥerem setam*; presumably, had the *ḥerem setam* been practiced before his time, the exemption clause would surely have appeared in various deeds. (2) R. Saadiah was the first *gaon* who, through interpretation of a talmudic passage dealing with a debtor who denies the claim against him (*b. Shevu'ot* 40b), ruled that *ḥerem setam* should be imposed even where *derara demamona* is absent (*Sha'arei Ẓedek* 39b, §17). Such a ruling is unprecedented.

The introduction of *ḥerem setam* was not simply a matter of internal halakhic development. The general environment was the prime catalyst that induced the *geonim* to endow it with a halakhic framework. The reality was shaped by three factors: (1) a first factor was the moral laxity of the times, as indicated by the ease with which people would take false oaths (see *Gezerta). (2) Related to this was the prevalence of oaths in Muslim society, characterized by the almost indiscriminate use of oaths in Muslim courts, with no procedural constraints or rigid rules to limit the applicability of oaths. Indeed, Muslim courts imposed oaths even during the intermediate stage of the judicial procedure, in order to establish the truth of a litigant's arguments or to substantiate a factual argument. The *geonim* introduced the *ḥerem setam* to help counter this laxity. (3) The geonic period witnessed a gradual economic transformation, from a society engaged in agriculture or local commerce to one whose international trade contacts extended over large areas. The new realities placed obstacles in the way of normal judicial procedures and induced the *geonim* to seek solutions for situations where real proof or evidence was lacking. *Ḥerem setam* was an effective instrument to that end. R. Joseph ibn Migash, in a famous responsum (§75), refers to the evolving use of *ḥerem setam* in cases where the defendant could demand imposition of *ḥerem setam* on the plaintiff before taking the oath himself: "Since the imposition of the said *ḥerem* is not legally required, it seems to us that it is a corrective measure and a question of social conduct, once we have understood that most people intend to make false accusations. We therefore see fit to invoke the said *ḥerem* before the oath, in the hope that the plaintiff will withdraw a false claim… And we instituted this [practice] many years ago, when we were in one of the lands of Andalusia, for the reason that we were obliged to do so because of what we saw there of this practice, not in our own abode. And when we were staying with you in Fez we were reminded there that this [practice] is mentioned in a responsum of R. Isaac [Alfasi], our great rabbi of blessed memory, or of one of the *geonim* of blessed memory, and we rejoiced at this. Now this is a corrective measure and a question of social conduct instituted by the court, not a legally required measure."

After R. Saadiah's time, the *geonim* limited the free use of *ḥerem setam*, so that we find Rav Hai Gaon stating, in the name of his ancestors as well, that it should be used only in certain cases: "Know that neither we nor our ancestors are accustomed to permit anyone who comes and says, 'Write me a *pitka de-lutata* and give me permission to ban and to curse people without specifying names.'… But in the case of orphans who bring a plea… they will immediately receive a *pitka delutata*" (*Teshuvot ha-Geonim*, *Ḥemdah Genuzah*, §165). At the same time, they did not generally prevent its imposition by litigants if they so desired; it was this rather ambivalent attitude to *ḥerem setam* that gave the measure its force.

[Gideon Libson (2nd ed.)]

HERESY, belief in ideas contrary to those advocated by religious authorities. Because Judaism has no one official formulation of dogma against which heresy can be defined, it has no clear-cut definition of heresy. A heretic may be distinguished from an apostate in that, although he holds beliefs which are contrary to currently accepted doctrines, he does not renounce his religion and often believes that he represents the true tradition. Since the heretic is still a Jew, various halakhic questions concerning his relationship to the Jewish community arise, such as whether he may offer a sacrifice, be counted in a *minyan*, or have his testimony admitted as evidence in a Jewish court (Ḥul. 13a; Git. 45b; Av. Zar. 32b; Sh. Ar., ḤM 34:22).

The Bible, although it does not have a specific term for heretic, regards as a heretic one who "whores after strange gods." It sets forth procedures to suppress idolatry and prescribes stoning for anyone who introduces idolatry into the community (Deut. 13:7–12).

Heresy in the Talmud and Rabbinic Literature

In talmudic literature a number of terms are used to refer to heretics, *min, *apikoros, *kofer*, and *mumar*, each of which also has other meanings. *Min* is the most common term and the one that appeared originally in the 12th petition of the daily *Amidah. Some identify the talmudic *minim* with the Judeo-Christians, others with unspecified groups who denied rabbinic authority and/or the belief in the coming of the Messiah. There is an early tradition that there were 24 groups of *minim* as early as the destruction of the Second Temple (TJ, Sanh. 10:29c). Among the errors of the *minim*, the Talmud lists denial of God's unity; belief in an independent divinity of evil; the portrayal of God as a cruel jester (Sanh. 38b–39a); and the denial of Israel's chosenness (Sanh. 99a), physical resurrection, and the coming of the Messiah (Sanh. 91a). *Maimonides identified *minut* with atheism, with the denial of God's unity and incorporeality, with the denial of creation *ex nihilo*, and with the belief in a power intermediary between God and man (Yad, Teshuvah 3:7).

The term *apikoros* seems to be derived from the *Epicureans, whose skeptical naturalism denied divine providence, and hence, divine retribution. The sages in accordance with their method of interpretation derived *apikoros* from an Aramaic form of the root *p-k-r-*, "to be free of restraint" (Sanh. 38b). The suggestion is that one who denies divine providence and retribution will feel free not to obey the laws of the Torah. In the Talmud the term *apikoros* refers to the *Sadducees (Kid. 66a); to those who denigrate rabbinic authority even in such seemingly insignificant ways as calling a sage by his first name; and to those who shame neighbors before the sages (Sanh. 99b). Maimonides defined the *apikoros* as one who denies the possibility of prophecy and divine revelation, that Moses was a prophet, or that there is divine providence (Yad, Teshuvah 3:8; cf. *Guide of the Perplexed*, 2:13 (end), and *ibid.*, 3:17 (start), in which Maimonides identifies the *apikoros* with someone who agrees with the opinions of Epicurus).

Kofer may be best translated as "freethinker." In *Sanhedrin* the *kofer* is identified as one who asks needling questions and points out contradictions between biblical texts (Sanh. 39a–b). The term *kofer ba-ikkar* in rabbinic literature refers to one who denies a basic and essential *ikkar* ("dogma"; on the various formulations of dogmas in Judaism see S. Schechter, *Studies in Judaism* (1896), 147–81). Maimonides defines a *kofer ba-Torah* as someone who denies either the divine inspiration of the Torah or the authority of the Oral Law and the rabbis who teach it, or one who maintains that the legislation of the Torah has been superseded (Yad, Teshuvah, 3:8).

Mumar, literally, "one who changes" or "converts", refers to an apostate, i.e., to one who converts, but in the talmudic tradition it sometimes means heretic, especially when it is used to refer to one who rejects only one commandment of the Torah (Hor. 11a). While the *apikoros* seems to be led to his heresy by intellectual uncertainty, the *mumar* seems to be brought to it by his appetites or emotional unbalance (see J.J. Petuchowski, in: HUCA, 30 (1959), 179–90).

Talmudic treatment of the heretic is not uniform but reflects many different situations and differing responses. While some texts tell of a scholar who shared a meal and conversed agreeably with a heretic, others hold that the food, wine, and bread of a heretic are not permissible, that a Torah scroll or *tefillin* written by a heretic must be destroyed, and that one need not endanger his life in order to save the life of a heretic or take medicine prescribed by one (Ḥul. 13a–b; Av. Zar. 26a–b; Tosef. Ḥul 2:20–21).

Causes of Heresy

Heresy derives from many sources: general restlessness (cf. Er. 69b), impatience with authority (cf. Av. Zar. 26b), the agitations of other heretics (cf. Eccl. R. 1:8, no. 3), and predisposition (cf. Ḥag. 16b). Intellectual vanity is frequently cited as a motivation to heresy (based on Num. 15:39, "that ye go not after your own heart").

Assuming that the intellect has only a limited competence, rabbinic Judaism maintained that those who seek theological truth without being guided by revelation often fall into error and heresy (Maim. Yad, Avodah Zarah, 2:3; cf. S.R. Hirsch, *Horeb*, Section 1, 4:18). Rationalist apologetes emphasized the danger of unbound speculation as much as the more traditional sages. The ban issued by Solomon b. Abraham ibn *Adret and others in 1305 against the study of Greek philosophy by the untrained under the age of 50 and by students under the age of 25 referred to a passage from Maimonides' *Guide* in support of its restrictions (Baer, Spain, 1 (1961), 281–305; Adret, *She'elot u-Teshuvot* (1958), 417, 154). Simeon ben Ẓemaḥ

*Duran's insistence that thinkers who go beyond acceptable textual interpretations are in error but are not *ipso facto* heretics represented a novel and remarkable attitude; but he excluded specifically from this category anyone who misinterprets fundamental principles (*Sefer Magen Avot*, 14b).

Persecution of Heretics

The persecution of heretics, when it occurred, was generally justified as a barrier to prevent those who mock the teachings of the Torah and its authoritative teachers from leading others into sin. A ban issued by the community of Venice in 1618 contains typical language:

"They consider all the words of the sages as being without meaning and void, and they call all those who believe in them 'fools who believe everything'… Therefore, when we heard the sound of war against the Lord and His Torah and we saw the flame glowing, we were afraid lest it go forth and set fire to some thorn – a man whose soul is empty and who knows nothing so that he be smitten; and as a consequence, God forbid, the land would be destroyed and laid waste – for this generation is spoiled and all the people listen to whoever favors leniency" (E. Rivkin, *Leon da Modena and the Sakhal* (1952), 14–15).

Rabbinic leaders who opposed actions against heresy did not advocate the concept of intellectual freedom but argued pragmatically that divisiveness must be avoided and that restrictions by which a community will not abide should not be imposed (see Naḥmanides' letter to certain French rabbis concerning their ban on the *Guide, Kovez̦ Teshuvot ha-Rambam*, pt. 3 (1859), 8a–10b).

The concern with heresy reflected a concern with the inner stability of the Jewish community and its relationship to the outside world. Thus, the heretic presented not only a spiritual danger but also a political one. Rabbinic Judaism could not ignore the intellectual attitudes of the outside world, which held the power of life and death over Diaspora communities. The monks of Montpellier gladly burned the "heresies" of Maimonides along with those of Catholic Aristotelians (1230; see *Maimonidean Controversy; and also D.J. Silver, *Maimonidean Criticism and the Maimonidean Controversy 1180–1240* (1965) 152ff.); the Dutch Reformed Church encouraged the Amsterdam Jewish community in its measures against Baruch *Spinoza, whose non-personalist pantheism was also influencing many Christians.

The liturgical petition against *minim* in the *Amidah* of the liturgy was changed to include *malshinim* ("informers"), suggesting at least an intimate association in the Jewish mind between defiance and defamation. Heresy gave birth to schism, and schism was not only unsettling but politically dangerous; many squabbles ended tragically as a result of the intervention of the sovereign power. Early and vigorous action against suspicious ideas was justified by many rabbinic leaders on the grounds that Israel must not be divided. Communities were encouraged to follow the example of the schools of Hillel and Shammai (see *Bet Hillel and Bet Shammai), whose arguments remained academic and did not lead to division within the community. They were also reminded of the dire consequences of the split of the kingdom of David between Jeroboam and Rehoboam.

ḤEREM. Jews never organized a central agency to define heresy and establish procedures to judge and punish heresy. In the medieval period heresy was established by individual rabbis, a *kehillah* ("community"), or a group of *kehillot*, and was combated by means of a **ḥerem*, a ban prohibiting social intercourse and marriage with a heretic and denying him burial rites. Those who taught doctrines considered heretical were threatened with this ban. Questionable books were sometimes banned, but, generally, they were prohibited only to the masses. Although censorship of texts seems not to have been practiced, it should be noted that a certain degree of censorship was imposed by the custom of requiring approbations (**haskamot*) for books.

A ban was valid only within the boundaries of the promulgating community or in the area under the promulgating sage's jurisdiction. Therefore, after the ban was proclaimed by a sage or by a *kehillah*, details of the charge were circulated among well-known scholars with a request for corroboration. Scholars far from the scene of the struggle, being personally uninvolved, could point out the lack of substance in the listed charges and weigh the practical dangers of persecuting an action of heresy against the need to protect the integrity of the community (see Z̦evi Hirsch *Ashkenazi of Altona reacting to the charges against David Nieto of London – 1703, Responsa 11/8). Often one community placed a ban while another refused to do so (see Rivkin, *Leon da Modena and the Kol Sakhal*, 8–9, on the opposite action of Venice and Salonika in the matter of Abraham Farrar). When a theoretically universal ban was pronounced against a specific group, for example, the *Karaites, the absence of a universal authority made it possible for certain communities to overlook the ban, and for its members to live peaceably side by side. The decentralization of religious authority effectively enlarged the range of permissible theological ideas.

The practice of excommunication probably goes back to the disciplines of the *Pharisees, the *Essenes, and the Dead Sea Covenanters (see *Dead Sea Scrolls), who excluded from their fellowship those who violated their rules. For these people, who were bound by oath to eat only special foods and to adhere to special rules of purity, such a ban was a terrible punishment. There is no indication of formal bans for heresy being pronounced against individuals until the Middle Ages.

Individuals, sects, and books were at various times declared heretical. The list includes *Samaritans, Judeo-Christians, *Karaites, *Shabbateans, *Frankists, *Ḥasidim, and liberal branches of modern Judaism; books ranging from Maimonides' *Guide of the Perplexed* to the *Zohar; and such men as Uriel Da *Costa, Baruch Spinoza, and *Shneur Zalman of Lyady.

When Moses *Mendelssohn wrote his *Jerusalem*, he maintained that the community had no legitimate authority over anyone's opinions, an original argument, far-reaching in its consequences and breaking entirely new ground. In the 19th and 20th centuries liberal thinkers have argued that all attempts at restricting ideas are self-defeating and that mistaken notions can be opposed only by gentle reason (see *Rabbinische Gutachten ueber die Vertraeglichkeit der freien Forschung mit dem Rabbineramte*, 1842–43). However, those who adhere to Orthodox Judaism can still find some meaning in the term heresy, though few modern religious authorities are likely to institute anti-heretical proceedings.

[Daniel Jeremy Silver]

ḤEREV LE-ET (Heb. חֶרֶב לְאֵת), moshav in central Israel, in the Ḥefer Plain, affiliated with Ha-Iḥud ha-Ḥakla'i, founded in 1947 by veterans of the British and Czechoslovak forces in World War II. In the first years of Israel's statehood, new immigrants from European and North African countries joined the settlement. Citrus groves, poultry, flowers, orchards were the moshav's main farm branches. In 1969, its population numbered 239, rising to approximately 360 in the mid-1990s and 721 in 2002 after expansion. The moshav had both religious and secular residents. Ḥerev le-Et, meaning "Sword into Plowshare" (Isa. 2:4), refers to the fact that demobilized soldiers became farmers.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

°HERFORD, ROBERT TRAVERS (1860–1950), English Unitarian theologian who devoted his life to research into the Judaism of the Second Temple and the Talmud, particularly the Pharisees. Travers Herford was a liberal scholar who was free of the theological prejudices of Christian scholars of Judaism and strove to present Pharisaic Judaism in an unprejudiced light. In the Oral Law he discerned a continuation of the spirit of the prophets. What the prophets demanded in vehement speeches, by emphasizing general principles, the rabbis accomplished by logical reasoning and by specifying laws and right conduct.

Herford rejected the notion that the halakhic sages placed the ceremonial act in the center of the Jewish religion: he demonstrates that in talmudic Judaism the intention is primary, but that in the view of the halakhic sages its moral content must be manifested primarily in deeds. "The yoke of the Torah" referred to disparagingly in Christian literature is to the Jew only a source of joy; its purpose is the fulfillment of God's will as it was revealed and embodied in each of the commandments, major or minor. Herford places special emphasis on the great historical function fulfilled by the Scribes and the Pharisees who brought the Torah to the people and established the synagogue as a place of learning and prayer. It popularized Judaism, and its consequent democratization of religion saved Judaism from extinction after the destruction of the Temple. Herford's view of Jewish apocalyptic literature also differs from that of Protestant scholars, who regard it as a continuation of prophecy. The Pharisees, according to Herford, did not produce apocalyptic literature but confined themselves to interpreting the Torah; the apocalyptic works were written by nonconformist groups who did, in fact, preserve the outer shell of prophetic Judaism, but did not preserve its core. That core was preserved by *halakhah*.

The difference between Judaism and Christianity was seen by Herford to rest on the difference between faith in a divinely revealed law, and faith in a supernatural personality capable of legislating laws which are "outside the authority of the Torah." Judaism is an independent entity and has no need of Christianity, while Christianity, according to Herford, needs Judaism's pure faith, which rejects any compromise with paganism. Without the heritage of Judaism, Christianity faces the "danger of assimilation to paganism." Not only is Judaism not a stage which led to Christianity, but rather the contrary: only after Christianity's completion of its activity will "the hidden treasure of the Pharisees be largely accepted." His most important works were *Christianity in Talmud and Midrash* (1903); *Pharisaism, its Aim and its Method* (1912); *What the World Owes to the Pharisees* (1919); *The Pharisees* (1924); *Talmud and Apocrypha: A Comparative Study of the Jewish Ethical Teaching in the Early Centuries* (1933); an edition of *Pirkei Avot* with English translation, introduction, and commentary (1962[4]); *The Separation of Christianity from Judaism* (1927); and *Judaism in the New Testament Period* (1928).

[Israel M. Goldman]

HERLANDS, WILLIAM BERNARD (1905–1969), U.S. lawyer and judge. Herlands, who was born in New York City, practiced law in New York with George Z. *Medalie from 1928 to 1931. After serving as assistant U.S. attorney for the Southern District of New York (1931–34), he was appointed assistant corporation counsel by Mayor Fiorello La Guardia in 1934. A year later he became chief trial assistant to N.Y. County special prosecutor Thomas E. Dewey in the latter's campaign against organized crime, handling cases in the restaurant industry and other areas. From 1938 to 1944 Herlands served as New York

City commissioner of investigation. He was particularly vigilant in exposing municipal corruption and investigating the German-American Bund. While in private law practice from 1944 to 1954, Herlands served at various periods in special investigative positions. After being appointed New York State's first commissioner of investigation in 1954, he was named by President Eisenhower to be Federal District Court judge for the Southern District of New York in 1955, a post he held until his death. Herlands, who was extremely active in Jewish affairs, was an honorary president of the Union of Orthodox Jewish Congregations of America, and a director of the Jewish Welfare Board.

HERLINGEN, AARON WOLFF (Schreiber) OF GEWITSCH (c. 1700-c. 1760), Austrian scribe, illuminator, one of the most gifted and prolific of the school of Jewish manuscript artists who flourished in Central Europe in the 18th century. His work developed over the years, and he was especially distinguished as a calligrapher. Born probably in Gewitsch, his family came to Moravia following the expulsion of the Jews from Vienna in 1669–70. Herlingen became active in the field of Hebrew manuscript production when he was a young man, and the earliest known manuscript he wrote and decorated, *Seder Birkat ha-Mazon*, is dated 1719–20. Herlingen produced his early manuscripts in Pressburg (today Bratislava), and later he settled in Vienna. His reputation increased quickly and apparently with the help of an assistant he hired, Herlingen carried out many commissions for the Viennese court Jews and other wealthy families, as well as some non-Jewish clients. Herlingen specialized in richly illustrated manuscripts of the Passover *Haggadah* and Grace after Meals (in color and grisaille), though he also produced illuminated manuscripts of other texts, such as the Esther scroll, a *Mohel* book, Book of Psalms, five *Megillot*, and *Perek Shirah*. His illustrations are strongly influenced, like those of other Hebrew manuscript artists of the period, by printed illustrated books (especially the Amsterdam *Haggadah* of 1695 and 1712), but introduced new images and an attractive freshness of approach. In 1736 or earlier he was appointed scribe to the Imperial Library in Vienna. This fact was proudly noted by him on the title pages of many manuscripts he produced, often also in Latin and other languages. His calligraphic work included non-Hebrew manuscripts as well, including the Book of Psalms in Latin.

HERLITZ, GEORG (1885–1968), Zionist archivist and author. Born in Oppeln (Opole), in Silesia, Herlitz worked from 1911 to 1916 at the Gesamtarchiv der deutschen Juden (see *Archives) under the guidance of Eugen Taeubler. In 1919 he was appointed the first director of the Central Zionist Archives and headed this institution first in Berlin and from 1933 to 1955 in Jerusalem. He published numerous articles on general Jewish topics and on Zionist questions in *Juedische Rundschau, Haaretz*, and *Ha-Olam*. Herlitz edited the *Juedisches Lexikon* (5 vols., Berlin, 1927–30; the first two with Bruno Kirschner as co-editor), for which he wrote a number of entries on the history of the German Jews and the history of Zionism. He also compiled a Zionist chronological handbook, *Das Jahr des Zionismus* (1949), and wrote an autobiography *Mein Weg nach Jerusalem* (1964). He served for many years as the secretary of the presidium of Zionist Congresses. His daughter ESTHER HERLITZ (1921–) was a senior member of the Israel Foreign Service and was Israel ambassador to Denmark from 1966 to 1971, and a member of Knesset in 1973–81.

HERMAN, DAVID (Nathan-David; 1876–1937), Yiddish theater producer. Born in Warsaw, Herman had a traditional education, studied dramaturgy in Warsaw, wrote initially in Polish and Hebrew, but turned to Yiddish when he joined the *Bund. He organized a dramatic group in Warsaw in 1903 that produced plays by I.L. *Peretz, *Sholem Aleichem, and Sholem *Asch. In 1908 he organized another group in Vienna that staged plays by David *Pinski, Asch, and Peretz in German. On his return to Poland, where the Russian ban on Yiddish theater had been lifted, Herman worked with the Peretz *Hirschbein troupe and organized with Peretz and A. *Mukdoni a Yiddish drama school in Warsaw. He was also director of the *Vilna Troupe, for which he staged the first production of *An-Ski's "Der Dibuk" (1920), which proved an international success. In 1931 he immigrated to the U.S.

HERMAN, JERRY (1933–), U.S. theater composer/lyricist. Jerry (Gerald) Herman was born in New York City to musically inclined parents and learned to play piano at an early age. At 17 he was introduced to Frank *Loesser, who encouraged him to continue composing. Herman went to the University of Miami and after graduation he moved into musical theater. His first effort, *I Feel Wonderful*, a revue consisting of material he had written in college, played Off Broadway. It was the only show his mother, a teacher, was able to see. She died of cancer at 44 and Herman spent the next year seriously depressed. In an attempt to break loose from his grief, Herman produced *Nightcap*, which got enthusiastic reviews in a tiny jazz club and played for two years.

In 1960 Herman was approached by a producer to compose the score for a show about the founding of the State of Israel. It was called *Milk and Honey* and starred Molly *Picon, the star of Yiddish theater. It opened in 1961 and ran for 543 performances on Broadway. Three years later the producer David *Merrick united Herman with Carol Channing for a project that was to become one of the theater's blockbusters, *Hello, Dolly!* The original production ran for 2,844 performances, the longest-running musical for its time. The show swept the Tony Awards, winning ten, a record that was unbroken for 37 years.

Herman went on to compose several more shows, including the smash *Mame,* starring Angela Lansbury; *La Cage aux Folles*; *Mack & Mabel*; and *Dear World.* Many of Herman's show tunes became standards and are presented regularly on television, in film, and on stage and were recorded by many of the world's most notable singers. The title tune from *Hello, Dolly!* is the single most popular song ever to have originated from a Broadway musical score. It was a No. 1 hit for Louis Armstrong in 1964 when it knocked the Beatles off the charts. Another Herman composition, "If He Walked into My Life," from *Mame*, became a pop standard. Other well-known Herman show tunes include "Shalom," "Before the Parade Passes By," "It Only Takes a Moment," "We Need a Little Christmas," "Mame," "I Am What I Am," and "The Best of Times."

Herman had three Broadway musicals run more than 1,500 performances: *Dolly, Mame*, and *La Cage*. His songs were the subject of two popular musicals, *Jerry's Girls* in 1985 and *Showtune* in 2003. His autobiography, *Showtune: A Memoir,* was published in 1996.

[Stewart Kampel (2nd ed.)]

HERMAN, JOSEF (1911–2000), painter. Born in Warsaw, he was the son of a cobbler. He left Poland for Brussels in 1938 and in 1940 escaped to Glasgow. From 1944 to 1953 he lived in the Welsh mining village of Ystradgynlais, and then settled in London. Herman brought from Poland a deep involvement in Jewish life and the Yiddish culture of East European Jewry. His earliest work was based on memories of Poland, deeply Jewish in sentiment and subject. But it was in Wales that he found his true style. He lived with the miners and in the Welshman's intensely religious and warm family life, he found a living substitute for the Jewish *shtetl*. In later years Herman painted in Israel, France, Spain, and Mexico, but his interest in men at work, and his heavy, profound, somber manner, relate directly to his Welsh experience.

[Charles Samuel Spencer]

HERMAN, OSKAR (1886–1974), Yugoslav painter. Born in Zagreb, until 1933 Herman lived in Munich. In 1941 he returned to Yugoslavia, was deported to the detention camp of Ferramonti in Italy, and in 1943 joined the Yugoslav partisan movement. In 1945, he returned to Zagreb. His painting, rich in color, became introspective, reflecting a balance of conflicting emotions.

HERMANN, GEORG (pen name of **Georg Borchardt**; 1871–1943), German novelist, essayist, and art historian; brother of Ludwig *Borchardt. Born in Berlin, Hermann lived there until 1933, when he immigrated to Holland. After the Nazi invasion of the Netherlands, he was first deported to the Westerbork concentration camp and later to Auschwitz, where he died. Hermann's life and literary work were rooted in the liberal bourgeoisie of Berlin, and his novels have sociological as well as artistic value. He had psychological insight and a gift for minute description of detail, and his poetic realism differed sharply from the naturalist school of writers' emphasis on daily life. Hermann published essays on the fine arts, sketches, and short stories; his most successful works were the novel *Jettchen Gebert* (1906) and its sequel, *Henriette Jacoby* (1908). This work portrays a cultivated Berlin Jewish family in the 1840s in the tradition of the family novels of Theodor Fontane and Thomas Mann. The modern Jewish intellectual, with his many inner complexities, appears in the novel *Die Nacht des Dr. Herzfeld* (1912) and its sequel, *Schnee* (1921). In 1928 Hermann returned to history in *Traenen um Modesta Zamboni*, the scene of which is Potsdam in the reign of Frederick the Great. Hermann considered himself a Jew without being religious. Critical toward both German and Jewish nationalist attitudes, he believed German Jews to be an integral part of the German people without having to neglect the intrinsic value of their particular tradition and experience.

HERMANN, LEO (1888–1951), Zionist journalist and a founder of the *Keren Hayesod. Born in Landskron, Bohemia, Hermann studied law in Prague where he joined the students' society *Bar Kochba (1906), became one of its leading members, and its chairman in 1908–09. He exercised a great influence on Bohemian Zionism between 1909 and 1913, mainly through his editorship of the Zionist weekly **Selbstwehr* (1910–13). He brought Martin *Buber to Prague, where under Bar Kochba's auspices, he delivered his famous "Three Speeches on Judaism," which laid down a philosophy adopted by Bar Kochba as its own. In 1913 Hermann became secretary of the World Zionist Executive in Berlin and, for a time during World War I, edited *Die Juedische Rundschau*. He remained secretary of the Executive until 1920, when he joined Berthold *Feiwel in organizing the newly created Keren Hayesod. When the fund's headquarters were transferred to Jerusalem in 1926, Hermann moved there and became its general secretary. He wrote *Nathan Birnbaum, sein Werk und seine Wandlung* (1914)

and edited and published a collection of ideological essays on Jewish and Zionist topics, *Treue* (1916), and a pamphlet on the language controversy in Ereẓ Israel, *Im Kampf um die hebraeische Sprache* (1914) on behalf of the Zionist Executive. He was also among the initiators and founders of the monthly *Der Jude*, which was edited by Martin *Buber. During his last years, he devoted himself to films about Israel, among which was *Le-Ḥayyim Ḥadashim* ("To a New Life").

[Oskar K. Rabinowicz]

HERMANUS QUONDAM JUDAEUS (**Herman of Scheda**; c. 1107–1170 or 1198), apostate abbot of Scheda (Westphalia). Born in Cologne, and originally named Judah b. David, he traveled to Mainz on business, and there loaned money to Ekbert, bishop of Muenster, without receiving a pledge. His parents therefore sent him back with his tutor Baruch to collect the pledge. He spent 20 weeks at Ekbert's court visiting monasteries, attending Ekbert's sermons, and taking part in religious disputations. When he returned home, Baruch accused him of undue sympathy toward Christianity. After a few weeks he decided to embrace Christianity. He went to Worms, preaching Christianity to the community there, and kidnapped his seven-year-old step-brother. Around 1128 he was baptized and five years later became a priest in the Premonstratensian Order. His autobiography, *Hermani Opusculum de conversione sua* (1687), describes Jewish life in Germany in the 12th century. However some scholars consider that Herman Quondam Judaeus may not have been identical with Herman of Scheda.

[Meir Lamed]

HERMANUV MESTEC (Czech **Heřmanův Městec**, Ger. **Hermann Mestetz**), town in Bohemia, Czech Republic. Jews settled in Hermanuv Mestec at the end of the 15th century and 10 families are mentioned in a document of 1570. Statutes of the *ḥevra kaddisha* exist from 1643 and an enlargement of the cemetery is recorded in 1667. In 1686 the local lord invited Jews to settle in houses formerly belonging to Christians who had died of the plague. At the end of the 19th century several Jewish firms made the town a center of shoe manufacturing. Noteworthy rabbis included Moses Simḥah Bumsla (d. 1724) and Moses *Bloch (1855–63). Sixty-three Jewish families lived in Hermanuv Mestec in 1724; by 1826 there were 492 Jews in the town, 721 in 1859, and 434 (9.3% of the total population) in 1880. In 1893 the community numbered 1,085, including the Jews in 40 surrounding villages. The community declined to 87 in 1921 and 54 (1.3%) in 1930. In 1942 the Jews were deported to Auschwitz via Theresienstadt and the synagogue appurtenances sent to the Central Jewish Museum in Prague.

[Jan Herman]

HERMENEUTICS, the science of biblical interpretation. The rabbis saw the Pentateuch as a unified, divinely communicated text, consistent in all its parts. It was consequently possible to uncover deeper meanings and to provide for a fuller application of its laws by adopting certain principles of interpretation (*middot*; "measures," "norms"). There are three formulations of such principles: the seven rules of *Hillel (Sifra, introd. 1:7; ARN[1] 37, 55; Tosef., Sanh. 7: end); the 13 rules of R. *Ishmael (Sifra, introd. 5); the 32 rules of R. *Eliezer b. Yose ha-Gelili (chiefly aggadic and generally considered to be post-talmudic). The indications are that the rules are earlier than Hillel (who lived in the first century B.C.E.). It is debatable whether (as suggested by the 12th-century Karaite author Judah *Hadassi) any Greek influence can be detected, though terminologically some of the rules have Greek parallels. R. Ishmael's rules are basically an amplification of Hillel's, so that the best method of studying rabbinic hermeneutics is to consider each of R. Ishmael's rules in detail.

The Thirteen Rules of R. Ishmael

(1) *Kal va-ḥomer* (more accurately *kol va-ḥomer*): an argument from the minor premise (*kal*) to the major (*ḥomer*). The Midrash (Gen. R. 92:7) traces its use to the Bible (cf. Gen. 44:8; Ex. 6:12; Num. 12:14 – not explicit but see BK 25a; Deut. 31:27; I Sam. 23:3; Jer. 12:5; Ezek. 15:5; Prov. 11:31; Esth. 9:12). The following two examples may be given: (a) It is stated in Deuteronomy 21:23 that the corpse of a criminal executed by the court must not be left on the gallows overnight, which R. Meir takes to mean that God is distressed by the criminal's death. Hence, R. Meir argues: "If God is troubled at the shedding of the blood of the ungodly, how much more [*kal va-ḥomer*] at the blood of the righteous!" (Sanh. 6:5). (b) "If priests, who are not disqualified for service in the Temple by age, are disqualified by bodily blemishes (Lev. 21:16–21) then levites, who are disqualified by age (Num. 8:24–25), should certainly be disqualified by bodily blemishes" (Ḥul. 24a). Example (a), where the "minor" and "major" are readily apparent, might be termed a simple *kal va-ḥomer*. Example (b) might be termed a complex *kal va-ḥomer*. Here an extraneous element (disqualification by age) has to be adduced to indicate which is the "minor" and which the "major." Symbolically the two types can be represented as SIMPLE: If A has X, then B certainly has X. COMPLEX: If A, which lacks Y, has X, then B, which has Y, certainly has X. Schwarz (see bibliography) erroneously identifies the Aristotelean syllogism with the *kal va-ḥomer*. First, the element of "how much more" is lacking in the syllogism. Second, the syllogism inference concerns genus and species:

All men are mortal.
Socrates is a man.
Therefore Socrates is mortal.

Since Socrates belongs in the class "man" he must share the characteristics of that class. However, in the *kal va-ḥomer* it is not suggested that the "major" belongs in the class of the "minor" but that what is true of the "minor" must be true of the "major" (Kunst, in *Bulletin of the School of Oriental and African Studies*, 10 (1942), 976–91). Not all of the thirteen principles are based on logic as is the *kal va-ḥomer*. Some are purely literary tools, while the *gezerah shavah* is only valid if received through the transmission of a rabbinic tradition.

The principle of *dayyo* ("it is sufficient"), that the conclusion should advance only as far as the premise and not beyond it, is a qualification of the *kal va-ḥomer* (BK 2:5). It must not be argued that if A has x, then B has x + y. The *kal va-ḥomer* suffices only to prove that B has x, and it is to go beyond the evidence to conclude that it also has y. R. Tarfon rejects the *dayyo* principle in certain instances (BK 25a).

(2) *Gezerah shavah*: comparison of similar expressions. It is probable that etymologically the word *gezerah* means "law" – as in Daniel 4:4, 14 – so that *gezerah shavah* would mean a comparison of two similar laws (Beẓah 1:6; see however S. Lieberman, *Hellenism in Jewish Palestine*, 193ff.); if the same word occurs in two Pentateuchal passages, then the law applying in the one should be applied to the other. Bergman argues (Sinai 71, 1972) that a *gezerah shavah* is the application of the laws in one instance to a second instance to achieve a unified legal principle, irrespective of the differences between the cases, more often than not by finding a word that appears in both instances. For example, the word *be-mo'ado* ("in its appointed time") is used both in regard to the Paschal lamb (Num. 9:2) and to the *tamid*, the daily offering (Num. 28:2), which is offered on the Sabbath as well. Thus it can be inferred that the term *be-mo'ado* includes the Sabbath and hence the Paschal lamb may be offered even on the Sabbath, although work normally forbidden on the Sabbath is entailed (Pes. 66a). The *gezerah shavah*, as may be seen from the above example, was originally a purely logical principle. It is reasonable to suppose that a law clearly stated in one passage can shed light on a similar law in a different passage. In the schools, however, the *gezerah shavah* threatened to become a formal principle whereby a mere similarity in words was sufficient warrant for positing similar laws in the respective passages. To prevent the abuse of this method, rules were laid down to qualify its use. A man cannot advance a *gezerah shavah* independently, but must receive it by tradition from his teachers (Pes. 66a); both passages must be from the Pentateuch (BK 2b); the words of the *gezerah shavah* must not only be similar but also superfluous (*mufneh*, "free") in the context in which they appear, so that it can be argued that they were placed there for the express purpose of the *gezerah shavah* (Shab. 64a). It would appear that the school of R. Akiva disagrees with that of R. Ishmael and does not require *mufneh* (TJ, Yoma 8:3, 45a).

Similar to the *gezerah shavah* but not identical with it are the rules of *hekkesh* ("comparison") and *semukhim* ("juxtaposition"). *Hekkesh* refers to the presence of two laws in the same verse, from which it may be inferred that whatever is true of one is true of the other. For example, "Thou shalt eat no leavened bread with it; seven days shalt thou eat unleavened bread therewith" (Deut. 16:3). Although women are exempt from carrying out positive precepts associated with given time, they are nevertheless obliged to eat unleavened bread on Passover since the verse, by combining the two laws compared the duty to eat unleavened bread with the prohibition against eating leaven, which, being a negative precept, is binding on women (Pes. 43b). *Semukhim* refers to the juxtaposition of two laws in two adjacent verses. For example, "Thou shalt not suffer a sorceress to live; Whosoever lieth with a beast shall be put to death" (Ex. 22:17, 18). Just as one who lies with a beast is put to death by stoning, so, too, a sorceress is put to death by stoning (Ber. 21b). R. Judah, however, rejects the universal application of the *semukhim* rule: "Just because the two statements are juxtaposed, are we to take this one out to be stoned?" (*ibid*). The *semukhim* rule, according to R. Judah, is to be applied only in Deuteronomy (*ibid*).

(3) *Binyan av mi-katuv eḥad* and *binyan av mi-shenei khetuvim*: an inference from a single verse, and an inference from two verses. (A construction – *binyan* – in which the premise acts as a "father" – *av* – to the conclusions drawn from it.) Examples: (a) "He shall pour out the blood thereof and cover it with dust" (Lev. 17:13) – just as the pouring out of the blood (the act of slaughter) is performed with the hand, so must the covering be done with the hand, not with the foot (*hekkesh*). R. Joseph derives from this that no precept may be treated disrespectfully. He observes: "The father of all of them is blood," i.e., from the law that the precept of covering the blood must be carried out in a respectful manner it is learnt that all precepts must be so carried out (Shab. 22a). (b) According to the rabbinic interpretation of Deuteronomy 23:25f., a farm laborer, when working in the field, may eat of his employer's grapes and standing corn. May he likewise eat of other things growing in the field? This cannot be derived from the case of the vineyard, for the owner of a vineyard is obliged to leave the gleanings to the poor (Lev. 19:10), and it may be that since the owner has this obligation, he also has the other. Nor can it be derived from the case of standing corn, for the owner of standing corn is obliged to give *ḥallah*, the priest's portion of the dough (Num. 15:17–21). Taking the two cases together, however, others can be derived from them. For the decisive factor in the case of the vineyard cannot be the gleanings, since the law of gleanings does not apply to standing corn. Nor can the decisive factor in the case of standing corn be *ḥallah* since *ḥallah* does not apply to a vineyard. The factor common to both vines and standing corn is that they are plants, from which it may be inferred that the law applies to all plants (BM 87b). The peculiarities of each case cannot be decisive since they are different from each other; the common factor is decisive. Symbolically they can be represented as:

Axy…………………a
Bxz…………………a
Cx…………………..a

(According to some commentators a simple analogy of type (a) is not to be reckoned among R. Ishmael's principles, both of which are of type (b), the difference being that in *binyan av mi-katuv eḥad* both the cases from which the induction is made are in the same verse whereas in *binyan av mi-shenei khetuvim* they are in separate verses – *Sefer Keritut* 1:3.)

(4) *Kelal u-ferat*; general and particular. If a law is stated in general terms and followed by particular instances, only those instances are covered by the law. Example: "Ye shall bring an offering of the cattle, even of the herd and the flock" (Lev. 1:2). Even though the term "cattle" normally embraces the "beast" (i.e., non-domesticated cattle), the latter is excluded by the particular limitation, "the herd and the flock" (Sifra, introd. 7).

(5) *Perat u-khelal*: particular and general. If the particular instances are stated first and are followed by the general category, instances other than the particular ones mentioned are included. Example: "If a man deliver unto his neighbor an ass, or an ox, or a sheep, or any beast" (Ex. 22:9) – beasts other than those specifically mentioned are included (Sifra, introd. 8).

(6) *Kelal u-ferat u-khelal i attah dan ella ke-ein ha-perat*: general, particular, general – you may derive only things similar to those specified. Example: "Thou shalt bestow the money for whatsoever thy soul desireth [*kelal*] for oxen, or for sheep, or for wine, or for strong drink [*perat*] or for whatsoever thy soul asketh of thee [*kelal*]" (Deut. 14:26). Other things than those specified may be purchased, but only if they are food or drink like those specified (Sifra, introd. 8).

(7) *Kelal she-hu ẓarikh li-ferat u-ferat she-hu ẓarikh li-khelal*: the general requires the particular and the particular the general. Specification is provided by taking the general and the particular together, each "requiring" the other. An example is, "Sanctify unto Me all the first-born" (i.e., males – Deut. 15:19), "whatsoever openeth the womb" (Ex. 13:2). A first-born male would have been understood as included in the term "all the first-born" even if a female had previously been born to that mother. Hence, the particular limiting expression "whatsoever openeth the womb" is stated. But this term would not have excluded one born after a previous Caesarian birth, hence the general term "all the first-born" (Bek. 19a).

(8) *Davar she-hayah bi-khelal ve-yaẓa min ha-kelal le-lammed lo le-lammed al aẓmo yaẓa ella le-lammed al ha-kelal kullo yaẓa*: if a particular instance of a general rule is singled out for special treatment, whatever is postulated of this instance is to be applied to all the instances embraced by the general rule. For example, "A man, also, or a woman that divineth that by a ghost or a familiar spirit, shall surely be put to death; they shall stone them with stones" (Lev. 20:27). Divination by a ghost or familiar spirit is included in the general rule against witchcraft (Deut. 18:10f.). Since the penalty of stoning is applied to these instances, it may be inferred that the same penalty applies to all the other instances embraced by the general rule (Sanh. 67b).

(9) *Davar she-hayah bi-khelal ve-yaẓa liton to'an eḥad she-hu khe-inyano yaẓa lehakel ve-lo lehaḥmir*: when particular instances of a general rule are treated specifically, in details similar to those included in the general rule, then only the relaxations of the general rule and not its restrictions are to be applied in those instances. For example, the laws of the boil (Lev. 13:18–21) and the burn (Lev. 13:24–28) are treated specifically even though these are particular instances of the general rule regarding plague-spots (Lev. 13:1–17). The general restrictions regarding the law of the second week (Lev. 13:5) and the quick raw flesh (Lev. 13:10) are, therefore, not be applied to them (Sifra 1:2).

(10) *Davar she-hayah bi-khelal ve-yaẓa liton to'an aḥer she-lo khe-inyano yaẓa lehakel-lehaḥmir*: when particular instances of a general rule are treated specifically in details dissimilar from those included in the general rule, then both relaxations and restrictions are to be applied in those instances. For example, the details of the laws of plague in the hair or beard (Lev. 13:29–37) are dissimilar from those in the general rule of plague spots. Hence, both the relaxation regarding the white hair mentioned in the general rule (*ibid.*, 13:4) and the restriction of the yellow hair mentioned in the particular instance (*ibid.* 13:30) are to be applied (Sifra 1:3).

(11) *Davar she-hayah bi-khelal ve-yaẓa lidon ba-davar he-ḥadash i attah yakhol lehaḥaziro li-khelalo ad she-yaḥazirennu ha-katuv li-khelalo be-ferush*: when a particular instance of a general rule is singled out for completely fresh treatment, the details of the general rule must not be applied to this instance unless Scripture does so specifically. For example, the guilt offering of the leper requires the placing of the blood on the ear, thumb, and toe (Lev. 14:14). Consequently, the laws of the general guilt offering, such as the sprinkling of the blood on the altar (Lev. 7:2) would not have applied, were it not for Scripture's stating: "For as the sin offering is the priest's, so is the guilt offering" (Lev. 14:13), i.e., that this is like other guilt offerings (Yev. 7a–b).

(12) *Davar ha-lamed me-inyano ve-davar ha-lamed mi-sofo*: the meaning of a passage may be deduced: (a) from its context (*mi-inyano*), (b) from a later reference in the same passage (*mi-sofo*). As an example of (a), "Thou shalt not steal" in the Decalogue (Ex. 20:13) must refer to the capital offense of kidnapping, since the two other offenses mentioned in the same verse, "Thou shalt not murder" and "Thou shalt not commit adultery," are both capital offenses (Mekh., Ba-Ḥodesh, 8, 5). In example of (b), "I put the plague of leprosy in a house of the land of your possession" (Lev. 14:34), refers only to a house built with stones, timber, and mortar, since these materials are mentioned later in verse 45 (Sifra, introd. 1:6).

(13) *Shenei khetuvim ha-makhḥishim zeh et zeh ad she-yavo ha-katuv ha-shelishi ve-yakhri'a beineihem*: two verses contradict one another until a third verse reconciles them. For example, one verse states that God came down to the top of the mountain (Ex. 19:20), another that His voice was heard

from heaven (Deut. 4:36). A third verse (Ex. 20:19) provides the reconciliation. He brought the heavens down to the mount and spoke (Sifra 1:7).

Other Rules

Among other rules found in the literature are *ribbui* ("inclusion") and *mi'ut* ("exclusion"). When found together these terms denote a variation of the *kelal u-ferat* rules (BK 86b; Shev. 26a). The term *ribbui* is also used to denote that the Hebrew particles *af, gam, et* indicate an inclusion or amplification, and the term *mi'ut* to denote that the particles *akh, rak, min* indicate an exclusion or limitation. This method of interpretation, used particularly in the school of R. Akiva, proceeds from the premise that every word of Scripture has significance. For instance, the particle *et* begins the verse "Thou shalt fear the Lord thy God" (Deut. 10:20). This implies that the application of the verse is extended to include reverence for scholars (Pes. 22b). According to Akiva's school the use of the infinitive absolute (which repeats the verb) implies an amplification. An example is "That soul shall utterly be cut off" (Num. 15:31) – "*hikkaret tikkaret*." R. Akiva remarks, "*Hikkaret* in this world, *tikkaret* in the world to come," but R. Ishmael demurs, "The Torah speaks in human language," i.e., the duplication of the verb is according to regular Hebrew usage and therefore carries no additional implication (Sif. Num. 112). The word *kol* ("all") is treated as a *ribbui*. For example, the duty of recalling the Exodus "all [*kol*] the days of thy life" (Deut. 16:3) devolves upon one at night as well as by day (Ber. 1:5).

Dots (*nekuddot*) found over certain letters are interpreted as calling attention to some special feature, e.g., over *va-yishakehu*, ("and he kissed him"; Gen. 33:4), to teach, according to one opinion, that Esau was completely sincere (Gen. R. 78:9). **Gematria* refers to the numerical equivalent of a word, e.g., the name Eliezer, Abraham's servant, has the same numerical value as the number of soldiers (318) Abraham takes out to battle (Gen. 14:14). The Midrash therefore states that Abraham sent only Eliezer into the battle (Gen. R. 43:2). In **notarikon* ("shorthand") the letters of a word represent the initial letters of other words. Some examples are: *nimreẓet* ("grievous"; Kings 2:8) alludes to *no'ef* ("adulterer"), *mo'avi* ("Moabite"), *roẓeaḥ* ("murderer"), *ẓorer* ("enemy"), *to'evah* ("abomination"; Shab. 105a). *Al tikrei* ("do not read… but") is a change of reading to convey a different meaning, e.g., *banayikh* ("thy sons"; Isa. 54:13) is read as *bonayikh* ("thy builders"; Ber. 64a). Where the vocalization differs from the consonantal form of the text, there is a debate as to which is to be followed in order to determine the law (Sanh. 4a). Two general rules found frequently are *ein mukdam u-me'uḥar ba-Torah* ("the Torah does not proceed in chronological sequence"; Pes. 6b) and *ein mikra yoẓe mi-ydei feshuto,* "a Scriptural verse never loses its plain meaning," i.e., regardless of any additional interpretation (Shab. 63a; Yev. 24a).

R. Ishmael and R. Akiva

It is stated (Shev. 26a) that R. Ishmael followed his teacher, R. *Neḥunya b. ha-Kanah, in expounding Scripture according to the rules of *kelal u-ferat* and that R. Akiva followed his teacher, *Nahum of Gimzo, in expounding by the rules of *ribbui* and *mi'ut*. The latter method is more inclusive and less confined by the plain meaning of the text. From this and some of the other examples given above it will be seen that the school of R. Ishmael was more restrictive in its use of hermeneutical principles than that of R. Akiva. Two further points of departure must be noted. According to R. Ishmael a matter itself derived from Scripture by means of one of the hermeneutical principles cannot serve as a premise for the derivation of an additional conclusion through the operation of these principles, whereas according to R. Akiva one may "learn from a matter itself derived from Scripture" (*lamed min ha-lamed*; Zev. 57a). According to R. Ishmael the principles of *kal va-ḥomer* and *binyan av* cannot be implemented toward the imposition of a penalty (*ein oneshim min ha-din*), a view to which R. Akiva takes exception (TJ, Yev. 11:1, 11d; J.N. Epstein, *Prolegomena* (1957) 525–6). Despite the appearance of two distinct approaches to the use of the hermeneutical rules, a closer reading of the talmudic sources reveals that R. Ishmael did employ R. Akiva's rules of *ribbui* and *mi'ut*. At the same time, R. Ishmael is not quoted in talmudic sources as having used each and every one of the thirteen principles. Thus, the *Sifra* might be attributing the thirteen principles to R. Ishmael and his school rather than actually quoting him.

The use of the these hermeneutic principles spread because of the increase in Torah study coupled with the increase in disagreements both among the rabbis and between them and the other Second Temple Jewish sects. The use of the principles also gave greater authority to the link between the Pentateuchal text and the law, especially when the law is not stated outright in the text. Over time, as the Mishnah became an authoritative halakhic text, the application of these rules slowly petered out.

[Louis Jacobs / David Derovan (2nd ed.)]

HERMER, MANFRED (1915–), South African architect. Born in Volksrust, Transvaal, he practiced in Johannesburg from 1939. Later he became a leading authority in South Africa on the planning and construction of theaters. His major work in that field was the Civic Theater in Johannesburg, forming the nucleus of the complex of buildings for the city's projected Civic Center. Hermer designed other theaters and also country and social clubs, industrial buildings, and several private hospitals and clinics including the Ashkelon hospital in Israel. His most prominent building is probably the Ponte City Apartments, a 54-story block in Johannesburg, built in 1976, which was once the most luxurious in the city. His firm is now known as Manfred Hermer, Grosskopff and Lombart. He later made his home in Canada.

HERMETIC WRITINGS, a collection of religious and philosophical treatises, also known as *Hermetica*, which was traditionally attributed to Hermes Trismegistos (Hermes the thrice-great). The *Hermetica* contain cosmological, ethical, and eschatological discourses, based on the assumption that only selected spirits may achieve bliss and salvation of the soul through gnosis (esoteric knowledge). In addition to this gnostic basis, Platonic and eastern religious elements may be discerned. The *Hermetica*, which are of late origin (4th–11th century C.E.), were produced on Egyptian soil by men of Greek speech and culture, although part was written in Latin. Some Jewish influence may be traced in the *Hermetica*. Some of the accounts of the ascent of the soul through the celestial spheres, given in the hermetic writings, have affinities with similar notions in the literature of the *Merkabah mystics. The writers of Book 1 (the *Poimandres*) and Book 3 knew the Mosaic account of the creation; they were also acquainted with Stoic cosmology, and tried to harmonize the one with the other, to "reconcile" Genesis to science: "When the period was completed … all living creatures, having until then been bisexual, were parted asunder … and so there came to be males and females. And God spoke in holy speech: 'Increase and multiply abundantly, all ye that have been created and made'" (1:18). "And each god (element) by his separate power, put forth that which he was bidden to put forth. And there came forth four-footed beasts and creeping things and fishes and winged birds, and grass and every flowering herb, all having seed in them according to their diverse natures … [and God ordained the] births of men, and bade mankind increase and multiply abundantly …" (3:3). Jewish elements in the doctrines of the *Poimandres* include teachings which originated in Jewish Hellenistic circles closely connected with the school of Philo, such as ideas about the Logos and the *Anthropos*. *Anthropos* in the *Hermetica* is more than the Adam of Genesis, the ancestor of the human race; he is a transcendental being, the personification of humanity, a notion evolved out of a combination of data from Genesis with the Platonic concept of the idea of Man. The rabbis, too, endowed Adam with superhuman qualities: His body filled the world from end to end and he shone with a heavenly radiance (Ḥag. 12a; BB 58a).

Hermes Trismegistos

Hermetic literature, as can be judged from its many translations, exercised some influence even in antiquity, the Slavonic Book of *Enoch possibly reflecting such influence. It left its mark in the Christian world, on the literature of Syrians and Arabs and, in some measure, on early Jewish writings. Hermes Trismegistos was identified in Hellenized Egypt with the Egyptian deity, "thrice-great" Thoth. To him were attributed not only the *Hermetica* proper, but also various writings on astrology, magic, and alchemy. Much hermetic literature existed in Arabic translation in the Middle Ages and it is through this literature that it reached, and sometimes influenced, Jewish thinkers. *Judah Halevi includes Hermes with Asclepius, Socrates, Plato, and Aristotle, among those supposed – by medieval neoplatonic philosophy – to be able to achieve the soul's ascent and its unity with the Active Intellect (*Kuzari*, 1:1). The treatise "Teachings on the Soul," by Pseudo-*Baḥya, appears to be influenced by the *Hermetica*. In his famous letter to Samuel ibn Tibbon, *Maimonides includes the books of Hermes under the rubric of ancient (i.e., pre-Aristotelian) philosophy, the study of which is a waste of time (see A. Marx, in JQR, 25 (1934/35), 380). In the *Guide of the Perplexed* (3:29), Maimonides mentions a work ascribed to Hermes among the compositions which spread the knowledge of idolatry throughout the world. Aside from stray references in books translated from Arabic and despite the huge literature extant in Arabic, there seems to be only one book translated into Hebrew which is ascribed to Hermes. Profiat *Duran, in *Ḥeshev ha-Efod* (quoted by Judah Muscato in his commentary to the *Kuzari*), identifies Hermes with Enoch, and regards him as the originator of the calendar.

[Solomon Rappaport and Lawrence V. Berman]

°**HERMIPPUS OF SMYRNA** (third century B.C.E.), peripatetic biographer. He is quoted by Josephus (Apion, 1:163–5) as recording in his work on *Pythagoras that the soul of one of the latter's disciples imparted to him certain precepts, notably, to avoid passing a spot where an ass had collapsed, to abstain from thirst-producing water, and to avoid calumny, in the practice of which Pythagoras "was imitating and appropriating the doctrines of the Jews and Thracians." *Origen cites another work of Hermippus in which he states cat-

egorically that Pythagoras derived his philosophy from the Jews (so also Antonius Diogenes and Aristobulus). Attempts to connect Greek philosophers with the Orient are common, however (cf., e.g., Megasthenes), and based apparently on romantic speculation.

HERMLIN, STEPHAN (**Rudolph Leder**; 1915–1997), German author. Born in Chemnitz, Germany, the son of East European Jewish immigrants, Hermlin joined a Communist youth organization in 1931. He fled Germany for Palestine in 1936. Disillusioned with Zionism, he left Tel Aviv for France in 1937. After the German invasion he was interned briefly but avoided deportation. In 1943 he escaped to Switzerland. After the war he worked in the American sector of Germany, before leaving for the Soviet sector in 1947. In exile Hermlin had established a reputation as a poet, and during the 1950s he wrote paeans to Stalin in a Socialist Realist mode. He gradually ceased writing poetry, but remained active as a translator, editor, essayist, and author of literary prose. Examples from the latter genre include "Die Zeit der Einsamkeit," which deals with the humiliations of a Jewish woman in Vichy France, "Die Zeit der Gemeinsamkeit," one of the first attempts in literature to depict the uprising in the Warsaw ghetto, and his semi-autobiographical *Abendlicht*. Hermlin also wrote essays about his postwar visits to the ruins of the Warsaw ghetto, and a poem dealing with Auschwitz: "Die Asche von Birkenau."

In part due to his persecution by the Nazis, Hermlin enjoyed a reputation in East Germany as an important cultural and moral authority. In 1996 the journalist Karl Corino determined numerous elements of Hermlin's biography to be exaggerations or outright fictions. In questionnaires, interviews, and his literary work, Hermlin, for example, had implied that his mother, an *Ostjuedin*, was a gentile Englishwoman and that his father, who immigrated to England in 1939, died in a German concentration camp. Hermlin had embellished his own anti-fascist activities, asserting incorrectly that he had been imprisoned in a German concentration camp and that he had fought against Franco in Spain. Hermlin died in Berlin.

[Michael Brenner (2nd ed.)]

°**HERMOGENES** (date unknown), author of a history of Phrygia in which he tells of the Phrygian Noah, Nannacos. Josephus mentions him (Apion, 1:216) among those historians who wrote of the Jews and testified to their antiquity.

HERMON, MOUNT (Heb. הַר חֶרְמוֹן; in Ps. 89:13 and Song 4:13, called just Hermon), the highest mountain in Israel, range in Lebanon, Syria, and (after the Six-Day War) Israel on the N.W. border of Transjordan. Mt. Hermon dominates its surroundings and its impressive peak is visible from a distance of more than 60 mi. (100 km.). It is called Jebel al-Sheikh ("the chieftain mountain") by the Arabs. In the south Mt. Hermon borders on the edge of the basalt table-land of the Golan; in the west on the valley of the Senir River (Ar. Ḥaṣbānī River and its continuation Wadi al-Taym); in the north on the Beirut-Damascus highway, which passes through the upper valley of the Parpar River (now called Barada River); and in the east on the Damascus tableland. Mt. Hermon may be considered to be an upfaulted block whose anticlinal axis, running northeast-southwest, constitutes the southern continuation of the Anti-Lebanon range. The slopes of the massif turning southeast and east are much steeper than those in the west. The Mt. Hermon block extends over a length of about 28 mi. (45 km.) and is widest in the south – about 15 mi. (25 km.). Tectonics, together with erosional processes, have created secondary depressions, most of which parallel the direction of the axis. Its highest peak, reaching 9,230 ft. (2,814 m.) above sea level, is called Qaṣr ʿAntar, "the fortress of ʿAntar," the Black hero of Arab legend. The top stratum of the Hermon massif is mostly Jurassic limestone, while younger strata (Lower Cretaceous, Cenomanian) have preserved themselves only in the mountain's circumference. Mt. Hermon does not appear to have ever undergone glaciation, so that alpine characteristics (e.g., needle peaks, cirques, arêtes, etc.) are absent. Karstic erosion, on the other hand, has been strongly active in the mountain's limestone, resulting in rough terrain features (crags, boulders, sinkholes, etc.) and in an almost complete absence of soil from much of the area. The latter fact also explains the scantiness of the vegetation cover, in spite of the abundant precipitation (dew, rain, and snow), which attains a maximum of 60 in. (1,500 mm.) per year on the mountain's highest reaches. These waters are quickly absorbed in the porous rocks and reappear in strong karstic and tectonic springs at the foot of the mountain. Its peak is covered with snow for about two-thirds of the year, and its waters feed the headstreams of the Jordan and springs descending eastward into the Damascus basin.

History

In the Bible Mt. Hermon is considered the northern boundary of Transjordan, i.e., of the territory of the Amorite kings conquered by Israel (Deut. 3:8; Josh. 12:1), as well as the ex-

treme limit of the territory of the half-tribe of Manasseh east of the Jordan (Josh. 13:11). The name Hermon is derived from the root *ḥrm* ("sacred"), and like most high mountains it was thought to be the residence of a god, whose name, Baal-Hermon, also served as the name of the mountain itself (Judg. 3:3; I Chron. 5:23). According to Deuteronomy 3:9, Mt. Hermon was called Sirion by the Sidonians (Phoenicians) and Senir by the Amorites. These names, which apparently designate the entire Anti-Lebanon range and not just the Hermon peak, appear in the Egyptian Execration Texts of the 19th century B.C.E., and in Ugaritic literature, in a treaty between the Hittites and Amorites (c. 1350 B.C.E.), in which the two sides swear, inter alia, by the gods of Mt. Shariyanu. When the Assyrian king Shalmaneser III attacked Damascus in 841 B.C.E., the Assyrian army had first to overcome Hazael's forces at Mt. Sa-ni-ru. As late as the 10th century C.E., Arab geographers mention the name Snir. In the Psalms, Mt. Hermon is contrasted with Mt. Lebanon (29:6); the land of the Hermons is mentioned with the land of Jordan (42:7); and Mt. Hermon is also juxtaposed with Mt. Tabor (89:13), which led to the Hill of Moreh being called the "Little Hermon." The Bible praises the dew of Hermon (Ps. 133:3), its lions (Song 4:8), and its cypresses (Ezek. 27:5). In classical times Jerome mentions that a temple stood on the mountain (Onom. 21:13–14). A Greek inscription found near the peak states that only those who "had taken the oath" were allowed to continue on from there. Snow from Mt. Hermon was sent to Tyre. The Targums called it Tur Talga ("Mountain of Snow"; Targ. Onk., Deut. 3:9 and Song 4:8), a name still used by the Arabs, Jebel al-Thalj.

In recent times, most parts of Mt. Hermon have been uninhabited. Only at its foot and on its lowest slopes villages nestle on protected sites, many of them inhabited by minority groups (Druze, Alaouites, etc.) that sought refuge there hundreds of years ago. The larger part of Mt. Hermon, its northwestern and western section, including the highest point of the massif, is in Lebanese territory. The northeastern part belongs to Syria. In the Six-Day War (1967), Israel forces occupied the formerly Syrian southeast corner (including the high "Hermon Shoulder"), where Syrian troops had built an elaborate network of fortifications and from where they had frequently shelled the Ḥuleh Valley settlements. They had also begun to dig a canal there, with the intention of diverting the Jordan sources from Israel. Among the villages that came under Israel jurisdiction on June 10, 1967, are the Druze center Majdal *Shams and the Alaouite (Nusairi) village of Ghajar. After 1967 roads were built on Mt. Hermon, two of which meet near the highest point in Israel hands (7,320 ft., or 2,200 m., above sea level), and a recreation and winter-sports center was constructed on the Hermon. In all, Israel controlled nearly 30 sq. miles (70 sq. km.) of the mountain. From 1969 Arab guerrillas installed themselves on Lebanese territory on the western slopes of Mt. Hermon, from which they repeatedly shelled Israel population centers; the Israel Defense Forces reacted with air attacks and land assaults on these hideouts.

[Michael Avi-Yonah and Efraim Orni]

HEROD (late first century B.C.E.), son of *Herod the Great and Mariamne, daughter of *Simeon B. Boethus. Implicated in the conspiracy of his half brother *Antipater, against his father (5 B.C.E.), Herod was cut off from his father's will and forfeited his hereditary rights (he stood next to Antipater in the line of succession). Herod the Great divorced Mariamne for concealing the plot and removed her father from the office of high priest. Herod thereafter lived in Caesarea as a private citizen. His wife Herodias, the daughter of *Aristobulus, son of Mariamne the Hasmonean, left him and married his brother Herod *Antipas.

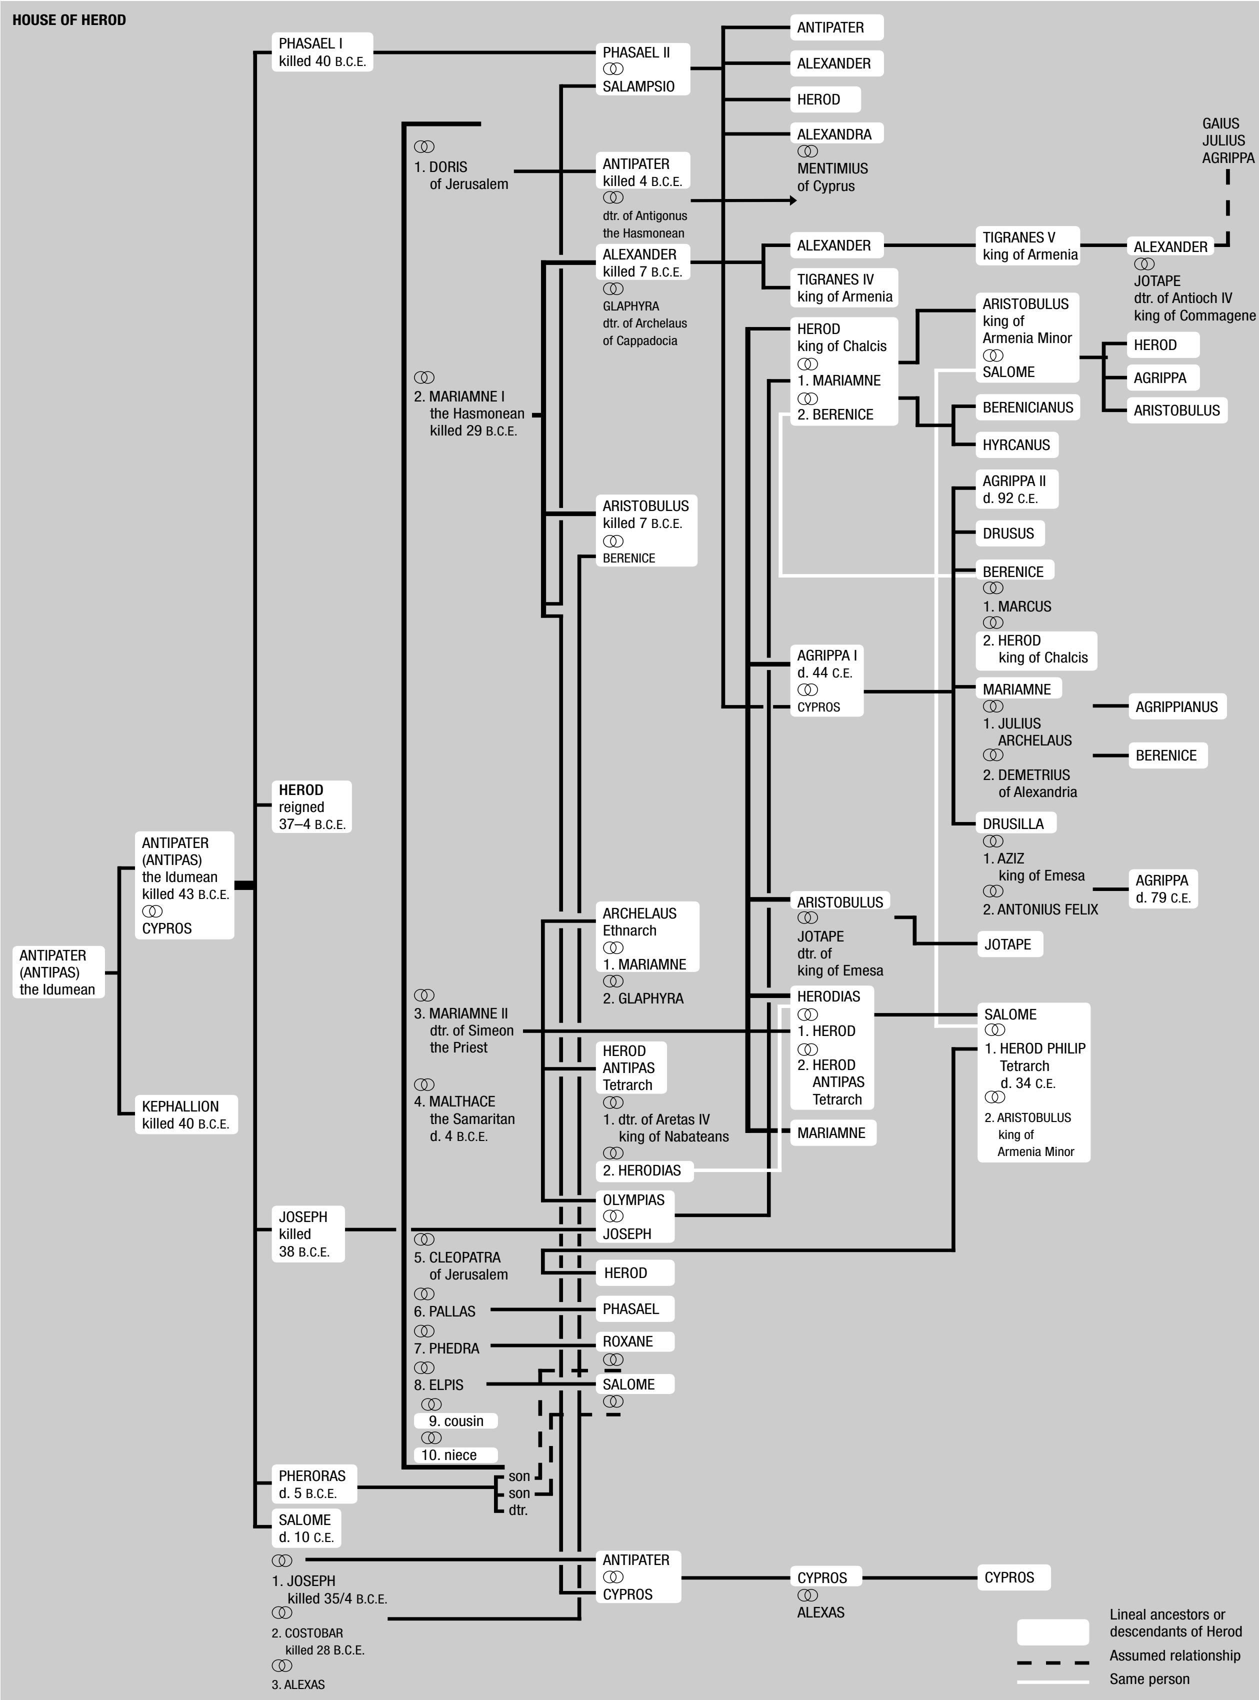
[Edna Elazary]

HEROD I (73?–4 B.C.E.), king of Judea from 37 B.C.E. until his death. Herod was the second son of the Idumean *Antipater and *Cypros. Nothing is known of his youth, but it is clear that he began the struggle for power early in life. In 47 B.C.E. he was appointed by Antipater governor of Galilee, ruthlessly crushing the revolt against Antipater's rule led by Hezekiah, and having the rebels put to death without trial. The imposition of the death penalty, solely on his own secular authority, led to Herod's arraignment before the *Sanhedrin in Jerusalem; had he been found guilty he would have faced the death penalty. Herod, however, intimidated the judges by appearing before the Sanhedrin with a heavily armed guard. But a member of the Sanhedrin, probably *Shammai, admonished his colleagues, rebuking them for their cowardice, and warned them that any deviation from their legal duties would eventually bring about their own deaths at the hands of the culprit. At this the members of the Sanhedrin resolved to pass sentence. However, *Hyrcanus II interrupted the session and allowed Herod to slip out of the city. Herod escaped to Roman Syria where the Roman governor appointed him governor of Coele Syria at Samaria. By virtue of this appointment Herod was able to return to Jerusalem and threaten his enemies, and his father was barely able to prevent him from entering the city and punishing his judges, including Hyrcanus himself. A record of the clash between Herod and the Sanhedrin seems to have been preserved in the talmudic story (Sanh. 19a) where, however, the incident is ascribed to Alexander *Yannai. After the assassination of Julius Caesar in 44 Herod joined Cassius, who temporarily established his rule in the East. Heavy taxes were imposed upon the inhabitants of Judea and Herod exacted them with great zeal, in order to curry favor with the foreign ruler. In 43 Antipater was killed by the Jew Malichus, seemingly with the connivance of Hyrcanus. Herod and his brother, Phasael, appealed to Cassius

The division of Herod's kingdom (4 B.C.E. to 6 C.E.). From Y. Aharoni and M. Avi-Yonah, Macmillan Bible Atlas, *Carta, Jerusalem, 1968.*

who had Malichus murdered. That same year Antigonus II, son of Aristobulus II, invaded Galilee but was driven out by Herod. Hyrcanus, afraid of the vengeance of his nephew, now accepted Herod as a savior. At that time Herod became betrothed to *Mariamne. By this betrothal Herod was able to attach himself to the Hasmonean dynasty, but at the expense of bringing trouble to both parties.



Power Through Rome

In 41 Marc Antony arrived in the East. Despite the complaints which Herod's opponents laid before Antony, Herod succeeded in bribing the Roman ruler, who appointed him and his brother Phasael tetrarchs of Judea, apparently under the supervision of Hyrcanus. Herod's opponents, who had already attempted to express their views before Antony, sent another large delegation which the Romans dispersed with much bloodshed. The leaders of the previous delegation, who had been imprisoned by order of Antony, were put to death.

In the year 40, the Parthians invaded Syria. With their assistance Mattathias Antigonus was able to seize the throne of Judea; he captured Jerusalem and besieged Herod, Phasael, and Hyrcanus in the palace of the Hasmoneans in the city. Phasael and Hyrcanus were persuaded to leave their stronghold to negotiate with the Parthian commander, who was in Galilee at the time; Phasael was put in chains by the Parthians and committed suicide (or was killed), while Hyrcanus was taken captive. Herod succeeded in escaping from Jerusalem together with his family. He left the fugitives in *Masada in the care of his brother Joseph, and himself went to Alexandria and from there to Rome to ask Antony for the throne. Since Herod had already proved his loyalty to Rome, the senate, on the advice of Antony and Octavian, proclaimed him king of Judea, and he was promised the assistance of Rome in his attempt to gain the throne. Herod now mobilized an army of mercenaries and attempted to conquer Galilee. This he failed to do, apparently because of the vehement opposition of the inhabitants. He thereupon turned to the coast and to Idumea and then relieved Masada, which had been besieged by Antigonus. The war dragged on for about two years without Herod's being able to defeat Antigonus. When Herod realized that he would not be able to conquer Jerusalem with his own forces, he requested the help of Antony. The Parthian war having ended, Antony was able to send a large army under the command of Sossius. In the spring of 37 B.C.E. the combined armies laid siege to Jerusalem, which held out for five months but fell at the end of the summer. Only with great difficulty was Herod able to prevent the Romans from completely destroying it. Antigonus was captured and later put to death by Antony, prompted, no doubt, by Herod.

When he came to power, Herod took absolute control of the government by putting to death 45 members of the Sanhedrin who supported the Hasmoneans. This destroyed the political power of the Sanhedrin, which seems to have been left with only the authority of a religious court, lacking any real influence in practical legislation. He also made the appointment to the high priesthood dependent on his favor and during his reign dismissed and appointed high priests arbitrarily. Herod was king only by the grace of Rome, which regarded him as a convenient instrument for carrying out its policy in the East. He established his rule on the basis of Roman patronage, and with great diplomatic skill and personal charm succeeded in winning the favor of the constantly changing Roman rulers. Herod was loyal to Antony during the period that he was all-powerful in the East. Herod leased the district of Jericho, which was of great economic importance, from Cleopatra, who had received it together with some maritime cities from Antony. When war broke out between Octavian and Antony, Herod, at the request of Cleopatra, was sent to subdue Malichus, king of the Nabateans. After a heavy defeat at the beginning of the war, Herod defeated the Nabateans near Philadelphia and finally subdued them in 31 B.C.E.

However, with the defeat of Antony at Actium it seemed as if Herod was doomed. But, unperturbed, he immediately abandoned his old friend and endeavored to join the side of the victor. Because of Herod's past friendship with Antony, Octavian ordered him to come to Rhodes to defend himself, but realizing to the full the benefit that Herod could bring Rome in the east he was not only gracious to him but even returned to him those regions which Antony had given to Cleopatra. Later Herod welcomed Octavian at Ptolemais (Acre) with great pomp, provided his army with abundant provisions, and then went to Egypt to congratulate him on the deaths of Antony and Cleopatra. At that meeting Octavian ceded to him the maritime towns and certain towns in Transjordan. During the period of Octavian's rule in Rome

(as *Augustus), Herod attained the pinnacle of his power. In 23, Augustus decided that the area of his rule be extended by the addition of territories in northern Transjordan (Trachonitis, Bashan, Auranitis). In 22/21 Herod went to Mitylene to visit Agrippa, Augustus' son-in-law, who was acting as viceroy in the East, and there established extremely cordial relations with him. In 20, Augustus himself came to Syria and met Herod; in consequence of this meeting, districts in the Ḥuleh Valley (Paneas and Ulatha) were transferred to Herod's kingdom. In 19 Herod set sail in the Black Sea at the head of a fleet in order to aid Agrippa in his campaign against the kingdom of Bosphorus.

From this time on Herod was able to unite under his crown the whole of the region previously ruled by the Hasmonean kings (except for some of the cities of *Decapolis), as well as areas beyond those borders in the northeast. His subjects included Jews, Greeks, and many hellenized Syrians. He was regarded as one of the most powerful monarchs in the sphere of Roman patronage in the east, and foreign authors flattered him with the title "the Great." His official status was that of "a king who was an ally and friend of the Roman people" (*rex socius et amicus populi Romani*). This was a personal rather than a hereditary office; he had the right to suggest heirs but confirmation lay with the emperor. Similarly, he possessed no authority to conduct an independent foreign policy and there is no reason to suppose that in his time Judea was exempted from paying tribute to Rome. In internal affairs, however, Rome gave Herod unlimited authority. In this sphere he was given four prerogatives: administrative, judicial, financial, and the authority to maintain his own army; within this framework he did as he pleased, being subject not even to Jewish law. His council, convened in the manner of hellenist kings, had no more than an advisory function. Insofar as Herod did not inherit his governmental institutions from the Hasmonean kings he set up an administration which was highly hellenistic in character. Most of its officials were without doubt hellenizers or even foreigners. In his court too he was attended predominantly by hellenizers, conspicuous among them being Nicholas of Damascus, his chief counselor, who wrote his biography and instructed him in Greek wisdom. His favorites were graded ("the king's familiars," "the king's friends") in the hellenistic manner. His army, too, seems to have been hellenistic in character. Jews constituted only a small portion of it, his main force of professional soldiers being composed of foreign mercenaries from Thrace and Gaul.

The Dynastic Murders

Despite this, there is no doubt that Herod remained an eastern monarch both in his mode of life and in his attitudes. He destroyed, in the full eastern hellenistic tradition, all members of the Hasmonean house, whose existence seemed to him to endanger his position. When he began his reign, after defeating Antigonus and putting him to death, he ignored the right to the high priesthood of the legal heir *Aristobulus, brother of his wife Mariamne, in favor of *Hanamel the Egyptian. This led Alexandra, mother of Mariamne and Aristobulus, to complain to Cleopatra, and Herod was compelled to dismiss Hananel and appoint Aristobulus. However, he kept the young Hasmonean under close surveillance and, on becoming aware of his growing popularity with the people, issued a secret order for him to be put to death. The young Aristobulus was drowned by Herod's courtiers in 36 while in a swimming pool in Jericho. Alexander complained to Antony about the murder and Herod was summoned to defend himself; but once again he was able to save himself by bribing the Roman ruler. Before his departure for Rhodes to present himself before Octavian in 30, Herod had the aged Hyrcanus put to death, so that, should he himself die by order of Octavian, the ex-monarch should not rule in his place. However, these murders created bitter and tragic enmity between Herod and Mariamne. There was in addition a pent-up hatred between the proud Mariamne and Herod's mother Cypros and his sister Salome. In order to keep them apart, before setting out on his journey to Octavian, Herod sent Mariamne and Alexandra to the fortress of Alexandrion and instructed his officers there to do away with Mariamne should he not return. He seems to have done the same before his journey to Antony in 35. Mariamne learned of this and her enmity toward Herod grew. The tension continued after Herod's return from Rhodes. In the end Mariamne was accused by Cypros and Salome of attempting to poison her husband. The king set up a family court accusing Mariamne of adultery and of planning to murder him. She was found guilty and put to death in 29. After her death the king was filled with remorse and suffered from such severe melancholy that he became dangerously ill. Having heard a rumor that he was dying, Alexandra attempted to seize the citadel of Jerusalem but failed, and she too was put to death.

There now remained (apart from her two daughters) only Mariamne's two sons, Alexander and Aristobulus; these were designated to inherit Herod's power and were sent to Rome to be educated. Following the death of Mariamne, Herod contracted many other marriages. But even before his marriage to Mariamne he had married Doris of Jerusalem, who was possibly an Idumean, and who had given birth to his first-born son, Antipater. Of his 10 wives, the names of eight are known. These included Mariamne, daughter of Boethus, a priest from Alexandria, Malthace the Samaritan, and Cleopatra of Jerusalem. He had 15 sons and daughters by these wives.

In 18/17 the two sons of Mariamne returned home and by virtue of their birth and their good looks at once endeared themselves to the people. They openly revealed their resentment at the slaying of their mother as well as their contempt for Herod's family. They quarreled with their father and with his relatives, particularly with his sister Salome and his brother Pheroras, as well as with their half brother Antipater; the last named was brought back to the court by Herod to counterbalance Mariamne's sons and to demonstrate that the succession could fall to another. Eventually Herod did in fact make Antipater heir apparent. For some years the court was full of intrigues, slander, and mutual accusations until finally Herod

was forced to bring the matter before Augustus. The latter endeavored to make peace between Herod and his sons and on his initiative a new succession was evolved which, on the death of Herod, would divide the kingdom between the three sons. Antipater, however, attempted to undermine the position of his brothers and eventually the quarrels were renewed. Herod, whose mistrust and cruelty became pathological in his old age, was convinced that Mariamne's sons were plotting his death. Imprisonments, investigations, and tortures against a background of slander and spying turned the court and the whole country into a hotbed of intrigue and made the lives of Mariamne's sons unbearable. Some efforts at reconciliation were made, but in the end Alexander and Aristobulus were brought before Herod's council accused of conspiring to murder the king. Herod obtained permission of Augustus to punish them as he thought fit. The trial court, which included Roman officials, found the king's sons guilty, and ignoring the protests of Nicholas of Damascus, Herod had them put to death (7 B.C.E).

Antipater thus appeared to be the unopposed heir to the throne, although his claim still lacked the endorsement of Augustus. Automatically he began fearing for his position, and Herod's love of his grandchildren, the sons of Alexander and Aristobulus, caused him to feel his position insecure. He began to form plans to rid himself of the king. A gloomy chapter again began of mutual accusations of varying degrees of veracity and of murder plots, in which Pheroras and his wife were also involved. While Antipater was in Rome, having been sent by Herod to obtain the emperor's assent to the succession, his plot against his father was discovered. On returning to Jerusalem he was brought before a family trial in the presence of the Roman governor of Syria. Sentence of death was pronounced which required confirmation by Augustus. Augustus is reported as having commented, "It is better to be Herod's pig than his son," but the sentence was nevertheless confirmed. However, when the sentence was carried out in the year 4, the aged Herod was lying in his palace in Jericho, and died five days later. Herod apparently died of cardio-renal failure, or failure of the heart and kidneys, but he was already suffering from major illnesses from around 7 B.C.E., accompanied by bouts of uncontrollable anger and cruelty. In his last will he divided the kingdom between his sons *Archelaus and Herod *Antipas, the sons of Malthrace, and Philip, son of Cleopatra.

Ereẓ Israel under Herod's Rule

Herod was a courageous soldier and commander, an efficient and energetic administrator, and in particular a talented diplomat whose skill lay in his ability to assess who were the real powers of his period; his personality was such that he knew how to win over all types of people. At the same time he was a man of unlimited ambition whose opportunism was never restricted by ties of friendship or loyalty (the only exception being his loyalty to his brothers); when in power he brooked no opposition but ruled with cruelty, intensified by his suspicion and jealousy. Herod's rule destroyed the internal organization of the Jewish community. In contrast to the Hasmonean kings who had ruled jointly with the popular institutions, Herod abolished all traditional autonomous institutions, and in practice he did away with the authority of the Torah, although this never took official form. He regarded the kingdom as his private property. One of the aims of his policy was to strengthen the foreign element in Ereẓ Israel and to bring the kingdom into the Roman hellenistic cultural orbit, with the aim of securing it as a sure link in the Roman Empire. Apart from political considerations, a personal inclination toward Greek culture was responsible for his policy. He established Greek cultural institutions such as the theater and the hippodrome in Jerusalem, and outside his own country in Syria, Asia Minor, and the islands of the Aegean Sea he erected splendid public buildings, such as aqueducts, theaters, and colonnades. In Greece itself he proffered aid to gymnasiums; his monetary grants helped finance the Olympic games, and earned him the honorary title of life president. In Ereẓ Israel itself he carried out building projects and extensive settlements that undoubtedly benefited the rural population, particularly the landless peasants, and also helped to root out the menace of robber bands. This was true particularly of the areas in Trachonitis where highway robbery was a daily occurrence. On the other hand the establishment of cities of veterans strengthened Greek influence and reinforced the position of the foreign element in the country. Herod built Sebaste on the site of *Samaria and in 27 allocated land to 6,000 of its inhabitants; he established *Caesarea and made it the largest port in the country (22–9); he rebuilt the maritime city of Anthedon and established the cities of Antipatris, Phasaelis, *Geba Parashim, and *Heshbon. To ensure his internal authority and for the protection of the borders, Herod built or rebuilt a number of fortresses: *Antonia in Jerusalem, *Machaerus and *Herodium in Judea, Herodion in Transjordan, Cypros near Jericho, and *Masada. He built palaces for himself in Jerusalem and in other cities.

Scholars are divided in their assessment of the economic condition of the people and state, and of the financial sources of his government. In addition to government and court expenditure Herod also spent money on gifts for his relatives and Roman politicians who were his allies in Rome. At the same time his kingdom paid tax to Rome. Herod's revenues are estimated at 2,000 talents a year, of which 1,300 were produced by the taxes of Judea; it is possible that the remaining 700 talents were drawn from his business undertakings and from the income from his private property. He rented the copper mines of Cyprus from Augustus for 3,000 talents, taking half their output. By expropriating the wealth of his political opponents he acquired many estates in different parts of the country, and apparently inherited much landed wealth from the Hasmonean house. A substantial part of his revenues from these properties, however, came from payments made by the peasants on his estates: "Since he was involved in expenses greater than his means, he was compelled to be harsh to his

subjects… since he was unable to mend his evil ways without harming his revenues, he exploited the ill will of the people to enrich himself privately" (Jos., Ant. 16:154–5). He even acted in a completely arbitrary manner toward the Greek cities he founded, although the old Greek cities succeeded in preserving a certain degree of self-government, apparently under the patronage of the emperor.

The foundation of Herod's kingdom and its only real strength was the power of Rome, although Herod possibly found a certain measure of cooperation from the Jewish people. The New Testament (Matt. 22:16; Mark 3:6; 8:15; 12:13) refers to a sect of Herodians whom some think to be identical with the *Boethusians whom the Talmud mentions with disapproval. Herod's dependence on Rome was absolute and his loyalty to it boundless. He imposed on his subjects an oath of loyalty to Augustus, and as the possessor of Roman citizenship which Julius Caesar had bestowed upon his father, Herod added the family name of the Julians to his own name. He erected temples to the emperor in the non-Jewish parts of his kingdom, introduced sports in honor of Augustus, and sent his sons to Rome to be educated. The final manifestation of servitude to Rome and one that the Torah loyalists could never forgive was the placing of the Roman eagle upon the facade of the Temple.

His Relationship with His Jewish Subjects

Despite his willing subjection to Rome and his enthusiasm for Greek culture, Herod had to try to make himself accepted to some extent by the Jews. He even attempted, albeit without success, to win over the Pharisees; when many of them refused to swear an oath of loyalty to the emperor and to himself he did not do more than fine them. He was also careful not to flout the external expressions of the religion of Israel; he refrained from putting images of idols or his own portrait on his coins, and, with the exception of the Roman eagle, from bringing images within the borders of Jewish settlement. He did not permit his sister Salome to marry a Nabatean prince who refused to be circumcised. It should be noted that according to Jewish law Herod was a full Jew (being the grandson of an Edomite proselyte), although he was not qualified to reign. To demonstrate his loyalty to Judaism, he decided to rebuild the Temple. He erected a splendid edifice to take the place of the previous unpretentious building, at the same time extending the boundaries of the Temple mount (see *Temple). About 10,000 commoners and 1,000 priests were occupied for nine years in building it; "Herod's building" is the Temple described in the Mishnah and in the writings of Josephus (parts of its external area have been excavated in recent years). From time to time Herod even showed concern for the needs of the people; in 25 B.C.E., a year of hardship and famine, he purchased grain for the people, distributed clothes, and supplied seed, and on two occasions lightened the burden of taxation. The productive capacity of his country was undoubtedly increased by his settlement projects and by the irrigation works which he constructed around Jericho, and also by his securing the border regions and suppressing banditry; his building projects, too, took the form of extensive public works.

All this, however, was of no avail, and far from winning the hearts of the Jewish people and their sages Herod was regarded by them as the destroyer of their traditional institutions, the murderer of their kings and leaders, and the agent for a foreign government. He incurred the wrath of those loyal to the Torah and pledged to national independence; during his time the foundations were already laid for the spiritual climate which was to give rise to the sect of *Zealots who opposed all foreign rule and any authority except that of the kingdom of heaven. During his reign his opponents did not dare oppose him openly, but when he was dying two Pharisaic scholars, Judah b. *Ẓippori and Mattathias b. Margalit, incited their followers to remove the golden eagle from the facade of the Temple; Herod's last act was to order that the perpetrators of this deed be seized and burned to death. After his death the people's anger was such that it exploded into open rebellion against his heir until the latter lost his throne. The Talmud calls Herod "a slave of the Hasmonean dynasty," and recounts the killing of the Jewish scholars and the murder of the Hasmoneans. It even ascribes the building of the Temple to Herod's wish to atone for slaying the scholars (BB 3a–4a; Ta'an. 23a). In Christian tradition too Herod is remembered as a cruel murderer. Herod was more acceptable to the Jews of the exile than to those of Ereẓ Israel. He intervened on their behalf several times, exerting himself with the Roman authorities. He even succeeded in obtaining the restoration of the privileges of which they had been deprived by the Greek cities of Asia Minor, as well as the right to collect the half shekel for the Temple.

Extant from the time of Herod are his coins, the remains of buildings, and a limited number of inscriptions. The main historical sources are the works of Josephus (the *Antiquities* and the *Wars*). Fragmentary accounts about Herod from the works of Nicholas of Damascus have also been preserved. There is also an allusion to Herod's rule in the apocryphal "Assumption of Moses." Fragments of rabbinic literature involving Herod are aggadic and very limited, possessing little historical value.

The Herodian dynasty retained its rule over Ereẓ Israel, or over parts of it, for three generations. However, its sovereignty was taken from it as soon as Herod died, for Archelaus was only recognized by the emperor as "ethnarch" and his two brothers as "tetrarchs" in their patrimony. The rule of Archelaus and Herod Antipas was discontinued during their lifetime, they themselves being exiled. Herod Philip's nephew Agrippa I, son of Aristobulus the son of Mariamne the Hasmonean, ultimately received Philip's territories from Caligula as a personal favor. He also received the title of king and united under himself the whole area ruled by Herod. His son *Agrippa II inherited the royal title, but he only ruled over certain border regions. Agrippa II died childless and with him and his sister *Berenice, the house of Herod came to an end.

[Shimon Applebaum]

In the Arts

Preeminently in European drama, the figure of Herod was immensely popular from the medieval period onward, inspiring a vast amount of literary treatment. Herod appears in the English Chester, Towneley, and York cycles and also in one of the Digby Plays, *Herod's Killing of the Children* ("Candlemas Day"). Here tradition made him a near-comic figure, an irate, roaring tyrant who descended from the stage to beat onlookers with an inflated bladder. In France, on the other hand, Herod was starkly portrayed as the cruel author of the Massacre of the Innocents, as in a passion play by Arnoul Greban (1420–1471). This was also the case in Germany with Hans Sachs's tragedy *Der Wueterich Herodes* (1552). Other early works on the theme include a German play by Sixtus Birck (1501–1554) and *Marianna* (1565) by the Italian writer Lodovico Dolce (1508–1568). In the 17th century, writers began to endow Herod with more complex human emotions, portraying him as a jealous and passionate husband driven to murder his unfortunate wife, Mariamne, only to fall a prey to hallucinations and remorse. This interpretation won particular favor in England, where a whole series of dramas made their appearance, notably Lady Elizabeth Carew's *Tragedy of Mariam, the Faire Queene of Iewry* (1613); *The True Tragedy of Herod and Antipater: with the Death of Faire Marriam*… (London, 1622) by Gervase Markham and William Sampson; and *Herod and Mariamna* (1673), a five-act verse tragedy by Samuel Pordage. Works of the same period in other languages were *Mariamne* (1610) by the French tragedian Alexandre Hardy; *Herodes infanticida* (Leiden, 1632), a neo-Latin tragedy by Daniel Heinsius; *El mayor monstruo, los zelos* (or *Tetrárca de Jerusalém*, 1635) a more sophisticated treatment by the Spanish dramatist Pedro Calderón de la Barca; *Mariane* (1635) by the Frenchman Tristan L' Hermite: and the melodramatic *La vida de Herodes* (1636) by the Spaniard Tirso de Molina.

The subject continued to attract attention in the 18th century, with plays by Elijah Fenton (*Mariamne*, 1723), who adopted a milder approach; Gaspar Lozano Montesino (*Herodes Ascalonita, y la hermosa Mariana*, 1725?); and *Voltaire, whose *Mariamne* (1725) made the king a criminal adventurer. Literary treatment of the theme became more varied in the 19th century, however, with poems and novels as well as plays: "Herod's Lament for Mariamne" was one of Lord *Byron's *Hebrew Melodies* (1815), and Friedrich Rueckert wrote *Herodes der Grosse* (1884), consisting of two five-act dramas: *Herodes und Mariamne* and *Herodes und seine Soehne*. Perhaps the outstanding dramatic treatment of all time was *Herodes und Mariamne* (1850), a powerful tragedy by Friedrich Hebbel, who made his hero a basically noble man of action. Hebbel's play, said to have been inspired by Byron, was later translated into Hebrew by Jacob *Fichman. It was followed by several treatments by Jewish writers, including Isaac Mayer *Wise's *The Combat of the People; or, Hillel and Herod* (1859), a historical novel; *Hordus* (1887), a Hebrew verse tragedy by Judah Leo *Landau; *Fun Kleyn tsu der Kroyn* (1889), a Yiddish historical novel by Nahum Meir *Schaikewitz; and *Di Letste Khashmonayim oder Kenig Hordus* (1907), a Yiddish drama by Judah Loeb Wohlmann. The late 19th century also saw the appearance of a rare Russian work on the subject, Dimitri Alexandrovich Alexandrov's *Tsar Irod i tsaritsa Mariamna* (1893), a verse tragedy based on the history of I.M. *Jost. By contrast, Henry Solly's *Herod the Great* (1896) tried to refute Josephus and to whitewash its hero. Interest in the subject was maintained in the 20th century, the outstanding work in English being *Herod* (1901), a tragedy in blank verse by Stephen Phillips. This was followed by *Mariamne* (1911), a poem by Thomas Sturge Moore; *Księżniczka żydowska* (1927), a tragedy by the Polish writer Wacław Grubiński; Kaj *Munk's *En idealist* (1928; *Herod the King*, 1947), one of the Danish writer's dramatic sketches of the "strong men" of history; *Hordus u-Miriam* (1935), a Hebrew novel by the Palestinian writer A. Orinovsky; and *Die Doper*… (1937), an Afrikaans drama by the South African writer Jacobus Johannes Müller. Two English plays were *King Herod* (1931) by Mary Danvers Stocks and *Herod and Mariamne* (1938), a drama by Clemence Dane based on Hebbel's German classic. Later works include *Herodes* (1942), a Flemish novel by Ernest Claes; a Dutch play of the same title (1955) by the Jewish writer Abel *Herzberg; and Jacob Weinshal's Hebrew novel *Hordus Aḥi* (1960).

Herod the Great mainly figures in portrayals of the New Testament episode of the Massacre of the Innocents (Matt. 2). The wholly negative account of Herod in the Gospels cast him in the role of folk villain in medieval popular imagination, which regarded the "Holy Innocents" as the first Christian martyrs. Herod's consultation with his priests and magicians and his reception of the Magi are subjects found in medieval art. Herod is shown seated on his throne while a devil whispers evil counsels into his ear. The scene is represented in a fifth-century mosaic at Santa Maria Maggiore, Rome, on 11th-century bronze doors at Hildesheim, in medieval manuscripts, including the 12th-century *Hortus Deliciarum* and the St. Louis Psalter, and in carvings in several medieval cathedrals, including Chartres, Notre Dame (Paris), and St. Moritz, Vienna. The Massacre of the Innocents was a popular subject throughout the Middle Ages and Renaissance. It also occurs in Byzantine ivories, as carvings (notably those at Notre Dame), and in manuscripts. The episode was treated by medieval Italian artists, notably Giotto (c. 1266–1337) in his frescoes in the Arena Chapel, Padua, and Duccio (c. 1255–1319) in his Maestà altarpiece for the cathedral of Siena. Giovanni Pisano (c. 1245–1314) made a bas-relief of the subject (now in the Museo Civico, Pisa). During the Renaissance, it was treated by the German painter Lucas Cranach (1472–1553; Dresden gallery) and by the Flemish painter Pieter Brueghel (c. 1520–1569; Vienna Museum), who made the massacre a snow scene. Tintoretto (1518–1594) was one of the Italian artists who painted the subject (Scuolo di San Rocco, Venice). Herod's massacre was especially popular in the 17th century, when it was treated by Flemish, Dutch, Italian, and French painters, including Rubens (1577–1640; Pinakothek, Munich), Poussin (1594–1665; Petit

Palais, Paris, and the Musée Condé, Chantilly), and Guido Reni (1575–1642; Pinacotheca, Bologna).

Popular Christian tradition relates that Herod suffered a terrible death: Eaten alive by worms, he finally committed suicide with his fruit knife. This was seen as a fitting punishment for the Massacre of the Innocents. The most striking depiction of Herod's agony is a painting by the Italian artist G. Archimboldo (c. 1530–1593) of a head of Herod formed out of interlacements of the little nude bodies of the "Holy Innocents," resembling the swarming of worms. In medieval representations of the subject, Herod is sometimes shown seeking relief in a bath or tub (some early printed *Haggadot* used this bathing scene as an illustration of Pharaoh's cruelty toward the Israelite infants). Other medieval artists portrayed him in the act of suicide, with a demon gathering his soul as it issues from his mouth.

In Music

Musical treatments of Herod were at first extremely dominated by the New Testament portrayal. The "Play of Herod," which had a distinct and important place in the religious drama of medieval Europe, was usually performed on the Feast of the Epiphany (January 6th) and, in its most extended form, included the confrontation with the Magi (or Three Kings from the Orient), the Massacre of the Innocents, and *Rachel's Lament. In most of the extant manuscripts, the musical notation is only fragmentary and the version found at Blois alone contains a complete and decipherable notation of the items sung. In later times, the New Testament Herod motive practically disappeared from the repertoire, except for motets (such as Palestrina's *Hostis Herodes impie*, 1589) and cantatas for the Feast of the Innocents, the subject lending itself too readily to political and religious exploitation. From the middle of the 17th century onward, the baroque "rediscovery" of Josephus brought the story of Herod and Mariamne to the attention of operatic librettists and composers. Two fragments of *Herodes und Mariamne*, an opera by G.F. Telemann (1681–1767), are known. It seems, however, that the unhappy ending of the story prevented its utilization: The ending could not be mitigated, since the New Testament associations obliged librettists to make Herod the blackest of villains. The subject thus became amenable to free stage treatment only in the 19th century, where its musical history begins with a parody: Siegfried August Mahlmann's successful *Herodes vor Bethlehem* (1803), for which the incidental music was written by Jacob Karl Wagner. In 1823, Isaac *Nathan published his setting of Lord Byron's poem about Herod and Mariamne. *Hérode*, a "lyrical and dramatic scene" on Herod and Mariamne, was composed by Georges Boyer (1885), and this was followed by Gabriel Pierné's cantata *Les Enfants de Bethléem* (1907). Hebbel's *Herodes und Mariamne* had meanwhile made its appearance on the stage and incidental music was written for its performances. The best known of such compositions was that by Karol *Rathaus. Michael *Gnessin's *Hebrew Songs* for voice and piano, opus 37 (published in 1930) contains a textless "Song of Mariamne," and is explicitly associated with Hebbel's drama.

HEROD II (d. 48 C.E.), grandson of *Herod the Great and Mariamne the Hasmonean; son of Aristobulus and brother of *Agrippa I; king of Chalcis 41–48 C.E. The emperor Claudius granted Herod the kingdom of *Chalcis in the Lebanon in 41 C.E. In 45 C.E. he and Agrippa were successful in procuring the revocation of an order by the procurator Fadus Cuspius who wanted to assume custody of the vestments of the high priest. After the death of Agrippa in 44 C.E. Herod was given charge of the Temple administration and the treasury and authorized to appoint the high priests. He deposed Elionaeus son of Cantheras, appointing instead Joseph son of Camei, and subsequently Ananias son of Nedebeus. In 50 C.E. Herod's kingdom and the right to appoint the high priests were transferred to his nephew, Agrippa II. Herod's son Aristobulus was king of Lesser Armenia and later of Chalcidice.

[Edna Elazary]

HERODIANS, a sect or party mentioned in the New Testament together with the *Pharisees as opponents of Jesus (Mark 3:6; 12:13; Matt. 22:16). There are differences of opinion as to their identity, and the Church Fathers already put forward various theories all connected in one form or another with the name of *Herod the Great. Some recent scholars identify

the Herodians with the "partisans of Herod" mentioned by Josephus (Ant., 14:479), though he mentions them as living at the beginning of Herod's rule in Judea. Others connect the name with Herod *Antipas, the son of Herod. In the absence of clear evidence, these must be regarded as mere conjectures. A. Schalit, who identifies the Herodians with the partisans of Herod, is of the opinion that they were his supporters among the Jewish community who urged the people to accept his sovereignty and spread messianic ideas which they applied to Herod and his rule.

[Uriel Rappaport]

HERODIAS (first century C.E.), daughter of Aristobulus, the son of *Herod I and *Mariamne the Hasmonean. Herodias was married to Herod, son of Herod I and Mariamne II, to whom she bore a daughter, *Salome. After 31 C.E. Herodias was divorced from her first husband and married his brother, Herod Antipas. The marriage aroused the anger of the people, because Jewish law forbade a man to marry his brother's divorced wife (see Lev. 18:6). John the Baptist, leader of those who opposed the marriage (Mark 6: 17–18; Matt. 14: 34; Luke 3:18–20), was seized by Antipas, who imprisoned him in *Machaerus in Transjordan, and later ordered him to be executed. One cause apparently was his fear of the messianic movement which John had stirred up among the people. There is no historical foundation to the New Testament story according to which John was killed at the request of Salome the young daughter of Herodias by her first marriage after Antipas had undertaken to grant anything she requested as a reward for her dancing at his birthday celebration. After Agrippa I became king (c. 40 C.E.) Herodias persuaded her husband to go to Rome to request a royal crown for himself from Caligula. As a result of Agrippa's slanders, however, Antipas was exiled to Lugdunum (Lyons?) in Gaul and his fortune given to Agrippa, brother of Herodias. Although the emperor permitted Herodias to return to her home, she chose to accompany her husband into exile.

[Abraham Schalit]

HERODIUM, Judean fortress built during the Second Temple period, located 60 stadia (c. 7 mi.) S. of Jerusalem near Tekoa. It was built by Herod at the spot where he had routed his pursuers during his flight from Jerusalem to Masada in 40 B.C.E. It was also his burial place and he was interred there with great pomp (Jos., Ant., 17:199; Wars, 1:673). Josephus relates that the fortress was erected on a natural hill which was further heightened by debris heaped on it. A staircase, with 200 marble steps, led to the fortress wall which was a circular structure defended by round towers; within the wall were several palaces. At the foot of the mountain a settlement was established, the water supply for which was brought from Solomon's Pools by means of an aqueduct passing through Naḥal Taḥuna (Ant., 14:360; 15:323–5; Wars, 1:265, 419ff.; 4:518). Herodium is identified with Jebel Fureidis, an artificial hill 2½ mi. (4 km.) southeast of Bethlehem which looks like a truncated cone from afar. The site was partly excavated by V. Corbo on behalf of the Custodia di Terra Santa in 1962–67. The fortress was found to consist of a double circular curtain wall with four towers (three semicircular and one round). Within the wall was a colonnaded portico with two exedrae, a bath, and a hall with four pillars. Traces of pre-Herodian and post-Herodian occupation were found; the latter included remains (including a synagogue) from the time of the Jewish War (66–70/73), the Bar Kokhba War (132–35), a Roman garrison, and a Byzantine monastery. Herodium also served as the capital of a toparchy (Wars, 3:55; Pliny, *Natural History*, 5:15). During the Jewish War it was one of the last strongholds remaining in Zealot hands and was captured by the Romans (by the governor Lucius Bassus) a short time after the fall of Jerusalem (Wars, 4:555; 7:163). According to documents found in Wadi Murabba'at in the Judean Desert, it served as one of Simeon Bar Kokhba's district headquarters during 132–135 C.E. In Byzantine times a monastery was erected there. Clearance of the site was continued by G. Foerster in 1968–69. More extensive excavations at the foot of Herodium ("lower Herodium") were conducted at the site by E. Netzer in 1970–87 revealing a large pool surrounded by a garden with porticoes, a racecourse, and a rectangular hall built of ashlars as well as additional remains from the Byzantine period, notably the remains of churches.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

°HERODOTUS (fifth century B.C.E.), Greek historian. He notes that the Phoenicians and the "Syrians of Palestine," have, on their own testimony, learned the practice of *circumcision from the Egyptians (*Historiae*, 2:104; cf. Jos., Ant., 8:262; Apion, 1:169). Herodotus mentions that these Syrians and Phoenicians furnished and manned 300 warships for the Persian navy (7:89). As Herodotus does not use the name *Ioudaioi* ("Judeans"), it is uncertain if the "Syrians of Palestine" are Jews or possibly Philistines who, although originally uncircumcised (Judg. 14:3), later adopted that rite from the Egyptians.

HEROD PHILIP I, tetrarch 4 B.C.E.–34 C.E.; son of *Herod the Great and Cleopatra of Jerusalem. Herod Philip was educated in Rome with his half brother *Archelaus. The portion of Herod's will that appointed Herod Philip tetrarch of Batanaea,

Trachonitis, Auranitis, and the east shore of the Sea of Galilee was confirmed by Augustus as far as is known. But the actual extent of his territory seems to have been even larger. A peace-loving man, a good administrator, and a just ruler, Herod Philip founded the city Caesarea Philippi at Paneas (*Banias) and the sources of the Jordan. A very large building complex, perhaps the palace of Herod Philip, comprising underground vaulted chambers, halls, and courts, dating from the first century C.E., has recently been excavated at Banias. Another city founded by him was Julias, named after Augustus' daughter Julia, on the site of the village of *Bethsaida, on the north of the Sea of Galilee. Herod Philip, who was considered a friend of the Romans, struck the first Jewish coins depicting Augustus and Tiberius. He was married to his niece Salome, granddaughter of Herod and Mariamne II, and died childless. After his death, his tetrarchy was incorporated into the province of Syria, but in 37 C.E. it was given to Agrippa *I.

HERRERA, ABRAHAM KOHEN DE (**Alonso Nunez De**; **Abraham Irira**; c. 1570?–1635 or 1639), philosopher of religion and kabbalist. Herrera, whose place of birth is unknown, was descended from a noble Marrano family. The biographical accounts of *Graetz and others should be corrected in accordance with Herrera's letter to Lord Essex, published in *Sources inédites de l'histoire du Maroc* (1st series, *Angleterre*, vol. 2). According to this letter, Herrera and his family were the subjects of the duke of Tuscany and lived at Florence (later at Venice). According to Barbosa Machado, Rodriguez de Castro, and Antonio Ribeiro dos Santos, Herrera (who was also called Ferreira) was born in Lisbon. From Daniel Levi de *Barrios' account, which claims that the Spanish general Gonzalvo de Cordova, conqueror of Naples, was among Herrera's ancestors, it is to be understood that his family immigrated to Portugal or (later perhaps) to Italy. Herrera went from Florence to Morocco where his uncle, Judah de Marchena, acted as trading agent of Sultan Moulay Aḥmad al-Manṣur of Morocco. During the English conquest of Cadiz, where Herrera was staying on the sultan's orders, he was captured and taken to London. He was freed before 1600, after a diplomatic exchange between the Moroccan sultan and Queen Elizabeth of England. At the end of the 1590s it seems that Herrera was living as a Jew at Ragusa. There, according to his testimony, he studied Isaac *Luria's Kabbalah under the guidance of Israel *Sarug. It appears that he went to Holland after this period and was converted to Judaism. Little is known about Herrera's life in Amsterdam. *Morteira and Isaac *Aboab studied his opinions and teachings and it is certain that these strongly influenced the spiritual life of the Amsterdam community. The esteem in which he was held is shown, among other things, by his "Approbation" to *Manasseh Ben Israel's *Conciliador* (of Sept. 6, 1632). According to J.N. Jacobsen Jensen (*Reizigers te Amsterdam* (1919), p. 25), Herrera took part in the disputation with the Christian theologian and Hebrew scholar Hugh *Broughton, but this is unlikely (cf. L. Hirschel, in: *De Vrijdag-Avond* 6 (1929), p. 119).

The following works by Herrera, in Spanish, are known: (1) *Puerta del Cielo*, expounding kabbalistic doctrine about God and the cosmos. (2) *Casa de Dios*, which deals mainly with theories about angels and pneumatology. Both works remained unpublished in the original (manuscripts are to be found in the library Ez Ḥayyim at Amsterdam and in the Royal Library of Holland), but were translated into Hebrew by Isaac *Aboab da Fonseca and published under the title *Sha'ar ha-Shamayim* (Amsterdam, 1655) and *Beit Elohim* (Amsterdam, 1655). The first appeared also with an introduction by Israel *Jaffe (Warsaw,1864; the translation differs considerably from the original). The works were translated, in an abridged form, from Hebrew into Latin and included in the famous anthology *Cabbala Denudata* (Sulzbach, 1677). (3) A Spanish treatise on logic, *Epitome y compendio dela logica o dialectica*, together with a glossary of philosophic and theological terms (*Libro de Diffinitiones*); the work was published in the original (probably in Amsterdam, when Herrera was converted to Judaism).

Herrera was the first to undertake a systematic philosophical interpretation of kabbalistic doctrines. He constantly attempted to prove that the theories of the Kabbalah were in accord with the ideas of the neoplatonist school, particularly in the form which these were given by the Florentine Academy, by Marsilio Ficino, and later Francisco Patricius. This interpretation draws on comprehensive knowledge of the whole of philosophical literature. Herrera develops his conception of God by depending on the doctrine of contingency (God as the only Necessary Being) which prevailed among the Jewish philosophers of the Middle Ages. At the same time, he accepts the utter indefinability of God's Being, which he understands at times in the manner of the doctrine of the "negative" attributes, but at times in the manner of the "*coincidentia oppositorum*" (the presence in God of opposite qualities at one time). The oneness and individuality (*ishiyyut*) of the Divine Being are reasoned by Herrera, particularly with reference to the potentiality of a concrete, individualized being (*Sha'ar ha-Shamayim* fol. 5). Herrera links his conception with the kabbalistic conceptions of God by using the concept of the infinite expansion (*hitpashetut*) of the Divine Being and through the use of the metaphor of light. Herrera diminishes the pantheistic character of these conceptions to the point that the comprehension of the Universe of God, Who enfolds in Himself, in an infinitely superior manner, all creation, does not mean its identification with the empiric totality of the world. God is thus conceived as the infinitely perfect and the absolute good. His explanation of the kabbalistic doctrine of *Adam Kadmon ("Primordial Man") is particularly interesting. Herrera adopted the neoplatonic thesis that only a sim-

ple being can emerge out of the absolute simplicity of God, and rejected the modifications (the doctrine of the spheres and their spirits) brought by the Arab and Jewish Peripatetics. He set up a specific correlation between God (**Ein Sof*) and the realm of *Adam Kadmon*, as the correlation between *principium* and *primum principium* ("First Cause" and "First Effect"). This relationship is to be understood in the sense of a particular Logos doctrine. Thus, *Adam Kadmon* is defined as the "highest thought," "the simple intelligence," and so on. This perfect being, the prototype of all creation, serves as the means of God's activity and has great similarity with the splendor of God. However, unlike God, it is finite (fol. 17a). The kabbalistic theory of God's willed "withdrawal" (*ẓimẓum*) is developed by Herrera in connection with the explanation of the theory of the "temporal" creation of the world, out of a free decision of God. Herrera's writings (in Latin translation) were considered by many to be the philosophical exposition of the Jewish Kabbalah. Because Johann Georg Wachter's *Der Spinozismus in Judentum* (1699) defended the theory of *Spinoza's pantheism and its dependence on Herrera, the latter's teachings were constantly referred to during the recurring controversies concerning pantheism in the 18th century. Herrera is quoted by Leibniz (cf. *Réfutation inédite de Spinoza par Leibniz*, ed. Foucher de Carell (1854), 17). Herrera's doctrines were also often discussed and exercised a certain influence at the beginning of the 19th century on works dealing with the history of philosophy.

[Jacob Gordin]

HERRERA DE PISUEGRA, town in N. Castile, Spain. Although the first information about a community there dates from the 15th century, it is known that there were *Conversos living in Herrera after the persecutions of 1391. In the 15th century many Jews and Conversos lived there. The annual tax paid jointly by the communities of Herrera and nearby Osorno amounted to 3,000 maravedis in 1474 and 1482. The tax levied on the community during the war with Granada was raised to 35,000 maravedis in 1491. The dossiers of Conversos from Herrera sentenced by the Inquisition provide a diversified picture of a Jewish community after it had become a community of Conversos. Most of them were tried as followers of Inés of Herrera (known as the Maid of Herrera), the daughter of a cobbler, who had visions concerning the fate of the Conversos and the place they would be allotted in Heaven because of the sufferings they had undergone. Inés was 12 years old when she appeared as prophetess in 1498–1500. Her prophecies promised imminent deliverance with the advent of the Messiah who would lead the Conversos to the Promised Land. Over 100 of her followers – most of them women – were burned at two autos-da-fé in Toledo in February 1501. From the Inquisitorial files we know about the extensive and intensive crypto-Jewish life led by the Conversos in Herrera and its surroundings. According to the files, most couples seemed to have practiced Judaism together. Very often their children, too, were found guilty of Jewish practices. The Converso community was well organized and solidarity characterized the relations between its members. Most of the Conversos in Herrera began to practice Judaism in the middle of the 15th century. Many of the Conversos were initiated into their Jewish practices by their parents. Some studied Hebrew. Sabbath observance was the most widespread practice. They tried to keep track of the Jewish calendar so that they would be able to celebrate the festivals. The Conversos in Herrera gathered in the homes of some of the leading members for prayer. Circumcision was also practiced in some families. From the Inquisitorial files it is clear that women were active in fulfilling certain commandments, such as *hallah, kashrut* and ritual immersion. Until the expulsion, the Conversos obtained kosher food from their Jewish neighbors.

[Haim Beinart]

HERRMANN, BERNARD (1911–1975), U.S. composer and conductor. Born in New York City, Herrmann studied at New York University and the Juilliard School of Music with Percy Grainger, Philip James, and Bernard Wagenaar. He composed music for radio, and became one of the world's most famous composers of film scores (40 scores between 1941 and 1966), notably for Orson Welles (*Citizen Kane* and *The Magnificent Ambersons*) and Alfred Hitchcock, including *Psycho*, in which he displayed new sensitivity and dramatic understanding of the medium. His other works include *Moby Dick* (1937), a dramatic cantata for male chorus, soloists, speakers, and large orchestra; the operas *Wuthering Heights* (1951), *A Christmas Carol* (1954), and *A Child is Born* (1955); a musical, *The King of Schnorrers* (1970); many orchestral works; and a string quartet, *Echoes.* As a conductor, Herrmann took special interest in little-known works (his championship of Charles Ives is noteworthy in this respect) and made many recordings. He spent the last 10 years of his life in England, continuing conducting and composing.

HERRMANN, HUGO (1887–1940), Zionist author, editor, and propagandist. Born in Maehrisch-Truebau (Moravska Trebova), Moravia, Herrmann attended the German Univer-

sity in Prague and became a teacher. He also was a member of the editorial staff of *Selbstwehr*, the Prague Zionist weekly; his cousin Leo *Hermann was another member of the staff. In 1913–14 he was editor in chief of *Juedische Rundschau*, the central organ of the Zionist Organization in Germany. He served in the army in World War I and after his discharge became editor of the *Juedisches Volksblatt* in Maehrisch-Ostrau (Moravska Ostrava), a post he retained from 1919 to 1922. He also organized the work of the *Keren Hayesod in Czechoslovakia and edited the newspaper published at the Zionist Congresses. Eventually he became one of the chief propagandists of the Keren Hayesod and traveled extensively on behalf of the fund. In 1934 he settled in Jerusalem.

Herrmann was one of the founders of Bar Kochba, the Jewish students' organization in Prague and engaged in literary activities on Jewish and Zionist subjects for most of his life. His publications include books on his travels in Ereẓ Israel, on the Arab question, a children's book on Jewish holidays, a book on the geography of Ereẓ Israel (published in several editions), etc. Shortly before his death he published a part of his memoirs.

[Getzel Kressel]

HERSCH, JEANNE (1910–2000), Swiss philosopher. The daughter of the Bundist Pesach Liebman *Hersch, who was a professor of statistics at the University of Geneva from 1921, she studied philosophy in her home city, then in Heidelberg, where she met Karl Jaspers, and in Freiburg. She belonged to a group of Jewish students influenced by Martin Heidegger, as were Hannah Arendt and Emmanuel Levinas. But in 1933, witnessing the negative role Heidegger played as rector of the university during the rise of Nazism, she immediately left Freiburg. Between 1956 and 1965 she was a professor of systematic philosophy in Geneva. Between 1966 and 1968 she presided over the philosophy section of UNESCO in Paris. A long time Social Democrat, she distanced herself from the party in 1992 when it declared the use of drugs legal. As an "intellectuelle engagée" she fought for human rights and criticized the student movement of 1968 for not having distanced itself sufficiently from Soviet Communism. Her philosophy was also grounded in Jewish ethics. She translated the work of Karl Jaspers into French. Hersch was a highly esteemed philosopher in Switzerland.

[Uri Kaufmann (2nd ed.)]

HERSCH, PESACH LIEBMAN (pseudonyms: **P. Liebman**; **P. Lemansky**; "**Academicus**"; 1882–1955), statistician and demographer, Bundist leader, and publicist. Born in Lithuania, Hersch moved to Warsaw when young and was active for some time in Zionist youth circles. In 1904, when studying at Warsaw University, he took part in the students' strike and was put under police supervision. He subsequently went to Geneva, where he spent most of his life. In 1909 he was appointed instructor in demography and statistics at Geneva University, becoming professor after World War I and gaining an international reputation. From 1905 Hersch was associated with the *Bund. He contributed to the Yiddish, Polish, and Russian press as a writer and editor, dealing with social and political issues, in particular emigration and problems of Jewish nationalism. Hersch was a member of the central bureau of the Bund's organization abroad. During 1912–13 he was in St. Petersburg, and wrote a polemic against Lenin concerning national autonomy. In 1915 Hersch represented the Bund at the international Socialist conference at Zimmerwald. After the war he contributed to the Bundist organ *Folkstsaytung*, published in Warsaw. He was also active in *YIVO and contributed to its publications. During World War II Hersch served as a representative of the American "Jewish Workers' Committee," and was active on behalf of the Jews in the Nazi-occupied countries and in facilitating the admission of Jewish refugees to Switzerland. He helped to establish centers of *ORT and *OSE in Geneva. After the war Hersch undertook manifold activities on behalf of the Bund and served as its representative at the Socialist International. The experience of the Holocaust and concern for the continuation of Jewish existence led Hersch to advocate a revision of Bund ideology. Although opposed to Zionism, as early as 1927 he had pointed out the importance of the deep emotional historical attachment of the Jewish people to Ereẓ Israel, which he visited in 1947 (where he also broadcast in Hebrew). Hersch appreciated the socialist achievements of the Histadrut in its various sectors of activity. He saw the establishment of the State of Israel as a major bulwark against assimilation and a factor for strengthening the national consciousness of the Jews throughout the world. Hersch published a collection of his articles on contemporary issues in *Oyf der Grenets fun Isaytn* (1952). In the field of scholarship Hersch already became known through his dissertation *Le Juif errant d'aujourd'hui* (1913), which was rewritten in Yiddish as *Di Yidishe Emigratsye* (1914). He subsequently published numerous studies in various languages, mainly French. In English these include "Jewish Migrations during the Last Hundred Years," in: *The Jewish People, Past and Present* (1 (1946), 407–30); "Jewish Population Trend in Europe," and "Jewish Population in Palestine," *ibid.* (2 (1948), 1–25, 40–50); and "Delinquency among Jews," in: *Journal of Criminal Law and Criminology* (27 (1936), 515–38). A member of many learned societies, in 1954 Hersch served as chairman of the United Nations International Conference for Demography and Statistics in Rome.

[Moshe Mishkinsky]

HERSCHBERG, ABRAHAM SAMUEL (1858–1943), Hebrew scholar and writer. Herschberg, who was born in Kolno, near Lomza, Poland, became a textile manufacturer in Bialys-

tok. There he was associated with S. Mohilever in the Ḥibbat Zion movement. In 1899–1900 he went to Ereẓ Israel with the intention of settling there. He described his impressions in *Mishpat ha-Yishuv he-Ḥadash be-Ereẓ Yisrael* (1901), in which he criticized Rothschild's officials, and in "*Be-Ereẓ ha-Mizraḥ*" (in *Ha-Zeman*, 1910). Herschberg also wrote articles about the state of the country's trade and commerce (in *Ha-Ẓefirah*, 1903–04); sketches on the early Ḥovevei Zion (in Sokolow's *Ha-Me'assef*, 1903); brochures on the development of modern Hebrew (1909) and on the Sephardim in Ereẓ Israel (*Ha-Shilo'aḥ*, 1911); studies of socio-economic life in the talmudic period, including *Ḥayyei ha-Tarbut be-Yisrael* (1924); articles on proselytism and the unity of race and religion among Jews (*Ha-Tekufah*, 12–13, 1922); and a two-volume history of Bialystok Jewry, *Pinkas Bialystok* (Yiddish, 1949–50). He translated into Hebrew R. Kittel's *Alttestamentliche Wissenschaft* (1911) and J. Eschelbacher's *Judentum und das Wesen des Christentums* (1912). From 1913 to 1914 he edited the Yiddish daily *Bialistoker*. He was murdered by the Nazis in the Bialystok ghetto.

HERSCHER, URI DAVID (1941–), U.S. rabbi, professor, founder and chief executive of the Skirball Cultural Center in Los Angeles. Born in Tel Aviv to parents who fled Germany in the mid-1930s, Herscher's childhood home was shadowed by the annihilation of his extended family in the Nazi scourge. His early youth witnessed the privations of the British Mandate period, relieved by summers in a kibbutz with an aunt and uncle. Religion was not part of his upbringing; the idealism of the infant Jewish state and the communitarian ethos of the kibbutz shaped his formative years. In 1954, he immigrated with his parents and brother to the U.S., joining relatives in San José, California. Speaking no English upon his arrival, he nonetheless thrived in his new home, befriended by neighbors, teachers, and classmates, few of whom were Jews. The hospitable welcome he and his family received was a decisive event in his life, defining his conviction that America was good to and for the Jews.

At the University of California at Berkeley in the early 1960s, Herscher and another student organized a summer camp for underprivileged youth. Seeking donated clothing for the children, he met Robert D. Haas, a classmate and scion of the Levi Strauss family, noted for its philanthropy. An enduring friendship ensued that would prove instrumental to his later endeavors.

He gained admission to Hebrew Union College-Jewish Institute of Religion. Declining to seek a pulpit upon ordination, he accepted an administrative position at the College-Institute, at the same time pursuing a doctorate in American Jewish history under the guidance of Stanley F. Chyet. In 1975 he was appointed professor of American Jewish history and executive vice president and dean of the faculty of the College-Institute, overseeing its campuses in Cincinnati, Los Angeles, New York, and Jerusalem.

In 1979, Herscher moved from Cincinnati to Los Angeles. Recognizing that the vast majority of Jews were unaffiliated and increasingly indifferent to Jewish concerns, he envisioned a new strategy of communal outreach and engagement: the creation of a cultural center that would focus on the American Jewish experience. The center housed the College-Institute's Skirball Museum, whose collection of artifacts would tell the story of the Jewish people from antiquity to America. The center also included venues for public lectures, performing arts, and educational activities.

Over the next decade, with help from key supporters such as Jack H. Skirball, Los Angeles Times Chairman Franklin Murphy, and the Levi Strauss family of San Francisco, Herscher garnered major contributions from both Jewish and non-Jewish benefactors. A fifteen-acre site was acquired in the Santa Monica mountains, and renowned Israeli-American architect Moshe Safdie was engaged to design the campus. In 1996 the Skirball Cultural Center, separately incorporated, opened to the public, with Herscher as founding president and chief executive. An immediate success, the Center attracted some 300,000 visitors in its first year, leading to an ambitious expansion of its facilities, programs, and endowment. By 2005, the Center had become one of the world's major Jewish cultural institutions.

Herscher's conceptual vision broadened as well. Underlining his commitment to the welfare of the wider community, in 2001 he accepted appointment to the Ethics Commission of Los Angeles. At his instigation, the Skirball's mission statement was expanded to address "people of every ethnic and cultural identity."

[Robert Kirschner (2nd ed.)]

HERSCHMAN, MORDECHAI (1888–1940), *ḥazzan*. Born in the Ukrainian town of Chernigov, Herschman, a lyric tenor, sang in a number of synagogue choirs before obtaining his first post as a *ḥazzan* in the "choral" synagogue of Zhitomir. In 1913, after only five months at Zhitomir, he was appointed chief *ḥazzan* of Vilna. During World War I he was conscripted into the Russian army reserve, but a senior officer was so impressed by his voice that he exempted him from duty so that he could continue to officiate as a *ḥazzan*. In 1920, he emigrated to the United States, where he was appointed *ḥazzan* of the Beth El Temple of Brooklyn, New York, a position he held for 10 years. Afterward he made many concert tours in Europe, Palestine, and the U.S. Herschman was notable for the warmth of his singing as well as for his ḥazzanic style, which was deeply influenced by the melodic elements of biblical cantillation and the traditional cantillation of Talmud study. His cantorial and folk song records were very popular, and it was his rendering that made P. *Jassinowsky's *Ve-Hayyah be-Aḥarit ha-Yamim* ("And it shall come to pass at the End of Days") famous.

[Joshua Leib Ne'eman]

HERSCHORN, JOSHUA (**Sheea**) **HALEVY** (1893–1969), Canadian rabbi and halakhic scholar. Herschorn was born in Muranovanye-Kurilovtsy, Ukraine, and received his main rabbinic training from his father. He also acquired a secular education and briefly attended the University of Odessa. The anti-Jewish violence which swept the Ukraine in the aftermath of World War I, as well as the repression of the Jewish religion in the Soviet Union, influenced his decision to emigrate to North America.

In 1921 he arrived in Montreal, where he had relatives, and began to function as a rabbi. His supervision of a group of kosher slaughterers gained him the enmity of several prominent local rabbis, who initially attempted to portray him as an interloper and a charlatan. Nonetheless, he was soon accepted by the Montreal Orthodox rabbinate as a valuable colleague. He became a member of the Rabbinic Council (Vaad ha-Rabbanim) of the Montreal Jewish Community Council (Va'ad ha-Ir) from its inception in 1923. In 1936, he became vice president, and in 1951 he succeeded Rabbi Hirsh *Cohen as president of the Rabbinic Council. He was thus widely recognized as Montreal's "chief rabbi." He actively served in this capacity until 1961, when he was incapacitated by illness. He also served for many years as Canadian vice president of the Agudath ha-Rabbonim (Union of Orthodox Rabbis of the United States and Canada).

His major publication is *Mi-Ma'ayanei Yeshu'ah* (1959), a collection of responsa, reflecting the halakhic concerns of North American Orthodox Judaism from the 1920s to the 1950s. They include several dealing with the halakhic implications of technological innovations. He published numerous articles in journals of rabbinic scholarship, as well as a number of articles and sermons in Montreal's Yiddish and Anglo-Jewish newspapers.

[Ira Robinson (2nd ed.)]

HERSH, SEYMOUR (1937–), U.S. journalist. Born in Chicago and a graduate of the University of Chicago, Seymour (Sy) Myron Hersh began his career in journalism as a police reporter for the City New Bureau in Chicago in 1959. After stints with United Press International and the Associated Press, Hersh joined the little-known Pacific News Service and went to Vietnam. In 1969 Hersh gained worldwide recognition for exposing the massacre at My Lai, where United States soldiers tortured and killed nearly 500 civilians, and its cover-up. He also covered the court martial of Lt. William Calley, the commanding officer at My Lai. Hersh received the Pulitzer Prize for international reporting and published two books on the subject: *My Lai 4: A Report on the Massacre and Its Aftermath* and *Cover-up: the Army's Secret Investigation of the Massacre at My Lai 4*.

In 1972 Hersh joined the Washington bureau of *The New York Times* and also became a regular contributor to the *New Yorker* magazine. His disclosures about the covert operations of the Central Intelligence Agency created a swarm of controversy. So did his book on Henry A. *Kissinger, *The Price of Power: Kissinger in the Nixon White House*, in 1983, which detailed the secret bombing of Cambodia while the administration was ostensibly pursuing an end to the war in Vietnam. The book won the National Book Critics Circle award. Hersh worked for *The Times* from 1972 to 1975 and again in 1979.

In his 1991 book *The Sampson Option*, about Israel's secret nuclear weapons program, Hersh revealed that in 1986 Nicholas Davies, the foreign editor of the London *Daily Mirror*, tipped off the Israeli Embassy in London that the Israeli whistleblower Mordechai Vanunu had given information about the country's nuclear capability to the *Sunday Times* and later the *Sunday Mirror*, both owned by the British media magnate Robert *Maxwell, who was thought to have had extensive contacts with Israeli intelligence services. According to Hersh, Davies and Maxwell published an anti-Vanunu story as part of a disinformation campaign on behalf of the Israeli government.

Hersh wrote a number of investigative articles for the *New Yorker* detailing military and security matters surrounding the U.S.-led invasion of Iraq in 2003 and the subsequent occupation. In a 2004 article, he examined how Vice President Dick Cheney and Secretary of Defense Donald Rumsfeld circumvented the normal intelligence analysis function of the CIA in their quest to make a case for the invasion. His coverage of Richard Perle, a pro-Iraq war advisor to the Bush White House, in another article led Perle to say that Hersh was the "closest thing American journalism has to a terrorist." In 2004 Hersh published a series of articles describing, and showing photographs, of the torture by U.S. military police of prisoners in the Iraqi prison of Abu Ghraib. Hersh asserted that the abuses were part of a secret interrogation program, known as Copper Green, expanded from prisoner treatment in Afghanistan and Guantanamo Bay, Cuba, with the direct approval of Defense Secretary Rumsfeld, in an attempt to deal with a growing insurgency in Iraq. In 2005 Hersh disclosed that the U.S. was conducting covert operations in Iran to identify targets for possible strikes. This was dismissed by both the U.S. government and by Iran.

Hersh published eight books, including *The Dark Side of Camelot* (1997), which looked at John F. Kennedy's relationship with Lyndon B. Johnson and scandals surrounding Kennedy. His other books include *The Target Is Destroyed*: *What Really Happened to Flight 007 and What America Knew About It* (1986), *Against All Enemies: Gulf War Syndrome*: *The War Between America's Ailing Veterans and Their Government* (1998), and *Chain of Command: The Road from 9/11 to Abu Ghraib* (2004).

[Stewart Kampel (2nd ed.)]

HERSHELE (pseudonym of **Hersh Danielevitz**; 1882–1941), Yiddish poet, essayist, short story writer, translator, and folklorist. Born in Lipno, Poland, Hershele received a traditional Jewish education and taught himself secular subjects. He

joined the revolutionary movement early, fled to Zurich, and then returned to Poland. During the German occupation of 1915–18 he was one of the founders of the Lodz literary circle and of various periodicals. He contributed to the Yiddish dailies in Poland, *Haynt, Moment*, and the Buenos Aires Yiddish daily *Di Prese*, and translated Polish, Russian, and German poetry into Yiddish. Primarily a folk poet, his books are *Hersheles Lider* ("Hershele's Poems," 1907) and *Zun Feygelekh* ("Sun Birds," 1918). Throughout his life he collected Yiddish folk songs, hundreds of which he sent to Ḥ.N. *Bialik, and folk stories and sayings. Hershele's charming and rhythmic poems described the lives, loves, and thoughts of simple Jewish coachmen, housemaids, and cooks in Poland. He published poems in *Dror, Yedies*, and *Payn un Gvure* in the Warsaw ghetto, where he died.

[Israel Ch. Biletzky]

HERSHEY, BARBARA (**Barbara Herzstein**; 1948–), U.S. actress. Born in Hollywood, California, Hershey made her professional debut as a teenager in 1965 on the television series *Gidget,* then starred on the TV series *The Monroes* (1966–67). From the late 1960s on, she acted in such feature films as *Last Summer* (1969), *The Liberation of L.B. Jones* (1970), *Dealing* (1972), *Boxcar Bertha* (1972), *The Stunt Man* (1980), *The Right Stuff* (1983), *The Natural* (1984), *Hannah and Her Sisters* (1986), *Hoosiers* (1986), *Tin Men* (1987), *Shy People* (Cannes Film Festival award for Best Actress, 1987), *A World Apart* (Cannes Film Festival award for Best Actress, 1988), *The Last Temptation of Christ* (Golden Globe nomination, 1988), *Beaches* (1988), *Falling Down* (1993), *A Dangerous Woman* (1993), *The Pallbearer* (1996), *The Portrait of a Lady* (Oscar nomination for Best Supporting Actress, 1996), *Breakfast of Champions* (1999), *Passion* (1999), *Lantana* (2001), and *Riding the Bullet* (2004).

Hershey has appeared in a number of television movies, such as *A Man Called Intrepid* (1979), *Angel on My Shoulder* (1980), *A Killing in a Small Town* (Emmy Award and Golden Globe for Best Actress, 1990), *Paris Trout* (Emmy nomination for Best Actress, 1991), *Hunger Point* (2003), and *Paradise* (2004). She has also appeared in such TV series as *From Here to Eternity* (1980), *Twilight Theater* (1982), *Return to Lonesome Dove* (1993), *Chicago Hope* (1999–2000), and *The Mountain* (2004).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

HERSHKO, AVRAM (1937–), Israeli biochemist and Nobel laureate. Hershko was born in Karcag, Hungary, and immigrated with his family to Israel in 1950. He gained his M.D. (1965) and Ph.D. (1969) from the Hadassah Medical School of the Hebrew University of Jerusalem, a period which included service as a physician in the Israel Defense Forces (1965–67). After a postdoctoral fellowship with Gordon Tomkins at the University of San Francisco (1969–72), he joined the faculty of the Haifa Technion, becoming professor in 1980 and subsequently distinguished professor in the Unit of Biochemistry in the Rappaport Faculty of Medicine of the Technion. His main research interests concern the mechanisms by which cell proteins are normally degraded and replaced by newly synthesized proteins, a formerly neglected field of study. Hershko and his colleagues showed that, contrary to previous ideas, cellular proteins are degraded by a highly selective proteolytic system. This system tags proteins for destruction by linkage to a protein called ubiquitin, which had previously been identified in many tissues, as the name suggests, but whose function was hitherto unknown. Subsequent work in Hershko's and many other laboratories has shown that the ubiquitin system has a vital role in controlling the survival of a wide range of proteins which regulate cell division and replacement and are involved in the repair of damaged DNA. The medical importance of these observations has been established. Inherited abnormalities in the ubiquitin system result in a degenerative disease of the nervous system and other diseases including cancer. Acquired abnormalities of the system, possibly following certain viral infections, may also lead to cancer and disorders of the immune system. The full range of functions of the ubiquitin system in health and disease was still to be elucidated, as were the implications for designing anti-cancer drugs. Hershko was awarded the Nobel Prize in chemistry (2004) jointly with his former Ph.D. student Aaron *Ciechanover and their colleague Irwin *Rose. His many honors include the Weizmann Prize for Science (1987), the Israel Prize for biochemistry and medicine (1994), the Gairdner Award (1999), the Lasker Prize for basic medical research (2000), and the Wolf Prize for medicine (2001). Hershko was a passionate advocate of proper support for scientific education and research in Israel.

[Michael Denman (2nd ed.)]

HERSHKOWITZ, VICTOR ("**Vic**"; 1918–), U.S. handball player, considered the greatest all-around player in handball history; winner of over 40 handball titles, including nine straight Three-Wall Singles Championships, and member of Handball Hall of Fame. Hershkowitz was born in Williamsburg, New York, the eighth of nine children, to Beila (Gelb) and Shmuel (Sam) from Ugocsa, Hungary. Hershkowitz went to Alexander Hamilton and Eastern District high schools, but was not a member of the school's handball club, which included Red *Auerbach. After graduating in 1936, and with few jobs available during the Depression, the stocky 5 ft. 8 in., 173 lb. Hershkowitz started playing handball in neighborhood parks. In 1942 he won the men's doubles One-Wall Championship, and then after the war he started a streak of winning at least one national championship every year from 1947 to 1967, except for 1959. "I had a good instinct as to where the ball would be most of the time. I was born with that, probably," he said, reflecting on his career. Hershkowitz, who played and practiced part time between his hours working as a fireman, won three of the national singles trophies on three different-

sized courts. His crowning achievement was in 1952, when he captured the National Singles One-Wall, Three-Wall and Four-Wall titles. Hershkowitz continued playing into his eighties, accumulating a dozen Masters titles as well, beginning in 1966. He was elected to the USHA Hall of Fame in 1957.

[Elli Wohlgelernter (2nd ed.)]

HERSHMAN, ABRAHAM M. (1880–1959), U.S. Conservative rabbi. Hershman was born in Neustadt, Poland, immigrating to the U.S. in 1896. Ordained at the Jewish Theological Seminary of America (1906), he served in Syracuse, New York, and then went to Detroit's Congregation Shaarey Zedek (1907), which he led until 1946, when he became rabbi emeritus. Founder and president of the Detroit Zionist Organization, Hershman was also principal of the Division Street Talmud Torah, Detroit's first Jewish communal school; delegate to the first American Jewish Congress, and a founder of the Jewish Community Council. His *Rabbi Isaac ben Sheshet Perfet and his Times* (1943) dealt with the history of the Jews in Spain in the 14th century. Hershman translated Book 14 of the Code of Maimonides as *Book of Judges* (1949), and wrote *Israel's Fate and Faith* (1952) and *Religion of the Age and of the Ages* (1953).

[Irving I. Katz]

HERSKOVITS, BELA (1920–1974), cantor and concert artist. A graduate of the leading music conservatories of Hungary, Herskovits was professor of Jewish liturgical music at the Goldmark Karoly College. When Hungary was invaded by the Nazis in 1942 he was imprisoned, but released, and succeeded in reaching the U.S. in 1942. Appointed cantor of the Ocean Parkway Jewish Center in Brooklyn, he was "discovered" by Eddie Cantor who introduced him to Hollywood. He co-starred in *Servant of God* and was musical consultant to Cecil B. De Mille's film *The Ten Commandments.* In 1966 he was appointed chief cantor of the Beth Shalom synagogue in Toronto, but later resigned on account of ill-health.

HERSKOVITS, MELVILLE JEAN (1895–1963), U.S. anthropologist. Born in Bellefontaine, Ohio, Herskovits became a lecturer in anthropology at Columbia University in 1924. In 1927 he moved to Northwestern University, where he directed the program of African studies. In 1935 he became professor of African Affairs. He made Northwestern University virtually the center of African studies in the U.S., and when the African Studies Association was established in 1957 he became its first president.

In the 1920s Herskovits undertook a series of anthropometric studies of the blacks in the United States and then widened his research to cover the blacks in the New World and in Africa. He carried out fieldwork among the bush peoples of Surinam, Dutch Guiana, and in Haiti, West Africa, Brazil, and sub-Saharan Africa. In his classic work, *The Myth of the Negro Past* (1941), he presented a masterly study of the African heritage of the American black. His studies of the New World black opened up a whole new field of research and prepared the way for a more positive and objective appreciation of the black, both individually and collectively, in American society. One of Herskovits' great interests was the study of race crossing and inheritance, and one of his earliest books was on this subject: *The American Negro: A Study in Racial Crossing* (1928). Like his teacher, Franz *Boas, he did not regard physical man apart from cultural man, and was concerned to combat the confusions between innate physical and acquired cultural traits.

In addition to his general study of anthropology, *Man and his Works* (1948), Herskovits published studies in ethnomusicology and economic anthropology. In 1959 he produced an important survey on Africa for the Committee on Foreign Relations of the U.S. Senate. His final major book, *The Human Factor in Changing Africa* (1962), dealt with the conflict between established custom and innovation among the peoples of Africa.

He discussed the problem "Who are the Jews?" in the essay that he and his wife Frances – who collaborated with him in much of his research and writing – contributed to *The Jews, Their History and Their Culture* (ed. by L. Finkelstein, 2 (1960), 1489–1509).

BIBLIOGRAPHY: *American Anthropologist*, 66 (1964), 83–109, includes bibliography.

HERSKOVITZ, MARSHALL (1952–) and **ZWICK, EDWARD** (1952–), U.S. writers-directors-producers. Born Marshall Schreiber to Alexander Herskovitz and Frieda (née Schreiber), Herskovitz grew up in Philadelphia, where his maternal grandfather was president of Har Zion Conservative Synagogue. In 1973, Herskovitz adapted *Beowulf* as a screenplay for his senior thesis at Brandeis University. Herskovitz earned an MFA from the American Film Institute in 1978. He went on to write and direct television programs such as *Family* (1979), *The White Shadow* (1979–80), and *Chips* (1980). Zwick was born in Chicago, Ill., to Allen Zwick and Ruth (née Reich). After graduating from Harvard, he studied theater in Europe on a Rockefeller fellowship before graduating from the American Film Institute in 1975. He took first place in a student film competition at the 1976 Chicago Film Festival and was offered the job of story editor on *Family.* In 1983, Herskovitz and Zwick teamed up for the made-for-television film *Special Bulletin,* which won two Emmy Awards. In 1985, they created The Bedford Falls Company, which was named after the town in *It's a Wonderful Life*. In 1986, Zwick directed his first feature film, *About Last Night*, followed by such projects as *Glory* (1989), which won 1989 Academy Awards for acting, cinematography, and sound; *Courage Under Fire* (1996); and *The Siege* (1998). Their first television project was the Emmy- and Golden Globe-winning series *thirtysomething* (1987–91). Herskovitz followed this with the film *Jack the Bear* (1993). Then came the duo's *Legends of the Fall* (1994), which Zwick directed. In 1994, they also produced the short-lived but highly acclaimed television series *My So-Called Life*, which was fol-

lowed by another short-lived series, *Relativity* (1996). In 2000, Herskovitz and Zwick produced the Oscar-winning film *Traffic*, and Zwick received an Oscar as producer with Bob and Harvey Weinstein of Miramax for *Shakespeare in Love* (1998). Later, the two tackled a 40-something-themed television show, *Once and Again* (1999), as well as the films *I Am Sam* (2001) and *The Last Samurai* (2003).

[Adam Wills (2nd ed.)]

HERSTEIN, LILLIAN (1886–1983), education advocate, union organizer, and life-long activist for social justice. Herstein was the youngest of six children in a Lithuanian-Jewish immigrant family. Her father, Wolf, worked as the sextant of a synagogue, while her mother, Cipe, owned and managed a Hebrew bookstore. Herstein's mother and siblings struggled to keep her in school after Wolf's death in 1898, and she graduated from Northwestern University in 1907.

The reluctance of the Chicago school system to hire Jews forced Herstein to teach in small rural schools before securing a position in Chicago in 1912. She immediately joined the Federation of Women High School Teachers union, and soon became its delegate to the Chicago Federation of Labor (CFL). When the Chicago Teachers' Union was created in 1937, Herstein became its representative to the CFL, where she was the only woman on the executive board for 25 years.

Herstein's activism soon expanded beyond the world of education. She worked in close conjunction with the Women's Trade Union League (WTUL), helping to organize workers, from newspaper reporters to coalminers, into unions. A powerful speaker, Herstein often expressed her views on the radio and on speakers' circuits. It was through the WTUL that Herstein became involved in a workers' education movement that gained momentum in the interwar years. She taught English and public speaking at the Chicago Labor College, a joint venture of the WTUL and CFL, as well as in workers' summer-school programs at both Bryn Mawr College and the University of Wisconsin. Herstein also taught at Chicago's Crane Junior College, where she inspired future Supreme Court Justice Arthur *Goldberg to become a labor lawyer. Herstein successfully fought to keep the free junior college system open during the Depression. Less successful were several bids for both state and federal offices, including a 1932 campaign for the U.S. Congress.

After her retirement from teaching in 1952, Herstein's activism turned towards civil rights and race relations. Her work with the Jewish Labor Committee on integrating the building trades earned her an award from the Chicago Commission on Human Relations in 1953. An active member of the American Civil Liberties Union, Herstein was also involved in Jewish workers' and women's organizations, including the *Histadrut, *Hadassah, and the *National Council of Jewish Women.

Kornbluh, *A New Deal for Workers' Education: The Workers' Service Program, 1933–1942.* (1987); R.H. Zieger and G.J. Gall. *American Workers, American Unions: The Twentieth Century* (2002).

[Nadia Malinovich (2nd ed.)]

HERSTIK, NAFTALI (1947–), *ḥazzan*. Herstik was born in Hungary but was brought to Israel as a child. His first teacher was his father, Cantor Moshe Menaḥem Herstik. Together with his brother Ḥayyim Eliezer (*ḥazzan* at the Oxford Synagogue, Johannesburg) he appeared as a child prodigy and continued his studies in *ḥazzanut* under Shelomo *Ravitz in Tel Aviv and with Prof. L. Bryll in London, where he studied inter alia at the Royal Academy of Music. After serving as *ḥazzan* in synagogues in Tel Aviv, Acre, Haifa, and the Finchley Synagogue in London (1972–79), he returned to Israel and was appointed *ḥazzan* to the Heichal Shelomo synagogue in Jerusalem in 1979. When the new sanctuary that became the Great Synagogue was completed in 1982, Herstik was appointed its *ḥazzan*. Herstik is also director of the Tel Aviv Cantorial Institute and he himself is highly regarded as a teacher of *nusaḥ l'tefillah*. As a superb artist, he has a worldwide reputation, and he sings with rare elegance and class. His rich and heart-warming tenor voice has been heard with the top Israeli and European orchestras worldwide. His discography includes a series of recordings for Beit Hatefutzot, namely the Danzig and Koenigsberg traditions; other CDs include performances with the London Male Choir, Jerusalem Great Synagogue Choir, and the Brno Symphony.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)

HERTZ, BENEDYKT (1872–1952), Polish author. Transposing social and political themes into the animal kingdom, Hertz published allegorical works that display keen observation and a gift for comedy. These include *Bajki* (1903), *Bajki i satyry* (1911), and *Bajki minionych dni* (1919), collections of fables; and plays such as *Szkice dramatyczne* (1910).

HERTZ, EMANUEL (1870–1940), U.S. lawyer and historian. Hertz, born in Bukta, Austria, brother of Rabbi Joseph Herman *Hertz, arrived in the United States when he was 14. He was admitted to the bar in 1894. Hertz became well known as an authority on Abraham Lincoln. He assembled the largest private collection of material relating to Lincoln, and was said to have gathered 4,000 items previously unknown. He wrote many pamphlets on various aspects of the life of Lincoln, and his books included: *Abraham Lincoln, New Portrait* (1931), *Abraham Lincoln, the Tribute of the Synagogue* (1936), and *Hidden Lincoln* (1938). He was a substantial benefactor of the Library of Congress and the National and Hebrew University Library, Jerusalem.

BIBLIOGRAPHY: *New York Times* (May 24, 1940).

[Sefton D. Temkin]

HERTZ, GUSTAV (1887–1975), German physicist and Nobel Prize winner, son of a Jewish father. Born in Hamburg, he became an assistant in the Physical Institute at Berlin in 1913.

He was severely wounded in World War I, and subsequently worked at Eindhoven in the Netherlands. In 1925 he became professor of physics and director of the Physical Institute at Halle, and in 1928 at the Technische Hochschule. He resigned "for political reasons" in 1934, and became director of the Siemens Research Laboratory II. He remained in Germany throughout World War II and subsequently became professor of physics at the University of Leipzig in the German Democratic Republic. He and James *Franck were awarded jointly the Nobel Prize for physics in 1925 for their discovery of the laws governing impact between an electron and an atom. Hertz converted to Christianity. He was a nephew of Heinrich Rudolph Hertz (1857–1894), the discoverer of electromagnetic waves, who was the son of a baptized Jewish father and a Christian mother.

BIBLIOGRAPHY: N.H. Heathcote, *Nobel Prize Winners in Physics* (1953), 230–48.

[J. Edwin Holmstrom]

HERTZ, HENRI (1875–1966), French poet, novelist, and critic. Hertz, the son of an army officer of Alsatian descent, was born in Norgent-sur-Seine. Like Max *Jacob, Apollinaire, and Jean Cocteau, whom he is said to have influenced, Hertz was a poet of revolt whose writing ranged from excessive sensitivity to biting sarcasm. Of his 12 published works, the most important are *Sorties* (1921), *Vers un monde volage* (1924), and *Enlèvement sans amant* (1929). Hertz was a distinguished journalist, his enormous output covering politics as well as articles in avant-garde periodicals on literary and artistic figures. He also wrote much in the press on Jewish problems. In 1925 he became general secretary of France-Palestine, an early French Zionist organization. He fought in the Resistance during World War II. Hertz's *Tragédies des temps volages* (1955), a collection of his verse and prose, contains the short story "Ceux de Job," which expresses the grandeur and anguish, the aspirations, and the despair of the Jewish people.

BIBLIOGRAPHY: A. Spire, *Souvenirs à bâtons rompus* (1962), 239–47.

[Sidney D. Braun]

HERTZ, HENRIK (originally **Heyman**; 1798–1870), Danish playwright and poet. Orphaned as a child, Hertz was brought up by a wealthy relative, in whose Copenhagen home he met many prominent people. He graduated in law but chose to become a writer. A member of the new school of Danish romantics, Hertz in 1830 drew up a program for them in elegant verse reflecting the movement's concern with beauty of form. His poetry reveals a sensual temperament, combined with humor and deep pathos. Hertz's principal interest was the theater. He skillfully copied all the fashionable dramatic forms and created roles for the leading Danish actors and actresses, writing about 50 comedies and romantic or historical dramas. His plays include the comedy *Sparekassen* ("The Savings Bank," 1836), which still retains its period charm; the highly successful *Svend Dyrings Huus* ("Svend Dyring's House," 1837), a romantic verse play inspired by medieval Danish ballads; *Kong Renés Datter* (1845, *King René's Daughter*, 1850), also of medieval inspiration; and *Ninon* (1848), a historical melodrama written in the style of Victor Hugo. The collected plays appeared in 18 volumes (1854–73). Hertz was baptized in 1832.

BIBLIOGRAPHY: H. Kyrre, *Henrik Hertz* (Danish, 1916); *Dansk Biografisk Leksikon*, 10 (1936).

[Frederik Julius Billeskov-Jansen]

HERTZ, JOSEPH HERMAN (1872–1946), chief rabbi of the United Hebrew Congregations of the British Commonwealth. Hertz, who was born in Slovakia, was taken in 1884 to New York. He was the first graduate of the *Jewish Theological Seminary of America (1894). After acting as rabbi in Syracuse, New York (1894–96), he was appointed rabbi of Johannesburg, South Africa. His outspoken opposition to Boer discrimination against the *uitlanders* (aliens) and religious minorities resulted in his deportation (1899–1901) but he returned to office on the conclusion of the Boer War. He went to the U.S. in 1911 as rabbi of the Orthodox congregation Oraḥ Ḥayyim in New York and in 1913 was elected chief rabbi of England. Here, he threw himself into the duties of his office with courage and energy, showing his profound sympathies with the recently arrived foreign elements. He publicly criticized Russian anti-Jewish policy, fought against Liberal Judaism, and his powerful advocacy of Zionism in the name of religious Jewry was partly responsible for the successful outcome of the negotiations which led to the *Balfour Declaration in 1917. Later, he fought courageously against Nazism and its echoes in England and strongly criticized the policies adopted by the Mandatory government in Palestine, which he visited frequently. In 1925 he attended the opening of the Hebrew University and later was a member of its board of governors. His works (apart from his doctoral thesis on the philosophy of Martineau) were principally of a popularizing nature, but filled a greatly felt gap, e.g., his *Book of Jewish Thoughts* (1917), of which hundreds of thousands of copies were printed, and his commentaries on the Pentateuch (1929–36) and on the prayer book (1942–45). A three-volume collection of his minor writings was issued under the title *Sermons, Addresses and Studies* (1938).

His appearances on the public platform were usually exceptionally impressive. He showed courage, and his brief occasional letters to the London *Times*, in times of emergency, the product sometimes of days of hard work, could influence public opinion. Characteristic was his letter published on May 28, 1917, in which he effectively and indignantly denied that the attack on Zionism by the two "official" leaders of the Anglo-Jewish community, C.G. *Montefiore and D.L. Alexander, represented "the views held by Anglo-Jewry as a whole or by the Jewries of the overseas dominions." He was no respecter of persons. The authoritative article in the *Dictionary of National Biography* quotes what was said of him: that he never despaired of finding a peaceful solution to any problem when all other possibilities had failed. He was made a Companion of Honour (C.H.) in 1943, the first British rabbi

to receive an award of this kind. Probably no British Chief Rabbi in history was faced with so many unprecedented and insoluble challenges and crises.

[Cecil Roth]

HERTZBERG, ARTHUR (1921–2006), U.S. Conservative rabbi, author, and intellectual. Hertzberg was born into a ḥasidic family in Lubaczow, Poland. He came to the U.S. in 1926 and grew up in Baltimore, where his father, a strong influence on his life and thought, was the rabbi of a small Orthodox synagogue. Hertzberg graduated from John Hopkins University. During his time on campus, he became a fervent Zionist. Breaking partially from his Orthodox background, he was ordained as a Conservative rabbi at the Jewish Theological Seminary in 1943. Hertzberg served as Hillel director at Smith College for one year, then was rabbi in congregations in Philadelphia and Nashville. In 1949, Hertzberg made the first of many visits to the fledging State of Israel. After spending a few years as an Air Force chaplain, he became rabbi of Temple Emanu-El in Englewood, N.J., a pulpit he held for nearly 30 years. During his time in Englewood Hertzberg earned a doctorate in history from Columbia University, and he joined its faculty in 1961. From 1985 to 1991 he was professor of religion at Dartmouth College and from 1991 he was Bronfman Visiting Professor of the Humanities at New York University. He was president of the Conference on Jewish Social Studies and served as consulting editor to the *Encyclopaedia Judaica*.

Hertzberg was president of the American Jewish Congress from 1972 to 1978 and a member of the executive of the World Zionist Congress from 1969 to 1978. In the late 1960s he became the first president of the newly formed International Jewish Committee for Interreligious Consultation, the body that represented Jews in dialogue with Christian leaders. In 1975 Hertzberg was elected vice president of the World Jewish Congress, and he was president of the newly established American Jewish Policy Foundation, a nonpartisan group engaged in research in the field of American Jewish policy, both foreign and domestic.

Hertzberg's books include *The Zionist Idea* (1959), an anthology about the intellectual history of the Zionist movement that is still used in college classrooms; *Judaism* (1961), which brings selections from the Jewish literary tradition; *French Enlightenment and the Jews* (1968), a groundbreaking work that traces the roots of modern antisemitism to the French Enlightenment; *Being Jewish in America* (1978); *The Jews in America* (1989); *A Jew in America* (2002), a memoir; and *The Fate of Zionism: A Secular Future for Israel and Palestine* (2003).

Hertzberg was a fiercely contrarian, profoundly American old-school rabbi. His deep Jewish learning was matched by his equally deep secular knowledge; both were guided by a blindingly original mind that can make the obscure seem immediately obvious. His passionate moderation on such subjects as Israel, which he loved deeply but not blindly, and American Jewry, whose future he thought was shaded by most American Jews' inadequate Jewish education, often divided him from others, whose opinions he felt were insufficiently realistic or not rooted firmly enough in Jewish tradition. An importance force and strong believer in the improved relationship between Catholics and Jews, Hertzberg also spoke out on such issues as the Church's refusal to allow historians access to its wartime archives. A profoundly creative thinker, Hertzberg influenced the way American Jews think about Judaism, Israel, and American Jews.

[Victor A. Mirelman / Joanne Palmer (2nd ed.)]

HERTZKA, EMIL (1869–1932), music publisher, born in Budapest. In 1901 he joined the newly founded Universal Edition in Vienna which he directed from 1907 until his death. By purchasing the rights of several older firms and actively encouraging the avant-garde composers – on whom few other publishers dared risk their resources and reputation – he became the publisher of the works of Bruckner, Mahler, and the publisher and champion of Béla Bartok, Arnold Schoenberg, Alban Berg, Kurt Weill, Jaromir Weinberger, Leos Janacek, Ernst Krenek, and others. He also founded the periodical *Musikblaetter des Anbruch*.

HERTZKA, THEODOR (1845–1924), Hungarian economist and journalist. Hertzka, who was born in Budapest, edited the economics section of the *Neue Freie Presse* from 1872 until 1879, when he founded and became editor of the *Wiener Allgemeine Zeitung*. In 1889 he established and became editor of the weekly *Zeitschrift fuer Staats- und Volkswirtschaft* and in 1901 was appointed editor in chief of the Budapest daily, *Magyar Hirlap*. Hertzka became known mainly through two novels, *Freiland, ein sociales Zukunftsbild* (1890; *Freeland; a Social Anticipation*, 1891) and *Eine Reise nach Freiland* (1893; *A Visit to Freeland, or the New Paradise Regained*, 1894). In these, he proposed a solution to the problems of society by the establishment in Central Africa of a model state, comprising a series of farming communes, which would be so organized as to avoid the drawbacks of both the capitalist and the communist systems. Hertzka established an international movement to carry out his plan and in 1893 a mission went to Africa to secure land for settlement. But the mission failed and the project was abandoned. Hertzka was influenced in his ideas by the U.S. economist and land reformer, Henry George, and in his turn influenced Franz *Oppenheimer, particularly in the areas of liberal socialism and cooperation. Theodor *Herzl was familiar with Hertzka's *Freiland* when he wrote *Der Judenstaat*. In a letter to Moritz Guedemann (Aug. 22, 1895), and in a reference in the introduction to *Der Judenstaat*, Herzl emphasized the difference between his plan and *Freiland*, which he described as a well-assembled machine, but one incapable of being set in motion. Hertzka's other writings include *Die*

Gesetze der socialen Entwicklung (1885), *Das Wesen des Geldes* (1887), and *Das Sociale Problem* (1912).

HERTZVELD-HIJMANS, ESTHELLA (1837–1881), Dutch poet. Esthella Hertzveld was the eldest of six children in the family of Salomon Hartog Hertzveld (1806–1904) and Devora Halberstamm (1814–1904). She received an excellent education, focusing primarily on the study of literature, Jewish history, Hebrew, and modern languages. At the age of 15 she made her literary debut as a poet with the publication of "Elias in de Woestijn" ("Elias in the Desert") and of "Sauls Dood" ("Saul's Death"), which soon made her famous in Dutch literary circles. Because of her reputation, the baptized Portuguese Jew Abraham Capadose dedicated to her his translation of a story on conversion in 1853. In readers' letters to the Jewish press the poet and her father distanced themselves from Capadose's dedication and beliefs.

In 1863 Hertzveld married Jacobus Hijmans (1816–1896), who was her senior by 21 years. Chief Rabbi Berenstein of The Hague consecrated the marriage in Delft. A report of the event was published in the December 18 issue of the *Delftse Courant*.

Hertzveld was also involved in social work and became an active member of the women's Arbeid Adelt movement that was emerging under the wings of Betsy Perk and later Aletta Jacobs.

A mother of six children, Esthella Herzveld died at the age of 44 from a lung disease.

Jozef *Israels painted her portrait, which is now part of the collection in the municipal museum in The Hague.

ḤERUT (Heb. חֵרוּת; also known as **Bet Ḥerut**), moshav in central Israel, in the southern Sharon near Tel Mond, affiliated with Tenu'at ha-Moshavim, founded in 1930 by experienced agricultural workers. After 1948, the moshav was enlarged and joined by new settlers from Romania. Its economy was based mainly on citrus groves, dairy farming, poultry, flowers for export, and vegetables. In 1968 it had 372 inhabitants, in the mid-1990s the population was approximately 480, and in 2002 it jumped to 616 as a result of new expansion. The moshav's name means "Freedom."

[Efraim Orni / Shulamit Gilboa (2nd ed.)]

HERUT MOVEMENT, Israeli political party, established in June 1948, soon after the establishment of the State, by members of the *Irgun Ẓeva'i Le'ummi on the basis of Ze'ev *Jabotinsky's ideology. In 1949, the Revisionist Party of Israel, which had run independently in the elections to the First Knesset but had failed to pass the qualifying threshold, merged with the Ḥerut movement. At the same time, the Ḥerut Ha-Ẓohar Alliance was established by the Ḥerut and Ha-Ẓohar organizations in the Diaspora as their representative body in the World Zionist Organization.

In the elections to the first five Knessets the Ḥerut movement (Ḥerut for short) ran in an independent list. In the elections to the First and Second Knessets it came in fourth, with 14 and 8 seats respectively, but in the Third to Fifth Knessets it came in second after Mapai, with 15, 17, and 17 seats respectively. In 1958 there were early exploratory talks about a possible alignment with the Liberal Party, but it was only in 1965, before the elections to the Sixth Knesset, that such an alignment was realized in the form of *Gaḥal, which ran as a list in the elections to the Sixth and Seventh Knessets. In the elections to the Eighth to Eleventh Knessets the Ḥerut movement ran within the framework of the *Likud, together with the Liberal Party and others. In 1988 Ḥerut ceased to exist as a separate party upon the formation of the Likud party.

Until 1979 the Ḥerut Movement held national conferences every two or three years to elect its leaders, receive reports, and determine policy. Due to internal strife no conference was held until 1986, but when it finally met it was once again dispersed, meeting again the following year, and then disbanding after the Likud formally turned into a party in 1988.

Until the establishment of Gaḥal, Ḥerut was viewed as a right-wing party which maintained that the State of Israel should contain both banks of the River Jordan, and it would characteristically refer to the Hashemite Kingdom of Jordan as "the so-called Hashemite Kingdom." It accused the Mapai-led government of following a defeatist policy vis-à-vis its neighbors, strongly criticized the policy of large-scale government intervention in the economy, but at the same time called for the institution of a national health insurance system and free schooling. Though it was highly critical of the Histadrut, in 1963 it established its own faction within the Labor-led trade union association, called Tekhelet-Lavan (Blue-White), which was the breeding ground for several future Likud politicians, including David *Levy. Ḥerut strongly objected to the Restitution Agreement signed with the Federal Republic of Germany in 1952, while also objecting to the special Military Administration for Israeli Arabs based on Mandatory emergency regulations.

David *Ben-Gurion refused to consider bringing Ḥerut (and the Communists) into the government, asserting that both were anti-democratic political movements, though it may be argued that in many senses Ḥerut played the role of a democratic watchdog over Mapai in the Knesset. The attitude to the Ḥerut movement in Mapai, and later in the Alignment,

changed after Levi *Eshkol became prime minister in 1963, and especially after the establishment of Gaḥal.

Except for a brief period after 1966, Menaḥem *Begin was chairman of the Ḥerut movement from 1948 until 1983. After Begin's resignation he was replaced by Yitzhak *Shamir, who presided over Ḥerut's complete merger with the Liberal Party in 1988. Other prominent leaders of the Herut movement included Yoḥanan Bader, Ḥayyim Landau, Shemuel Katz, Ya'akov Meridor, Shemuel *Tamir, and Ezer *Weizman. Closely associated with the Ḥerut movement was the *Betar youth movement, the Ḥerut Women's Alliance, and the National Workers' Federation. The organ of the movement until 1966 was the daily *Ḥerut*.

[Susan Hattis Rolef (2nd ed.)]

HERXHEIMER, SALOMON (1801–1884), German rabbi. Born in Dotzheim, Herxheimer attended the yeshivah of R. Herz Scheyer in Mainz, studied secular subjects under Michael *Creizenach, and later graduated from the University of Goettingen. While teaching in Eschwege, he wrote *Yesodei ha-Torah* (1831), a popular work on religious and moral instruction, which was translated into English and reached 36 editions by 1916. Later he became the rabbi of Anhalt-Bernburg. At the rabbinical conferences of the 1840s Herxheimer, an exponent of moderate Reform, especially supported the idea of confirmation (see *Bar Mitzvah). His singular achievement was the publication of a translation of the Bible into German with commentary (1841–48), a third edition of which appeared in 1863. He also published a book on Hebrew grammar (1834) and an edition of his sermons (1838, 1857).

BIBLIOGRAPHY: S. Salfeld, *Dr. Salomon Herxheimer* (Ger., 1885).

HERZ, HENRI (**Heinrich**; 1802–1888), Austrian pianist and composer. Born in Vienna, he belonged to the group of elegant European virtuosos preceding the generation of Liszt. Though disdained by Schumann and by the "new German School," he enjoyed fashionable popularity in France both as a pianist and as a composer of "salon" piano pieces, more than 200 in number. He taught in Paris, founded a piano factory there, organized concerts, and had interests in various financial enterprises. He toured the U.S. three times and during a visit to Mexico composed the Mexican national anthem. His travels are described in *Mes voyages en Amérique* (1866).

[Judith Cohen]

HERZ, HENRIETTE (1764–1847), Berlin salonnière. The beautiful and highly educated daughter of Benjamin de Lemos, a Portuguese Jewish physician, she married the physician and philosopher Marcus *Herz, 17 years her senior, in 1779. In the 1780s their home became a center of Enlightenment and post-Enlightenment learning, attracting young Prussian nobility and reform-minded Jews interested in Marcus Herz's lectures and demonstrations in chemistry and physics and in discussing the new Romantic literature with his beautiful wife. Henriette Herz and her friend Dorothea (Brendel) *Mendelssohn Veit Schlegel, the daughter of Moses *Mendelssohn, formed a *Tugendbund* (Society of Virtue) with Wilhelm and Alexander von *Humboldt, Karl Laroche, and others to promote friendship and learning. Wilhelm von Humboldt's later efforts on behalf of Jewish emancipation stem in part from his youthful infatuation with Herz. Some of their correspondence is composed in Hebrew script. In the 1790s Herz developed a lifelong friendship with the philosopher and Protestant theologian Friedrich *Schleiermacher. Reading groups among intellectual circles developed into the famous Berlin salons hosted almost exclusively by women such as Herz, Rahel Levin *Varnhagen von Ense, and Sara Levi. Among those who frequented Herz's salon were Friedrich Schlegel, Karl Gustav von Brinkmann, Friedrich Genz, Madame de Genlis, and Jean Paul Richter. Herz's beauty was captured in portraits painted by Anna Dorothea Therbusch (1778) and Anton Graff (1792), and in a bust sculpted by Gottfried Shadow (1783). She knew many languages, including ancient Greek, Latin, Italian, Spanish, and English and in 1799 and 1800 she translated two English travel books into German. Following Marcus Herz's death in 1803, her salon activity tapered off and ended by 1806 with Napoleon's occupation of Berlin. Herz lost her pension and was forced to seek work as a governess; in 1817 she became a Protestant and traveled to Rome (1818–19). Herz spent her later years in reduced circumstances teaching languages and needlework to young women and offering hospitality to Schleiermacher's students. In the 1820s she began a memoir focusing on her youth; wishing to control her posthumous reputation, she burned some of her correspondence. At the end of her life, Herz she gave J. Fuerst access to her remaining papers and spoke with him about her life. Following her death, he published her reminiscences (J. Fuerst, *Henriette Herz. Ihr Leben und ihre Erinnerungen* (1858)).

HERZ, LEOPOLD EDLER VON (1767–1828), Austrian financier and nobleman. His father, Salomon Lefmann (1743–1825), went to Vienna from Hamburg in 1770, married the sister of Nathan von *Arnstein, and was raised to the nobility in 1797 for financial services to the crown. At the same time he was active in Jewish communal affairs. Leopold (Lippold) married Charlotte von Arnstein. Talented, ambitious, and sophisticated, he rapidly distinguished himself in financial affairs. Through his greatest achievement, arranging the subsidy promised by England to Austria after the Battle of Leipzig (1813), he acquired the friendship of Metternich and caused

a minor sensation when Wellington and Castlereagh dined at his home immediately on their arrival for the Congress of Vienna (1815). In 1815 Leopold joined Nathan von Arnstein and other notables in signing the petition to Francis I for Jewish rights. However, he and five of his children embraced Christianity in the summer of the *Hep! Hep! riots (1819).

HERZ, MARCUS (1747–1803), German physician and philosopher. Herz was born in Berlin, where his father was a Torah scribe. At the age of 15, Herz left for Koenigsberg, where he worked as a clerk. He attended lectures at the University of Koenigsberg from 1766 but had to stop in 1770 because of his financial situation. He became friendly with Immanuel *Kant, who asked him to serve as his "advocate" on the occasion of his submitting his dissertation. In his book *Betrachtungen aus der spekulativen Weltweishei* (1771) Herz formulated his interpretation of Kant's views. In 1770 Herz returned to Berlin, where he joined Moses *Mendelssohn's circle. Supported by David *Friedlander, he completed his medical studies at Halle. In 1774 he was appointed physician at the Berlin Jewish Hospital and was reputed to be one of the best doctors of his time. He married Henriette De Lemons from a Portuguese Jewish family from Hamburg. She was a social leader who gathered at her salon some of the most prominent intellectual figures in Berlin of her time and was known for her intellect (see Henriette *Herz). In 1777 Herz started lecturing in his home on philosophy and experimental physics. These lectures were attended by important persons, including members of the royal family, among them the future Frederick William III. In 1787 the king of Prussia bestowed the title of "professor" on Herz with the right to receive an income for life. Kant corresponded with Herz for many years, and these letters are of great importance for understanding both the development of Kant's views before the publication of *Critique of Pure Reason* in 1781 and the relationship between Kant and Salomon *Maimon. Herz published several essays on philosophy and on the human soul. His *Versuch ueber den Geschmack und die Ursachen seiner Verschiedenheit* (1776) developed the conception of perfect beauty (in the spirit of Winckelmanns). In 1786 Herz published his *Versuch der Kuenste*. In 1786 he published his *Versuch ueber den Schwindel*, and in 1777–84 his *Briefe an Aerzte*. At Mendelsshon's request he translated from English into German *Vindiciae Juaeorum*, a defense of Judaism by Manasseh Ben Israel. In his work *Freimuetige Kaffeegesprache zweier juedischer Zuschauerinnen ueber Juden Pinkus* (1772), Herz criticized the self-hatred found among Jews. He also wrote, at the request of the editor of *Ha-Me'assef*, a pamphlet in which he argued against quick burial, the traditional custom among Jews. He was for a long time the unknown translator of the so-called "Prayer of the Jewish Physician," attributed to Maimonides, from Hebrew into German.

HERZBERG, ABEL JACOB (1893–1989), Dutch author. Herzberg was born in Amsterdam into a Russian immigrant family. A lawyer by profession, he became an enthusiastic Zionist in his youth and made his mark as a powerful speaker and outstanding writer on Jewish affairs. Deported with his family to Bergen-Belsen during the Nazi occupation of Holland, Herzberg recorded his experiences in *Amor Fati* (1946) and *Tweestroomenland* ("Country Between Two Streams," 1950). His *Kroniek der Jodenvervolging* ("Chronicle of the Persecution of the Jews," 1956) is a factual and comprehensive survey of Dutch Jewry during the Hitler era. Herzberg's other works include three plays: *Vaderland* ("Homeland," 1934), an account of the sufferings of German Jewry; *Herodes* (1955); and *Sauls dood* ("Saul's Death," 1959). He also wrote *Eichmann in Jeruzalem* (1962), a study of the *Eichmann trial which he attended as a reporter for a Dutch daily, and *Brieven aan mijn kleinzoon* ("Letters to My Grandson," 1964), a series of childhood recollections.

[Henriette Boas]

HERZBERG, WILHELM (Ze'ev; 1827–1897), German author and communal worker in Ereẓ Israel. Born in Stettin into an assimilated family, Herzberg was familiar with Judaism from non-Jewish sources only, but became deeply impressed by its cultural and humanitarian values. In 1868 his work *Juedische Familienpapiere* (*Jewish Family Papers*, 1875) was published in Hamburg under the pen name Gustav Meinhardt. Its framework is fictional, and in it Herzberg expresses his admiration for Judaism through a daring attack on Christianity. The work made a strong impression on Jewish scholars in the West, and Peretz *Smolenskin wrote an article on it entitled "La-Kol Zeman" ("To Everything There is a Season" in *Ha-Shaḥar*, 1873) in which he emphasized Herzberg's liberation from the inner bondage that was characteristic of Jewish apologists at the time. In 1877, on the recommendation of Heinrich *Graetz, Herzberg was appointed director of the Mikveh Israel Agricultural School. Two years later he became director of the first Jewish orphanage in Jerusalem, which was founded that year through the initiative of Graetz and his friend M.G. Levi. In 1887 Herzberg combined the orphanage with the Laemel School. In the following year the first chapter of *B'nai B'rith, the "Jerusalem" lodge, was founded in Ereẓ Israel under his initiative; it established the Midrash Abrabanel Library (which became a nucleus for the Hebrew National and University Library) and the village of Moẓa. In 1891 Herzberg moved to Brussels.

HERZBERG-FRAENKEL, LEO (1827–1915), Galician author and functionary. As a result of his political activities during the 1848 revolution he was compelled to leave his native Brody; from 1850 to 1852 he was a journalist in Vienna. He then returned to Brody, where he was secretary of the Chamber of Commerce for the next 40 years. Active both in general and Jewish life, Herzberg-Fraenkel served as deputy of Brody for many years. He published novels dealing with East European Jewish life (which were translated into several languages), including *Ghettogeschichten* (1885), tales of the ghetto; *Geheime Wege* (1897), on the clandestine activities of Jewish youth in Russia; and several novels on non-Jewish themes. His essay on Polish Jewry appeared in *Oesterreich-Ungarn in Wort und Bild*. Although he welcomed the idea of Herzl's *Judenstaat*, he did not believe that the Zionist ideal could be realized. However, he stressed the need for a speedy exodus of Jews from Eastern Europe, no matter where and without political aim. He was among the supporters of plans to settle the Jews of Galicia on the land in an attempt to make them economically productive. His son *SIGMUND (1857–1913) taught German and Austrian history at the universities of Vienna and Czernowitz.

HERZENSTEIN, MIKHAIL YAKOVLEVICH (1859–1906), Russian economist. Herzenstein, who was born in Odessa, studied law and political economy. Despite his conversion to Christianity and his considerable professional competence, his appointment as a teacher at the Moscow Agricultural Institute was deferred for 15 years, presumably because of his liberal views. In 1903 he was named lecturer in political economy and statistics at the University of Moscow. In 1905 he was elected a deputy to the First Duma, where he became known as an expert on agrarian questions and called for the expropriation of the lands of the Russian nobility. The expropriated land would be distributed among the peasants, while the nobles would receive reasonable compensation. Herzenstein was bitterly hated by the reactionaries, both for his liberal agrarian views and for his Jewish origin. Ten days after the Duma was dissolved, Herzenstein was murdered by an agent of the "Black Hundred" at a Finnish summer resort.

His writings, principally on agrarian economics, include *Kredit dlya zemstv i gorodov* (1892; Credit to the Local Councils and the Cities), which is considered a major contribution to the subject of rural credit, and his highly regarded *Noveyshiye techeniya v uchenii o pozemel'nom kredite v Germanii* (1905; Recent Tendencies in the Theory of Agricultural Credit in Germany).

HERZFELD, ERNST EMIL (1879–1948), archaeologist and Orientalist. Herzfeld, born in Celle, Germany, became director of the Seminar fuer Landes und Altertumskunde des Orients in Berlin, and was professor at the University of Berlin from 1920 to 1935. He took part in many excavations, and directed several of them, including those at Ashur (1903–05), Mariamlik, and Coricos in Cilicia (1907); Samarra in Iraq (1910–13; 1931); Pasargadae (1928); Kukh-i-khawaja in Sistan (1929); and Persepolis (1931–35). In the mid-1930s he emigrated to the United States, where he became professor at the Institute of Advanced Studies at Princeton. Herzfeld laid the foundations for Arab archaeological research in Iraq and the archaeology of Persia of all periods. He was also among the planners and editors of *Matériaux pour un Corpus Inscriptionum Arabicarum* (1903). His publications include *Iranische Felsreliefs* (with F. Sarre, 1910), *Archaeologische Reise im Euphrat-und Tigris-Gebiet* (4 vols., 1911–20), *Die Aufnahme des Sasanidischen Denkmals von Paikuli* (with F. Sarre, 1924), *Die Keramik von Samarra* (with F. Sarre, 1925), *A New Inscription of Xerxes* (1932), *Iranische Denkmaeler* (4 pts., 1932–33), *Archaeological History of Iran* (1935), *Imām Zāde Karrār at Buzun, a Dated Seldjuk Ruin* (with M.B. Smith, 1935), *Altpersische Inschriften* (1938), *Zoroaster and his World* (2 vols., 1947), *Geschichte der Stadt Samarra* (1948), *Monuments et inscriptions d'Alep* (1947), and *The Persian Empire…* (1968).

BIBLIOGRAPHY: G.C. Miles, in: *Ars Islamica*, 7 (1940), 82–92; R. Ettinghausen, *ibid.*, 15–16 (1951), 261–6; C.R. Morey, in: NDB, 8 (1969), 733–4; idem, in: G.C. Miles (ed.), *Archaeologica Orientalia in Memoriam Ernst Herzfeld* (1952), 1–4.

HERZFELD, LEVI (1810–1884), rabbi and historian. Herzfeld, who was born in Ellrich, Germany, studied Talmud under Abraham *Bing in Wuerzburg and Samuel *Eger at Braunschweig and at Berlin University. He first served as *dayyan* under Eger, whose successor as the chief rabbi of the duchy of Braunschweig he became in 1842. As a spokesman of moderate Reform, Herzfeld, in association with L. *Philippson, convened the first Rabbinical Conference in Braunschweig (1844) and also took a leading part in the two following conferences of 1845 and 1846. He and Philippson headed the Institut zur Foerderung der israelitischen Literatur (1860–73). Herzfeld's main importance as a writer of Jewish history lies in that he was the first to pay attention to its economic aspects, particularly in his *Metrologische Voruntersuchungen zu einer Geschichte des… altjuedischen Handels* (1863–65) and his *Handelsgeschichte der Juden des Altertums* (1879, 1894^2). While the latter work's apologetic intent to disprove the antisemitic image of the Jews as a parasitic people of middlemen is evident, the *Handelsgeschichte* is distinguished by its meticulous analysis of the sources and has not been superseded by any other comprehensive work of its type. Herzfeld also wrote on art in Jewish history (*Zwei Vortraege ueber die Kunstleistungen der Hebraeer und alten Juden*, 1864). In his three-volume *Geschichte des Volkes Israel von der Zerstoerung des ersten Tempels bis zur Einsetzung des Makkabaeers Schimon zum hohen*

Priester und Fuersten (1847–57), he stressed the connection between political and religious history. Herzfeld also published Ecclesiastes, with a German translation and commentary (1838); proposals for a reform of Jewish matrimonial law (*Vorschlaege*, 1846); and a Reform prayer book (1874[3]), with some studies on its preparation.

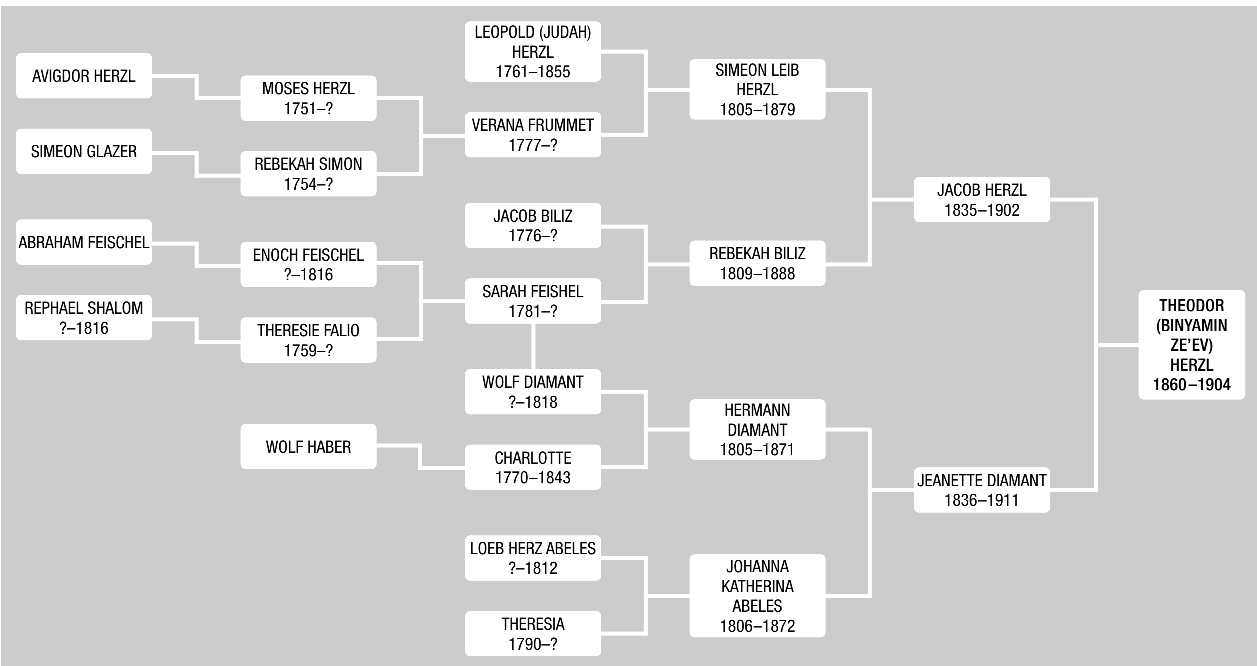
HERZL, THEODOR (**Binyamin Ze'ev**; 1860–1904), founder of political Zionism and the World Zionist Organization. Herzl was born in Budapest, Hungary, to an affluent family and educated in the spirit of German-Jewish enlightenment. In 1878 he entered the law faculty of the University of Vienna, where his family had moved. In 1881 he joined a German students association, Albina, but, encountering antisemitism, resigned two years later. In 1884 he completed his studies but soon afterwards left the legal profession and dedicated himself to literature. His essays were characterized by his superb style and penetrating observations on human problems in modern times. In addition, he also wrote a number of plays, some of which were staged in Vienna, Prague, Berlin, and New York.



In 1889 Herzl married Julie Naschauer. She failed to appreciate his ideas and aspirations and the relationship was not a happy one. They had three children: Pauline, Hans, and Margarethe.

From October 1891 until July 1895 Herzl served as the Paris correspondent of the *Neue Freie Presse*, a liberal-oriented and prestigious Viennese daily. Herzl took particular interest in the social and political problems of France. Excerpts from his articles appeared in a book titled *Das Palais Bourbon* (1895). The resurgence of antisemitism in France awakened his interest in the Jewish problem. His article, entitled "French Antisemites," which appeared in the *Neue Freie Presse* (1892), was followed by his play *Das neue Ghetto* (1895) in which he rejected assimilation, and certainly conversion, as a way to make Jews acceptable to gentile society.

It was, however, the Dreyfus trial (January 1895) that shattered Herzl's illusions. The humiliation of an innocent Jewish captain at the Ecole Militaire, and particularly the cries of the mob, "Death to the Jews," convinced him that the only solution to the Jewish problem would be a massive exodus of the Jews from countries afflicted with antisemitism and the concentration of the Jews in a territory of their own, preferably in the Land of their Forefathers.

He tried first to interest Baron Maurice de *Hirsch, a prominent Jewish philanthropist. The meeting was a failure. Nor was Herzl successful in winning over Dr. Moritz Guedemann, the chief rabbi of Vienna, where Herzl had returned in 1895 to serve as a feuilleton editor of the *Neue Freie Presse*. His attempts to convince a number of other Jewish leaders and intellectuals to support his scheme were also unsuccessful. A notable exception was the celebrated author Max *Nordau, who lent his brilliant pen and oratorial talents to Herzl's service, as well as to Zionism.

Undeterred by his initial setbacks, Herzl published in 1896 his epoch-making treatise *Der Judenstaat* (*The Jewish State*). Translations into Hebrew, English, French, Russian, and Romanian soon followed. In his book Herzl analyzed the Jewish problem and saw the establishment of a Jewish State as

Ancestry of Theodor Herzl, from P. J. Diamant, Theodor Herzl's vaeterliche und muetterliche Vorfahren, *Jerusalem, 1934.*

the only solution. Responses to his book were mixed. Predictably, the assimilationists in Western Europe rejected his thesis and regarded it as a hindrance to their struggle for emancipation. In contrast, David *Wolfsohn, Max *Bodenheimer, and other Zionist-oriented individuals were enchanted and found in Herzl their natural leader. Particularly enthusiastic were Jewish students in Germany and in Austria. The Zionist Movement had come into being. It was, however, the mass of Jews in Eastern Europe that constituted the backbone of the Movement. They regarded Herzl almost as a savior.

Henceforth, Herzl dedicated all his energy and resources to his Zionist cause. His premature death on July 3, 1904, at the age of 44, deprived the movement of a leader of international caliber. He had become a legendary figure in Jewish history, even in his own lifetime.

Political Activity

It was antisemitism that made Herzl and Max Nordau, his close collaborator, conscious Jews. Both were steeped in European culture, but the resurgence of modern antisemitism wounded their dignity. Herzl was particularly stirred by Eugen Duehring's book *Die Judenfrage als Frage des Rassencharakters und seiner Schädlichkeit fuer Existenz und Kultur des Volkes* ("The Jewish Problem as a Problem of Race and the Harm It Is Causing to the Existence and to the Culture of the People"). As the years went by, the feeling of disenchantment grew stronger, but it was not until the Dreyfus trial in 1894 that Herzl's hopes of emancipation were irreparably shattered. He realized that the civilized nations could not cope with the "Jewish Question," which was a legacy from the Middle Ages. "They have tried it through emancipation, but it came too late." The belief of the doctrinaire libertarians that "men can be made equal by publishing an edict was erroneous." The Jews themselves were not yet accustomed to freedom, and the people around them had "neither magnanimity nor patience." In those places where the Jews had been liberated, the nations saw only their bad characteristics. Lacking historical perspective, they failed to realize that some of the anti-social qualities they attributed to Jews were the product of oppression in earlier times. In vain did Jews endeavor to show their loyalty, sometimes even exaggerated patriotism, toward their countries of domicile. Their sacrifices, their achievements in science, and their contributions to commerce were in vain. In the "fatherlands" in which they had lived for centuries, they were denounced as "strangers."

Herzl appreciated that antisemitism was a complex phenomenon. In some countries, it did occasionally reveal a religious bias, but its virulent character was primarily a consequence of emancipation. Contrary to the general belief that hostility to the Jews would disappear, Herzl feared that it would worsen. Hence, he believed that it was futile to combat antisemitism. Assimilation had failed, since in any genuine sense it could be effected only by intermarriage, and the nations would not tolerate members of an unassimilable group becoming their leaders, although, he allowed, perhaps they were "fully within their rights." He predicted that in Russia and Romania persecution would be inspired officially; in Germany, discrimination would be legalized, and in Austria, people would allow themselves to be intimidated by the mob into initiating a "new St. Bartholomew's Night." Hungary, Herzl's country of birth, would be no exception. The calamity would come in a "most brutal form; the longer it is postponed, the more severe it will be; the more powerful the Jews become the fiercer the retribution. There is no escape from it."

He hoped that, in the long run, antisemitism would not harm the Jews and that educationally it might even prove useful. "It forces us," he concluded, "to close ranks, unites us through pressure, and through our unity will make us free." It was this feeling of freedom that made Herzl declare: "We are a people, one people. We recognize ourselves as a nation by our faith." Henceforth, he no longer regarded the "Jewish Question" as a social or religious problem, but as a national one, which should be solved politically by the council of the civilized nations. Sovereignty over a portion of land, "large enough to justify the rightful requirements of a nation," to which the Jewish masses would emigrate, would provide the right solution. Pondering the choice between the Argentine and Palestine, the "ever memorable historic home" seemed preferable. Its very name would attract the people "with a force of marvelous potency."

Herzl wanted to give the Jews "a corner… where they can live in peace, no longer hounded, outcast, and despised… a country that will be their own," to rid them of the faults that centuries of persecution and ostracism had fostered in them and to allow their intellectual and moral gifts free play, so that finally they might no longer be "the dirty Jews, but the people of light." There they would regain self-esteem and dignity, and "the derisive cry 'Jews!' may become an honorable appellation, like 'German, "Englishman," Frenchman.'"

The solution to the problem, however, should not be left to Jews alone. "The Jewish State is a world necessity!" Those civilized nations who were trying "to exorcise a ghost out of their past" must also shoulder responsibility. He believed that a potential community of interests did exist between the antisemites and the Zionists. "The antisemites will become our most dependable friends, the antisemitic countries our allies. We want to emigrate as respected people," parting as "friends from our foes… The solution of the Jewish Question must be a mighty final chord of reconciliation." Eventually it would place relationships between Jew and Gentile on a normal footing. If the Powers, with the concurrence of the sultan, would recognize Jewish sovereignty over Palestine, the Jews in return could undertake to regulate Turkish finances; they would form there "a portion of Europe … an outpost of civilization." The Jewish State would become "something remarkable… a model country for social experiments and a treasure house for works of art… a destination for the civilized world."

Relations with Germany

Herzl was primarily a man of action who wished to translate his ideas into reality. His basic premise, that Zionism consti-

tuted an effective antidote to antisemitism, led him to the conviction that the countries most plagued by this problem were his potential allies. As early as June 9, 1895, he jotted down in his diary, "First I shall negotiate with the Czar regarding permission for the Russian Jews to leave the country … Then I shall negotiate with the German kaiser, then with Austria, then with France regarding the Algerian Jews, then as need dictates." That Herzl should have expected Germany to support him is not surprising, since it was there that modern antisemitism originated. In an interview with Baron de Hirsch in 1895 he exclaimed, "I shall go to the German kaiser, he will understand me…. I shall say: Let our people go! We are strangers here; we are not permitted to assimilate with the people, nor are we able to do so. Let us go!" He was confident that one day the kaiser would be grateful to him for leading the "unassimilable people out."

In this assumption Herzl was basically correct, but it was rather the philosemites who first gave him support. When a long-awaited reply from ex-Chancellor Bismarck was not forthcoming, and the German press appeared to be critical of his *Judenstaat*, a savior from an unexpected quarter called on him. It was the Reverend William Hechler, chaplain to the British Embassy in Vienna. Hechler impressed Herzl as a likable, sensitive, and enthusiastic man. He believed that in 1897–98, the years of "prophetic crisis," Palestine would be returned to the Jews, a prediction that was backed by abstruse computations. Having read the *Judenstaat*, he no longer doubted that the "foreordained movement" had come into being. In Herzl's quizzical eyes, Hechler appeared "a naïve visionary," but it is undeniable that it was he who raised Herzl's cause to the diplomatic plane by introducing him to the Grand Duke of Baden, at whose court Hechler had been a tutor. Hechler also knew the kaiser and thought it possible to arrange an audience for Herzl.

On March 26, 1896, Hechler wrote to the duke about Herzl's project, noting with satisfaction that the antisemitic movement had made the Jews see that they were "Jews first and [only] secondly Germans, Englishmen, etc." It reawakened in them a longing to return "as a nation to the Land of Promise … Palestine belongs to them by right." Should Germany and England give their support and take the Jewish State, declared neutral, under their protection, the Return of the Jews would be a great blessing and would put an end to antisemitism, which was detrimental to the welfare of European nations. He also suggested that the issue be laid before the kaiser, the duke's nephew.

The duke took the opportunity of the kaiser's visit to Karlsruhe to brief him on the subject. The kaiser was not fully acquainted with the matter and did not take it seriously. Nor, it appears was Grand Duke Frederick truly convinced of Herzl's cause. Herzl did his best to dispel the duke's misgivings. On April 22, 1898, when they first met at Karlsruhe, he explained that the establishment of the Jewish State would be an act of goodwill, not a consequence of persecution, that emigration would be voluntary, and that it concerned chiefly the Jews of Austria, Russia, and Romania. German Jews would welcome it; it would divert the migration of their East European coreligionists away from Germany. Moreover, it would reduce the number of Jewish proletarians and, by the same token, the number of revolutionaries. Herzl argued that Jewish enterprise would restore to health "the plague-spot of the Orient."

The grand duke was won over and remained Herzl's staunch supporter. Verdy du Vernois, the former Prussian minister of war and an expert on the Orient, was also convinced that the Zionist project would benefit Turkey, while Hechler continued untiringly to win new converts, particularly in British and German clerical circles. Grand Duke Frederick advised Hechler to win over Count Philipp zu Eulenburg, the German ambassador in Vienna, a gifted politician, whose influence on the kaiser was profound. Hechler was instructed to tell the ambassador that, in the duke's opinion, "something was involved that might prove to be important for German policy in the Orient."

Briefed by Hechler, Herzl was now confident that his movement would receive help. He hoped to persuade the grand duke that settlement by a neutral national element along the shortest route to Asia could be of value to Germany. He also prepared a draft letter to the kaiser, explaining that the Jews were the only people who could colonize Palestine; the land was too poor to attract others. For the Jews, it was rich in memories and hopes. Settlement by other European nationals would engender jealousy among the Powers, while settlement by the Jews, as a neutral element, would create fewer complications.

On Hechler's advice, the letters were not dispatched, but they reflect the working of Herzl's mind. He attempted to strike a balance between the principle of neutrality, embodied in the Basle Program, and an endeavor to solicit the support of a European Power – in this case, Germany – for his cause. The two elements were complementary. The Zionists, he hoped, would be regarded as the lesser evil, since no Power would let any other have Palestine.

During the summer and autumn of 1898, everything seemed, at least superficially, to be going well for Herzl. When Hechler failed to meet Count Eulenburg in Vienna, the duke wrote directly to the kaiser. Earlier he had hesitated to introduce Herzl to Wilhelm, but now that the Zionist movement had made substantial progress, it warranted a certain amount of attention, especially on the eve of the imperial visit to Palestine. Jewish colonization had proved successful, and consistent efforts were being made to lay the foundations of a Jewish state.

It took Wilhelm a month to reply to his uncle's letter. The Zionist aspirations appealed to him, and he instructed Eulenburg to examine the material, but he doubted whether the movement was ripe enough to justify official support. He noted also that Zionism was meeting with strong opposition from influential sections of Jewry, but the duke remained optimistic. On September 2, 1898, he received Herzl in Mainau Castle and, as if to demonstrate his confidence, discussed se-

cret political matters with him. Originally, the kaiser's trip was to be strictly religious, but subsequently it was decided to give it a political character. En route to Palestine, the emperor would pay an official visit to the sultan. Through Ambassador Marschall, the German Government had made inquiries in Constantinople and, the duke said, had learned that the sultan viewed the Zionist cause with favor. Since the Cretan affair, the kaiser had been on excellent terms with the sultan, and the duke was confident that the kaiser's word would certainly be heeded by his host. This was important, because legal security was necessary for the foundation of a state; he thought a formula could be found for preserving the Ottoman overlordship on the pattern of the former Danube principalities.

Shortly after, on September 16, Herzl was invited to meet Count Eulenburg in Vienna. The ambassador was not yet fully acquainted with the project and nourished some misgivings: the soil of Palestine was poor and the Turks would view the immigration of "two million people" with disfavor and suspicion; the sultan was obsessed by fear. However, after listening to Herzl, the ambassador grew "perceptibly warmer." The project was new and visibly fascinated him. But the strongest impression made on him was Herzl's statement that, since Zionism existed, one Power or another would sooner or later espouse it. "Originally, I thought that it would be England. It lay in the nature of things" – but now Germany would be even more welcome. The mention of England, as Herzl observed, was conclusive for Eulenburg. He promised Herzl that he would try to persuade the emperor to intercede with the sultan in order to obtain the country for the Zionists on "the basis of autonomy." He also suggested that Herzl should meet the foreign minister, Bernhard von Buelow.

Herzl impressed Eulenburg as "an unusually gifted man" of striking appearance: "a tall gentleman, with a head like that of King David, the type of valiant leading Jews from the time of the Jewish kingdom, without any trace of a *Handelsjude*." This reaction was typical of Eulenburg's romantic nature. His deeper reasons for so fervently supporting Herzl can only be surmised, for there is little documentary evidence. He believed that Herzl could collect "absolutely unlimited sums" to offer the sultan as a quid pro quo for the concession of Palestine. Since Eulenburg was the first German statesman to commit himself, at least by implication, to the maintenance of the Ottoman Empire, it is possible that Herzl's offer to straighten out the sultan's finances made a strong appeal to him.

Buelow had other ideas. He received Herzl with "captivating kindness," impressing him as a gentleman of the *vieux jeu* of diplomacy rather than the iron type of the Bismarck era. He complimented Herzl profusely on his writing, but his conversation was more in the nature of a chat than a serious political discussion. He doubted whether many German Jews would emigrate; in any case, their departure seemed to him undesirable. He was pleased to learn from Herzl that in Vienna the Zionists had won students away from socialism. Herzl's projected state, however, he dismissed as a "*polis* of Plato." He expected that the main difficulty would be to convince the sultan to enter into negotiations with the Zionists, adding ironically that "it would make a big impression on him should the kaiser give him such advice." Yet Herzl felt intuitively that Buelow was not in favor of the kaiser granting him an audience.

Buelow was a cultured and subtle diplomat and an expert in manipulating people. "He liked to play with ideas and with human beings [but] had no taste for pathos or for lofty trains of thought," but "beneath the charming façade was a narrowness of vision." That the anti-Socialist aspect of Zionism should have attracted his attention is hardly surprising, since "the most important domestic question for him was the fight against the Socialists." His biographer notes that, while recognizing Herzl's great literary talents, he was unable to work up any enthusiasm for his political ideas. Buelow was well aware of the hardships which the Jews in Eastern Europe had to endure but was not convinced that mass emigration to Palestine would improve their lot. He also doubted whether Herzl's project could be applied to German Jews, who were strongly attached to Germany and felt no need "to rush into an undefined venture in Palestine." Zionism, in Buelow's opinion, could at best attract the destitute, not the prosperous and educated among the Jews of Europe; but beggars were not capable of founding a state or even of colonizing it.

Buelow was largely influenced by Professor Ludwig Stein. In a memorandum prepared at Buelow's request, Stein dismissed the Zionist project as "not worthy of consideration," a conclusion he had reached during a fact-finding mission to Palestine in 1895 on behalf of the *Esra Verein*. The *Verein* was investigating the possibilities of Jewish migration from Russia to Palestine, but Stein, though impressed by the existing colonies, discounted them as "mere oases in the desert. The stony soil, the lack of humus, the dearth of fauna, and the scanty flora" were "insurmountable obstacles to any considerable colonization." Moreover, in his opinion, Abdul Hamid's opposition to the settlement of aliens made the *Verein*'s project impracticable.

In 1929, Stein admitted that he had been mistaken:

> In justice to the memory of Herzl, I must confess that in his visionary ecstasy he foresaw many things which logical rationalism considered Utopian. Herzl and Nordau had prevailed. They brought to life a movement that grew far beyond the limits of my wildest dreams. Had I possessed prophetic vision then my judgment as recorded in my diary [memorandum?] would have been different. But being a philosopher by profession, I could not assume the role of seer.

Buelow, too, in October 1914 (by then no longer a minister) admitted to Bodenheimer that reports from Jewish quarters had misled him into adopting a negative attitude toward Zionism.

Unable to rely on Buelow, Herzl wrote to Eulenburg to request an audience with the emperor before the latter's departure for Constantinople. He made five points:

1. In various countries, Zionism might lessen the danger

of socialism, since it was often dissatisfied Jews who provided the revolutionary parties with leaders and ideas.

2. A reduction in Jewish numbers would weaken antisemitism.

3. Turkey stood to gain from the influx of an intelligent and energetic element into Palestine. Large sums of money injected into her economy and the increase in trade would improve her finances.

4. The Jews would bring civilization and order back to a neglected corner of the Orient.

5. A railroad from the Mediterranean to the Persian Gulf was a European necessity. The Jews could and must build this great road of the nations which, if undertaken otherwise, might call forth the most serious rivalries.

This memorandum had a remarkable success. In less than a week, the kaiser, in consultation with Eulenburg, whose counsel he valued, made up his mind to give full support to Herzl's cause. In a letter to his uncle, the grand duke, thanking him for providing the stimulus and guidance in a matter of which hitherto he had had only superficial knowledge, the kaiser wrote:

> The fundamental idea of Zionism has always interested me and even aroused my sympathy. I have come to the conclusion that here we have to deal with a question of the most far-reaching importance. Therefore I have requested that cautious contact should be made with the promoters of this idea. I am willing to grant an audience to a Zionist deputation in Jerusalem on the occasion of our presence there. I am convinced that the settlement of the Holy Land by the wealthy and industrious people of Israel [*Volk Israel*] will bring unprecedented prosperity and blessings to the Holy Land, which may do much to revive and develop Asia Minor. Such a settlement would bring millions into the purse of the Turks and so gradually help to save the "Sick Man" from bankruptcy. In this way the disagreeable Eastern question would be imperceptibly separated from the Mediterranean…. The Turk will recover, getting his money without borrowing, and will be able to build his own highways and railways without foreign companies and then it would not be so easy to dismember Turkey.
>
> In addition, the energy and creative powers and abilities of the tribe of Shem would be directed to more dignified purposes than the exploitation of Christians, and many Semites of the Social Democratic Party, who are stirring up opposition, will move eastwards, where more rewarding work will present itself…. I know very well that nine-tenths of all Germans will be deeply shocked when they hear, at a later time, that I sympathize with the Zionists or even that I place them under my protection when they appeal to me.

Moreover, Kaiser Wilhelm added:

> From the point of view of secular *Realpolitik*, the question cannot be ignored. In view of the gigantic power (very dangerous in a way) of international Jewish capital, would it not be an immense achievement for Germany if the world of the Hebrews looked to her with gratitude? Everywhere the hydra of the most awful antisemitism raises its terrible and brutal head, and the Jews, full of anxiety, are ready to leave the countries where they are threatened in order to return to the Holy Land and seek protection and security. I shall intercede with the Sultan.

Wilhelm was certainly not free from religious prejudices but here his reaction to antisemitism was unusual. By proposing a constructive solution to the "Jewish Problem," he seemed to stand out from most of his contemporaries, though obviously, without the impact of Herzl's memorandum (re-echoed partly in his letter), it is doubtful whether his conclusions would have been so far-reaching. However, it is evident that it was Eulenburg who had kindled his interest. The count understood the emperor and, in serious matters, knew how to make his counsel effective. "Only by consistently rational and timely advice was it possible to confine the … temperamentally exuberant Emperor within limits." The kaiser "has to be greatly interested in a matter," Eulenburg told Herzl during his second interview on October 8, "as otherwise he soon loses sight of it. My standing with the Kaiser is such that I am able to speak to him differently from, and more than, many others. Very few people can go as far as I … I have been able to bring the matter up again and again and I have succeeded."

On September 27, Eulenburg advised Herzl that the kaiser would be pleased to receive a Zionist deputation in Palestine, which would give Herzl an excellent opportunity to present his case. On the next day, September 28, Eulenburg sent Herzl a highly confidential postscript: "His Majesty would discuss the matter with the Sultan in a most emphatic manner and will be pleased to hear more from you in Jerusalem. The Kaiser has already issued orders to the effect that no obstacle is to be placed in the way of the [Zionist] delegation. In conclusion, H.M. wishes to tell you that he is very much *prepared* to undertake the protectorate in question."

The duke also assured Herzl of the emperor's "warm and lively interest"; he would suggest his protection of the Zionist project when he met the sultan; thereafter he would receive a Zionist deputation in Jerusalem in order to demonstrate his sympathy.

The meeting with Eulenburg on October 8 was even more encouraging and made Herzl confident that Germany's intervention and protection were a foregone conclusion.

A subsequent conversation with the grand duke in Potsdam on October 9 fortified Herzl's conviction. "The Kaiser has been thoroughly informed … and is full of enthusiasm. That word is not too strong. He has taken to your idea quite warmly. He speaks of it in the liveliest terms. He would also have received you by now, for he has confidence in you; but it is now deemed better to receive you at Constantinople and Jerusalem." He added that a good report had come from Marschall and that the kaiser believed that the sultan would consider his advice favorably.

Ambassador Marschall had made his name as a diplomat by initiating the era of German-Turkish friendship, which became one of the chief *leitmotifs* of Germany's foreign policy. There is hardly any evidence about his attitude toward Zionism; the "favorable report" to which both Eulenburg and the grand duke of Baden referred has not so far come to light. It is not among the documents of the German Foreign Ministry, nor can it be traced in the *Nachlass Eulenburg*, or

among the emperor's papers. We can only surmise why it was too risky for him to support such a venture.

His first objective was to cement relations with Turkey; the second, to facilitate Germany's peaceful penetration of the Ottoman Empire without arousing suspicion. This was not an easy task, since the Russian press was giving much prominence to the alleged German plans to colonize Asia Minor, and even Petersburg made known its displeasure with Berlin's *Drang nach Osten*. It was the French who were responsible for feeding the Russians with this kind of information, which Marschall dismissed as "terrible nonsense, such as only Frenchmen, when speaking about Germans, are able to produce." But German protection of Jewish colonization would have substantiated the Russian and French allegations and, in the given circumstances, caution was imperative.

Moreover, Marschall was aware that the sultan's objection to foreign colonization was based on religious grounds and that the Muslim clergy were particularly sensitive on this issue. In 1905, Marschall asked a representative of the *Hilfsverein der deutschen Juden* to advise the Zionists to moderate their political aspirations. Yet the question still arises: why, if Marschall was aware of the pitfalls entailed in support of Zionism, did he not warn the emperor in the autumn of 1898?

Soon after the Zionist delegation arrived in Constrantinople, it experienced a bitter foretaste of its future disappointments. Marschall declined to grant Herzl an audience on the pretext that he did not know him. Max Bodenheimer's explanation that Dr. Herzl was the Zionist leader who had been in touch with Count Eulenburg and that the matter concerned the reception of a deputation by His Majesty the Kaiser had no effect. To the Zionists' regret, Eulenburg did not join the Near Eastern tour. Buelow was unreliable and Marschall enigmatic. To bring matters to a head, Herzl wrote to Wilhelm requesting a confidential audience. He assured the kaiser that France, weakened internally, would not be able to make a move, that "to Russia, the Zionist solution of the Jewish question meant enormous relief," and that no effective objection was to be feared from England, since the English Church was known to favor the Zionist cause. "Everything depends on the form of the *fait accompli*." As for the sultan, even if he did not immediately realize what aid the Zionists would bring to his impoverished state, it was unlikely that he would decline to accept the kaiser's advice. Once personal contact between the two sovereigns was established, they could ignore the intrigues of the other Powers. Herzl's request boiled down to a concession for a "Jewish Land Company for Syria and Palestine" under German protection.

The long-awaited audience with the emperor took place on October 18 in Buelow's presence. The kaiser listened attentively to Herzl's exposition and expressed confidence that the Zionists, with the financial and human resources at their disposal, would be successful in their venture. That the word "Zionism" was used by the German emperor as an accepted term was a source of pride to Herzl, but other utterances were less pleasant. "There are elements among your people whom it would be a good thing to settle in Palestine," the kaiser stated. "I am thinking of Hesse, for example, where there are usurers at work among the rural population. If these people took their possessions and went to settle in the colonies, they could be more useful." Herzl was taken by surprise, because earlier he had been assured by both Eulenburg and Buelow that Wilhelm II was by no means antisemitic. Herzl soon regained his confidence and launched an attack on antisemitism, only to be parried by Buelow, who commented that the Jews, by flocking to the opposition and even to the anti-monarchical parties, showed their ingratitude to the House of Hohenzollern. Herzl replied that Zionism would take the Jews away from the revolutionary parties. Buelow stuck to his guns and, when Wilhelm expressed confidence that the Jews would support the colonization of Palestine once they knew it was under his protection, the foreign minister interjected that the rich Jews were not in favor of it, nor were the big newspapers. At every opportunity, he contradicted the emperor, only stopping short of using "the little word No … since the *voluntas regis* [royal will] is Yes." On one occasion, the kaiser had laid it down that "*suprema lex regis voluntas est*."

However, the emperor, who often allowed himself to be guided by his minister, in this case supported Herzl and agreed that Zionism was a "completely natural" solution. Buelow again raised a doubt as to the attitude of the Porte, although individual Turkish ministers might prove more amenable if offered sufficient bribes. But the kaiser brushed aside Buelow's misgivings, confident that it would make an impression if he showed interest. "After all, I am the only one who still sticks by the Sultan." Throughout the conversation, the kaiser looked at Herzl directly. Only when the latter spoke of the new overland route to Asia and the Persian Gulf did he stare into space, and his thoughtful expression revealed that Herzl's words had made an impact. The interview was concluded by the kaiser's undertaking to ask the sultan for a "chartered company under German protection." He shook Herzl's hand vigorously, promising to work the details out with Buelow. Events showed that he gravely misjudged the attitude of the Porte and his own minister.

Though flattering his sovereign as "a monarch of genius!" Buelow remained unconvinced. He told Herzl (after the kaiser had left) that in his opinion the Turks were unfavorably disposed and advised him to see Marschall, who possessed "exact information." Soon after, Herzl drove to the German Embassy, only to find that Marschall had left to attend the dinner in the kaiser's honor. It was there that the emperor made his diplomatic overture to the sultan and failed.

Wilhelm's account of his encounter with Abdul Hamid, quoted already, is too sketchy to enlighten us. In 1902, the Grand Duke of Baden told Dr. Bodenheimer that at the dinner the kaiser twice attempted to discuss the matter of Palestine with the sultan, but the latter displayed a "complete and ostentatious lack of understanding." Earlier, in 1901, Herzl was told by Count Eulenburg that he had been unable to discover what the difficulty had been. The sultan rejected the kaiser's sugges-

tion so brusquely that it was not possible to pursue it further; "we are anxious to remain on good terms with him. As a guest, the Kaiser could not, of course, press the subject."

If the circumstantial evidence adduced above is correct, the kaiser's diplomatic venture was clumsy. Wilhelm II has been described as quick, versatile, and responsive to ideas, but also as a man without depth; impulsive by nature, he scarcely penetrated the problems that he studied. In personal relations, he was benevolent and amiable; yet, on some occasions, he was inclined to act in a most erratic and tactless manner. Despite his intellectual gifts, there was much of the irresponsible dilettante in him. He undoubtedly had an instinct for politics, but he was no master of diplomacy. "What he needed most – and never had – was someone in authority over him." It was unfortunate that Eulenburg was not present, because Buelow's reliability was still to be tested.

Unaware of the emperor's failure, Herzl drafted the official address he was to deliver in Jerusalem:

> We are bound to this sacred soil through no valid title of ownership. Many generations have come and gone since this earth was Jewish. If we talk about it, it is only about a dream of very ancient days. But the dream is still alive, lives in many hundreds of thousands of hearts; it was and is a wonderful comfort in many an hour of pain for our poor people. Whenever foes oppressed us with accusations and persecutions, whenever we were begrudged that little bit of right to live, whenever we were excluded from the society of our fellow citizens – whose destinies we have been ready to share loyally – the thought of Zion arose in our oppressed hearts.
>
> There is something eternal about that thought, whose form, to be sure, has undergone multifarious changes with people, institutions, and times.

Herzl stressed that Zionism was a political expression of an old idea. It aimed at solving the "Jewish Question" by modern means, but its essence was to realize the centuries-old dream of returning to Zion. "This is the land of our fathers, a land suitable for colonization and cultivation," he said, "It cries out for the people to work. And we have among our brethren a frightful [*sic*] proletariat. These people cry out for a land to cultivate." He argued that Zionism was a cause so worthy of sympathy that it would fully justify the emperor's protection. The sultan, too, should be persuaded of the usefulness of the Jewish Land Company.

> We are honestly convinced that the implementation of the Zionist plan must mean welfare for Turkey … Energies and material resources will be brought to the country; a magnificent fructification of desolate areas may easily be foreseen; and from all this there will arise more happiness and more culture for many human beings. Our idea offends no-one's rights or religious feelings; it breathes long-desired reconciliation. We understand and respect the devotion of all faiths to the soil on which, after all, the faith of our fathers, too, arose.

Moreover, Herzl added that Jewish aspirations transcended their purely national context. They were part of the human endeavor.

> This is the fatherland of ideas which do not belong to one people or to one creed alone. The farther men advance in their morality, the more clearly do they recognize the common elements in these ideas. And thus the actual city of Jerusalem, with its fateful walls, has long since become a symbolic city sacred to all civilized men.

The exalted note echoed the messianic hope of the Hebrew prophets, who believed that the redemption of the Jewish people would coincide with the redemption of mankind. Lofty as its content was, it brought no definite result. Circumstances were against Herzl; it does not require much imagination to realize why "German protection of a Jewish chartered company" could not commend itself to the sultan. For years, Turkey had been struggling against the system of *Capitulations, which provided the European Powers with an instrument for meddling in her internal affairs. "The spectre of a second Franco-Lebanon [in the form of a Judeo-]German Palestine" was alarming. Ahmed Tewfik, the Turkish foreign minister, who accompanied the kaiser on his tour of Palestine, made it clear that "the Sultan would have nothing to do with Zionism and an independent Jewish kingdom." As a result, Wilhelm lost his enthusiasm for Zionism.

Herzl may have been flattered when the kaiser stopped for a while and chatted with him at the gates of Mikveh Israel, to the astonishment of the spectators watching the imperial procession on its way to Jerusalem. "Water is what it needs, a lot of water … It is a land of the future," the kaiser told Herzl, but the interview that Herzl had with the Legation counselor Klehmet, whom Buelow had brought with him from Berlin as his secretary, was discouraging. He objected to a number of passages in Herzl's draft address and insisted on the deletion of the passages requesting the emperor to take the Land Company under his protection. It was noticeable, Bodenheimer observed, that the Foreign Ministry took great care to ensure that the kaiser would not, in a moment of enthusiasm, announce his protection of Zionist colonization.

The official audience with the emperor took place on November 2, 1898, in Jerusalem, again in Buelow's presence. The emperor welcomed Herzl affably and displayed interest in his address, but then stated that the matter required "thorough study and further discussion." The German and Jewish colonies had impressed him and served as an indication of "what could be done. The country has room for everyone"; the work of the Jewish colonists "will also serve as a stimulating example to the native population. Your movement, with which I am thoroughly acquainted, contains a sound idea." He assured the deputation of his continued interest, but the conclusive statement that Herzl was so eagerly awaiting was not forthcoming, and the political aspect of the scheme was passed over. The kaiser said "neither yes nor no," and Herzl inferred that his stock had depreciated. On the day itself, he still clung to the belief that the reception might have some "historic consequences," but disillusion was soon to follow. The colorless official communiqué issued by the German news agency (of which Herzl learned on his return journey) dispelled earlier hopes. It read:

> Kaiser Wilhelm has received a Jewish deputation… Replying to an address by its leader, Kaiser Wilhelm said that all those efforts which aimed at the improvement of agriculture in Palestine, and which furthered the welfare of the Ottoman Empire, commanded his benevolent interest, with due respect for the sovereignty of the Sultan.

The substitution of "Jewish" for "Zionist" was significant. Moreover, the emphasis on respect for Ottoman sovereignty also reflected the caution employed by German officials, but such an emasculated formula was hardly what Herzl expected. A month earlier he had asked Eulenburg whether it would not be wiser for the kaiser to receive the Zionist deputation privately. Unaware of the fiasco in Constantinople, he felt he had been misled. However, unlike his colleagues, he remained undaunted; the protectorate was not an end in itself, but only a means to achieve his objective. Herzl returned to Berlin empty-handed.

The ever sympathetic Grand Duke of Baden was willing to help and Count Eulenburg invited Herzl to meet him, but the attitude in Berlin remained negative. The duke admired Herzl's perseverance and suggested that, since Germany was in no position to recommend the Zionists in Constantinople, Austria might well be able to do so. Eulenburg also explained why it was impossible for Germany to sponsor Herzl's cause, but encouraged him and thought that the support of the British Parliament, where Herzl had managed to enlist 40 sympathizers, was "very important."

Relations with Turkey

Turkey was Herzl's main stumbling-block; to win her over was one of his main objectives. As early as 1895 (the year of his Zionist awakening), when the Eastern question had gained renewed prominence in diplomatic circles, he hoped that a favorable opportunity might arise for the Jews to claim Palestine as a "neutral land." But when prospects of Turkey's dismemberment faded, he veered in the opposite direction: "We shall bestow enormous benefits upon Turkey." If Palestine were ceded as "an independent country," the Jews would undertake to straighten out Turkish finances. If Jewish capital could be raised for the most exotic undertakings, would none be found for "the most immediate, the direst need of the Jews themselves?" he wrote to Baron Hirsch in 1895.

Briefed by Moritz Reichenfeld, director of the Union Bank of Vienna, he calculated that a sum of 18 million Turkish pounds would suffice to relieve the Porte of foreign debt; this he hoped to supplement with an additional 2 million. These calculations were, however, based on a misconception. The Turks were disinclined to grant even minor concessions, while the rich Jews were in no mood to raise the money. Dionys Rosenfeld, editor of the *Osmanische Post* in Constantinople, told Herzl on May 3, 1896 that, despite her financial straits and diplomatic weakness, Turkey would not relinquish sovereignty over any of her provinces, an opinion that Philip de Newlinski, a Polish agent, confirmed: the sultan would never part with Jerusalem.

To Newlinski's astonishment, Herzl did not betray any sign of despair. His instinct told him that not every statement should be taken at face value. Herzl's sympathetic presentation of Turkey's problems in the formerly hostile *Neue Freie Press* earned him the sultan's goodwill. Although Palestine remained out of the question, Herzl inferred from Newlinski that the Ottoman sovereign might accept some kind of arrangement. The only opponent was the grand vizier. He received Herzl in his capacity as a journalist and discussed current affairs, but Palestine was not mentioned. Herzl still hoped that once the benefits became more tangible opposition at the Yildiz Kiosk would melt away. Moreover, to dispel any lingering suspicions he modified his terminology. "Independent Jewish State" and "republic" were replaced by "autonomous vassal state … under the suzerainty of the Sultan"; Jewish immigrants were to embrace Ottoman nationality and settle in Palestine at the express invitation of the sultan; they were to pay a tribute of 100,000 pounds, a sum which would rise to 1 million annually, *pari passu* with the increase in immigration. In return they would be granted autonomy and be allowed to maintain an army.

On his return from Constantinople (July 1896) Herzl's first priority was to raise the necessary funds. In London the idea of a Jewish state had an electrifying effect on the poor Jews of the East End, but the rich Jews remained aloof. A notable exception was Sir Samuel *Montagu, MP (later the first Lord Swaythling), a prominent banker and a Ḥovevei Zion leader. Even so Montagu made his support conditional on that of Baron de Hirsch and Baron Edmond de *Rothschild of Paris, but, as neither was moved by Herzl's appeal, Sir Samuel's sympathy had little practical value. Rothschild had no faith in Turkish promises and doubted the feasibility of the project. Warm as his patronage of the Jewish colonies in Palestine was, he was not prepared to accept the risk of having to maintain hundreds of thousands of immigrants. Moreover, his experience convinced him that a politically motivated project would not be favored in Constantinople. Rothschild's rejection was a bitter blow to Herzl, but despair was a luxury he could not afford. A year earlier he had written to Zadoc Khan, the chief rabbi in France, "I believe that we are at a great turning point of our history." If the big capitalists refused, perhaps the little Jews would band together and raise the money. A national movement had to be shouldered by the people themselves, not by single individuals. It was this reasoning, among other things, that prompted him to convene a World Zionist Congress.

It was in deference to Turkish susceptibilities that references to the idea of Jewish statehood were dropped. In the June 1897 issue of *Die Welt*, the Zionist organ, Herzl introduced for the first time the term *Heimstaette*, which means homestead, and prevailed upon the First Zionist Congress to incorporate it in its official program: "Der Zionismus erstrebt fuer das juedische Volk die Schaffung einer oeffentlich-rechtlich gesicherten Heimstaette in Palestina." He insisted on the wording "oeffentlich-rechtlich" (under public law) as against one of the alternative suggestions "voelker-rechtilich" (under

international law) which implied intervention by the foreign Powers in the internal affairs of a sovereign state. He dismissed the term "rechtlich" (under private law) since in the given context it was too weak. By contrast, "oeffentlich-rechtlich gesicherte Heimstaette" (secured by public law) was flexible enough to be interpreted in Constantinople as meaning by public Ottoman law, whereas, in London, Paris, and Berlin it could be read as international law, enabling the European Powers to guarantee the Jewish home. Like the Delphic utterances, it could be interpreted either way, but to Herzl it could have had only one meaning:

> At Basel I founded the Jewish State. If I said this out loud today, I would be answered by universal laughter. Perhaps in five years, and certainly in fifty, everyone will know it. The foundation of a State lies in the will of the people…. Territory is only the material basis; the State, even when it possesses territory, is always something abstract … At Basel I created this abstraction … I gradually worked the people into the mood for a State and made them feel that they were its National Assembly.

The Turks, however, were not deceived, and on February 4, 1898, Tewfik Pasha told Herzl that he welcomed Jewish immigrants to Turkey but would not grant them any specific territory or autonomy. To Herzl such a solution, tantamount to a "settlement of new Armenians in Turkey," was totally unacceptable. Nor did Wilhelm II prove to be Herzl's savior; as it turned out, the kaiser's *démarche* with Abdul Hamid did more harm than good. Strangely, it never occurred to Herzl that the intervention of a foreign Power would prejudice his case with the Ottoman ruler. Newlinski's sudden death was an additional misfortune. Rejected by the German government and aware of the poor state of Zionist finances, Herzl almost reached breaking point. The big question mark inserted on April 17, 1899, in his diary reflected his state of mind.

However, it was Arminius Vámbéry, a Hungarian-Jewish Orientalist and traveler, who procured an audience with the sultan for Herzl. Vámbéry was fluent in 12 languages and changed his religion as lightly as his coat. As a young man in Constantinople he had embraced Islam and later, when appointed professor of Oriental languages at the University of Budapest, had adopted Protestantism. A personal friend of Abdul Hamid II and of King Edward VII, and an authority on Central Asia, he had carried out several diplomatic missions for both the British and Turkish governments. When Herzl met him on June 16, 1900, he was 70 years old, not clear about his own identity, whether he was a Turk or an Englishman, but his study of religions had made him an atheist. Herzl's personality attracted him strongly, and, as events showed, his help to the Zionists was genuine. Beneath his cosmopolitan veneer lurked Jewish sentiments, and Herzl played on them well. "You and I belong to a race who can do everything but fail," and on December 23, 1900 Herzl urged him on: "Your true mission is to help your people."

Vámbéry kept his word. On May 8, 1901, on his return from Constantinople, he brought good news: the sultan would receive Herzl as a Jewish leader and an influential journalist, though not as a Zionist. "You must not talk to him about Zionism. That is a phantasmagoria. Jerusalem is as holy to these people as Mecca is."

However weighty the religious motives, what made the Turks so obdurate was the fear of intervention by the Powers. Should the Jews be allowed to immigrate freely, the Powers would seize an early excuse to occupy Palestine by military force. Ahmed Tewfik made little effort to conceal from David Wolffsohn how annoyed his government was with Herzl's *The Jewish State* and reiterated the standard Turkish position.

That the sultan nonetheless did receive Herzl warmly is not surprising since with Zionism deliberately excluded there was nothing to sour the occasion. The meeting took place on May 17, 1901. Before the audience Herzl was presented with the Grand Cordon of the Order of Mejidiye, the highest Turkish decoration, and, after they had met, the sultan gave him a diamond tie pin as a token of personal friendship. For Herzl the gifts had only a symbolic value. His impression of Abdul Hamid was of "a weak, cowardly, but thoroughly good-natured, man," neither crafty nor cruel, but "a profoundly unhappy prisoner in whose name a rapacious, infamous, seedy camarilla perpetuates the vilest abominations." In contrast, Herzl impressed his host as "a leader" and "a prophet." The audience lasted for two hours. Herzl thanked Abdul Hamid for his benevolence toward the Jews, which the latter accepted as confirmation of an established fact: his Empire was wide open to Jewish refugees and, among the non-Muslims, they were the most reliable subjects. This gave Herzl an opening to proffer certain services, quoting the story of Androcles and the lion. "His Majesty is the lion, perhaps I am Androcles, and maybe there is a thorn that has to be pulled out." The thorn, Herzl disclosed, was the public debt; if eliminated, Turkey would be given a new lease on life. Herzl put his finger on the sorest spot of Turkey's body politic and, noting how amused his host was by the parable, asked for permission to make the sultan's pro-Jewish sentiments public from whatever platform and on whatever occasion he deemed fit. Abdul Hamid, unaware that Herzl had in mind the Zionist Congress, agreed and said that what Turkey needed most was the industrial skill of the Jewish people. He asked Herzl to recommend a financial adviser and promised "permanent protection" to those Jews who sought refuge in his lands.

Vámbéry, whom Herzl met on his return journey, thought that his achievement in Constantinople was "tremendous" and hoped that the concession for the charter company would be granted within a year. The press, too, presented the audience in rosy colors. Elated, Herzl hoped to be more successful with Jewish financiers, but was again disappointed. The Rothschilds remained unconvinced. Herzl complained to a friend that had it not been for this "miserable money" he would have been "almost through with the Sultan."

In mid-July 1902, Herzl called at the Yildiz Kiosk for the fifth and last time. Believing the moment propitious, he asked that the Porte should reject French financial assistance and grant a concession for the Jewish colonization of

Mesopotamia and Haifa and its environs. Mesopotamia was merely camouflage for his real ambitions, and Haifa was only a stepping stone. He was careful not to disclose the identity of his "friends" in the world of high finance, and warned that the consolidation of the Ottoman public debt would be a "slow and complicated" process. The fees paid by the Company would be proportionate to the number of immigrants allowed to enter the regions concerned. Should the sultan make a special declaration, a favorable response throughout the world would follow. It would attract Jewish intelligence, capital, and enterprise, from which the Ottoman Empire as a whole would benefit.

Mehmed Said Pasha, the grand vizier, complimenting Herzl on his "humanitarian and commendable" aspirations, assured him that, in principle, the sultan was prepared to negotiate. But when the actual situation was considered, Said was decidedly negative: Turkey feared complications with the Great Powers, and even Haifa could not be conceded, since it was strategically important. Before leaving, Herzl obtained a warm letter from Abdul Hamid ("*Le Sionisme est très noble*"), but on matters of substance, the deadlock remained unresolved.

Turkey was Herzl's main stumbling block. His policy toward it was based on give and take, but this principle proved unworkable, since the funds with which he hoped to restore Turkish solvency were denied him, and the sultan refused to issue a declaration that could have stirred the Jewish masses and warmed the hearts of Jewish financiers. Nor was it likely that Herzl would have been more successful had the necessary resources been placed at his disposal. The sultan was not in the habit of selling his land and limiting his sovereignty voluntarily. Fear of political complications, real and imaginary, should the Jews be allowed to establish themselves in Palestine, weighed far more heavily with the Turks than financial benefits, however alluring. In the circumstances, it was only the combined pressure of the Powers that could have forced Turkey to make certain concessions. It was therefore an illusion to expect that friendly advice by the kaiser to the sultan would be sufficient to put Herzl's charter company into operation.

In Search of International Support – The Uganda Controversy

Herzl did not lose hope. Some day, when the Turks were in dire need, they would become more amenable. In the meantime, he shifted his efforts to Britain in the expectation that it would allow him to establish a Jewish colony under its protection somewhere in the neighborhood of Palestine. His eyes had been turned to England since 1895. Initial reactions to his ideas reinforced his belief that London should be one of his main bases. Gladstone, the former prime minister, liked Herzl's *The Jewish State*, while Bishop Wilkinson thought that Zionism was a practical proposition. Also the press reported sympathetically on the First Zionist Congress; the Conservative *Pall Mall Gazette* and the radical *Daily Chronicle* advocated a European conference for the settlement of the "Jewish Question." The Fourth Zionist Congress, which met in London (August 13–16, 1900), also attracted favorable comment, and friendly sentiments were expressed at Westminster and elsewhere. Yet, for all the sympathy that Herzl gained, no practical results ensued.

It was not until 1902 that negotiations with the British government began in earnest. With Palestine barred, Herzl hoped to acquire at least a staging post in its neighborhood; a foothold in Cyprus, in the Sinai Peninsula, or in the El-Arish area. Joseph Chamberlain, the colonial secretary, who met him on October 22 and again on October 23, 1902, thought Cyprus impracticable, but agreed that in the El-Arish area, or in Sinai, which was uninhabited, a self-governing Jewish colony could be founded, provided Lord Cromer, the British agent in Cairo, approved. To Herzl this was no mean achievement, and two days later he told Lord Rothschild enthusiastically that, should the plan materialize, "a refuge" and "a home for the hard-pressed Jews" would be created, while England would increase her influence in the southeastern corner of the Mediterranean and rally "ten million" friends to her side.

The plan did not materialize. The sultan, who exercised at least nominal sovereignty over Sinai, objected; so did the Egyptian government. The difficulty of providing irrigation was another factor weighing heavily against the plan in official calculations, and Cromer, by no means personally hostile, gave it the *coup de grâce*. In the spring of 1903, Chamberlain offered instead the Guas Ngishu plateau near Nairobi in East Africa – not "Uganda," as Chamberlain and others later inaccurately called it – for a Jewish settlement under the British flag. Herzl thought it politically imprudent to reject it, since the very fact that a Great Power was negotiating with him amounted to a *de facto* recognition of his movement. He considered the offer primarily in *political* terms. Rather than impede, it might bring the realization of his ultimate goal nearer. For him it was merely a ploy to obtain British recognition of the Zionist movement and recognition of the Jews as a people, and to bring Britain gradually to the conclusion that only in Palestine would the "Jewish Problem" be solved.

This strategy is evident from the correspondence between Herzl and Leopold Greenberg, the editor of the *Jewish World* and the *Jewish Chronicle*, his representative *vis-à-vis* the Foreign Office. In a letter dated June 7, 1903, Greenberg wrote:

> It seems to me intrinsically there is no great value in East Africa. It will not form a great attraction to our people for it has no moral or historical claim. But the value of the proposal of Chamberlain is politically immense *if we use it to its full*. An essential of this is, I submit, that the Agreement that we get from the British government should be as well a definite declaration of its desire to assist our people.… That will be of infinite value to you both within our Movement and outside. It matters not if East Africa is afterwards refused by us – we shall have obtained from the British government a recognition that it cannot go back on and which no other British government will ever be able to upset. Everything after that will have to start from that point – the point of recognition of us as a Nation. It also follows

naturally that if it is found that East Africa is not good, they will have to make a further suggestion and this will … gradually and surely lead us to Palestine.

Responding, Herzl insisted: "We must obtain from the British government recognition of us as a nation [*eine nationale Anerkennung*], and the Charter should include the following phrase: *'Bildung einer Colonialgesellschaft fuer die juedische Nation'* [creation of a Colonization Company of the Jewish People]."

Greenberg was sorry to hear that the East Africa plan provoked some opposition. He ascribed it to misunderstanding. "Had it really been an alternative plan to Palestine, I would have opposed it myself most vehemently. At the moment, the most pressing problem is recognition of Jews as a people by one of the Great Powers.… This should be achieved before our march toward Eretz Israel. We shall thereafter be able to rally our people and unite them under your banner."

The opposition to whom Greenberg referred included Max Nordau, Herzl's close friend and collaborator. Nordau had claimed that the area in East Africa was unsuitable for colonization and Jewish refugees would prefer to migrate to America or Europe instead. The Zionist Movement would lose its *raison d'être* and die a natural death.

Herzl had no difficulty in convincing Nordau. "This British East African beginning," he wrote to Nordau, "is politically a *Rishon le-Zion*." If the Zionists gratefully acknowledged Chamberlain's offer, it would enhance his sympathy and commit him to do something for them, should a Zionist fact-finding mission disqualify East Africa as a suitable place for settlement. Negotiations with the British government, Herzl elucidated, were tactical; they would bring the realization of Zionism sooner than all Baron Edmond de Rothschild's colonies. Moses also reached the Land of Canaan in a roundabout way. Nordau was converted and henceforth supported Herzl wholeheartedly.

It was at that time that Herzl received a letter from Vyachelslav Plehve, the Russian minister of the interior, with whom he had been negotiating. The letter is dated August 12, 1903 and is of outstanding importance. Plehve promised, on behalf of the czarist government, that Russia would intervene with the sultan in favor of the Zionists and would assist them in the organization of massive Jewish immigration and settlement in Palestine with the ultimate objective of creating there a Jewish state.

Both in its phrasing and in its implications, Plehve's letter was of far greater moment than the British one. Sir Clement Hill of the Foreign Office referred to "the establishment of a Jewish colony" in East Africa, which would enable the settlers to observe "their National customs." Plehve favored the creation of "an independent state in Palestine," a term that Herzl himself was reluctant to use. The British document is tentative and guarded in its language, while the Russian one refers clearly to "moral and material support" on practical issues. The motives are also different. That of the British government was primarily humanitarian, while that of the Russian government was shaped by domestic considerations. It reflected also the general line of Russian foreign policy aimed at the dismemberment of the Ottoman Empire. By fostering the separatist aspirations of the non-Turkish nationalities, Russia hoped not only to weaken Turkey from within, but also to emerge as the champion of those struggling for liberation.

Plehve's letter served as the cornerstone of Herzl's diplomacy. With such a diplomatic breakthrough, was there any point in continuing negotiations about East Africa? Considering Herzl's political *Weltanschauung*, it should not be too difficult to answer the question. The reason was that the British letter contained the key phrase that was missing from the Russian one; i.e., recognition of the Jews as a nation. This was important not only as a matter of principle, but also out of regard for practical politics. Herzl realized, long before the principle of self-determination became standard currency in international relations, that only nations were entitled to claim a territory. Moreover, support by only one Power was insufficient; only pressure by a Concert of Powers would have the desired effect on Turkey. Such a combination did in fact emerge during the conferences in London in 1912–13 following the Balkan Wars. However, by then Herzl was no longer alive. Moreover, Herzl's basic concept was that the "Jewish Problem" was an international problem which should be solved internationally, not by one single Power. Hence, the importance of bringing England into the picture.

The storm that erupted during the Sixth Zionist Congress was unforeseen. The response of the Zionist Executive, to whom Herzl brought Sir Clement Hill's letter of August 14, 1903, for approval, was positive, even enthusiastic. Jehiel *Tschlenow, the Russian Zionist leader, gave it his unqualified blessing, remarking that a Great Power had recognized the Jews as a nation and acknowledged their creative talents. When one of the few skeptics pointed out that Palestine had not been mentioned in the British letter, Herzl replied that it was written in "invisible ink," which, within several months, would become readable.

In his opening address to the Congress on August 23, 1903, Herzl assured the delegates that he had no other objective in mind than Palestine. "There is no change and there will be no change in our attitude toward the Land of our Forefathers," he declared. The speech was greeted with great enthusiasm. Years later, Weizmann acknowledged in his *Trial and Error* that the British letter had reestablished the national and juridical identity of the Jewish people.

The acrimonious controversy that ensued was largely due to a misunderstanding. Partly it was Nordau's fault for coining, in his otherwise brilliant speech, the term *ein Nachtasyl* (a night shelter). This made some of the delegates, like Shmarya *Levin, initially a fervent supporter, suspect that the *Nachtasyl* was merely the thin end of a permanent shelter to the detriment of the idea of a return to Zion. The atmosphere became explosive, laden with emotion. The exchange turned into a debate among the deaf. Diplomatically discreet, Herzl was wary of revealing his true motives. There was also another

reason for his reticence. Suffering from a serious heart condition, he was unable to take an active part in the discussions. The Congress thus resembled a boat rocked in high seas deprived of its navigator.

The opponents, the *Neinsagers* (Nay sayers), were under a misapprehension. It was not the choice between "Zion or Uganda" that had been put on the agenda. What had been proposed was the dispatch of a Commission of Inquiry to East Africa. The Commission was to report back to the Congress, the Organization's sovereign body, for further reflection. Herzl anticipated that the report would be negative, as it was crystal clear to him that the Jews would not go to Africa in any case. The purpose of the exercise was to elicit from the British government yet another area of settlement and bring it gradually to the conclusion that there was no alternative to Palestine.

In retrospect, all the controversy was irrelevant, because the subject matter became unreal. After Chamberlain's resignation as colonial secretary in mid-September 1903, there was an appreciable diminution in interest in the Uganda project. Alfred Lyttleton, his successor, showed no enthusiasm for it, while the Foreign Office, largely on account of strong objections raised by the British governor in Kenya, became decidedly reserved. As soon as rumors spread of a possible influx of Jews, the white settlers in Kenya protested against the very idea of Jewish settlement. Embarrassed, the Foreign Office offered Leopold Greenberg another territory for settlement in Somali or in Tanaland, which, on all counts, was unsuitable for Europeans.

Herzl did not shed any tears, but greeted the news with undisguised satisfaction. In a circular letter to the members of the Zionist Executive, he declared that the East Africa project was dead. Simultaneously, he advised Greenberg to continue his pourparler with the Foreign Office. This Greenberg did with consummate skill. The results were spectacular.

On December 14, 1903, Greenberg met Lord Percy, the newly appointed under-secretary of state. Percy was a humanist and a philosemite. Sensing that settlement in Africa would not attract Jews, he asked Greenberg pointedly: "Was there any serious attempt to acquire Palestine? On the basis of what you told me, it ought to be the most desirable goal." He added that he wished to meet Herzl.

In spite of ill health, Herzl continued his diplomatic *tour de force*. On September 5, 1903, briefing Plehve on the proceedings of the Congress, he reiterated his argument that a massive and continuous emigration of Jews from Russia – "an emigration without the right of return" – would be possible only in the direction of Palestine. East Africa would attract only a few thousand proletarians. Hence, it lay in Russia's interest to support Zionist aspirations. And to Count zu Eulenburg, the German ambassador in Vienna and the kaiser's confidant, he confessed, "I will gladly let Wilhelm II have the glory of placing himself at the head" of the Concert of Powers on the Zionist question. Although Sir Clement Hill's letter was as generous as it [was] wise we stubborn Jews are more attached to the sand and chalk of Palestine" than to East Africa.

This line of reasoning dispels any lingering suspicion that Herzl had abandoned Palestine in favor of East Africa, for it appears that his main purpose was not necessarily to obtain the East Africa concession, but to ease Germany's (or any other Power's) task in gaining Palestine for the Zionists. East Africa was only the diplomatic stepping stone to the main goal. That there was no substitute for Palestine is also clear from Herzl's letter to Izzet Bey, which was his last contact with the Sublime Porte:

> A territory we can find elsewhere. We have found it. You have undoubtedly read in the papers that the English government has offered me a territory of 60,000–90,000 square leagues in Africa, a rich, fertile country, excellent for our colonization. But nevertheless, I come back once more to my plan for finding the salvation of the Jewish people among the brothers of our race and our coreligionists who live under the scepter of the Caliph, bringing to them what we have … the spirit of enterprise, industry, economic progress.

With no satisfactory response from Constantinople forthcoming, Herzl continued to consolidate his position among the Powers in the hope that they would exert concerted pressure on Turkey. His achievements in the Italian and Austrian capitals were noteworthy.

Victor Emmanuel III of Italy received Herzl graciously on January 23, 1904. Italy had no "Jewish Problem," but Zionism had its positive attractions. Palestine "will and must get into your hands," the king told Herzl. "It is only a question of time. Wait until you have half a million Jews there!" He thought that the partition of Turkey was inevitable, but that the Zionists in the meantime should refrain from using the term "autonomy"; the sultan disliked this word. Plehve's letter, in the king's opinion, represented "a great success." Herzl was able to witness the effect of the royal goodwill when he met Tommaso Tittoni, the foreign minister. The conversation was short but productive. The minister promised Herzl that he would write to the Italian ambassador at Constantinople and ask him to proceed jointly with the Russians.

Herzl was an Austro-Hungarian citizen and also enjoyed the confidence of successive prime ministers, Count Kazimierz Badeni (1895–97) and Ernst von Koerber (1900–4), but it was not before the autumn of 1903 that he could rely on his own government's support. Koerber was impressed by Herzl's achievements in Russia and assured him of his interest. On April 30, 1904, Herzl met Count Agenor von Goluchowski, the foreign minister. Initially, the latter was skeptical, but Plehve's letter made all the difference. Since Russia was in favor, he too could reach agreement with Herzl. Though strongly critical of antisemitism, he thought Herzl's project so praiseworthy that every government should support it financially. When the question was discussed on an international plane, "there must be no petty or half-way measures. If it were a question of only one or two hundred thousand Jews, the Great Powers could not be stirred into action. But they could if [they] asked Turkey for land and legal rights for 5–6 million Jews."

This was more than Herzl had dared to hope. However, Goluchowski declined Herzl's suggestion to take the lead in the matter; the moment was inopportune. It would be better if England took the initiative.

The foreign minister's reluctance to take the initiative arose from the need to keep in step with Russia. Since 1897, the two countries had had a secret agreement under which they undertook to maintain the *status quo* in the Balkans. This was qualified by Article III, which specified that, should circumstances change, the contracting parties would act together. The Turkish provinces in Asia were not mentioned in the text, but it could be assumed that the principle in Article III applied there as well. This explains the change in Austria's attitude toward Herzl following the revelation of Plehve's letter.

But, in spite of the professed status quo principle, the long-term policy of the two Powers was aimed at the gradual dismemberment of the Ottoman Empire. A Jewish Palestine, with a Jewish population of five to six million, could have fit well within this pattern. The sultan's suzerainty over Palestine (a formula advanced by Herzl) did not matter, since it was meant to be only nominal. Moreover, Goluchowski hoped that, if London committed itself to the Zionist cause (as the Italians had already done), this might revive the 1887 tripartite Mediterranean Agreement.

It would be safe to say that had Herzl remained alive, he would have traveled to London, not in connection with the East Africa project but to disclose to Lord Percy the Goluchowski proposal for creating a Concert of Powers in support of the Zionist aspiration.

Criticism, nonetheless, did not abate. It was not until mid-April 1904 (two and a half months before Herzl's death) that the leading opponents, the *Neinsagers*, admitted during the meeting of the Executive that they were mistaken and expressed their unswerving confidence in Herzl.

An Assessment

The shifts of emphasis in Herzl's diplomatic activity from one capital to another gave the impression at the time that his policy was inconsistent, if not contradictory; but this was not so. His strategy was multilateral, though evolving in response to opportunities rather than by design. His basic principle was that the "Jewish Question" was an international one and should therefore be tackled within the framework of international law. He strove to gain recognition and support from all the Powers concerned; which one was to take the lead was of secondary importance. As Israel Zangwill stated, Herzl was not German, English, or Turkish, but the "first Jewish statesman since the destruction of Jerusalem."

Herzl died on July 3, 1904, at the age of 44. His premature death robbed the Zionist movement of a leader of international caliber. He had become a legendary figure in Jewish history, even in his own lifetime; what he accomplished did not make Zionism poorer, but rather made Jewry richer.

Herzl was a statesman without a state, a leader without a people to support him. If he impressed monarchs, ministers, and intellectuals, it was thanks to his own qualities. He aroused both admiration and opposition, but nobody could ignore the magnetism of his personality, his intelligence, his sincerity, and his idealism. A visionary who sometimes naïvely believed that because an idea was good and just it must necessarily prevail, he was also a shrewd and down-to-earth politician with no illusions about human nature. A liberal and a great European, he became the foremost exponent of Jewish nationalism, which was neither chauvinist nor escapist, but an endeavor to restore Jewish honor within a normal national environment. "We shall enter the Promised Land … under the banner of labor.… We must be a people of inventors, warriors, artists, scholars, honest merchants … workmen." Though the *Judennot* was the primordial force which fired Herzl, he never lost sight of the universal aspect of the Jewish renaissance.

Herzl was the founder of political Zionism. He turned a mystique, a dream, into a political factor. The movement that he brought into being became the most dynamic force in modern Jewish history. He founded its organ, *Die Welt*, its financial arm, the Jewish Colonial Trust, and the Zionist Congress, which became the embodiment of Zionist parliamentarianism. Like any great man of history, he foresaw what was going to happen. His prediction of a Jewish catastrophe was fulfilled, tragically, during the Nazi Holocaust and, exactly 50 years and 8 months after he had recorded its creation in his diary, the State of Israel was proclaimed.

HERZLIAH HEBREW TEACHERS' INSTITUTE. Hebrew educational institution in the U.S. founded in New York in 1921 by Moses *Feinstein as an afternoon high school. It was expanded into a teachers' seminary in 1923 and the high school was discontinued in 1966. Its aims were "the training of teachers in the … Hebrew Language, Bible, Religion, Art, Drama, History, Tradition and general culture." In 1967 it merged with the Jewish Teachers' Seminary and People's University.

Prior to the establishment of the State of Israel, Herzliah was the chief instrument for Hebraism and Zionism in American Jewish education, with hundreds of alumni serving Jewish communities throughout North America. Its educational philosophy was based on the cultivation of Hebrew as a living language and a medium for cultural creativity and it was dedicated to national revival and the rebuilding of Israel, and a communal (non-denominational) approach to Jewish education and maximalist requirements in Hebrew schools. For a number of years Herzliah sponsored a young people's Hebrew theater (Habima Haktana). Leading exponents of Hebraism in

America served on the faculty, among them Daniel *Persky, Abraham *Epstein, and A.Z. Halevi.

With the American Zionist movement confining itself to political activities, support for Herzliah diminished, although it received some assistance from the Zionist Organization of America for a short period in the 1960s. Enrollment fell sharply from its one-time peak of 500 and, with the conflict of languages between Hebrew and Yiddish in American Jewish life settled in favor of English, Herzliah merged with the Jewish Teachers' Seminary to establish a sounder basis for further operations. Hebrew and Yiddish sectors maintain separate identities in the combined school, though some Yiddish courses were added to the requirements for the Hebrew Teachers Diploma. The merger was unsuccessful as the proliferation of universities teaching Judaic studies, the Hebrew language and Yiddish, and the strength of the seminaries in the New York area made it ever more difficult to recruit students and to garner support for Herzliah, and the institution folded.

HERZLIYYAH (Heb. הֶרְצְלִיָּה), town in the southern Sharon, Israel, 10½ mi. (17 km.) N. of Tel Aviv, Herzliyyah was first founded as a moshavah in 1924 on land acquired by the *American Zion Commonwealth Corporation (a land purchasing agency organized by the Zionist Organization of America). The settlers, second-generation farmers, members of *Benei Binyamin, soon developed a flourishing agricultural center principally based on citriculture. The discontinuation of citrus exports during World War II brought about the development of other agricultural branches and industrial enterprises. By 1948, Herzliyyah's population was 5,300. After the *War of Independence (1948), the municipal area was greatly enlarged, expanding mainly to the seashore. In 1960, Herzliyyah was accorded city status. In 1969 the city boundaries included two separate urban zones: the older, eastern part, mainly a residential area; the dune-and-sandstone-hill area along the coast, comprising three quarters: a bathing and recreation area on the seashore proper, where some of Israel's largest hotels are located; an industrial area in the south; and a middle-class residential area in the north. Over the years, the physical structure of city changed owing to expansion. In the 21st century, the city can be divided into three main areas: Herzliyyah Pitu'aḥ, an upscale residential area; the industrial area with numerous high-tech firms, well known for its cafés and restaurants; and the eastern belt, including the city center and residential neighborhoods. The city's area runs to 10 sq. mi. (26 sq. km.). It has a number of parks and recreation grounds and the municipality has been developing the city's marina, which already accommodates 800 sailboats. The Herzliyyah Interdisciplinary Center, a private college, is located in the city.

Tel Aviv's proximity was among the factors accelerating its growth, from 16,000 in 1954, and 35,600 in 1968 to 83,300 in 2002, including 7,000 new immigrants, mainly from the former Soviet Union. The city falls within the Tel Aviv conurbation, a factor in regional and countrywide planning. Herzliyyah is named after Theodor *Herzl.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HERZOG, CHAIM (1918–1997), Israeli military commander, attorney, politician, and sixth president of the State of Israel. Member of the Tenth Knesset. Herzog was born in Belfast in Northern Ireland, to Rabbi Isaac *Herzog, who was the chief rabbi of the Jewish community of Ireland in the years 1921–36, after he moved his family to Dublin in 1919. Rabbi Herzog immigrated to Palestine with his family in 1936 and served as Ashkenazi chief rabbi of Palestine and then Israel in 1936–59. Chaim Herzog studied at the Hebron and Merkaz ha-Rav yeshivot and studied at the Government of Palestine Law School. He then continued his studies in London and at Cambridge and received his law degree in Britain. Herzog served in the *Haganah during the Arab Revolt of 1936–38 and in the British army in World War II. He crossed to Normandy and was stationed in northwest Germany, participating in the liberation of some of the concentration camps. Toward the end of the war he served as head of British Intelligence in northern Germany. After the war Herzog graduated from the Royal Military College and returned to Palestine. In 1948 he ran the Defense Section in the Jewish Agency, and after the establishment of the State he fought in the War of Independence, serving as operations officer in the battle of Latrun in 1948–50. In 1959–62 he served as head of the Intelligence Department (later Section) of the IDF. In 1950–54 Herzog served as military attaché at the Israel Embassy in Washington, later serving as commander of the Jerusalem District and as commander of the Southern Command in 1957–59, after receiving the rank of major general. He retired from active service in 1962.

In 1962–72 Herzog managed an industrial development group, and in 1972–83 had a law firm in Tel Aviv that specialized in the representation of large industrial firms. In 1965 he joined the *Rafi Party and was secretary of its Tel Aviv branch. In the course of the Six-Day War he became Israel's best-known military commentator, and after the war he was appointed as the first military governor of Jerusalem and the West Bank. During the Yom Kippur War he once again became a military commentator. From 1975 to 1978 he served as Israel's ambassador to the United Nations, where in November 1975 he led the fight against General Assembly Resolution 3379 that equated Zionism with racism. At the conclusion of his speech in the General Assembly he tore up the document containing the resolution. He was president of the World ORT Union and was awarded an honorary British knighthood in 1970. From 1981 to 1983, he was a Labor member of the Knesset.

In 1983 Herzog was elected president of Israel, serving for ten years. In that period he paid official visits to some 30 countries and addressed 15 parliaments, including both

houses of the U.S. Congress, both houses of the Canadian Parliament, the Argentine Congress, and the Polish Sejm as well as the Bulgarian Parliament, being the first foreigner in history to do so.

He also wrote prolifically in the press in Israel and abroad. Among his books are *Israel's Finest Hour* (1967), *Days of Awe* (1967), *The War of Atonement* (1975), and *The Arab-Israeli Wars* (1982).

Herzog's wife, AURA, established the Council for a Beautiful Israel. His son YITZHAK was elected to the Sixteenth and Seventeenth (2006) Knesset on the Labor Party List, and in January 2005 became minister of construction and housing.

[Susan Hattis Rolef (2nd ed.)]

HERZOG, DAVID (1869–1946), Austrian rabbi and scholar. Herzog was born in Tyrnau (Trnava) and studied in Vienna. In 1900 he was appointed rabbi in Smichov, a suburb of Prague. Later, as rabbi of Graz, Austria, he also taught Semitic languages at the University of Graz. In 1938 the Nazis raided his home and threw him into the Mur River. He was rescued and escaped to Oxford, England. His scholarly interests were two-fold: medieval Jewish Literature, especially Judeo-Arabic writings, and the history of the Jews in Austria, especially in Steiermark. In the first field he published *Die Abhandlung des Abu Bekr ibn Al-Saig "Vom Verhalten des Einsiedlers," nach Mose Narbonis Auszug* (1896); *Maimonides Commentar zum Tractat Peah* (1899), the text in the original Arabic with an introduction and notes; and Joseph b. Eliezer Bonfils' supercommentary to Abraham ibn Ezra's commentary to the Pentateuch (*Josef Bonfils und sein "Tzofnat Paaneach,"* 2 vols., 1911–30, repr. 1966–67). In Jewish history he published, under the influence of J.E. Scherer, a number of important articles and studies. His works are based on archival material and other primary sources, such as tombstone inscriptions. Herzog wrote *Urkunden und Registen zur Geschichte der Juden in der Steiermark* (1935), and "Die juedischen Friedhoefe in Graz" (in *Quellen und Forschungen zur Geschichte der Juden in der Steiermark*, vol. 2, 1937). Some of Herzog's sermons also appeared in print.

BIBLIOGRAPHY: G. Kisch, in: *Historia Judaica*, 8 (1946), 105–6.

HERZOG, GEORGE (1901–1983), musicologist. Born in Budapest, Herzog studied at the Royal Academy of Music, Budapest (1917–19), at the Berlin Hochschule fuer Musik (1920–22), with Egon Petri (piano) in 1921, and became assistant to Hornbostel at the Phonogramm-Archiv in Berlin University (1922–4). In 1925 he immigrated to the United States and took a postgraduate course in anthropology at Columbia University. He held academic posts and was a research associate in anthropology at the University of Chicago (1929–31) and at Yale University (1932–5). He completed his doctorate at Columbia University in 1938 with a dissertation on the musical styles of Pueblo and Pima tribes and was an assistant professor of anthropology there (1939–48). In 1948 he became professor of anthropology at Indiana University, bringing with him the Archives of Folk and Primitive Music he had established in 1936, which became the Indiana University Archives of Traditional Music. Herzog was a founder of ethnomusicological studies at American academic institutions and introduced courses in primitive and folk music and comparative musicology. As one of the leading authorities on North Amerindian music, he conducted field research among such tribes as the Apache, Comanche, Dakota, Maricopa, Navaho, Pima, Pueblo, Yuma and Zuni. He was also interested in European folk music (Greek, Irish, Spanish and south Slav) and Jewish (Babylonian, Yemenite and Judeo-Spanish which he recorded among the immigrants in New York, 1939–1941). In 1935 and 1947 he was awarded Guggenheim Fellowships. His writings include *Research in Primitive and Folk Music in the U.S.* (1936), many articles such as "Speech – Melody and Primitive Music," in: *Musical Quarterly,* 20 (1934), 452–66; "Musical Typology in Folksong," in: *Southern Folklore Quarterly,* 1 (1937), 49–55), and contributions to leading encyclopedias.

HERZOG, ISAAC (1888–1959), rabbinic scholar; chief rabbi of Israel. Born in Lomza, Poland, Herzog was nine years old when his father R. Joel Herzog immigrated to Leeds, England, to be the rabbi there. Though Isaac never attended a yeshivah, he achieved the highest standards in rabbinic scholarship, receiving *semikhah* from Jacob David Wilkowsky (Ridbaz) of Safed. Herzog was awarded his doctorate of literature by the London University for a thesis on *The Dyeing of Purple in Ancient Israel* (1919), which deals with the coloring of one of the threads of the **ẓiẓit* (see Num. 15:38). As part of his dissertation, he proved that the process used by the Radzyner ḥasidim to create the blue dye for *ẓiẓit* was incorrect. The Radzyner Rebbe had been misled by an unscrupulous chemist who had added iron filings to the mixture. During World War II, the Radzyner blue dyeing factories and their process were lost. Ironically, after the war, the surviving Radzyn ḥasidim approached Herzog, who gave them the correspondence between him and the Radzyner dyemakers. Thus, they were able to reestablish their dyeing business in Israel, where it still functions to this day.

Endowed with a brilliant analytical mind and a phenomenal memory, Herzog was soon recognized as one of the great rabbinical scholars of his time, besides being a linguist and jurist and at home in mathematics and natural sciences. The charm of his personality, which combined ascetic innocence with conversational wit and diplomatic talents, made a great impression.

Herzog served as rabbi in Belfast (Northern Ireland), 1916–19, and in Dublin until 1936, receiving the title of chief rabbi of the Irish Free State after 1921. He maintained excellent relations with political and ecclesiastical figures, and established a life-long friendship with Eamon de Valera, the

Irish prime minister. By testifying before a committee of the Irish senate he succeeded in safeguarding *sheḥitah* against the provisions of a Slaughter of Animals Act (1935). Herzog was an ardent Zionist and a founder of the Mizrachi Federation of Great Britain and Ireland.

In 1932 Herzog declined an invitation to the rabbinate of Salonika. In 1936 he accepted the invitation to become chief rabbi of Palestine in succession to A.I. *Kook and assumed office in 1937. With the exception of a few die-hard fanatics, who sporadically challenged him, Herzog enjoyed the respect of the vast majority, including the non-religious elements, particularly in the kibbutzim. In the winter of 1938, in reaction to the British Peel Commission and in anticipation to the eventual emergence of an independent Jewish State, Herzog convened a rabbinic conference to discuss the halakhic issues that would arise with Jewish sovereignty. They included *kashrut* and Sabbath observance, laws of marriage and divorce, as well as the incorporation of *halakhah* into the civil and criminal codes. The discussions took into account the fact of non-Jewish citizens and that the majority of the Jewish citizens would not be observant. Herzog was particularly innovative in dealing with the issue of cooperation between a Jewish state and non-Jewish countries. He resorted to the halakhic concept of partnership. He used the same idea as the basis for citizen rights and obligations of non-Jews within the Jewish state. Another area of special concern was the equal status of women and the repercussions on the laws of inheritance. According to Jewish law, women do not inherit their husbands' or parents' property. Herzog grappled with ways to reconcile Jewish law with modern values and practice. As chief rabbi, he was president of the Rabbinical Court of Appeal and of the Chief Rabbinate Council, and thus, through the enactment of *takkanot* in matters of personal status, he was responsible for significant advances, reconciling the necessities of modern living with the demands of *halakhah*. These *takkanot* include the acceptance of non-observant Jews as witnesses before the rabbinic court, the payment of alimony and the coercion of recalcitrant husbands who refuse to give their wives a *get* (decree of divorce). He was also responsible for formulating the statutory regulations governing the rabbinic courts. These were first implemented in 1943. Along with the Sephardi Chief Rabbi, Ben-Zion Ḥai *Ouziel, he did away with the separation of Ashkenazi and Sephardi Jews in the rabbinic courts. He also served as president of the Va'ad ha-Yeshivot, established in 1940 to solicit financial support for the country's talmudic colleges. It was his initiative that led to Isaac *Wolfson's building Hechal Shlomo, the seat of the chief rabbinate, and other important religious organizations and services. From the time of his arrival in Israel in 1937, Herzog became the champion of all the Jews arrested by the British Mandate authorities. He actively intervened on behalf of all those sentenced to death. Unfortunately, his efforts were not always successful.

Before, during, and after World War II Herzog was one of the representatives of Palestinian and world Jewry to the various conferences and commissions organized to find a solution to the Arab-Jewish conflict over Palestine. He set forth the Jewish spiritual claims to the Holy Land and stressed the need of a refuge for the survivors of the Holocaust. Herzog, deeply stirred by the tragedy of the Holocaust, traveled to London (1940), the United States (1941), South Africa (1941), Turkey (1943), and Cairo (1944) trying to rescue Jews. Thus, in 1940 he received from Soviet Russia permits for staff and students of Lithuanian and Polish yeshivot stranded in Vilna to cross Russia to the Far East. In 1946 he traveled throughout Europe for six months in an attempt to find and rescue the many Jewish children, mostly orphans, who were hidden in monasteries and convents and with non-Jewish families during the years of Nazi persecution (see *Massa Haẓẓalah*, 1947). In the course of these travels he was received by the pope and many leading statesmen. Herzog fought unsuccessfully to have the laws of the new State of Israel based on Torah law. He was especially disappointed that the vast majority of rabbis in Israel did not assist him in his efforts to base the laws of inheritance on *halakhah*. In responding to another of the challenges made by the new State of Israel to *halakhah*, Herzog took a stance that was different from his predecessor, Rabbi Abraham Isaac ha-Kohen *Kook. Rabbi Kook opposed granting women the right to vote or to hold public office. Herzog, on the other hand, felt that modern democratic standards and the positive impact of the votes cast by religious women demanded that Jewish law find a way to allow women's suffrage. In the end, he did find the right combination of halakhic precedent to support the right of women to vote and to hold office. Indeed, Herzog worked constantly to reconcile Torah, the State, and democracy.

Among Herzog's published works are the first two volumes of the planned five of *Main Institutions of Jewish Law 1936–39* (1965–67^2). His talmudic research is contained in *Divrei Yiẓḥak*, partly published in his father J. Herzog's *Imrei Yo'el* (v. 1, 1921) and partly in his father-in-law S.I. *Hillman's *Or ha-Yashar* (1921), and *Torat ha-Ohel* (1948). Two volumes of responsa, *Heikhal Yiẓḥak*, appeared in 1960 and 1967. His son, Chaim, edited *Judaism: Law & Ethics*, a selection of his father's essays in 1974. *The Royal Purple and the Biblical Blue Argaman and Tekhelet*, Herzog's Ph.D. dissertation, was published in 1987. *Pesakim u-Khetavim*, nine volumes of responsa and letters, were published between 1989 and 1996. *Torat ha-Ohel*, containing novellae on the Rambam and the Talmud, appeared in 1993. The digest of responsa *Oẓar ha-Posekim* (11 vols. to 1969) was founded by Herzog in 1940, as was the Harry Fischel Institute for Research in Jewish Law, one of the functions of which was to train *dayyanim* for the rabbinical courts of Israel. *Massu'ot Yiẓḥak, a religious settlement named after Herzog, located first in the Eẓyon group in the Hebron hills and destroyed in 1948, was rebuilt near Ashkelon.

His wife, SARAH (1899–1979), daughter of Samuel Isaac Hillman, was the president of the Mizrachi Women's Organization and chairman of the Ezrat Nashim hospital in Jerusalem in which capacity she was mainly responsible for the erection of its new facilities (1968).

His son Chaim *Herzog (1918–1997) was Israel's sixth president.

Herzog's second son, JACOB (1921–1972), was a lawyer and doctor of international law in addition to having been ordained as a rabbi. He published a translation and commentary in English of certain tractates of the Mishnah. Before the State of Israel, he was in Haganah intelligence. In the Foreign Ministry of the State he was successively counselor on Jerusalem, director of U.S. Division, adviser to Ben-Gurion during the Sinai Campaign, Israel minister plenipotentiary in Washington, Israel ambassador to Canada, and assistant director general of the Foreign Ministry. From 1965 he was director general of the Prime Minister's Office. He was chairman of the Committee for Twentieth Anniversary Celebrations of the State of Israel.

Chief Rabbi Herzog was the author of the "Prayer for the State of Israel" that is recited in synagogues throughout the world on the Sabbath. He was also responsible for including the phrase, "*reshit ẓemiḥat ge'ulateinu* – the beginning of the emergence of our salvation," in the beginning of the prayer.

[Jacob Goldman / David Derovan (2nd ed.)]

HERZOG, REGINALD OLIVER (1878–1935), German organic chemist who described the microcrystalline structure of cellulose. Herzog was born in Vienna. He worked at the Technische Hochschule at Karlsruhe from 1905 to 1912, and became professor of chemistry at the German Technische Hochschule of Prague in 1912. From 1919 until the advent of Hitler in 1933 he was director of the Kaiser Wilhelm Institut fuer Faserstoffchemie in Berlin-Dahlem. In 1934 he accepted the chair of chemical engineering at the University of Istanbul. Herzog's X-ray studies of cellulose, together with the simultaneous and independent work by Scherrer, opened up the modern conceptions on high molecular weight materials and fibers. He was a versatile chemist, with a keen and imaginative mind, and among the topics he worked on were dyestuffs, tanning, enzymes, proteins, and diffusion constants. He wrote *Chemische Technologie der organischen Verbindungen* and edited a handbook *Technologie der Textilfasern* (1926).

[Samuel Aaron Miller]

HERZOG, SHIRA (1957–), journalist, Middle East analyst, administrator. Shira Herzog was born into a prominent Jerusalem family. Her father, Dublin-born Ya'acov Herzog, was a rabbi and leading Israeli diplomat. Her uncle, Chaim *Herzog, served as chief of Israel's military intelligence and later president of Israel.

After she completed her military service, Shira Herzog went to the Hebrew University of Jerusalem and graduated with a B.A. in history and English literature in 1974. Daughter of a diplomat, as a young child she had lived in Ottawa while her father was for three years Israel's ambassador to Canada, and in 1974 she returned to Canada, where she completed an M.A. in English at York University in Toronto. Deeply committed to a democratic and progressive Israel, in 1976 she joined the Canada Israel Committee, first as director of special projects, then as director of research, and finally as national executive director. In 1988 she became vice president of the Calgary-based Kahanoff Foundation, one of Canada's largest private foundations. The Kahanoff Foundation, which also maintains offices in Toronto and Tel Aviv, initiates and funds innovative community programs in western Canada and Israel.

Highly regarded for her insightful analysis of Middle East affairs, from 1994 to 2003 Herzog was a regular contributor to the *Canadian Jewish News* and from 2002 wrote a column on the Middle East and Jewish affairs for the *Globe and Mail*, Canada's most influential newspaper. She also co-hosted *Israel Today*, a Canadian-produced television program devoted to Israel and Jewish issues.

Based in Toronto, Herzog served on the boards of the Philanthropic Foundations of Canada, the American-based Council of Foundations, the Institute for Research on Public Policy headquartered in Montreal, and the Tel Aviv-based Israel Democracy Institute, which seeks to promote the development of democratic values and political institutions in Israel.

[Harold Troper (2nd ed.)]

HESCHEL, ABRAHAM JOSHUA (1907–1972), U.S. scholar and philosopher, descended on his father's side from *Dov Baer (the Maggid) of Mezeritch and *Abraham Joshua Heschel of Apta (Opatow); on his mother's side from *Levi Isaac of Berdichev. After traditional Jewish studies, he obtained rabbinic ordination (*semikhah*). At the age of 20 he enrolled in the University of Berlin, where he obtained his doctorate, and at the *Hochschule fuer die Wissenschaft des Judentums,* where he also taught Talmud and received a second, liberal rabbinical ordination. In 1937 Martin *Buber appointed him his suc-

cessor at the central organization for Jewish adult education (*Mittelstelle fuer juedische Erwachsenenbildung*) and the *Juedisches Lehrhaus* at Frankfurt on the Main. Deported by the Nazis in October 1938 to Poland, he taught for eight months at the Warsaw Institute of Jewish Studies. He immigrated to England where he established the Institute for Jewish Learning in London. In 1940 he was invited by Julian Morgenstern to teach at Hebrew Union College in Cincinnati, where he was associate professor of philosophy and rabbinics for five years. From 1945 he taught at the Jewish Theological Seminary of America (JTS) as professor of Jewish ethics and mysticism. In 1946 he married Sylvia Strauss, who gave birth to Susannah Heschel, who followed in the footsteps of her father as a scholar of Judaism. Heschel visited Israel and called for the renewal of the prophetic vision in Zion. He served as professor at JTS until his death, combining his professional activities with extensive social action.

Writings

Heschel wrote books and studies on medieval Jewish philosophy – on Saadiah Gaon, Solomon ibn Gabirol, Maimonides, and Don Isaac Abrabanel – as well as on Ḥasidism. He became one of the most influential modern philosophers of religion in the United States, where his work is widely recognized in Jewish and Christian circles. Heschel saw the task of the philosopher of religion neither in the construction of a "religion of reason" which draws on non-Jewish sources nor in the analysis of "religious experience." The first substitutes philosophy for religion; the second tends to replace it with the psychology of religion. Heschel's own works attempt to penetrate and illumine the reality underlying religion, the living and dynamic relationship between God and man, through the empathetic understanding of the documents of Israel's tradition and of the experience of the religious Jew. Although he brought to this task the tools of modern philosophy, he pointed out repeatedly that no amount of rational analysis alone can ever exhaust the richness and fullness of this reality. He therefore highlighted the fact that reason itself discloses its own limits and that the ineffable quality of the Divine cannot fully be reduced to any scheme of conceptual categories, because man apprehends more than he can comprehend.

Heschel's lifework can be seen as consisting of two parallel strands: (1) the undertaking to study and interpret the classical sources of Judaism and (2) the endeavor to offer to his contemporaries a theology which results from the application of the insights of the traditional sources to the problems and questions which the modern Jew faces. Thus he started out with a book on prophecy (*Die Prophetie*, 1936), which presents a phenomenology of prophetic consciousness, and a biography of Maimonides treating the existential confrontation of Aristotelian philosophy with rabbinic Judaism. Studies in the field of Ḥasidism continued this undertaking. He published his first American book under the title *The Earth Is the Lord's* (1950) on Jewish life in Eastern Europe. In his three-volume Hebrew work, *Torah min ha-Shamayim be-Aspaklaryah shel ha-Dorot* (1962, 1965; third volume published posthumously in 1990), he presented the assumptions and ideas underlying the talmudic views of Torah and revelation and discovered two major trends in ancient Jewish thought which became formative in all subsequent Jewish history. In these two trends, epitomized by Rabbi *Ishmael and Rabbi *Akiva, halakhic differences reflect different aggadic positions of faith. Rabbi Akiva maintained that the Torah is written in heavenly language, which stimulates vision and opens one up to mystery, whereas Rabbi Ishmael asserted that the Torah is written in the language of man, which promotes logical thinking and the search for *peshat* (the plain meaning).

The results of Heschel's wide-ranging studies contributed to the formation of his original philosophy of Judaism, expressed in his two foundational books, *Man Is Not Alone* (1951) and *God in Search of Man* (1955). Religion is defined as the answer to man's ultimate questions. Since modern man is largely alienated from reality, which informs genuine religion, Heschel tried to recover the significant existential questions to which Judaism offers answers. This leads to a depth-theology which goes below the surface phenomena of modern doubt and rootlessness and results in a humanistic approach to the personal God of the Bible, who is neither a philosophical abstraction nor a psychological projection, but a living reality who takes a passionate interest in His creatures. The "divine concern" or "divine pathos" is the central category of Heschel's philosophy. Man's ability to transcend his egocentric interests and to respond with love and devotion to the divine demand, to His "pathos" or "transitive concern," is the root of Jewish life with its ethics and observances. The ability to rise to the holy dimension of the divine imperative is at the basis of human freedom. The failures and successes of Israel to respond to God's call constitute the drama of Jewish history as seen from the viewpoint of theology. The polarity of law and life, the pattern and the spontaneous, of *keva* ("permanence") and *kavvanah* ("devotion"), inform all of life and produce the creative tension in which Judaism is a way of prescribed and regular *mitzvot* as well as a spontaneous and always novel reaction of each Jew to the divine reality.

Heschel developed a philosophy of time in which a technical society that tends to think in spatial categories is contrasted with the Jewish idea of hallowing time, of which the Sabbath and the holidays are the most outstanding examples (*The Sabbath*, 1951). He defined Judaism as a religion of time, aiming at the sanctification of time. In his depth-theology, which is based upon the human being's pre-conceptual cognition, Heschel thought that all humanity has an inherent sense of the sacred; he pleaded for a radical amazement and fulminated against symbolism as a reduction of religion. Instead of advocating a sociological view of Judaism, he highlighted the spirituality and inner beauty of Judaism as well as the religious act, while at the same time rejecting a religious behaviorism without inwardness. Heschel's way of writing is poetical and suggestive, sometimes meditative, containing many antitheses and provocative questions and aims at the

transformation of modern man into a spiritual being in dialogue with God.

Religion and Action

Underlying all of Heschel's thought is the belief that modern man's estrangement from religion is not merely the result of intellectual perplexity or of the obsoleteness of traditional religion, but rather the failure of modern man to recover the understanding and experience of that dimension of reality in which the divine-human encounter can take place. His philosophy of religion has therefore a twofold aim: to forge the conceptual tools by which one can adequately approach this reality, and to evoke in modern man – by describing traditional piety and the relationship between God and man – the sympathetic appreciation of the holy dimension of life without which no amount of detached analysis can penetrate to the reality which is the root of all art, morality, and faith.

Heschel applied in a number of essays and addresses the insights of his religious philosophy to particular problems confronting people in modern times. He addressed rabbinic and lay audiences on the topics of prayer and symbolism (see his *Man's Quest for God*, 1954), dealt with the problems of youth and old age at two White House conferences in Washington, and played an active part in the civil rights movement in the U.S. in the 1960s, and in the Jewish-Christian dialogue beginning with the preparations for Vatican Council II. Heschel thought that religious people from various denominations are linked to each other, since "No religion is an island."

Heschel considered himself a survivor, "a brand plucked from the fire, in which my people was burned to death." He also regarded himself as a descendant of the prophets. He was a person who combined inner piety and prophetic activism. He was profoundly interested in spirituality, but an inner spirituality concretely linked to social action, as exemplified by his commitment to the struggle for civil rights in the U.S., by his protests against the Vietnam War, and by his activities on behalf of Soviet Jewry (see i.a. *The Insecurity of Freedom: Essays on Human Existence*, 1966).

[Fritz A. Rothschild / Ephraim Meir (2nd ed.)]

HESCHEL, ABRAHAM JOSHUA BEN JACOB (d. 1664), talmudic scholar of Lithuania and Poland. His father was rabbi of the community of Brest-Litovsk and head of its yeshivah, where Abraham Joshua became a teacher as a young man. In 1630 his father was appointed rabbi of Lublin and head of the yeshivah, where Abraham Joshua again assisted him. After his father's death in 1644, he succeeded him as head of the yeshivah. Some scholars claim that he also inherited the rabbinic position, others that he became rabbi of Lublin only in 1650 after the death of Naphtali Katz, who was his father's successor. In 1654, Abraham Joshua became rabbi and head of the yeshivah of Cracow, succeeding the famous Yom Tov Lipmann *Heller.

Heschel was a wealthy man, of outstanding piety, and his reputation as a teacher attracted numerous students. A number of them became famous in their own right, among them *Shabbetai b. Meir ha-Kohen, Aaron Samuel *Koidanover, Gershon *Ashkenazi, and Hillel of Brest Litovsk. His teaching methods were based on dialectics (*pilpul*). Heschel's renown as a legal authority spread far and questions were addressed to him from all parts of Europe. Although in many cases he was reluctant to give decisions, when he did, they were brief, logical, and to the point. During the Chmielnicki persecutions many cases of **agunot* came before him, and Heschel exercised considerable leniency in dealing with them. In one such instance, involving a certain Jacob (grandfather of Jacob *Emden), who was missing after an attack on Vilna, witnesses gave evidence that he had been killed by the Cossacks, and Heschel decided that the wife could remarry; six months later Jacob returned, whereupon Heschel resolved that he would refrain in the future from giving decisions in such matters (see *Megillat Sefer* by Jacob Emden (1897), 7; and J.M. Zunz, *Ir ha-Ẓedek* (1874), 111). He was commissioned by the communities of Poland to solicit aid from the wealthy Jewish communities of Austria, Bohemia, and Moravia for the victims of the Chmielnicki massacres. Heschel was received everywhere with great respect, and his mission was crowned with success. He was supposedly even received by the emperor of Austria who accorded him great honor. Heschel died in Cracow.

His commentaries on the *Sefer Mitzvot Gadol* of *Moses of Coucy were published in its Kapost edition in 1807; they are short and logical, and reveal a fine command of the Hebrew language. Aaron Kelniker, a student of Heschel's in Lublin, published a work, *Toledot Aharon* (Lublin, 1682), containing some of his teacher's novellae on *Bava Kamma*, *Bava Meẓia*, and *Bava Batra*, compiled from lecture notes. Later editions were entitled *Ḥiddushei Halakhot* (Offenbach, 1723; etc.). In the preface, Kelniker briefly described the famous yeshivah of Lublin during his period of studies there under Heschel.

The *Ḥanukkat ha-Torah* of E.J. Ersohn (1900) contains 600 of Heschel's homilies on the Bible, gathered from different rabbinic sources of the 17th and early 18th centuries. Events connected with Heschel and his time are recorded by the author in the appendix, *Kunteres Aharon*, which, although containing some legends, also includes much material of historical value. Some of Heschel's responsa are to be found in works of his contemporaries. His novellae and a commentary on the Shulḥan Arukh are still in manuscript (see *Kunteres Aharon*, 103).

[Shlomo Eidelberg]

HESHBON (Heb. חֶשְׁבּוֹן), biblical city in Transjordan, 50 mi. (80 km.) due E. of Jerusalem. The identification of Heshbon is undisputed; it was situated on the site of the present town of Ḥisbān in the southern Belka. The site was first explored in the 19th century; excavations at the site were conducted by S.H. Horn between 1968 and 1973, by L.T. Geraty between 1974 and 1976, and in 1978 by J. Taylor and L.G. Herr. Heshbon was the capital of Siḥon, king of the Amorites (Num. 21:26), and was conquered by Moses and the Israelites in their first victory on the way to the Promised Land. This event is recorded in a kind of postscript to an ancient song extolling Heshbon's might (Num. 21:30). The city was assigned to the tribe of Reuben (Num. 32:37) but because of its proximity to the borders of Gad it is listed as a levitical city in the latter's territory (Josh. 21:39; I Chron. 6:66). Its fate in the conflict between Israel and Moab in the time of the Judges (Ehud) is uncertain (cf. Judg. 3:12ff.; I Sam. 12:9–11); the Ammonites also appear to have claimed it at that time (Judg. 11:26). Archeological excavations at the site have not brought to light remains predating c. 1200 B.C.E. A small unfortified village existed at the site during the 12th–11th centuries B.C.E. The territory remained Israelite until after the death of Ahab (c. 853 B.C.E.) when Mesha, king of Moab, reconquered it during his rebellion against his Israelite overlord. Remains of a settlement at the site were uncovered dating from the 7th–6th centuries B.C.E. Several inscribed sherds were found. In Isaiah (15:4) and Jeremiah (48:2, 34) Heshbon is still mentioned as a Moabite city although Jeremiah also speaks of it as belonging to Ammon (49:3). The fertile area around Heshbon is mentioned in Isaiah 16:8–9 and the memory of the pools of Heshbon lingers on in Song of Songs 7:5 where the eyes of the beloved are compared with them. In the early 13th century B.C.E. Siḥon was thus a conqueror who soon lost his lands to another invader (cf. Num. 21:25–30). Situated on the "King's Highway" (cf. TJ, Shev. 6:1, 36c, and parallels) and surrounded by fertile fields and vineyards, Heshbon was eminently suited as a central settlement. It was an important site during the Hellenistic to Roman periods (c. 200 B.C.E. to 130 C.E.). In Hasmonean times it was apparently conquered by John Hyrcanus early in his reign (135–104 B.C.E.) although the sources record only the conquest of Samaga, a village in its territory (Jos., Ant. 13:255; Wars 1:63). Although the city was apparently held by Alexander Yannai (Ant. 13:397), Hyrcanus II ceded it to the Nabatean king Aretas III (as may be concluded from Ant. 14:18). Herod recovered it from the Nabateans and established a colony of veterans there (*ibid.*, 15:294). At the outbreak of the Jewish War in 66 C.E., it was attacked by Jews (Wars 2:458). In 106 C.E. Heshbon became part of the new Provincia Arabia (Eusebius, Onom. 84:4). From the 2nd-4th centuries C.E. the site has the remains of a temple and inn on the acropolis, the former destroyed in the earthquake of 365 C.E. In the third century it was renamed Aurelia Esbus and Jerome mentions it by this name and describes it as "a notable city of Arabia in the mountains in front of Jericho, 20 Roman miles from the Jordan" (Onom. 85:4–5). Its coins, struck under Elagabalus, show Zeus and Esculapius as well as the Arabian deities Dushara-Dionysus and Astargatis-Astarte. In the fourth and fifth centuries Heshbon was the seat of a bishop (two churches are known from the site) and after the Arab conquest it was the capital of the Belka district up to Mamluk times. Medieval and Ottoman remains are also known.

HESHIN, SHNEUR ZALMAN (1903–1959), Israel jurist and Supreme Court justice. Heshin, who was born in Jerusalem, studied law in the United States. In 1937 he was appointed a magistrate in Tel Aviv and from 1944 to 1948 served as district court judge there. He became a justice of the Supreme Court of Israel in 1948, and from 1954 was its permanent deputy president. He published several books on his legal experiences, including one on child adoption, *Yaldei Immuẓim* (1956), and *Tears and Laughter in an Israel Courtroom* (1959). A brilliant jurist with a thorough knowledge of several legal systems, his judgments were an important contribution in Israel law in the first years of the state's existence.

[Benjamin Jaffe]

His son MISHAEL CHESHIN (1936–), also a Supreme Court justice, was born in Beirut and graduated magna cum laude from the Hebrew University Law Faculty. In 1962, he re-

ceived a doctorate in law from the Hebrew University. From 1957 through the mid-1980s, he was a lecturer at the Hebrew University Law School. During 1962–78, he was also employed by the Ministry of Justice, first as deputy state attorney and from 1972 as deputy attorney general. From 1978 to 1991 he engaged in private law practice in Jerusalem and in 1992 he was named to the Israel Supreme Court, becoming deputy president in 2005 and retiring in 2006. Known as an independent-minded defender of civil liberties, Cheshin was a mainstay of Aharon *Barak's activist court.

[Leon Fine (2nd ed.)]

HESKES, IRENE (1923–1999), U.S. music historian, bibliographer, compiler, and editor who specialized in Jewish music. Her work was published in milestone books such as *The Resource Book of Jewish Music* (1985) and *Passport to Jewish Music* (1994). In addition she wrote numerous articles and reviews for musicological and general publication on the subject of Jewish and Israeli music. She also edited *The Cantorial Art* (New York, 1966) and *Studies in Jewish Music: The Collected Writings of A.W. Binder* (New York, 1971). Her latest compilation of the catalog *Yiddish American Popular Songs 1895–1950* (1992), which presents 3,427 Yiddish song titles, highlights material from the Library of Congress collection of Judaic music and tells the story of struggles of migration, settlement, hope and acculturation through a catalogue of sheet music that had been deposited in the Library of Congress for copyright registration, but was virtually unknown to scholars. This book is important for an understanding of the roots of the American musical theater.

[Gila Flam (2nd ed.)]

HESPED (Heb. הֶסְפֵּד), eulogy in honor of the departed and as a comfort to the bereaved (Sanh. 46b–47a). Based upon the biblical accounts of the death and burial of Sarah (Gen. 23:2), Jacob (Gen. 50:10), Samuel (I Sam. 25:1), Saul and Jonathan (II Sam. 1:12), and others, eulogizing is regarded in Jewish tradition as a religious duty in fulfillment of the commandment to "love your neighbor as yourself" (Maim. Yad, Evel, 14:1; Sh. Ar., YD 344:1). The eulogy should emphasize the good deeds and virtues of the deceased, but should avoid excessive praise (Ber. 62a). In the Talmud the question is disputed whether the *hesped* is in honor of the deceased or a tribute to the bereaved family; it is concluded that it is a homage to the deceased (Sanh. 46b–47a). Where professional eulogizers are employed, the heirs of the deceased can be forced to defray the costs of the eulogy (Sanh. 46b).

The martyrs executed by the Romans were not eulogized, for fear of the authorities (Sanh. 11a). Suicides and persons placed under *ḥerem* are not to be eulogized (Sh. Ar., YD 345); gentiles may be eulogized (Ber. 16b).

The eulogy should be pronounced in front of the bier, either in the public square or at the cemetery (BB 100b). The biers of famous scholars and community leaders were carried into the synagogue for eulogizing (Sh. Ar., YD 344:20), as is still the custom today. Based upon Jeremiah 22:10, the eulogy may take place only within the seven days following the death (MK 27b; Sh. Ar. YD 394:1–2); for scholars and great community leaders, however, it can be made within 12 months of their death (Maim. Yad, Evel, 13:10; see Ket. 103b). In the Babylonian academies, it was customary to eulogize during the *Kallah sessions of Adar and Elul all those rabbis who had passed away in the intervening period. Likewise in Central and Eastern Europe, on the Seventh of *Adar, all scholars who died during the past year are eulogized. In some communities, the *hesped* takes the form of a talmudic discourse delivered after the *sheloshim* (30th day after death). According to traditional custom, no eulogy is pronounced on Sabbath, on festivals, on the New Moon, on Ḥanukkah, on Purim, on the eve of a holiday and on Isru Ḥag (the day after it), during the whole month of Nisan, and on the days when the *Taḥanun prayer is omitted. In some congregations, eulogies are not delivered 30 days prior to a festival (MK 1:5; MK 8a). These rules are lifted in case of a learned and worthy person, though the eulogy should be shorter than usual (MK 27b).

A beautiful example of a eulogy is stated in the Talmud (TJ, Ber. 2:8, 5b–c) where *Resh Lakish eulogized his pupil R. Ḥiyya b. Adda by quoting Song of Songs, "My beloved is gone down to his garden,… to gather lilies." He interpreted the verse to allude to God ("the beloved") who came down to take the righteous as one gathers lilies in a garden of flowers. While the Bible and Talmud preserve instances of short eulogies only, medieval and modern homiletic literatures abound in long and often intricately composed prose eulogies.

A bibliography of famous eulogies was compiled by A. *Jellinek (*Kunteres ha-Maspid*, 1884) and by D. Wachstein (*Mafte'aḥ ha-Hespedim*, 3 vols. 1922–30).

[Meir Ydit]

HESS, MENDEL (1807–1871), German rabbi. Born at Lengsfeld (Stadtlengsfeld), Saxe-Weimar, he was one of the first German rabbis to have a university education. In 1827 he was appointed chief rabbi of the grand duchy of Saxe-Weimar, residing first at Lengsfeld and thereafter, until his death, at Eisenach. Hess was an advocate of radical *Reform, carrying out, despite opposition from the Jews, a government decree of June 20, 1823, which required all services in synagogue to be conducted in German. In addition, he officiated at marriages between Jews and Christians. From 1839 to 1848 he edited (with S. *Holdheim in the last year) *Der Israelit des neunzehnten Jahrhunderts*, a weekly which publicized his views. He published an order of worship for the Jews of Saxe-Weimar (Eisenach, 1833), and collections of sermons and addresses (1839–48, 1871).

[Joseph Elijah Heller]

HESS, MICHAEL (1782–1860), German educator. He was sent by his father, Rabbi Isaac Hess Kugelmann, to the yeshivah in Fuerth and later moved to Frankfurt o. M., where he was appointed as tutor to the son of Meyer Amschel *Rothschild in 1804. At the age of 24 he became headmaster of the recently founded Frankfurt Philanthropin school, a position he held until 1855. Influenced by the writings of Moses *Mendelssohn and an extreme advocate of *Reform, Hess gradually limited the time allotted for Jewish studies, claiming that religion should be the province of the home. Among his innovations were a girls' school, a kindergarten, confirmations, sermons, hymns, prayers in German, and a semi-religious Sunday school. In 1819 he vigorously opposed the erection of an Orthodox school; he attacked the school founded in 1853 by S.R. *Hirsch, who replied in 1854 in a scathing pamphlet entitled *Die Religion im Bunde mit dem Fortschritt*. Hess wrote pedagogic works and a history of the Philanthropin.

HESS, MOSES (1812–1875), German socialist, a precursor of modern Zionism, and father of Zionist Socialism. Born in Bonn, Hess remained there with his Orthodox grandfather when in 1817 his father moved to Cologne, where he owned a grocery and a sugar refinery. His grandfather provided him with a religious education, and only at the age of 14 was Hess sent to Cologne, where he worked in his father's business. From 1837 to 1839 he studied philosophy at the University of Bonn, but did not graduate. In 1837 Hess published his first book *Die heilige Geschichte der Menschheit*, an historical-philosophical work that displayed a profound influence of both the Bible and Spinoza and already contained communistic elements. Of considerably greater importance was his second book, *Die europaeische Triarchie* (1841), in which he recommended the union of the three great powers – England, France, and Germany – into one European state.

Hess was one of the founders, editors, and, from the end of 1842, the Paris correspondent of the *Rheinische Zeitung*, the first socialist daily in Cologne (it was suspended by the Prussian government in March 1843 after 15 months of publication). His numerous articles and essays also appeared in a series of radical periodicals of the period. In 1845–46 he edited an important socialist monthly, *Der Gesellschaftsspiegel*. In 1845 Hess moved to Belgium and was active in the Kommunistenbund, and 1848–49 he lived in Paris as a correspondent for German newspapers. In 1849 he took refuge in Switzerland and two years later in Belgium. From 1853 until the end of his life, he lived – with interruptions – in Paris.

After the death of his father (1851), who left him an inheritance that constituted the basis of his very modest but independent way of life, Hess married his Christian companion Sybille Pesch of Aachen. He spent the years 1861 to 1863 in Germany, where he published his most famous work *Rom und Jerusalem, die letzte Nationalitaetsfrage* (1862; *Rome and Jerusalem*, 1918 and later editions). In 1863 he actively cooperated with Lassalle and was the *Bevollmaechtigter* (plenipotentiary delegate) of the Allgemeiner Deutscher Arbeiterverein for the district of Cologne. At the end of 1863 he returned to Paris and contributed a number of studies to the *Archives israélites de France*. As a Freemason he also contributed to *Le monde maçonnique*. He was also a Paris correspondent of the Chicago *Illinois Staats-Zeitung* (1865–70), the *Social-Democrat* (1865–67), the *Rheinische Zeitung* (1868–70), and the *Volksstaat* (1869–70).

As a Prussian subject, Hess was expelled from France at the outbreak of the Franco-Prussian War. He moved to Belgium, where he published his violently anti-Prussian pamphlet, *Une nation déchue, Coalition de tous les peuples centre l'Allemagne prussifiée* (1871). After the war he returned once more to Paris and wrote the first volume of his *Dynamische Stofflehre* (published posthumously by his wife in 1877). He died in Paris and was buried, according to his own wish, at the Jewish cemetery in Deutz, near Cologne. His remains were transferred to kevuẓat Kinneret in Israel in 1961.

Hess may be considered the first important German socialist and the main representative of "philosophical Socialism." In contradistinction to Ludwig Feuerbach, who applied his theory of self-alienation only to theology, Hess applied this notion to historical and economic phenomena, such as property, money, the state, politics, etc. He believed that free labor – uncorrupted by private property and identical with genuine enjoyment – should replace the contemporary social system based on exploitation and characterized by the concentration of capital and the proletarianization of the masses. Hess felt that free labor would develop the "essence" of man as a social species. Socialism was not a class question to Hess, but a humanitarian problem that would be solved by education and the organization of labor. In his view, therefore, Socialism was practical ethics. In their *Communist Manifesto*, *Marx and Engels bitterly attacked and ridiculed this type of "true" Socialism. Hess was the first to recognize the greatness of Marx, at a time (September, 1841) when the latter was virtually unknown. He exercised an influence on the young Marx and won Engels for Communism. Between 1846 and 1851 Hess himself was strongly influenced by Marx, but he never became a "true" Marxist. Under the impact of Marx, Hess began to stress the importance of the material and economic factors for the realization of Communism. But he remained an ethical socialist even after having adopted some of Marx's ideas.

Hess' attitude toward the Jews underwent important changes within the course of his life. In his twenties he thought that the Jews had already accomplished their mission in history and should assimilate; he felt himself thoroughly German. During the *Damascus Affair (1840), he was deeply affected by the sufferings of his fellow Jews, but his compassion was not of long duration. Yet in 1862, he published *Rome and*

Jerusalem, a classic of Zionist literature. At the beginning of the book he states:

> Here I stand once more, after 20 years of estrangement, in the midst of my people; I participate in its holy days of joy and mourning, its memories and hope, its spiritual struggles in its own house and with the civilized people among which it lives, but with which, despite 2,000 years of living and striving together, it cannot organically coalesce. A thought which I had stifled forever within my heart is again vividly present with me; the thought of my nationality, inseparable from the inheritance of my ancestors, the Holy Land and the eternal city, the birthplace of belief in the divine unity of life and in the future brotherhood of all men. This thought, buried alive, had for years throbbed in my sealed heart, demanding outlet. But I lacked the energy necessary for the transition, from a path apparently so remote from Judaism as mine was, to that new path which appeared before me in the hazy distance and only in its general outlines.

Hess' inner transformation was the result of his own studies and his own experience. At the outbreak of the Italian war with Austria (1859), he noticed the connection between his anthropological studies and the liberation movement of the oppressed nationalities. These studies convinced him that all racial domination would ultimately cease and would be followed by a regeneration of the nations, including the Jewish one. On the other hand, it is clear that he personally suffered humiliation from antisemites. The Jewish national concept held by Hess was based on his idea of race. All past history, according to Hess, moved in the sphere of race and class struggle. "The race struggle," he said, "is the primal one, the class struggle secondary." He was convinced that there are "two world-historical races" whose combined cultural efforts shaped modern society: the Aryans and the Semites. The Aryans aim at explaining and beautifying life, the Semites at moralizing and sanctifying it. In the field of races there is variety but no superiority or inferiority, so that there is no justification for racial oppression or discrimination. The final aim of history is harmonious cooperation of all nations. For every oppressed nationality, national independence is the prerequisite for social progress.

Hess professed that Jews must preserve their nationality in the exile and strive for its political restoration in Palestine. He felt that the Jewish religion is the best means of preserving the nationality of the Jews and must therefore be left unchanged until the day when the foundations of a Jewish political and social establishment are laid in Palestine and a Sanhedrin can be elected to modify Jewish law in agreement with the needs of the new society. According to Hess, the Jewish people needed a "center of action," around which a nucleus of men devoted to the religious mission of Israel could gather to pursue their work. One day these men would discover one another in the ancient state of Israel. Their number is irrelevant, since Judaism has never been represented by a numerous people (*Archives israélites*, 26 (1865), 486). The future Jewish state, he pointed out, must be based on the following foundations: acquisition of soil by the nation as a whole; creation of legal conditions under which work can flourish; and "founding of Jewish societies of agriculture, industry and trade in accordance with Mosaic, i.e., socialist, principles" (*Rome and Jerusalem*, Letter 12).

Moses Hess was forgotten for some time, and only with the birth of the Zionist movement were his personality and his book, *Rome and Jerusalem*, appreciated. Herzl wrote about Hess in his diary on May 2, 1901:

> The 19 hours of this round trip were whiled away for me by Hess with his *Rome and Jerusalem*, which I had first started to read in 1898 in Jerusalem, but had never been able to finish properly in the pressure and rush of these years. Now I was enraptured and uplifted by him. What an exalted noble spirit! Everything that we have tried is already in his book. The only bothersome thing is his Hegelian terminology. Wonderful the Spinozistic-Jewish and nationalist elements. Since Spinoza, Jewry has brought forth no greater spirit than this forgotten Moses Hess (Vol. 3, p. 1090).

Articles on Hess and the beginning of attempts of translation appeared in the 1880s. M. *Bodenheimer, who published a new edition of *Rome and Jerusalem* with an introduction, made the book available to the public in 1899, and since then many editions have come out both in the original and translation. T. Zlocisti also contributed to the revival of Hess' memory by publishing a selection of Hess' *Juedische Schriften* (1905), *Philosophische und sozialistische Schriften* (1921), a comprehensive biography (1925, translated into Hebrew in 1945–50), and his letters (published only in Hebrew with notes by the translator, 1947). E. Silberner brought out Hess' correspondence in the original German in 1959 and wrote a new, comprehensive biography (1966). Selections of his writing have been published in German (1962), Polish (1963), and in Hebrew (edited with notes by Martin Buber, 2 vols. 1954–56).

[Getzel Kressel]

HESS, DAME MYRA (1890–1956), British pianist. Hess made her debut in Beethoven's Fourth Piano Concerto with Sir Thomas Beecham in 1907, and subsequently toured Europe, the U.S., and Canada. She gained fame especially in performances of Scarlatti, Bach's *Well-Tempered Clavier*, and the piano concertos of Mozart and Beethoven. During the Blitz in London in World War II she organized daily lunchtime concerts in the National Gallery and was created a Dame of the British Empire in 1941 for her contribution to maintaining morale in the city.

[Judith Cohen]

HESSE, state in Germany. There were Jews living in Hesse at the end of the 12th century, and by the middle of the 14th century they had settled in more than 70 places, the most important of which were *Friedberg, *Wetzlar, and *Fulda. Most of the communities destroyed by persecutions during the *Black Death (1349) were reestablished in the 14th century. As Emperor Louis IV of Bavaria (1314–47) and his successors usually transferred rights over the Jews to the nobles, the majority of the Jews of Hesse lived in villages and towns under the protection of the nobles and not in the cities belonging to the emperor. In 1524 Landgrave Philip the Magnanimous expelled the Jews from his territory but allowed them to return shortly afterward. His adviser in religious affairs, the Protestant reformer Martin *Bucer, demanded that he humiliate the Jews and limit their rights. Although Philip did not respond to this request, his 1539 *Judenreglement*, the model for future Hessian legislation regulating Jewish rights, while relatively favorable, included a prohibition on the building of new synagogues and commanded the Jews not to resist efforts to convert them. After Philip's death in 1567 Hesse was divided among his four sons, with two principalities, Hesse-Kassel and Hesse-Darmstadt, emerging with sizable Jewish populations. For the history of Hesse-Homburg Jewry, see *Homburg.

Hesse-Kassel

In the reign of Philip's son William the Wise of Hesse-Kassel, who prohibited anti-Jewish incitement, the number of Jews on his lands increased. In the reign of his successor the Jewish *Landtag* was inaugurated. Once every three years (until 1806) this day of assembly was held, on which the Jews of Hesse decided on the assignment of taxes, internal legislation, and other public matters. In 1656 a *Landrabbinat* was established with its seat in Witzenhausen, where the central yeshivah for Hessian Jewry was founded. The majority of Hessian Jewry settled in rural regions (143 heads of households in 42 localities in 1646). In the 17th and 18th centuries the authorities sought to restrict the commercial occupations they pursued, particularly peddling and trade in cloth and metals. Jews also made their living in the livestock and leather trades, in real estate brokerage, and in supplying silver for the mint and recruits for the army. As far back as the 15th century Jews served as court physicians. In the 18th century some Jews were granted the monopoly of tobacco production. They were finally allowed to trade freely in 1781, but it was not until Hesse-Kassel became a part of the kingdom of Westphalia (1808) that they were recognized as citizens.

From the middle of the 17th century and for the next two centuries the Goldschmidt family of Frankfurt, *Court Jews and financiers to the landgraves of Hesse-Kassel, were dominant in Jewish affairs. From 1709 to 1734 several Hebrew books were published in *Hanau. After Hesse was incorporated into Westphalia, matters of religion and education came under the consistory in *Kassel, headed by Israel *Jacobson, who introduced reforms. The Jewry Law of 1816 encouraged the Jews to transfer to agriculture and crafts, and that of 1823 restricted rabbinical authority. Complete civil rights were not granted until Hesse-Kassel was annexed to Prussia (1866) and became part of the district of Hesse-Nassau.

Hesse-Darmstadt

The situation of the Jews in Hesse-Darmstadt was generally more favorable than in Hesse-Kassel. In his *Judenordnung ("Jewry regulations") of 1585 Landgrave George I (1567–96) reissued his father's *Judenreglement* with the addition of a few more restrictions. The 1629 *Judenordnung* of George II (1626–61) was regularly renewed for a century and a half, although his successor, Ludwig VI, expelled the Jews from the cities for a short period. Generally, however, the policy of the rulers was one of nonintervention in Jewish affairs, which stimulated the development of institutions of Jewish self-government. As in Hesse-Kassel, during the triennial *Judenlandtage* the Jews of the principality convened to discuss questions of community taxation as well as other economic and social problems. Despite such important developments within the Jewish community, the Jews of Hesse-Darmstadt were subject to legal disabilities until the middle of the 19th century. Even the Hessian constitution of 1820 placed strict limitations on citizenship, and the majority of Jews remained **Schutzjuden*; only in 1848 were all legal inequalities finally abolished. The Jewish population of Hesse-Darmstadt was 19,530 in 1822 and reached a peak of 28,061 in 1849, declining gradually to 20,401 in 1925. Although their percentage of the total population declined from 3.04% to 1.52%, it remained throughout one of the highest in Germany. The Jews, who were settled primarily in rural areas, engaged in peddling, livestock trade, and dealing in wholesale agricultural produce; accusations that they exploited the peasants were endemic. The Jews of Hesse-Darmstadt (and Hesse-Kassel as well) suffered during the *Hep! Hep! disturbances of 1819 and again during the revolution of 1848. In both cases the rulers intervened vigorously on behalf of the Jews; later in the century they tried to moderate the anti-Jewish policies of the Russian czar, to whom they were related by marriage. In contrast to their rulers, the backward peasants of Hesse repeatedly elected to parliament the rabid antisemite, Otto Boeckel; the region continued to be a hotbed of antisemitism and actively welcomed the Nazi seizure of power.

Especially after persecutions on the *Kristallnacht* (Nov. 9/10, 1938), when the local populace supported the Nazi stormtroopers, the Jews of the rural communities of Hesse moved, or were forced to move, to such larger towns as *Frankfurt, *Darmstadt, *Giessen, Friedberg, *Kassel, and *Offenbach. From there, the majority were later deported to concentration camps in Eastern Europe.

Hesse

After World War II most of Hesse-Darmstadt and Hesse-Kassel was included in the new state of Hesse, which in 1970 contained 1,508 Jews in nine communities, the most important being Offenbach, *Wiesbaden, Darmstadt, and Kassel, with

a joint regional organization in Frankfurt. At the beginning of the 21st century, after immigration from the former Soviet Union, the population of these four main communities exceeded 3,000.

[Zvi Avneri]

HESSEL, FRANZ (1880–1941), German writer, translator, and publisher. The son of a Jewish banker, Hessel grew up in Berlin and studied literature in Munich. After 1900 he participated in the literary circle of Munich, publishing the *Schwabinger Beobachter* together with Franziska zu Reventlow and the poems *Verlorene Gespielen* (1905). Together with Karl Wolfskehl he attended the 1903 Zionist Congress in Basel, yet remained rather aloof from it. Between 1906 and 1914 he lived mostly in Paris, writing stories (*Laura Wunderl*, 1908) and novels (*Der Kramladen des Gluecks*, 1913) which were mostly set in Munich and opposing bourgeois capitalism with aesthetical models of life like the *flaneur* and also posing the question of Jewish identity. This is still the case in his Paris and Berlin novels *Pariser Romanze* (1920), *Heimliches Berlin* (1927), *Spazieren in Berlin* (1929), and his short prose (*Teigwaren leicht gefaerbt*, 1926, *Nachfeier*, 1929, *Ermunterung zum Genuss*, 1933), which analyze the social and material space of urban life. During the years of the Weimar Republic Hessel worked for the publisher Ernst Rowohlt, editing the literary journal *Vers und Prosa* (1924) and translating Stendhal, Balzac, Casanova, and (together with Walter *Benjamin) Proust. In 1938 he fled to Paris and southern France. In 1940 he was imprisoned in a camp and died soon after the liberation in Sanary-sur-Mer.

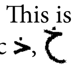
[Andreas Kilcher (2nd ed.)]

HESSEN, JOSEPH VLADIMIROVICH (1866–1943), Russian lawyer and politician. Born in Odessa, Hessen graduated in law from the University of Petersburg in 1889 but was banned from practicing on the grounds that he was politically unreliable. In 1891 he converted to Christianity, which opened for him government service. In 1898 he founded the law journal *Pravo* in which he wrote several important articles on law including *Uzakoneniye, usyneniye i vnebrachnya deti* ("Legitimation, Adoption, and Children Born Out of Wedlock," 1916[3]) and *Sudebnaya reforma* ("Court Reform," 1904). Hessen joined the Constitutional-Democrat (Kadet) Party in 1905, and from 1906 was coeditor of their newspaper. In 1907 he was elected on their list to the Second Duma (Russian parliament), where he represented himself as a Jew of Russian Orthodox faith. After the Russian Revolution of 1917 Hessen left Russia and lived in Helsinki and later in Berlin where he edited the *Arkhiv Russkoy Revolyutsii* ("Archive of the Russian Revolution," 22 vols., 1921–37). His other writings include *Istoriya russkoy advokatury* ("History of the Legal Profession in Russia," 1914), two works of Jewish legal interest, and an autobiography *V dvukh vekakh* ("In two centuries," 1937). He also wrote an article on the position of the Jews following the antisemitic May Laws in 1882 in *Yevreyskaya Biblioteka* (vol. 10 (1903), 318–38), and was coeditor of *Sbornik zakonov o yevreyakh …* (1904), a collation of laws affecting the Jews. In 1933 he moved to Paris, and in 1940 to Limouge in southern France, where he died.



HESSEN, JULIUS ISIDOROVICH (1871–1939), historian of Russian Jewry. Hessen was born in Odessa. He was the author of more than 300 historical works. His first published work was a biography of Osip *Rabinovich and a Russian translation of *Pinsker's *Autoemanzipation* (1898). Both his scholarly and communal activities revolved around the quest for the emancipation of Russian Jewry. In 1905–06 he served as secretary of the short-lived Union for Full Equality of the Jewish People in Russia; he prepared the memorandum on the life of the Jews in Russia and the history of Russian legislation on the Jews which was sent to the members of the Duma and the state council. Hessen's mature historical work began with studies of aspects of Russian Jewish history, including *Yevrei v masonstve* ("Jews in Freemasonry," 1903) and *Velizhskaya drama* ("The Velizh [Blood-Libel] Drama," 1905), collected in his *Yevrei v Rossii* (1906; Heb. *Ha-Yehudim be-Rusyah*, 1913); *Zakon i zhizn* ("Law and Life," 1911), on the history of the Pale of Settlement; and *Gallereya yevreyskikh deyateley* ("A Gallery of Outstanding Jewish Figures," 2 vols., 1898–1900). He initiated the publication of the Russian-Jewish encyclopedia *Yevreyskaya Entsiklopediya* (16 vols., 1908–13), served as its general secretary and its editor for modern Russian-Jewish history, and contributed many important articles to it. Hessen summed up his research in *Istoriya yevreyev v Rossii* ("History of the Jews in Russia," 1914), later extending the history to 1882 in *Istoriya yevreyskogo naroda v Rossii* ("History of the Jewish People in Russia," 2 vols., 1916–27; vol. 1 rev., 1925. These standard works deal with the history of Russian Jewry from its early beginnings in the period of the grand duchy of Kiev, but are of particular importance for the position of the Jews in Russia in the 18th and 19th centuries, drawing on archival

material from the many commissions appointed to inquire into the Jewish problem and on the reports of provincial governors. After the 1917 Revolution Hessen was employed, with others, on a history of the labor movement in Russia and on a history of antisemitism in Russia. In the years 1930–35 he was editor of the *Vestnik an S.S.S.R.* (Journal of the Academy of Sciences). From 1935 he prepared the publication of the archives of the Arctic explorations. The exact circumstances of his death are not known.

[Abraham N. Poliak]

HESTRIN, SHLOMO (1912–1962), Israel biochemist. Born in Canada, Hestrin studied at the University of Winnipeg and went to Palestine in 1933, worked on a kibbutz, and completed his studies at the Hebrew University. In 1939 Hestrin became research assistant and later guest researcher at universities in the U.S. and returned to Israel in 1949 to become head of the microbiological chemistry laboratory at the Medical School in Jerusalem. In 1959 he was appointed head of the department of biochemistry. He was awarded the Israel Prize in 1957. His field of research was in biochemistry of sugars, properties of yeast enzymes in decomposition, the structure and synthesis of polysaccharides in bacteria and their use in medical research and to increase blood volume. Hestrin contributed much to the development of teaching and research in biochemistry at the Hebrew University.

HESTRIN-LERNER, SARAH (1918–), physiologist. Born in Winnipeg, Canada, Hestrin-Lerner immigrated to Ereẓ Israel in 1932. She studied zoology at the Hebrew University and received her doctorate in pathological physiology. She was awarded the Israel Prize for medicine in 1955.

ḤET (Heb. ח; חֵית), the eighth letter of the Hebrew alphabet; its numerical value is therefore 8. It is pronounced as a fricative pharyngeal. The earliest representation of the *ḥet* is in a pictograph of a fence . Variants of the latter form survived in the Phoenician , Hebrew , and Samaritan . The Aramaic *ḥet* dropped two of the horizontal bars and by the eighth century B.C.E. it had already become . This is the basic form of the modern Hebrew ח. The Arabic  developed through the Nabatean . In the Syriac and other eastern Aramaic scripts the *ḥet* developed as follows: . From the Phoenician *ḥet* the Greek "H" (the Ionian vowel *eta*) developed, but in Latin it regained its consonantal value (fricative laryngeal). See *Alphabet, Hebrew.

[Joseph Naveh]

ḤEVER HA-YEHUDIM (Heb. חֶבֶר הַיְּהוּדִים), a name which appears on Hasmonean coins, indicating some kind of ruling body. It is found particularly in the combination "High priest and Ḥever ha-Yehudim"; on the coins of the high priest Johanan (either Hyrcanus I or II) is found "Johanan high priest and head of the Ḥever ha-Yehudim." Scholars dispute the nature of this body. Some regard it as a council associated with the ruler, composed of aristocrats, priests, and scholars; at a later period it was known as the *Sanhedrin, its origin being in the *gerusia*, known to have existed before the Hasmonean period. Others take the phrase to refer to the nation as a whole, which on the coins is thus associated with the ruler. They compare the Ḥever ha-Yehudim to the Great Assembly which was convened to endorse the establishment of Hasmonean rule in the time of Simeon the Hasmonean (142 B.C.E.; I Macc. 14:25–49). Still others regard the name as a translation of some Greek term like κοινὸν τῶν Ἰουδαίων ("The Commonwealth of the Jews"). No such body, however, is known to have existed. It is worthy of note that Ḥever ha-Yehudim does not appear on those coins of Alexander Yannai (104–76 B.C.E.) on which he bears the title of king.

[Uriel Rappaport]

HEVESI, LAJOS (**Ludwig**; 1843–1910), Hungarian author and journalist. A noted humorist, Hevesi was associated in Budapest with the satirical magazine, *Borsszem Jankó*, and with the *Pester Lloyd*. From 1885 he edited the *Wiener Fremdenblatt*. One of his most popular books was *Des Schneidergesellen Andreas Jelky Abenteuer in vier Weltteilen* (1875), a much-translated adventure story.

HEVESI (originally **Hoffman**), **SANDOR** (1873–1939), Hungarian stage director, playwright, and translator. After graduating from the University of Budapest, Hevesi became a teacher but he soon turned to the theater and in 1902 was appointed stage director of the Budapest National Theater. A disciple of the English director Gordon Craig, Hevesi improved artistic standards and introduced modern English plays into the repertoire. He put his knowledge of stage technique to good use in his own plays, which enjoyed considerable popularity in their time. Hevesi translated all the plays of George Bernard Shaw and many of those by Shakespeare, Molière, Ibsen, Gogol, and Wilde. His conversion to Christianity did not save him from antisemitic persecution and he was forced to retire from public life in 1935. An anthology of his essays, *A drámairás iskolája* ("School for Playwriting"), appeared posthumously in 1961.

His adopted son, ANDRÁS HEVESI (1902–1940), also an author and translator, was a member of the group associated with the radical periodical *Szép Szó*, which included Pál Ignotus, Ferenc Fejtö, and Béla *Zsolt. His outstanding stories were *A párizsi esö* ("The Rain in Paris," 1939) and *Irén* (1938). He left Hungary during the antisemitic excesses of the Horthy regime, and, after volunteering for the French army in 1940, died in battle.

[Baruch Yaron]

HEVESI, SIMON (formerly **Handler**; 1868–1943), rabbi and scholar in Hungary. He studied at the Budapest rabbinical seminary and at Budapest University. In 1894 he was appointed rabbi of Kassa (now Kosice, Slovakia) and later officiated in various communities. Hevesi was a brilliant speaker. He subsequently became rabbi of Pest and in 1927 chief rabbi, continuing in this position until his death. Hevesi combined considerable rabbinical learning with interest in general and Jewish philosophy. From 1905 he was lecturer in homiletics and Jewish philosophy at the rabbinical seminary. Hevesi took a leading role in public affairs of Hungarian Jewry, and was active in establishing social and educational organizations, including an association for popular education (OMIKE). He published various essays on philosophy and also books, and participated in editing the learned periodicals *Ha-Ẓofeh le-Ḥokhmat Yisrael, Magyar Zsidó Szemle*, and *Yavneh*. His works in Hebrew include studies of the Book of Job (in *Ha-Ẓofeh le-Ḥokhmat Yisrael*, 5 (1921), 35–39, 81–89, 156–63, 283–93); and Ecclesiastes (in *Festschrift der Landesrabbinerschule* (1927), second pagination in Hebrew, 15–38; and in Hungarian, *Dalalat Alhairin* (1928) on Maimonides' *Guide*.

BIBLIOGRAPHY: *Emlékkönyv Dr Hevesi Simon… papi müködésének negyvenedik évfordulójára* (1934), 1–73, includes Hebrew section and bibliography; J. Katona, *Hevesi Simon, 1868–1943* (Hung. 1943).

[Alexander Scheiber]

HEVESY, GEORGE CHARLES DE (1885–1966), chemist, isotopes pioneer, and Nobel Prize winner. Hevesy was born in Budapest and studied there and in Berlin. After obtaining his doctorate at Freiburg he worked with Lorenz at the Technische Hochschule in Zurich, with *Haber at Karlsruhe, and with Rutherford in Manchester. In 1913 he started important work with F. *Paneth in Vienna on radioactive isotopes. This was the beginning of the use of radioactive tracers or "labeled atoms," an important tool in chemical and biological research. When war broke out in 1914, Hevesy joined the Austro-Hungarian army as technical supervisor of the state electrochemical plant in the Carpathians. After the war he returned to Budapest and resumed his studies of isotope tracers. In 1920 he joined Niels *Bohr at the new institute of theoretical physics in Copenhagen. There, together with D. Coster, he discovered a new element, no. 72, which he called hafnium. In 1923 he revealed in a paper the first use of radioactive tracers in a biological problem and in 1924 their first use in animal physiology. In 1926 Hevesy became professor at Freiburg; there he added a new field – X-ray fluorescence – as a method of analysis of trace materials in minerals, rocks, and meteorites. In 1934 his position was rendered intolerable by the Nazis; he resigned and returned to the Copenhagen institute. The discovery of artificial radioactive elements immensely enhanced the utility of the tracer technique in research work. After 1938 Hevesy gave his whole attention to the use of this tool in biochemical research. In 1943 Denmark, under Nazi occupation, became unsafe, and he followed Bohr by escaping in a fishing boat to Sweden. In 1943 he was awarded the Nobel Prize "for the use of isotopes as tracers in the study of chemical processes." After the war he remained in Stockholm, as professor in the institute of organic chemistry of the university. His biological work continued, largely on nucleic acids, the metabolism of iron and calcium, cancer anemia, and the effects of radiation. Among Hevesy's numerous other awards and honors were the "Pour le Mérite" from the German president Heuss and the Atoms for Peace Award (New York, 1959).

[Samuel Aaron Miller]

ḤEVRAH, ḤAVURAH (Heb. חֶבְרָה, חֲבוּרָה, Aram. חֶבְרָא), a formal membership association in the framework of the traditional Jewish community, now limited in scope. In Ashkenazi communities, each such society bore the generic appellation *kaddisha* (קַדִּישָׁא), "sacred," sometimes superfluously, as for example the "Sacred Society of Tailors," while the burial society was identified specifically as the *ḥevrah kaddisha.* Among Sephardim it was known as *ḥevrah (ḥebra) ḥesed ve-emet*. The best-known *ḥevrah* is the one which dealt with the reverent disposal of the dead, to which, in time, the name *ḥevra kaddisha* became confined. It probably existed in talmudic times (see *Ḥevra Kaddisha). The term *ḥevrah*, however, and even *ḥevra kaddisha*, was applied to associations of all kinds formed for religious, philanthropic, or educational purposes.

The *ḥevrah* with specific religious purposes went back at least as far as the 14th century. At Saragossa in Spain, mention is made in 1378 of the *lelezmuroz* (apparently, *leil ashmorot*, the night watch). Later there were, especially in Italy, groups designated Shomerim la-Boker, engaged in early worship. Mystic associations of kabbalists and Shabbateans met in special conventicles for the pursuit of their esoteric lore. Others served the existing synagogues; *bedek ha-bayit* cared for needed repairs, *ner tamid* for lighting. Groups such as *shivah keru'im* consisted of an elite, who, not content with the rare *aliyah* (call to the reading of the Torah) in the main synagogue, met in small groups in special rooms.

Educational associations were of two kinds. Benevolent associations provided instruction for poor children, chiefly the **talmud torah* association. Associations for adult education covered a wide network of groups and provided a variety of courses, including study of the Mishnah, Talmud, or Midrash, and the chanting of psalms.

Philanthropic groups were also numerous. (In 1800 a testator in Amsterdam bequeathed funds to 210 charities.) Among the host of philanthropic associations were **bikkur ḥolim* for visiting the sick and general *sick care; **gemilut ḥasadim* providing free loans; *pidyon shevuyim* for *ransoming captives; *hakhnasat oreḥim* for care of transients; and **hakhnasat kallah* providing dowries for poor brides.

Vocational associations comprised *guilds of artisans. Such professional fraternities were formed within every craft

in which a sufficient number of Jews engaged. On record in Lissa, Poland, in the 18th century, are Jewish guilds of tailors, goldsmiths, lacemakers, plumbers, tanners, barbers, weavers of gold cloth, and furriers.

The *ḥevrah* was distinguished from the modern association by its essentially religious nature. While each organized group served its stated purpose, the major benefits to be derived from membership were the heavenly rewards. In sickness and in death the member was assured that his fellow members would pray for his recovery or for the peace of his soul. This intercessional aspect was its greatest attraction. Next in importance was the social element: the honors conferred in the society's chapel, the conviviality of periodic feasts for members only, and the mutual aid benefits of a fellowship group. The association also exercised powerful control over the religious and moral behavior of its members. Rules of proper conduct were inculcated at admission; breaches of discipline were punishable by fines, expulsion, or the threat of being denounced to the *kahal* which possessed punitive powers, including that of excommunication. In structural and organizational patterns the various associations were remarkably similar. The fundamental law of each association was framed in a set of ordinances by legal draftsmen, *ba'alei *takkanot*. On admission the name of the new member was inscribed in the society *pinkas*, or minute book. Often there were periods of apprenticeship and journeymanship prior to full membership status. Children were admitted at the circumcision ceremony or somewhat later. Women, although inadmissible for membership in a *ḥevrah*, could enjoy its intercessional benefits either by making donations in cash or in kind, or by good deeds such as the performance of ritual ablution of deceased women, collection of charitable funds, or sewing garments for the poor. The revenues of the association consisted of membership dues, usually paid in weekly installments, as well as special assessments, voluntary contributions, profits from property acquired, fees for services, or compulsory taxes authorized by the *kahal*. The *ḥevrah* served a vital need before the development of modern social services. As an organized social cell it performed many necessary functions for the individual Jew. It played an important role in the fabric of autonomous institutions that kept Jewish life vibrant and diversified. In its modern context the complexion of the *ḥevrah* has entirely changed.

See: *Autonomy, *Community, *Fraternal Societies, *Hekdesh.

[Isaac Levitats]

ḤEVRA (Ḥavurah) KADDISHA (Aram. חֶבְרָא קַדִּישָׁא; lit. "holy brotherhood"), a term originally applied to a mutual benefit society whose services were restricted to its members, irrespective of the social, religious, or charitable purpose for which it was established (cf. Rashi to MK 27b and Tos. Ket. 17a bot.). In the **Yekum Purkan* prayer the phrase is used in the plural to apply either to the whole Jewish community, or to the rabbis as a whole. In a responsum *Asher b. Jeḥiel refers to a *ḥevra kaddisha* that formed an association for **gemilut ḥasadim*, encompassing all charitable activities (13:12). Its regulations specified that a son could inherit the rights and privileges of his father in the *ḥevra* as soon as he reached his religious majority, and if the deceased member left no son the privileges devolved upon the heir, but he must be "the one who is regarded as most suitable in the eyes of the members." The responsum which follows deals with a member of a *ḥevra* who married the daughter of another member and they had two sons. Both members died and the two sons both claimed membership, one on the basis of his father's right and the other on that of his grandfather. Nowhere, however, is the purpose and aim of this *ḥevra* mentioned. As late as the 19th century the heads of the *Lubavitch (Ḥabad) ḥasidic dynasty referred to their various groups of followers as *ḥevra kaddisha*. In the course of time, in the same way as the comprehensive phrase *gemilut ḥasadim* became restricted to one aspect of all the acts of kindness and consideration to which it originally applied, so the term *ḥevra kaddisha*, at least among the Ashkenazi Jews, came to apply to a brotherhood formed for one purpose only, namely, the reverential disposal of the dead in accordance with Jewish law and tradition.

The origin of this restricted use of the term can be found in a passage of the Talmud. The duty of arranging for the disposal of the dead devolved upon the entire community and when a person died the whole population had to abstain from work in order to pay their respects (cf. Jos. Apion 2.27: "All who pass by when one is buried must accompany the funeral"). On one occasion, R. *Hamnuna (d. 320) came to a certain place and heard the sound of a funerary bugle. When he saw that the members of the community continued with their avocations he said, "Let them be placed under a ban." They informed him, however, that there was a *ḥavurah* which occupied itself with this duty, and he permitted the others to continue their work (MK 27b). Another interesting but less certain reference is found in the minor tractate *Semaḥot* (chap. 12): "Thus used the *ḥavurot* to conduct themselves in Jerusalem. Some used to go to the house of mourning, and others to banqueting houses; some to the *shevu'a ha-ben* (see *Circumcision, Folklore), and others to gather up human bones… the early *Ḥasidim* gave preference to the house of mourning over the banqueting houses."

Ḥevra kaddisha in the more restricted sense arose simultaneously in Spain and in Germany at the beginning of the 14th century, and soon was to be found in all communities. It would appear that originally the privileges were confined to the actual members of the *ḥevra*. The comment of Rashi to the above-mentioned passage from *Mo'ed Katan* – "there were associations, each one of which made itself responsible for the

burial of its own members" (cf. Tos. Ket. 17a bottom) – no doubt reflects local and contemporary conditions.

The origin of the *ḥevra kaddisha* in the sense of a brotherhood which took upon itself the sacred duty of providing for the burial of all members of the community is not known before the 16th century. The first known was established by Eleazar Ashkenazi in Prague in 1564, and the drawing up of the formal *takkanot*, the regulations of the *ḥevra*, was effected by *Judah Loew b. Bezalel, also of Prague, in the 17th century. These *takkanot*, which were confirmed by the Austrian government, laid it down inter alia that its services were available to all members of the community even if they were not members of the *ḥevra* and made no contribution toward it. They regulated such matters as the fees to be paid, the allocation of the graves, and the rules for the erection of tombstones.

Their most important duty, however, was the preparation of the corpse in accordance with the traditions and laws for the reverential disposal of the dead. Those engaged in this sacred task are called *mitassekim* ("those who occupy themselves"), a term already found in the Talmud (MK 24b) as well as *gomelei ḥasadim* (Ket. 8b), since the duty to the dead is regarded as the "only true *gemilut ḥasadim*." Among the northern Sephardi Jews they are called *lavadores* ("washers"). Some of the societies included among their functions tending the sick, providing garments for the poor, and arranging the rites in the house of mourning.

Membership in the *ḥevra kaddisha* was regarded as a coveted honor, and, until recent times, was an honorary one. This is reflected in two extant documents relating to *Shneur Zalman of Lyady, the founder of the Ḥabad ḥasidic dynasty. The first, written when he was a child of five, records: "today, the 16th of Kislev 5510 [1750] the child Shneur Zalman the son of Baruch was accepted as an assistant [*shammash*] in the *ḥevra kaddisha* until he reached his religious majority," and in consideration thereof his grandfather undertook to provide a supply of planks for the synagogue and an annual contribution of 18 gulden, with the promise that he would be accepted as a full member on attaining his majority. The second document records his appointment as a full member on that date (Steinman p. 31). Sir Moses *Montefiore in his diary expresses his pride in the fact that he had been elected a member of the Society of *Lavadores* of the Spanish and Portuguese Congregation of London and he fulfilled his duties with meticulous care.

The institution of the *ḥevra kaddisha* is unique to the Jewish community. It derives from the fact that according to Jewish law no material benefit may accrue from the dead. As a result no private or commercial firm is permitted to engage in the disposal of the dead for private gain. The duty must thus become a function of the community as a whole.

The fraternal aspect of the *ḥevra* was observed in various ways, the most common being the annual celebration of the *ḥevra* on a fixed day. The date differs in many communities. The most common is the seventh day of Adar, the traditional anniversary of the death of Moses. Many communities observed other dates, such as the 15th or 20th of Kislev, whereas in Pressburg (Bratislava) it was held on Lag ba-Omer. The day begins as a fast, in expiation of any inadvertent disrespect shown to the dead, and a special order of *seliḥot* is recited. It concludes with a sumptuous banquet, regarded as one of the important occasions of the community at which sermons were delivered. Z. *Shneour in his *Shklover Mayses* gives a vivid account of this annual celebration. In Pressburg the *haftarah* for the Intermediate Sabbath of Passover, the subject of which is Ezekiel's vision of the valley of dead bones (Ezek. 37), was reserved for members of the *ḥevra*.

[Louis Isaac Rabinowitz]

Women and Ḥevra Kaddisha

> *A man may shroud and gird the corpse of a man, but not that of a woman. A woman may shroud and gird the corpse of a man or of a woman. A man may attend another man suffering from intestinal illness, but not a woman. A woman may attend a man or a woman suffering of intestinal illness* (Sem. 12:10).

Although women were essential participants in caring for other women on their deathbeds and beyond, they were not allowed to be members of the Holy Brotherhood. Like all other institutions constituting the inner structure of Jewish communities, the *ḥevra kaddisha* devised its decorum and protocol according to exclusively masculine preconceptions. Women were permitted to sew the shrouds, and were also commonly allowed to be assistants. From the regulations of Prague's *ḥevra kaddisha* (1692–1702, §25), we know that women served as regular auxiliaries in the *ḥevra kaddisha* but they were never regarded as equal participants. Eventually, autonomous strictly female organizations were established in the wake of the global transformations that affected the brotherhoods during the Enlightenment process. At the end of the 17th century, groups of *nashim ẓidkaniyyot* (pious women) were founded, first in Rome (1617), then in Berlin (1745), Amsterdam and Rendsburg (1776), London (1795), Chorostkow, and Vilna. In addition, *Frauhenhebrah* (sisterhoods), together with new brotherhoods of bachelors and young people, were established throughout the Jewish German world (Frankfurt/Main, 1761; Mainz and Dresden, 1790; Manheim, 1798, etc.) to assume the responsibilities of preparing deceased members of the community for burial.

ḤEVRAT HA-OVEDIM, cooperative society of Jewish workers founded in 1923 at the second conference of the *Histadrut.

Its aim was to engage in settlement, industry, construction, and supply in both town and country on a basis of mutual aid and responsibility. Its immediate purpose was to help create jobs and livelihood opportunities for newly arriving pioneers and workers; the long-term aim was to bring about the establishment of a "labor commonwealth" in Ereẓ Israel. Every member of the Histadrut was a member of Ḥevrat ha-Ovedim and vice versa. The Histadrut's executive council (*va'ad ha-po'el*) was identical with Ḥevrat ha-Ovedim's management council (*minhalah*), which appointed its secretariat and its board of managers. Ḥevrat ha-Ovedim was a roof organization for the ramified enterprises run by the Histadrut and its members, and at its peak covered close to 25% of Israel's gainfully employed population. Its functions were supervisory and directive: It appointed managers for its industrial concerns and other economic bodies, checked and directed economic policy through audit unions, etc., and prepared general financial plans. It also participated in the ownership and management of various public, semi-public, and private enterprises. During the 1980s and the 1990s Ḥevrat ha-Ovedim was gradually stripped of its assets as the Histadrut sold off all its economic holdings, such as Koor, Solel Boneh, Bank Hapoalim, etc. The election of Haim *Ramon as secretary-general of the Histadrut in 1994 marked the final stage in the demise of Ḥevrat ha-Ovedim. To reduce the Histadrut's debt, Ramon sold off its last holdings and thus put an end to Ḥevrat ha-Ovedim.

[Aharon Yadlin / Shaked Gilboa (2nd ed.)]

HEWITT, DON (1922–), U.S. journalist. Born in New York City, Hewitt attended New York University for a year and left to pursue a career in journalism. His first job was as a copy boy at *The New York Herald Tribune*. From 1943 to 1945, he was a war correspondent for *Stars and Stripes* in both the European and Pacific theaters. After the war, he worked as an editor for the Associated Press in its Memphis bureau and in 1948 he began his long-time association with the Columbia Broadcasting System. From 1948 to 1962 he produced and directed *Douglas Edwards with the News* and the first year, 1963–64, of the trend-setting *CBS Evening News with Walter Cronkite*. These two programs had a major influence on the general development of television news programming, and Hewitt played a pivotal role in framing politics for a growing audience. He directed and produced the first televised presidential debate, between John F. Kennedy and Richard M. Nixon, in 1959, and was responsible for CBS's coverage of the national political conventions between 1948 and 1980. Among his most influential contributions was the appropriation of the lower half of the television screen for printed information and news. He created a more informed generation of "news anchors" (a term he coined) through his use of cue cards and multiple framing angles. It was this redefinition of the role of the news anchor that opened up the field for Hewitt's major contribution. In 1968 Hewitt created the first television newsmagazine, *60 Minutes*, and it proved to be one of the most important programs CBS ever produced, both journalistically and financially. The profits for the network from *60 Minutes* were significantly in excess of a billion dollars. On the show, different anchors concentrated on a separate story, providing in-depth coverage of different topics. Unlike the nightly news, *60 Minutes* had the time to provide history and editorial commentary and could systematically investigate social and political issues in a way that had only been done before in print. The mixture of up-to-date reporting and extensive investigation gave *60 Minutes* an aura of knowledge and respectability previously unseen on television. For many years, the program either led the ratings or finished in the top-10 most-watched shows. Hewitt earned countless honors and awards, including membership in the Television Hall of Fame. He continued to produce *60 Minutes* well into his eighties but left in 2004.

HEXTER, JACK H. (1910–1996), U.S. historian. Born in Memphis, Tennessee, Hexter received his bachelor's degree from the University of Cincinnati (1931) and his master's (1933) and doctoral degrees from Harvard University (1937). He taught at Queens College, N.Y. (1939–57) and at Washington University in St. Louis, Missouri (1957–64), where for three years he served as chair of the Department of History in Arts and Sciences. After that, he was appointed professor of history at Yale University (1964–78), where he developed and directed the Yale Center for Parliamentary History and its publication program. From 1965 he was co-editor of the massive edition of *The Complete Works of Thomas More*, prepared at Yale. He was also general editor of *The Traditions of the Western World*.

Hexter's principal contributions were to 16th- and 17th-century history, a field in which he urged historians to reappraise traditional assumptions, such as the belief in a steadily rising middle class or the homogeneity of the gentry. His essays were marked by a brilliance of style that enhanced their impact. Some of the more important are assembled in *Reappraisals in History* (1961). Hexter's first book, *The Reign of King Pym* (1941), was a masterly account of the early years of the English Civil War, and it was followed by major analyses of Machiavelli and More. His *More's "Utopia": The Biography of an Idea* (1952) is a seminal study. His later books include *Doing History* (1971); *The Vision of Politics on the Eve of the Reformation* (1973); *On Historians* (1979); and *After the Reformation* (1980).

Upon his retirement from Yale in 1978, Hexter returned to Washington University as a Distinguished Historian in Residence and subsequently became the John M. Olin Professor of the History of Freedom until 1990. In 1986 he founded and became director of Washington University's Center for the

History of Freedom, where he launched a 25-year project to create the world's first comprehensive study of the development of modern freedom. The first volume of *The Making of Modern Freedom* series was published in 1992.

Hexter spent much of the 1990s lobbying for the creation of a federal program to encourage Gulf War veterans to become teachers. In 1994 Congress endorsed the Troops to Teachers program which, in its first four years, helped direct more than 3,000 veterans into US classrooms.

Hexter was a member of the Educational Advisory Board of the Guggenheim Foundation and of the editorial boards of the *Journal of British History* and the *Journal of the History of Ideas*. He was president of the Conference of British Studies, and served on the board of trustees of the Danforth Foundation. His awards and honors included four Guggenheim Fellowships and two Fulbright Fellowships.

[Theodore K. Rabb / Ruth Beloff (2nd ed.)]

HEYD, URIEL (1913–1968), Israel historian of Muslim institutions. Heyd was born in Cologne, Germany. He settled in Palestine in 1934. After service with the Political Department, Middle East section of the Jewish Agency, in Jerusalem and London (1943–48), he joined the Israel diplomatic corps, initially as first secretary of the Washington embassy, then as counselor of the legation in Ankara. His academic career began in 1951, when he joined the staff of the Hebrew University. From 1956 to 1963 he chaired the university's Institute of Oriental Studies, becoming a full professor of Islamic history in 1959.

Heyd's scholarly interest centered on the Ottoman Empire from the 16th to the 20th centuries. His books in Hebrew include *Dahir al-Umar, Shalit ha-Galil* ("Dahir al-Umar, Ruler of Galilee," 1942) and a translation from the Turkish of Mahmud Makal's *Bizim Köy (Ha-Kefar Shellanu* – "Our Village," 1951). Among his books in English are *The Foundations of Turkish Nationalism* (1950), *Language Reform in Modern Turkey* (1954), *Ottoman Documents on Palestine 1552–1615* (1960), *Revival of Islam in Modern Turkey* (1968), and the posthumous *Studies in Old Ottoman Criminal Law* (1973). He edited *Studies in Islamic History and Civilization* (1961). His article "The Ottoman Ulema and Westernization in the Time of Selim III and Mahmud II" (in *Scripta Hierosolymitana*, vol. 9, 1960) remains a major contribution.

[Norman Itzkowitz / Jacob M. Landau (2nd ed.)]

HEYDENFELDT, SOLOMON (1816–1890), U.S. jurist. Heydenfeldt was born in Charleston, South Carolina. In 1837, he moved to Alabama and was admitted to the state bar in the same year. He practiced law in Tallapoosa County and served as judge of the county court, but left for San Francisco in 1850, possibly due to public disapproval of his stand against further importation of slaves into Alabama. In 1852, after an unsuccessful attempt to gain the Democratic Party nomination for the United States Senate, he was elected justice of the California Supreme Court by popular vote, thus becoming the first Jew to hold judicial office in that state. Heydenfeldt remained in the post until 1857, when he returned to private practice. As a southern sympathizer during the Civil War, however, his refusal to take a loyalty oath to the Union cost him his legal career, though he continued to reside in San Francisco until his death. Heydenfeldt was active in philanthropic causes and was a leader in the Jewish community.

[Max Vorspan]

°HEYDRICH, REINHARD TRISTAN (1904–1942), Nazi *SS leader who played a prominent part in the design and execution of the "Final Solution." Heydrich was born in Halle, Saxony. He father was an opera singer and director of a music conservatory. His mother was a stern disciplinarian and Heydrich was falsely suspected of being of partial (paternal) Jewish origin. Throughout his life, he was moved by chamber music and had a great love for Mozart and Haydn. In other areas of his life, he was brutal, cynical, and sadistic.

Commissioned as a naval officer, he was discharged in 1931 after a Naval Court of Honor found him guilty of misconduct toward a young woman whose reputation he blemished. Soon after a chance introduction to Heinrich *Himmler, Heydrich was entrusted with the organization of the SD, the intelligence and surveillance arm of the SS. He was but two years younger than Himmler, a situation that threatened to stymie his career advancement to the top.

In 1931 Heydrich joined the SS as chief of its Security Service (SD). After the Nazi's accession to power he was *Himmler's assistant in the Bavarian police and later became chief of the *Gestapo. Heydrich rose rapidly through the ranks of the SD. He played a leading role in the blood purge of 1934. He played a role in the 1938 purging of the German Army High Command and planted false information that led to a similar purge by Stalin of the Red Army. As head of the *Gestapo, Heydrich could incarcerate enemies of the Reich at will. During **Kristallnacht* in November 1938, Heydrich had 30,000 Jewish men arrested by the Gestapo and the SS and incarcerated in concentration camps. By 1938 he had succeeded in concentrating the management of Jewish affairs in his own hands, stressing the policy of forced emigration. The success of *Eichmann's Zentralstelle fuer juedische Auswanderung ("Center for Jewish Emigration") in Vienna led Heydrich to create a similar center in Berlin for the whole of Germany. Heydrich was one of the instigators of the *Kristallnacht* pogroms in 1938. In 1939 he was appointed head of the Reich Security Head Office (Reichssicherheitshauptamt – RSHA), which incorporated the Gestapo and the SD. In a circular issued after the conquest of Poland, he ordered the concentration of Polish Jews in ghettos and the appointment of Jew-

ish Councils to be made personally responsible, in the literal meaning of the term, for carrying out German orders. His memo spoke of the "final goal" not the "Final Solution." With Eichmann's help, Heydrich organized mass deportations of Jews from the annexed parts of Poland and from Germany and Austria to the territory of the *Generalgouvernement*, his Einsatzkommando simultaneously killing tens of thousands of Polish leaders and Jews. On the eve of the invasion of the Soviet Union he created additional Einsatzkommandos that killed a million Jews and many Soviet officials. He also negotiated the agreement that the Wehrmacht lend assistance to the *Einsatzgruppen*. Heydrich was instrumental in the Nisko and Lublin plan and the proposed deportation of all European Jews to the island of *Madagascar, a plan that was never implemented. Many historians believe that the impracticable nature of this plan soon gave rise to the "Final Solution."

He planned the *Wannsee Conference, even drafting in March 1941, before the systematic killing of Jews had begun, the letter assigning him responsibility for the preparation of the "Final Solution to the Jewish Question" that Hitler's deputy, Hermann *Goering, would sign on July 31, 1941. Heydrich was charged by Goering with implementing the "Final Solution" in the entire sphere of German influence. He had apparently carved out a sphere of influence on the Jewish question and an area of specialization. He had what one biographer called "an executive instinct," anticipating where policy could go and planning accordingly. For this purpose he convened the *Wannsee Conference to coordinate the action of various government and party agencies. Appointed in place of Constantin Neurath as Reichsprotektor of Bohemia and Moravia, he pacified Czechoslovakia with great brutality. Heydrich was wounded by Czech resistance fighters on May 29, 1942, and died several days later. Hitler spoke at his funeral and vowed revenge. In retaliation, the Germans razed the village of Lidice, murdering all its male inhabitants. Maps published afterwards excluded all mention of the village. At the same time 152 Jews in Berlin were killed in a special action, and more than 3,000 Jews from the *Theresienstadt ghetto were deported and exterminated. *Aktion Reinhard*, the murder of Polish Jewry, was apparently named after Heydrich (see *Holocaust, General Survey). The retaliation for his death was so intense and disastrous that even the postwar Czechoslovak government was reluctant to release material on its involvement. The allegation that Heydrich was of Jewish origin has been shown by Robinson to be completely false. But it was useful. Heydrich's superiors employed it as a means of keeping him loyal.

[Yehuda Reshef / Michael Berenbaum (2nd ed.)]

HEYM, STEFAN (**Helmut Flieg**; 1913–2001), German novelist, biographer, and political writer. Heym was born in Chemnitz, Saxony. Following his publication of an aggressive, anti-nationalist poem in the local Social Democratie daily *Volksstimme*, he was expelled from secondary school in 1931. He went to Berlin as a freelance writer for left-wing periodicals and, following Hitler's rise to power, fled to Czechoslovakia early in 1933. After a two-year stay in Prague, he was admitted to the United States on a refugee visa and studied literature at the University of Chicago, quickly acquiring an admirable command of the English language, in which he subsequently wrote all his works, some of which he himself translated into German.

Heym identified himself with much of the Communist Party's ideology and in 1937, at the early age of 24, he was appointed editor of the American Communist Party's German-language organ *Deutsches Volksecho*, holding the position until the paper closed down in the fall of 1939. In the meantime, he has also published a pamphlet entitled *Nazis in the U.S.A.* (1938). His first major anti-Nazi novel, *Hostages* (1942), became a best-seller and was made into a film.

In 1943, Heym enlisted in the U.S. Army and was attached to its Psychological Warfare Branch. Though regarded by his superiors with a certain distrust because of his communist associations, he was charged with the publication of *Der Ruf*, a literary periodical for German prisoners of war in the U.S. He was given a responsible post at Radio Luxembourg at the time of the Allied advance into Germany and, after the occupation, and editorial position on the Munich *Neue Zeitung*. Eventually, disagreement with the paper's largely American-oriented policy, as well as his criticism of U.S. cold war methods, led to his resignation from the U.S. Army in a fit of anger and bitterness, amidst controversial publicity. Renouncing his U.S. citizenship in 1952, he joined a group of pro-communist German émigré authors who decided to settle in the Soviet-dominated area of Europe.

However, while Heym's earlier American books, such as *The Crusaders* (1948) – according to the *New York Times* "the best book on World War Two" – and *The Eyes of Reason* (1951), had been very critical of many aspects of American history and life, he soon fell foul of the East German authorities because of his refusal to toe the party line. Thus his novel *Der Tag X*, which dealt with June 17, 1953 (the day of the East Berlin rising against the Communist government), was never published in the German Democratic Republic. He also angered the East German government in 1956, when he challenged Walter Ulbricht at the Fourth Congress of the German Writ-

ers' Union, and in 1960 when he published *Schatten und Licht*, a collection of short stories which was said by one of his East German critics, Guenter Ebert, to have deprived him of the right to be called a socialist writer.

Eventually, Heym turned to historical subjects in the hope that he might be allowed to voice his criticism of the Eastern bloc régimes in a somewhat subtler and more indirect way. These books include *The Lenz Papers* (1963), on the workers' revolt of 1848–49 in Baden; the biography *Ferdinand Lassalle* (1969); *Schmaehschrift oder Koenigin gegen Defoe* (1970), on Daniel Defoe's censorship troubles in England; and, finally, *The King David Report* (1972), which – in his own words – is based on the biblical narrative but examines the Bible from a Marxist point of view. This last work shows how King Solomon's court historian Ethan is ready to comply with an official request to construct a national myth to replace historical truth. The topicality of this highly ironical novel and Heym's implied rejection of any personality cult is so clearly evident that its sale was prohibited in the German Democratic Republic. However, the author himself repeatedly declared that he was critical not only of certain developments in the Eastern bloc, but even more so of those in the West, and that he identified himself with the basic concepts of his new socialist homeland. In 1952, Heym was awarded the East German Heinrich Mann Prize and, in 1959, the (East) German National Prize for Arts and Literature.

In reaction to the publication of his anti-Stalinist novel *Collin* in West Germany, Heym was expelled in June 1979 from the East German writers' federation and forbidden to earn his livelihood as a writer "for making critical statements about the communist system." Henceforth, Heym shifted his activities more and more to West Germany, though he remained a citizen of the GDR. In 1981 he published his novel *Ahasve*, which retells the story of the "Wandering Jew" within the setting of the "Cold War" and its permanent nuclear threat by switching back and forth from the 15th century to the present. His anti-dogmatic thought was further underscored by his novel *Schwarzenberg* (1984), which dealt with a Socialist republic founded on the soil of a country the Allied forces forgot to occupy at the end of World War II.

It was this vision of an "alternative," non-totalitarian socialism that earned Heym his special status in the turmoil of German reunification in 1989, when he became one of the most prominent speakers at East German demonstrations, defending Socialist thought both against its Stalinist misinterpretation and against West German capitalism.

In 1994, Heym entered the political system as a candidate for the PDS, the successor party of the former Communist Party (SED). He was elected and made the opening speech at the 13th Bundestag as its oldest member – a speech that was boycotted by the majority faction of the Christian Democrats. Heym resigned a year later. At the same time, he published his last big novel on the Trotzkyist activist Karl Radek, who was expelled from Germany in 1919 and – because of his opposition to Stalin – was finally given a prison sentence of ten years, during which he died (in 1939). Heym died while attending a conference on Heinrich Heine in Jerusalem.

[Erich Gottgetreu / Philipp Theisohn (2nd ed.)]

HEYMAN, MOSES DAVID (1896–), U.S. inventor. Born in Newark, N.J., Heyman became president of a large mining company in Ecuador, and formed his own company in 1930. He invented many machines used in metalworking, mica, and other fields. Among them was the "mechanical hand" (1938). Heyman was the first person to make continuous sheets of synthetic mica.

HEYMANN, FRITZ (1897–1944), German journalist and historical writer. Heymann, who was born in Duesseldorf, volunteered for war service with the German army at the age of 17. He was captured and subsequently escaped from captivity in England to rejoin his regiment. After Germany's defeat, he joined one of the nationalistic (and usually antisemitic) volunteer corps which continued the war against "the enemy within," usually synonymous with socialists and democrats. Eventually, he studied law and literature and, after a period in business, worked for various German newspapers. From German nationalism, Heymann turned later to Jewish nationalism. On the advent of Hitler, he left for the Saarland, from where he continued the fight against Nazism as a coeditor of *Westland*. After the plebiscite in favor of Germany he took refuge in Holland. Heymann wrote *Der Chevalier von Geldern* (1937), "a chronicle of Jewish adventures," in which the story of Simon von *Geldern is prominently featured. In 1942 he held a series of lectures in Amsterdam aimed to encourage the local Jewish population, called *Marranen-Chronik*. These lectures were edited and published in 1988, under the title *Tod oder Taufe*. In 1943 Heymann was deported to Theresienstadt, and a year later to Auschwitz, where he was murdered.

BIBLIOGRAPHY: Kesten, in: F. Heymann, *Der Chevalier von Geldern* (1963²), introd.; Kobler, in: BLBI, 4 (1961), 44–55. **ADD. BIBLIOGRAPHY:** F. Heymann, *Tod oder Taufe*, ed. H.J. Schoeps (1988); H.J. Schoeps, in: *Geschichte als Trauma* (1991), 175–83; I. Piel, in: *Aspekte juedischen Lebens in Duesseldorf und am Niederrhein* (1997), 220–25.

HEYMANN, WALTHER (1882–1915), German poet, pioneer of German expressionism. He read law in Koenigsberg, Freiburg, Berlin and Munich; after the first civil-service examination he was a teacher on probation in Insterburg and Koenigsberg. Heymann, who was born in Koenigsberg, published his first volume of lyrics, *Der Springbrunnen*, in 1907, but achieved his more original style with *Nehrungsbilder* (1909), in which he idealized the landscape of his native East Prussia. A contributor to the expressionist publication *Sturm*, Heymann combined a love of nature with a critical intellectual approach. In all his writing there is an earnest search for

artistic form and for solutions to contemporary and eternal problems. He was killed on the Western front early in World War I, and most of his work was published posthumously. It included *Kriegsgedichte und Feldpostbriefe* (1915); *Das Tempelwunder: Erzaehlungen* (1916), a collection of short stories; and two volumes of lyrics, *Die Tanne* (1917) and *Von Fahrt und Flug* (1919). An edition of his *Gedichte, Prosa, Essays, Briefe* (ed. by L.M. Fiedler) appeared in 1998.

BIBLIOGRAPHY: H. Schumann, *Walther Heymann* (Ger., 1915). **ADD. BIBLIOGRAPHY:** P. Raabe, *Die Autoren und Buecher des literarischen Expressionismus* (1992[2]).

[Kurt Pinthus / Konrad Feilchenfeldt (2nd ed.)]

HEYMANS, GERARDUS F. (1857–1930), Dutch psychologist and philosopher born at Ferward in Frisia. He was the cofounder of the psychological laboratory of Louvain in Belgium (1891) and founded the laboratory at Groningen in Holland (1893), where he served as professor of psychology and philosophy. In 1926 he was president of the Eighth International Congress of Psychology in Groningen.

His psychological research concerned itself with the Mueller-Lyer illusion (1889), which he attributed to eye movements. Other works followed on taste mixtures, psychic energy, the heredity of character, déjà vu, attention, and dreams. In philosophy he covered the fields of the theory of knowledge, esthetics, metaphysics, and ethics. His works include *Die Gesetze und Elemente des wissenschaftlichen Denkens* (1890; 1923[4]); *Einfuehrung in die Metaphysik auf Grundlage der Erfahrung* (1905, 1921); and *Einfuehrung in die Ethik auf Grundlagen der Erfahrung* (1914; 1932[4]).

[Helmut E. Adler]

HEYSE, PAUL (1830–1914), German author and Nobel Prize winner. Heyse was born in Berlin and became one of the outstanding and most controversial figures in late 19th-century German literature. His father was a Christian, and professor at the University of Berlin, and his mother an assimilated Jewess. After graduating from Berlin University, he traveled to Italy, where he found inspiration for his tales in verse and prose *novellen*. The best known of the latter was *L'Arrabiata* (1853) while, of the former, *Der Salamander* (1867) was unrivaled in its genre. In 1854, King Maximilian II of Bavaria called the promising young writer to Munich, where he joined the school of lyricists headed by Emanuel Geibel. This group, which resembled the French Parnassians, devoted itself to the perfection of form rather than innovation of subject matter. Throughout the 1880s and 1890s, Heyse was fiercely attacked by the rising generation of German naturalists for sacrificing virility to elegance of diction, and for dealing with foreign (especially Italian) themes rather than with the vital events of contemporary Germany. His best novels were *Kinder der Welt* (1873), on religious and social problems, and *Im Paradies* (1875), about artistic life in Munich. By 1910, when Heyse became the first German writer to gain the Nobel Prize for literature, the polemics directed against him came to an end. His lyrics and *novellen* then found an honored place in German literature. A Hebrew translation of Heyse's drama *Die Weisheit Salomons* was published by S.L. *Gordon (1896). His collected works appeared in 38 volumes in 1872–1914; a new series, also in 38 volumes, appeared in 1902–12.

[Sol Liptzin / Konrad Feilchenfeldt (2nd ed.)]

HEZEKIAH (Heb. חִזְקִיָּה, חִזְקִיָּהוּ; "YHWH is [my] strength," shortened form of יְחִזְקִיָּהוּ; in cuneiform transcription Ḫazaqiau, "YHWH is strong"), son of Ahaz, king of Judah (II Kings 18–20; II Chron. 29–32). Hezekiah reigned for 29 years in Jerusalem. According to II Kings 18:9–10, Samaria was conquered by the Assyrians in the sixth year of his reign (722/1 B.C.E.). This would imply that Hezekiah ascended the throne in 727/6 B.C.E. This seems to be confirmed by Isaiah 14:28ff. The rod of him who smote Philistia (*ibid.*) was hardly *Ahaz, who (even if one discounts II Chron. 28:18f.) barely managed to save his kingdom with the help of Assyria but surely *Tiglath-Pileser of Assyria who invaded Philistia repeatedly and made it tributary. The manner of dating the prophecy in Isaiah 14:28 would seem to be due to the circumstance that Ahaz, like Tiglath-Pileser, died in 727/6. According to II Kings 18:13, however, the campaign of *Sennacherib (701 B.C.E.) took place in the 14th year of Hezekiah's reign which would place the beginning of Hezekiah's reign in 715/4 B.C.E. (i.e., after the destruction of Samaria); and this dating also has adherents among modern Bible scholars.

In II Kings 18:3–4 stress is laid on the purgation of the cult by Hezekiah. The purge included the removal of cultic objects with a long history in Judah, such as the "high places," the pillars, the Asherah cult pole, and the *copper serpent whose creation was attributed to Moses in the desert (Num. 21:5–9). In II Chronicles 29–32, the emphasis is placed on the renewal of the cult and the return to the service of God as in the days of David and Solomon (II Chron. 28:24; 29:3). In the Books of Kings and Chronicles, a personal and religious reason for this reform is given. The changes stemmed from the will of the king, who was pious and did that which was upright in the eyes of God, more than any other king who reigned before him (II Kings 18:3, 5–6; II Chron. 31:20–21). It seems that there were also some political aspects to this religious reform.

Hezekiah abolished the cult of the high places, which had always been practiced in Jerusalem and the provincial towns, and concentrated the religious activity in the Temple of Jerusalem (II Kings 18:22). It was his intention to raise the Jerusalem Temple to the status of the only legitimate cult place. He would thus strengthen the ties between the people of Judah and the dynasty of David, which reigned in Jerusalem. Moreover, if there is any historical basis to the account in II Chronicles 30:1–10, Hezekiah sent letters to Ephraim and Manasseh inviting them to the Temple in Jerusalem in order to sacrifice the Paschal Lamb. The object of this invitation to the "remnants" living outside Judah to come to Jerusalem for Passover was to intensify the consciousness of the national unity of the Israelite tribes as a first step in the territorial and political restoration of the kingdom of David and Solomon. The national awakening that became apparent in Judah during this period was also expressed in literary activities (Prov. 25:1; see *Deuteronomy; *Hosea). Hezekiah probably introduced the seals on the handles of jars that were intended for storing state provisions in time of siege. The state of Judah was divided for that purpose into four defensive zones each comprising several walled towns. The four names of the jars represent the key cities of the above-mentioned zones: Mmšt-Negev, Socoth-Shephelah, Hebron-Hills, Ziph-Wilderness.

These activities were doubtless closely associated with the activities of Hezekiah in other fields, such as the war against the Philistines. Hezekiah penetrated into Philistia and reached the frontier of the state of Gaza. The activities of Hezekiah on the southwestern border of Judah are echoed in I Chronicles 4:34–43 (the version of the LXX, *Gerar*, is preferable to that of the traditional text *Gedor*) and according to Sennacherib's prism (in Pritchard, Texts, 287; COS II, 302–3) the inhabitants of Ekron delivered their king, Padi, into the hands of Hezekiah. It can be logically assumed that these conquests were closely connected with Hezekiah's rebellion against Sennacherib in 701 B.C.E. (II Kings 18:7, 13–37; II Chron. 32; Isa. 36–37; Pritchard, *ibid*). This rebellion was a result of Hezekiah's policy for the expansion of his territory and his ambition to achieve absolute political independence. Hezekiah made preparations for the decisive struggle with Assyria by strengthening his forces and defenses internally and by making alliances against Assyria. He assured the supply of water to Jerusalem by closing off the outlet of the Gihon spring, which was outside the walls of Jerusalem, and diverting the spring waters by means of a tunnel to the pool of Siloam which was situated within the city walls (II Kings 20:20; Isa. 22:9–11; II Chron. 32:30). There is epigraphic evidence for the construction of this tunnel in the *Siloam Inscription, which was engraved near the pool end of the tunnel. Hezekiah also took care to fortify the provincial towns. He built towns for the storage of grain, wine, and oil (II Chron. 32:28–29), reorganized the army, and made many weapons (II Chron. 32:5–6). The passage in I Chronicles 4:41, perhaps warrants the conclusion that a *census was taken during his reign in connection with the military preparations throughout Judah. In the year 712 Sargon II sent his army on a military expedition against Ashdod. The connection of the prophetic narrative of Isaiah 20 with the Assyrian expedition is vouched for by the text and is not disputed. The Assyrian army crushed the Ashdod-led revolt at Azekah, which lay about 15 miles due east of Ashdod. How long after the fall of Azekah King Hezekiah remained defiant cannot be said. In any case the attack on, or the capture of, Azekah is the background of Isaiah 22:1–14. Hezekiah engaged in extensive diplomatic activity in order to ensure support and assistance from the outside. He contracted an alliance with Egypt (II Kings 18:21; Isa. 36:6) in spite of the opposition of Isaiah (Isa. 30:2; 31:1). The ties between Hezekiah and *Merodach (Berodach)-Baladan, the Chaldean (II Kings 20; Isa. 39), an old enemy of Assyria, are of special importance. This appears to be the background of the visit of the messengers of Merodach-Baladan to Jerusalem (II Kings 20:12–21; Isa. 39; II Chron. 32:31). It also appears that Hezekiah was the ally of Luli, king of *Sidon, and Ṣidqā, king of Ashkelon, who fought against Sennacherib during his campaign of 701 B.C.E. Concerning the campaign itself, there is much information available from the Bible, Assyrian documents, Greek authors of the Persian and Hellenistic periods, and archaeological findings. Even so, the exact progress of the campaign has not been clarified. The general lines of the campaign are as follows: Sennacherib first fought Luli, the king of Sidon. Luli fled, while Sidon and her other towns surrendered. In mainland Tyre various kings of Phoenicia and Palestine accepted Sennacherib's rule and paid their tribute to him. Sennacherib advanced along the coast to Philistia, conquered the northern lowland towns which were under the dominion of Ashkelon, and took King Ṣidqā of Ashkelon himself as captive. On his way southward he defeated the Egyptian army at Eltekeh. He then conquered Ekron and penalized the rebels who had surrendered Padi their king to Hezekiah. From Ekron he pushed on into the territory of Judah. Sennacherib relates that he conquered the 46 fortified cities of Judah from Hezekiah, as well as innumerable smaller cities (cf. II Kings 18:13; Isa. 36:1).

On one of Sennacherib's reliefs there is a detailed description of the conquest by the Assyrian army of the town of Lachish and the deportation of its inhabitants. According to the annals of Sennacherib, 200,150 captives were deported from Judah. Sennacherib also relates that he besieged Jerusalem and distributed the other towns among the kings of Philistia, thus diminishing the size of Hezekiah's kingdom. Hezekiah surrendered to release Padi, whom Sennacherib reinstated as king of Ekron, and paid a heavy tribute which included 30 talents of gold, 800 talents of silver, and precious stones (cf. II Kings 18:14). Of all the discrepancies between the various sources dealing with the details of the campaign, the most outstanding contradiction lies in the conflicting descriptions of the biblical and Assyrian sources as to the end of the campaign. The biblical accounts come from multiple contradictory sources. According to II Kings 18:13–16 (see below) Hezekiah capitulated. According to II Kings 19:20–31 (= Isa. 37:22–32) Isaiah encouraged Hezekiah and the people to ignore the words of

the *Rabshakeh, whom Sennacherib dispatched with an army from Lachish to Jerusalem to demand unconditional surrender. On this same account the campaign ended when a catastrophic plague on the Assyrian camp wiped out the invaders and Sennacherib hurried back to his country (II Kings 19:35; Isa. 37:36; II Chron. 32:21). According to the Assyrian version, however, the campaign ended in an Assyrian victory.

Various suggestions are put forward by scholars. According to one, the biblical story and the Assyrian description deal with different stages of a single campaign which took place in 701 B.C.E. The first stage ended with the seizure of the cities of Judah, the capitulation of Hezekiah, and the sending of the tribute to Assyria (Pritchard, Texts, 287–8; COS II, 302–3; II Kings 18:13–16). The second stage which ended in disaster for Assyria is mentioned only in the Bible (II Kings 18:17ff.), while the Assyrian version, for obvious reasons, passes over it in silence. According to another suggestion, which is even less likely, the biblical story combined two different campaigns which took place at different dates. The first campaign, which took place in 701 B.C.E., ended with the submission of Hezekiah (as in the Assyrian source and cf. II Kings 18:13–16), while the second campaign was waged after 689 B.C.E., a period on which there is no information in the Assyrian sources. Some scholars find echoes of the second campaign in Herodotus (*History*, 2:141), where a defeat of Sennacherib at the gates of Egypt is reported. The most likely solution is that Hezekiah paid tribute (II Kings 13:16) and that Sennacherib withdrew from Jerusalem after a brief campaign. The fact that Jerusalem was not conquered and that Hezekiah remained on the throne, and possibly soon expanded his territory as an Assyrian vassal, led Isaiah (II Kings 19:32–34; = Isa. 37:33–35) and doubtless some of his contemporaries to see here the hand of God. The annals of Sennacherib do not claim that Jerusalem was captured. They only mention that Hezekiah sent his submission tribute to the king of Assyria in Nineveh. It appears that for some reason Sennacherib hurried back to his country and received the tribute in Nineveh. In the course of time the departure of Sennacherib was attributed to a miracle. The fact that Sennacherib was in fact assassinated by his own sons (II Kings 18:37), albeit 20 years later, provided further proof of divine deliverance.

[Bustanay Oded / S. David Sperling (2nd ed.)]

In the Aggadah

Hezekiah is idealized in the *aggadah*. He is regarded as completely righteous, modest in his demands (Sanh. 94b), devoted to the study of Torah (Song R. 4:8), and "strengthening the bonds between Israel toward its Father in Heaven." Through his efforts knowledge of Torah was universal so that "they searched from Dan to Beersheba and no ignoramus was found; from Gabbath to Antipatris and no boy or girl, man or woman was found who was not thoroughly versed in the laws of cleanness and uncleanness" (Sanh. 94b). When he died, they placed a Scroll of the Law upon his coffin, saying "This one has fulfilled all that is written in this" (BK 17a). He was rewarded for his righteousness, God himself fighting on his side (Lam. R. Proem 30). God wished to appoint Hezekiah as the Messiah, and Sennacherib as Gog and Magog, but the Attribute of Justice protested that David had been more entitled to this, and the proposal was abandoned. With his death, the merit of the patriarchs came to an end. Hezekiah did six things of his own accord. The first three the rabbis approved, the others they did not. He hid away a "Book of Cures," broke into pieces the brazen serpent, and dragged the bones of his father (to the grave) on a bier of ropes. He stopped up the waters of Gihon, removed (the gold from) the doors of the Temple and sent it to the king of Assyria, and intercalated a second month of Nisan (Ber. 10b). A *baraita* states that "Hezekiah and his school wrote the books of Isaiah, Proverbs, Song of Songs, and Ecclesiastes" (BB 15a).

[Yehoshua M. Grintz]

In the Arts

Two of the earliest literary works on this subject, both titled *Ezechias*, were dramas by the German Protestant Sixtus Birck (1538) and the English author Nicholas Udall. The latter's play was staged in 1564 before Queen Elizabeth I in King's College Chapel, Cambridge, but has not survived. In the 18th century there was an anonymous Russian *Drama o Yezekiye, tsare Izrailskom* written during the reign of Peter the Great; and three English plays: *Hezekiah*, one of Hannah More's *Sacred Dramas* (1782), W.A. Wright's *Hezekiah, King of Judah …* (1798), and William Allen's *Hezekiah, King of Judah; or, Invasion repulsed, and Peace restored* (1798), the last of which was marked by contemporary political allusions. The miraculous defeat of the Assyrian host was commemorated in Lord *Byron's poem "Sennacherib" (*Hebrew Melodies*, 1815); and the era of invasion described in W.H. Goss's novel *Hebrew Captives of the Kings of Assyria* (1890) and Joseph *David (Penker)'s Marathi drama *The Assyrian Captive* (1922). Later works on the theme include Naḥman Isaac *Fischman's five-act Hebrew drama *Kesher Shevna* (1870), which dealt with Hezekiah's alien majordomo, Shebna, who was censured by the prophet Isaiah. Four interpretations of the subject in the 20th century were John W. Harding's romance *The Gate of the Kiss* (1902); a short story by Arnold *Zweig (1910); William Henry Temple Gairdner's *King Hezekiah; a tragical drama* (1923); and Walter Gutkelch's German play, *Der grosse Mut des Hiskia* (1954).

In art the main subject treated is the miraculous prolongation of Hezekiah's life (Isa. 38:1–8). The eighth-century fresco at Santa Maria Antica, Rome, shows the prophet Isaiah standing at the bedside of the sick king, as does a miniature of the same period from the *Christian Typography* of Cosmas Indicopleustes (Vatican Library). In a 10th-century Greek psalter (Bibliothèque Nationale, Paris) Hezekiah is shown giving thanks to God. He also appears in two 11th-century Catalan Bibles; on a fresco in a former monastery in Cologne (Romanesque, 12th century); and in a 13th-century statue by Benedetto Antelami in the cathedral of S. Donnino, Borgo. There is a representation of the king by Michelangelo in the Sistine Chapel, Rome.

The prayer of Hezekiah (Isa. 38) is included among the *cantica* of the Roman Catholic liturgy, and as *Canticum Ezechié* it figures in the Lauds of the Office for the Defunct; it is sung to a simple psalmodic formula. Hezekiah's illness and recovery provide the main theme of oratorios and cantatas on the subject, such as G. Carissimi's 17th-century *Ezechia* (oratorio, in the "Historia" form) and G.B. Bononcini's *Ezechia* (oratorio, 1737). A descriptive piece for keyboard instrument, "Der todtkranke und wieder gesunde Hiskias," was composed by G. Ph. Telemann as no. 4 of his *Biblische Sonaten* (1700). The prayer, and its introductory verses, form the subject of Ernst Kenek's motet for women's voices and piano, *Aegrostate Ezechias* (1945). A modern setting of the Hebrew text was written by the Israeli composer Abel *Ehrlich *(Mikhtam le-Ḥizkiyyahu)*.

HEZEKIAH (died c. 46 B.C.E.), fighter for freedom at the beginning of the period of Roman rule in Judea. Hezekiah, probably a supporter of the Hasmoneans, conducted a stubborn war against supporters of the Roman government. He was the leader of a band of guerillas and raided the gentile towns on the Syrian border, perpetrating acts of violence and plunder. Josephus calls Hezekiah an *archilistes* ("chief bandit"), a pejorative term he uses for all the freedom fighters, particularly during the Roman war. The young Herod, who was appointed military governor of Galilee at the time, put an end to these raids. He captured Hezekiah and his associates and had them put to death without trial (Jos., Wars, 1:204; Jos., Ant., 14:159). This deed excited great anger in Galilee and in the circles of the nobility and the Sanhedrin in Jerusalem, who feared Herod's ambition. They therefore sought to bring Herod to justice and to punish him in accordance with the law. It appears that Josephus' knowledge of Hezekiah was obtained from the work of *Nicholas of Damascus and does not give a true picture of his personality. There is no doubt that his family had a distinguished ancestry and comprised scholars, as can be inferred from the fact that his son Judah was called *sophistes* ("a scholar"; Jos., Wars, 2:118). *Menahem b. Judah and *Eleazar b. Jair also belonged to the same family (Jos., Wars, 2:447).

[Abraham Schalit]

HEZEKIAH (early third century C.E.), Palestinian *amora*; at times referred to as Beribbi (Ḥul. 57a). He was the son of R. *Ḥiyya. He and his brother Judah were praised from youth for their wisdom and were called *rovin* ("youths"; Ḥul. 19a–20a). Resh Lakish said of them that when Ḥiyya and his sons came to Ereẓ Israel from Babylonia they restored the Torah, which had been forgotten (Suk. 20a). Although they gained their livelihood from agriculture they took care not to forget their learning (Ber. 18b). Hezekiah was more renowned than his brother and his name is more frequently mentioned in the Talmuds. He also compiled a collection of *beraitot* which are introduced in the Talmud with the words "the school of Hezekiah taught" (Sanh. 37b, et al.). He utilized the existent halakhic Midrashim and added to them. In consequence the *Sifrei*, and still more the *Mekhilta of R. Simeon b. Yoḥai*, contain anonymous statements which in the parallel passages in the Talmud and the Midrashim are introduced by "Hezekiah taught," or "the school of Hezekiah taught," or "Hezekiah said." The Talmud cites many halakhic disputes between Hezekiah and Johanan (Ḥag. 8a; Git. 53a, et al.). He also engaged in *aggadah* and is quoted in the Midrashim (Lev. R. 9:9; Tanḥ. Niẓẓavim 1, et al.). Among his sayings are: "A man's prayer is not heard unless he makes his heart like flesh" (Sot. 5a) explained by Rashi: "which is soft, and not like stone which is hard"; "Great is peace, for in connection with all other precepts it is written, 'if, thou meet' etc. [Ex. 23:4], 'if thou see' etc. [Ex. 23:5],… i.e., if a precept comes to your hand, you are bound to perform it, but if not, you are not bound to perform it. In this case, however, it says: 'Seek peace and pursue it' [Ps. 34:15], 'seek it in thine own place, and pursue it to another place'" [Lev. R. 9:9]. Hezekiah lived in Tiberias (Meg. 5b) and on his death was buried in the sepulcher of his father (MK 25a).

Another Palestinian *amora* of the same name lived at the beginning of the fourth century. He was a pupil of Jeremiah (Zev. 75b), many of whose sayings he transmitted (TJ, Ber. 5:2, 9c, et al.), as well as those of Abbahu (TJ, Beẓah 1:2, 60b) who was a fellow citizen of Caesarea (TJ, Dem. 1:3, 22b; TJ, Shev. 9:7, 39a, et al.). Of his pupils Mana is known (TJ, Ned. 5:5, 39b). Some are of the opinion that he moved to Babylon since an *amora* Hezekiah is referred to as transmitting sayings in the name of the Babylonian *amora*, Abbaye (Shab. 38b, et al.), but it appears that the reference is to a different sage.

[Zvi Kaplan]

HEZEKIAH, THE HIGH PRIEST (fourth century B.C.E.), one of the most important Jewish personalities to emigrate to Egypt after Ptolemy I's victory in the battle near Gaza in 311 B.C.E. He is mentioned by Hecataeus of Abdera (Jos., Apion, 1:187–9) under the name Ezekias as "a man of about 66 years of age, highly esteemed by his countrymen, intellectual,

and moreover, an able speaker and unsurpassed as a man of business." Hezekiah assembled his friends and tried to convince them of the advantages of emigration to Egypt, "for he had in writing the conditions attaching to their settlement and political status." Scholars have tended to doubt the accuracy of this passage, because the high priest at this time was Onias, and there was none by the name of Hezekiah. However the term αρχιερένς applied to Hezekiah does not necessarily signify high priest; it can mean a priest of high standing (*ibid.*, 1:186–9). In 1931 a coin of the fourth century B.C.E. was discovered in the Beth-Zur excavations which bears the names of Hezekiah and perhaps Jehohan(an?). Albright identifies the latter with Onias the high priest. In his opinion, the coin belongs to Hezekiah, who was an important priest during this period and served as treasurer.

[Isaiah Gafni / Edna Elazary]

HEZEKIAH BEN DAVID (d. c. 1058), exilarch and *gaon*. His grandfather Hezekiah b. Judah, a grandson of *David b. Zakkai, is also referred to as exilarch, although there is some doubt whether he actually held the position. Hezekiah b. David became exilarch after Azariah b. Solomon, a descendant of David b. Zakkai's brother Josiah. The date of his appointment is uncertain but in 1021 he is mentioned as exilarch in one of his letters. On the death of *Hai Gaon in 1038 Hezekiah was asked to succeed him, the exilarchate and gaonate thus being temporarily combined. The official title of *gaon*, however, was apparently not conferred on him. Some years later, after being denounced to the authorities by informers, he was arrested, put in chains, and tortured. Two of his sons escaped to Spain where they were helped by *Joseph, son and successor of *Samuel ha-Nagid, who had addressed a poem to Hezekiah in 1055. Only three of Hezekiah's letters and one of his responsa (quoted by Judah b. Barzillai in *Sefer ha-Shetarot*) are known. According to Ibn Daud the gaonate and exilarchate ended with the death of Hezekiah. In fact, scholars continued to be appointed to the former position. The exilarchate also continued nominally, the office being held by Hezekiah's descendants: his son David, his grandson Hezekiah b. David, and the latter's son David down to the early 12th century.

[Abraham David]

HEZEKIAH BEN DAVID DA SILVA (1659–1695), rabbi of Jerusalem, brother-in-law of Moses *Ḥagiz. Hezekiah was born in Leghorn, where he studied under Samuel Kushta and Judah Sharaf, a Jerusalem emissary. He migrated to Jerusalem prior to 1679 and there studied under Moses b. Jonathan *Galante. In 1688 he was sent as an emissary of Jerusalem to Central and Western Europe. In Amsterdam, in 1692, he was offered the post of rabbi, which he declined, but during his stay, he influenced the wealthy Jacob Pereira to found a yeshivah in Jerusalem in his name (to take the place of the yeshivah of the same name, "Beit Ya'akov," named after the brothers Vigo of Leghorn, which had closed its doors in 1689 immediately after the death of Moses Galante). Hezekiah was head of this yeshivah from his return to Jerusalem in 1692 until his death.

Hezekiah's reputation rests upon his *Peri Hadash*, which contains exceptionally trenchant criticisms of the rulings of Joseph *Caro and all the earlier codifiers, with the exception of Maimonides. In this work, aimed at nullifying the authority of the Shulḥan Arukh as representing the final *halakhah*, he attempts to elucidate the *halakhah* as conforming with his view. He also added his own novellae. He inclines to leniency in his rulings, taking to task those authorities who adopt a stringent line. The section *Yoreh De'ah* was published in Amsterdam in 1692, while Hezekiah was on a mission there from Jerusalem; the section on parts of *Oraḥ Ḥayyim* and *Hilkhot Gittin* in 1706, and that on the whole of *Oraḥ Ḥayyim* in 1730. When the volume on *Yoreh De'ah* reached Egypt it gave rise to violent controversy. The Egyptian rabbis even thought of excommunicating him but instead they ordered the book to be suppressed and issued a ban against anyone studying it, which was later repealed, however, by *Abraham ha-Levi, the rabbi of Egypt. In the course of time, the work increased in popularity, many leading halakhists accepting its rulings. Jonathan *Eybeschuetz in his *Kereti u-Feleti* (Altona, 1763), and Joseph *Teomim in *Peri Megadim* quote him regularly and rule in conformity with his view. The work was published later in the editions of the Shulḥan Arukh together with the other standard commentaries – in *Yoreh De'ah* (Amsterdam, 1743), in *Oraḥ Ḥayyim* (1754), and in *Hilkhot Gittin* (Vienna, 1809). The publishers softened, to some degree, the sharpness of its language, and omitted the harsh expressions used against the Shulḥan Arukh and other halakhists, making it conform in style to the other commentaries. Among those who strove to rebut its trenchant criticism were Hananiah Cases in *Ḥok le-Yisrael* (Leghorn, 1740), Ḥayyim ibn Attar, who in his *Perot Ginnosar* (Amsterdam, 1742) gives the *Peri Ḥadash* on *Yoreh De'ah* together with his criticisms entitled *Peri To'ar*, and Ẓevi *Ashkenazi (the "Ḥakham Ẓevi"), whose conclusions were published in the periodical *Sha'arei Torah* (cf. bibliography). Hezekiah also wrote: *Mayim Ḥayyim* (Amsterdam, 1730), novellae on Maimonides, and responsa.

A pamphlet on the halakhic determination of the time of twilight was published in the *Shemen la-Ma'or* (Constantinople, 1755) of Ezra Malki, and again under the title *Binah ve-Da'at* (Cracow, 1927). Ḥayyim Joseph David *Azulai speaks of works by Hezekiah on the Talmud according to the kabbalis-

tic system of Isaac *Luria, which he ordered to be suppressed, the section of his *Peri Hadash* dealing with the laws of Sabbath being inadvertently destroyed along with them. Among his disciples were Solomon *Algazi, who was a rabbi in Egypt, Isaac ha-Kohen *Rapoport, and Isaiah *Azulai.

[Abraham David]

HEZEKIAH BEN JACOB (of Magdeburg; 13th century), tosafist. Hezekiah, one of the last of the tosafists, was apparently a pupil of Samson of Coucy and *Eliezer b. Joel ha-Levi. His appointment as reader of the Magdeburg community while still in his youth aroused considerable opposition. Moses b. Ḥasdai and *Isaac b. Moses of Vienna, author of the *Or Zaru'a*, intervened to settle the dispute (*Or Zaru'a*, nos. 114–15; Resp. Maharam of Rothenburg, ed. Lemberg, nos. 109–11). In the sources Hezekiah is also referred to as Yeḥezkiyahu, and was known in brief as Mahari'aḥ (**M**orenu **H**a-**R**av **YeH**ezkiyyahu). He was the author of the *tosafot* to the tractate *Shabbat*, and of a halakhic work, which was never published. A manuscript of it existed in the library of the Jewish community of Prague and a description was given by H. Brody (see bibliography). According to him the manuscript, which covers 12 tractates, constituted the complete original work. Fragments from it and quotations are given in the *Haggahot Asheri* of *Israel of Krems and in various manuscripts of books on ritual law of that period. Hezekiah was the uncle of *Eliezer of Touques.

[Shlomoh Zalman Havlin]

HEZEKIAH BEN MANOAH (mid-13th century), biblical commentator of the school of *Rashi, apparently from France. Some are of the opinion that his father was Manoah of Béziers and, on the basis of a section in the rhymed introduction to Hezekiah's work, conjecture that Manoah was tortured at a time of religious persecution. Hezekiah wrote a commentary on the Pentateuch and on Rashi's commentary under the title *Ḥizzekuni* (or *Ḥazzekuni*, either in allusion to his name or as an appeal to his readers to encourage and "support" him). It was first published in the Venice edition of the Pentateuch in 1524, and separately in Cremona in 1559. In his commentary he chiefly bases himself on the halakhic and aggadic Midrashim and on the comments of Rashi, citing also various comments from another "20 books," including the commentaries of *Samuel b. Meir (Rashbam) and Joseph b. Isaac *Bekhor Shor. In his comments he quotes many Midrashim no longer extant, for which he is the only source. The work contains a number of French *la'azim.

BIBLIOGRAPHY: Michael, Or, no. 836; J. Guttmann, in: *Ner David – Festskrift… D. Simonsens* (1923), 44–48; Waxman, Literature, 2 (1960^2), 44.

HEZIR, founder of the 17th priestly watch (I Chron. 24:15). The name is also borne by one of the leaders who signed the covenant with Nehemiah (Neh. 10:21). Possibly the reference is to the same family, the name becoming wrongly linked in transcription with the leaders of the people instead of the priests. In 1864 the discovery of a Hebrew inscription engraved above a catacomb in the valley of Kidron outside Jerusalem, close to the so-called tomb of Zechariah and Absalom's monument, brought to light the name of six brothers of the "sons of Hezir" and two sons of one of the brothers. This three-line inscription, dating from the first half of the first century B.C.E., is one of the longest of the Second Temple period and the writing shows an affinity to the scripts of the Gezer Calendar, the earlier Dead Sea Scrolls, and to the script of the Aramaic inscription on the tombstone of King Uzziah (dating from Second Temple times). The catacomb, which contains a number of chambers, has a facade of Doric columns and its architecture is unmistakably Greek in style, belonging therefore to the Hellenistic period. Priests of Jerusalem for whom such tombs were erected probably belonged to the hellenizing movement. It is therefore possible that the tomb dates from the middle of the second century B.C.E., the inscription being added two generations later.

[Lea Roth]

ḤIBAT ALLAH, ABU AL-BARAKĀT (Nathanel) BEN ALL (Eli) AL-BAGHDĀDĪ (second half 11th–first half 12th century), philosopher, physician, and biblical commentator. Abu al-Barakāt spent most of his life in Baghdad. He was a well-known physician and served at the court of Caliph al-Mustanjid (1160–70). At the age of 60 he converted from Judaism to Islam. Maimonides mentions him in his *Ma'amar Teḥiyyat ha-Metim* (ed. J. Finkel, in: PAAJR, 9 (1939), 13 [Heb.]), holding that his doctrine of the soul is incorrect and that he follows in the footsteps of the Islamic theologians, the *mutakallimūn* (see *Kalām), rather than in those of the true philosophers. In 1143 Abu al-Barakāt composed an extensive Arabic commentary on Ecclesiastes (extant in manuscripts in Oxford and Leningrad), dictating it to his pupil, Isaac, the son of Abraham ibn Ezra, who in the introduction to this work wrote a long poem in praise of his teacher. (Considerable portions of the commentary have been edited by Poznański in ZHB, 16 (1913), 32–36.) Abu al-Barakāt was perhaps the author also of a Hebrew grammar written in Arabic (manuscript in Leningrad; see Harkavy, in ZAW, 1 (1881), 159). Arabic bibliographers name the following medical writings by Abu al-Barakāt: "*Ikhtiṣār al-Tashrīḥ*" a compendium of anatomy according to Galen; "*Ḥawāshī,*" annotations to Book I of Avicenna's *Canon*; a handbook of antidotes in three treatises; and

studies on two remedies compounded by Abu al-Barakāt, one of which is described by the Aramaic name *bar sha'ata*.

Philosophy

Abu al-Barakāt's major work, written while he was still a Jew, is entitled *Kitāb al-Muʿtabar*, a title which S. Pines (see bibliography) renders as "the book of what has been established by personal reflection." This translation suggests the author's conception of the history of philosophy and the task of the philosopher. In his view, the ancient philosophers transmitted their teachings orally but only to persons qualified to receive them. Although their teachings were later set down in writing, it was merely in outline form, and when in following periods philosophers attempted to interpret them, they did not always succeed. Thus, much of the history of philosophy is a record of intellectual confusion and misinterpretation. Abu al-Barakāt therefore saw no need to base his philosophy on the teachings and interpretations of earlier philosophers, and claimed that his philosophy resulted from his own reflection on matters. While this claim is exaggerated, his book contains much that is novel.

Physics

Of special significance in the *Kitāb al-Muʿtabar* is Abu al-Barakāt's critique of certain physical, psychological, and metaphysical notions accepted by Aristotle and his followers. Two examples are his critiques of the Aristotelian conceptions of time and space. Aristotle had defined time as the measure of motion, thereby making time a property of the corporeal world. Rejecting this definition, Abu al-Barakāt held that time is a measure of being. In his view, the human mind knows a priori, immediately, and with certainty that being exists and concomitantly that time accompanies being. Hence, time is absolute and independent of the world. Since Abu al-Barakāt also maintained that there is no essential difference between the existence of God and that of other beings, it follows from his description of time that God exists in time – a proposition that Aristotelians deny. Again, Aristotle defined space as the inner surface of a surrounding body, thereby making it a property of bodies. But Abu al-Barakāt identified space with three-dimensionality, which can exist apart from bodies. Moreover, in his view space can be infinite. Abu al-Barakāt's account of motion was also unique. Aristotle held that a constant force produces a uniform motion, the velocity of which is proportional to the force that engenders it. Abu al-Barakāt's discussions seem to imply that a constant force produces an accelerated motion, a proposition that appears later in Newtonian physics. Abu al-Barakāt's definition of time shows a similarity to that of Abraham bar Ḥiyya (early 12th century), and his conception of space and some of his other physical notions show a similarity to the teachings of Ḥasdai Crescas (c. 1340–c. 1412). However, there is no evidence that Abu al-Barakāt influenced either of them.

Psychology

Abu al-Barakāt mainly followed the psychological doctrines of *Avicenna, himself an innovating interpreter of Aristotle, but with certain disagreements. Aristotle based his analysis of the soul on various functions of organic substances, but Avicenna held that for man self-consciousness is the primary given. From this observation Avicenna concluded that the human soul exists in some fashion apart from the body. However, he limited self-consciousness to the rational part of the soul. Abu al-Barakāt agrees with Avicenna that self-consciousness is central, but differs in holding that it applies to the soul in its totality and not to the intellect alone.

Metaphysics

Abu al-Barakāt's metaphysical position is also anti-Aristotelian. He rejected the notion of negative attributes (see *God, Attributes of), accepted by many Aristotelians, maintaining that positive qualities can be attributed to God and that these qualities are common to both God and man, though they are found first in God, their prime exemplar, and secondly in other beings. Contrary to the Aristotelians, too, is his view that God knows individuals and particulars, not only His own essence. Abu al-Barakāt also reflected on creation of the world, discussing the arguments of those who accept it as well as those who oppose it. His own opinion is not clear, but it appears that he believed in the eternity of the world.

Abu al-Barakāt had a distinct influence on Muslim philosophy. Even his critics accepted some of his ideas. Other philosophical writings mentioned by bibliographers include *Maqāla fī Sabab Ẓuhūr al-Kawākib Laylan wa-Khafāʾihā Nahāran* ("A Study of the Reason for the Visibility of the Stars by Night and their Invisibility by Day"), "*Risāla fī al-ʿAql wa-Māhiyyatihi* ("A Study of the Intellect and its Nature"), and "*Fī al-Qaḍāʾ wa'l-Qadar*" ("On Fate and Destiny").

[*Encyclopaedia Judaica* (Germany)]

ḤIBAT ALLAH, IBN JUMAYʾ IBN ZAYN (second half of 12th century), Egyptian physician. Ibn Jumayʾ was regarded as one of the greatest experts of his time in his field. Saladin engaged his services at the royal court, as did his ministers and viziers. He was the author of several works, among them the book *Kitāb al-Irshād li-Maṣāliḥ al-Anfus wa'l-Ajsād* ("The Book of Instructions for [the Maintenance of] the Health of the Body and the Soul"), which was completed by his son, Abu Ṭāhir Ismāʿīl. He also wrote a commentary on the *Canon* of *Avicenna.

[Eliyahu Ashtor]

ḤIBBAT ZION (Heb. חִבַּת צִיּוֹן), moshav in central Israel, in the Ḥefer Plain, affiliated with the Farmers' Union (Hitaḥadut ha-Ikkarim), founded in 1934 by members of the Ḥovevei Zion movement in Russia who settled in Ereẓ Israel prior to World War I and were allocated land for settlement only many years later. Citriculture and dairy cattle were its principal farm branches. The settlement's name is taken from that of the *Ḥibbat Zion movement. Its population in 1968 was 303, rising to 390 in the mid-1990s and 443 in 2002.

[Efraim Orni]

ḤIBBAT ZION (Heb. חִבַּת צִיּוֹן, "Love of Zion"), the movement that constituted the intermediate link between the forerunners of *Zionism in the middle of the 19th century and the beginnings of political Zionism with the appearance of Theodor *Herzl and the First Zionist Congress in 1897. The adherents of Ḥibbat Zion, called Ḥovevei Zion ("Lovers of Zion"), were a widespread movement among the Jewish masses of Russia and Romania, but groups of Ḥovevei Zion also existed in Western Europe and in the United States. Originally, the declared aim of Ḥibbat Zion was not different from that of its predecessors, the forerunners of Zionism, and of the subsequent political Zionist movement, namely, to solve the problem of the abnormal Jewish life in the dispersion by a return of the Jewish people to Ereẓ Israel, settlement on the land on a large scale, and attaining the recognition of the major powers for this purpose (see, e.g., Leon *Pinsker and his program). But, in the early 1880s, when *aliyah* to Ereẓ Israel from Eastern Europe began, mainly in the wake of the Russian pogroms, and the first Jewish agricultural settlements in Ereẓ Israel were established, the Ḥovevei Zion concentrated their means and efforts in encouraging and strengthening the movement toward *aliyah* and settlement and not in the political field. Conditions in Russia did not permit open political activity and forced the Russian Ḥovevei Zion to engage in "practical" work only.

In Western Europe as well, where Jews were permitted more freedom in this field, members of Ḥibbat Zion were not prepared to carry on the political cause of Zionism, basically because of fears that their patriotism would be suspect. Thus the efforts of Ḥovevei Zion turned de facto into philanthropic activity of limited scope and with minor results. Were it not for the aid of Baron Edmond de *Rothschild, it is doubtful whether Ḥovevei Zion would have been able to maintain the first settlements.

When Herzl began his activities, he was not aware of the political Zionist idea that had originally inspired the Ḥibbat Zion movement, and at first he negated the value of the existent small-scale settlement activity that was carried out semi-illegally, against the wishes of the Ottoman regime, and referred to it as "infiltration." The Ḥovevei Zion in the West reacted with reservation toward Herzl and continued their philanthropic aid to both the old and the new *yishuv* by means of *Esra and other institutions. Ḥovevei Zion in Eastern Europe, however, mostly joined Herzl, but disassociated themselves from his negative approach to practical settlement work in Ereẓ Israel and continued to support the *yishuv.* This difference in approach was the source of friction during Herzl's time and afterward between the "political" and the "practical" Zionists, until the consolidation of "synthetic Zionism" after David *Wolffsohn resigned from the presidency of the World Zionist Organization (1911). Ḥibbat Zion was in effect the first mass movement to provide Herzl with wide popular support.

[Getzel Kressel]

ḤIBBUT HA-KEVER (Heb. חִבּוּט הַקֶּבֶר, "beating in the grave"), punishment mentioned in an early *aggadah* which was treated more widely by the kabbalists. According to this belief, the deceased is punished for his sins not only by the torments of gehinnom ("hell") and the transmigration of his soul, but also by being struck with a fiery chain immediately after burial by the Angel of Death (or the angel Duma, cf. Ber. 18b). Only those who die in Ereẓ Israel or, if outside, who are buried on Friday afternoon before sunset, are exempted from this punishment. To ward off *ḥibbut ha-kever* the kabbalists counseled acts of charity and the fervent recitation of prayers. Of particular efficacy in this regard is remembering one's Hebrew name when asked for it by the Angel of Death. To engrave this name in their memories, pious Jews after concluding the recitation of the *Amidah, add a biblical verse, the first and last letters of which correspond to the first and last letters of their Hebrew name.

See list in *Siddur Avodat Yisrael*, 106–7.

HIBSHŪSH, ḤAYYIM, an erudite coppersmith of *San'ā (d. 1899), one of the first modern intellectuals of the Jewish community of *Yemen. His activity was communal as well as scholarly. In his public work he was the main partner of his younger colleague, R. Yiḥye Qāfih, in acting for the improvement of the education system of the Jews of Yemen and for the reshaping of their socio-economic structure. Together they sent letters to European Jewish welfare organizations asking them to send modern teachers to Yemen. Hibshūsh was the first Yemenite-Jewish writer who decided to compose a history of his community based on written, authorized sources, including many Muslim-Arabic works, and not just oral traditions as was the case with R. Yiḥye Ṣāliḥ in *Megillat Teman*. In this work he was followed by other San'ānī Jewish scholars such as R. Shalom Qoraḥ and R. 'Amram Qoraḥ. But his fame among western researchers stems from his Judeo-Arabic book *Mas'ot Hibshūsh*, in which – responding to the request of Eduard *Glaser – he depicted his travels in 1870 to the northern and northeastern regions of Yemen, including rich and sometimes unparalleled information about the Jewish communities in those areas. In fact, he was chosen – owing to his erudition and his profession as a coppersmith – to accompany the Jewish-French Orientalist Joseph *Halévy in quest of Sabaean in-

scriptions. The main reason for writing *Mas'ot Hibshūsh* was probably that both Hibshūsh and Glaser were not content with the fact that Halévy, in his long and detailed reports about his travels in Yemen, completely ignored his Ṣan'ānī guide. In this work, Hibshūsh claims that it was actually he who copied for Halévy the hundreds of Sabaean inscriptions. Hibshūsh's *Travels* was edited by S.D. *Goitein from manuscripts, first published in Hebrew translation (1939) and then in its Judeo-Arabic original with an English abridged translation (1941). Hibshūsh's significant contribution to knowledge of ancient and modern Yemen is universally acknowledged, as attested by the Italian, French, and Arabic translations of his *Travels*, recently published.

[Yosef Tobi (2nd ed.)]

HICKL, MAX (1873–1924), one of the early Zionists in Moravia and a founder of the *Po'alei Zion world movement. Born in Bruenn (now Brno), Hickl joined Herzl as soon as the latter appeared on the scene. He was also the chief organizer of the Jewish clerks in the Austrian commercial houses and eventually formed the first Po'alei Zion group out of this organization. Hickl was the founder of *Juedische Volksstimme*, a German-language Zionist weekly that made its first appearance in 1900, and he edited it for a quarter of a century; in the paper's early years, B. *Feiwel and R. *Stricker were Hickl's assistants. For a number of years he published *Juedischer Volkskalender*, an almanac that included outstanding Zionist writers among its contributors and German translations of Hebrew and Yiddish literature. During World War I, when he moved to Vienna, Hickl founded a publishing company that put out German-language Zionist books as well as Hebrew books and the Hebrew monthly *Gevulot*.

[Getzel Kressel]

ḤIDDUSHIM (Heb. חִדּוּשִׁים, "novellae"), the results of a method of study of rabbinical literature which derives new ideas from talmudic and also rabbinic texts, in order to clarify *halakhah*. The *ḥiddushim* represent the "obligation imposed upon us to search through the subjects of the Torah and the precepts and bring to light their hidden contents" (*Naḥmanides, introduction to *Sefer ha-Milḥamot*). From the commentary, whose purpose is to explain the text – its difficult terms and other complexities – the student goes on to a thorough analysis and summary of the theme, the establishment of its basis, and the general principles to be deduced from it. On the one hand, however, it is not always possible to draw a clear line of demarcation between commentaries and *ḥiddushim*, while on the other many works belong to the category of *ḥiddushim* from the point of view of their contents and methods though they are not referred to as such.

The changes in conditions of life in the course of time give rise to questions and problems which require an authoritative solution in the spirit of the laws of the Torah. The *geonim* were already required to explain the Talmud in this light and base their decisions upon it. Their comments on various talmudic topics, either by defining the framework of a given *halakhah* or by indicating the conditions necessary for the application of a certain *halakhah*, are actually *ḥiddushim* on those *halakhot*, which at times display considerable originality. This phenomenon is especially noticeable in the *responsa literature, whose authors were required to give a practical decision in answer to questions which arose during their time. The *ḥiddushim* scattered in the responsa literature are very numerous, even if they are not always apparent on the surface, and they sometimes constitute a completely new approach to the relevant passage in the *Gemara*. During the succeeding era, when new Torah centers came into existence, another category of *ḥiddushim* was developed. The most famous of these centers are the Spanish, connected with the name of *Alfasi, and the Franco-German, of which Rashi and the *tosafists are the most distinguished representatives. Each of these centers developed its particular system: the tendency of the Spanish school was toward summarization and methodical presentation, in order finally to arrive at the *halakhah*, and was less concerned with abstract discussions and theoretical detail; the French school, on the other hand, applied itself to the minutest details of talmudic text, without aiming at any methodical arrangement, though this was arrived at indirectly as a result of their remarkable mastery of the vast material.

The most outstanding among the first authors of novellae are Joseph *Ibn Migash, the disciple of Alfasi and the first to write novellae to tractates of the Talmud, which are distinguished by their profundity and had a decisive influence on Maimonides; *Abraham b. David of Posquières, author of novellae to several of the talmudic tractates combining commentary and novellae – his glosses to Alfasi and Maimonides include *ḥiddushim* on talmudic themes which served as an inexhaustible source for subsequent authors; and Meir b. Todros *Abulafia, whose opinions are at times outstandingly original. During the time of Naḥmanides and his pupil R. Solomon b. Abraham *Adret, the teachings of the French school reached the Spanish schools. As a result of their influence the method of study in this country underwent a change and the synthesis thereby created became known in the world of talmudic scholarship as the teachings of the great **rishonim*. They include Naḥmanides, Solomon b. Abraham Adret, *Yom Tov b. Abraham Ishbili, *Nissim b. Reuben Gerondi, Joseph ibn *Ḥabiba, the author of *Nimmukei Yosef* on Alfasi; and others. The method in the schools of these *rishonim* was to study *Gemara* with Rashi's commentary and the tosafists, comparing their views with those of Alfasi and Maimonides. This system resulted in many objections to the decisions of Alfasi and Maimonides, since the conclusions arrived at by Rashi and

his school did not always correspond with those of Alfasi and the halakhic decisions in Maimonides' *Mishneh Torah*. This resulted in investigation into sources upon which Alfasi and Maimonides had based their decisions, and a search for alternative interpretations. They constituted in effect *ḥiddushim* to Rashi and the path blazed by him, and the revelation of new approaches to many topics. At the same time, the tendency developed among the *rishonim* of suggesting more than one interpretation for a given talmudic passage. Various interpretations were presented side by side – a characteristic example of this system being that of Naḥmanides' *Sefer ha-Milḥamot*, which was written in order to defend Alfasi against the criticisms of *Zerahiah ha-Levi in his *Sefer ha-Ma'or.* Naḥmanides goes to the length of giving Alfasi's explanations, even though he is not always in complete agreement with them: "At times we defend the opinions of our teacher, even though they are far from the actual meaning of the section. Our purpose in so doing is to bring to the attention of the students the arguments which can be brought in their favor" (Intr.). His novellae on the Babylonian Talmud are extensive and lengthy because he does not omit even the smallest detail – especially in difficult subjects – of the problems already discussed by his predecessors. Yom Tov b. Abraham employs the same method of collation, but the most distinguished proponent of this method was the author of *Nimmukei Yosef,* which is remarkable for its assembly of the opinions of his predecessors, entering into a full discussion and deciding between them. Naḥmanides was also the first whose biblical commentary is referred to as *ḥiddushim*; his influence on subsequent novellae literature was decisive. Later came the works of Menahem *Me'iri, which have fully been brought to light in recent years. They are outstanding for their accumulation of the numerous opinions of *rishonim* of every category and their comparison and appraisal in order to arrive at the most acceptable view. These novellae are today accepted by all students.

The novellae of the *aḥaronim* are of a different character. Generally they tend to verbosity and are inclined toward casuistry. Among the most eminent of them one can also recognize the desire to arrive at new halakhic decisions. There is an attempt to shed light on the subjects under discussion by the introduction of the "hypothesis," i.e., an attempt to decide what the *halakhah* would be in a given case which is not explicitly mentioned in the *Gemara*.

A different category of novellae was created by the school of the tosafists and their successors who encouraged and developed the study of the Torah for its own sake without placing overmuch emphasis on legal decisions and conclusions. Their extensive knowledge of the Talmud enabled them to embrace various tractates and different subjects at one and the same time. The study of a subject was thus not confined to the actual text but included corresponding and parallel subjects and everything even remotely connected with it throughout the Talmud. This comparative study revealed numerous contradictions and problems. The solution of these difficulties gave rise to novellae, either by establishing limits to one topic, or by sharp distinctions between two subjects which at first sight appear to be identical. In later generations this category of novellae became widespread. The wide range of knowledge and the profundity of their authors opened the door to a system of the most ingenious novellae. The most distinguished of the *aḥaronim*, such as Ezekiel *Landau (author of *Noda bi-Yhudah*) and Akiva *Eger, posed a multiplicity of difficulties based on their vast knowledge and profound erudition. Their answers abound in brilliant innovations, many of which were accepted as binding in the practical *halakhah*. In the wake of the great authors, the tendency became widespread among all talmudic scholars, including yeshivah students. The revelation of new aspects in talmudic topics became the norm. In yeshivot, special encouragement is given to anyone who reveals this talent, and opportunity is given to him to expound his ideas before his colleagues. *Ḥiddushim* have become an integral part of the normal study of the Talmud.

Among important authors of novellae on the Talmud from the Middle Ages to the present day may be mentioned: 13th CENTURY: *Eliezer b. Joel ha-Levi (Ravyah); *Isaac b. Abba Mari, *Isaac b. Moses of Vienna, Samuel B. Isaac ha-Sardi, author of *Sefer ha-Terumot*; *Isaiah di Trani; *Meir b. Baruch of Rothenburg (Maharam), whose novellae are included in his responsa and halakhic decisions; *Aaron b. Joseph ha-Levi. 14th–15th CENTURIES: Nissim Gerondi; Joseph *Colon; *David ben Solomon ibn Abi Zimra; Joseph b. David ibn *Lev. 16th-17th CENTURIES: Bezalel *Ashkenazi, author of *Shitah Mekubbeẓet*, an extensive collection of novellae of various authorities; Solomon *Luria (Maharshal), author of *Yam shel Shelomo*; *Meir b. Gedaliah of Lublin and Meir (Maharam) *Schiff, who gave a tremendous impetus to the study of the Talmud in Poland; Samuel Eliezer *Edels, who, in addition to his *Ḥiddushei Halakhot*, noted for their great profundity and erudition, also wrote *Ḥiddushei Aggadot*. IN THE FIRST HALF OF THE 18th CENTURY: Meir Eisenstadt, author of *Panim Me'irot*; R. Jacob Joshua Falk, author of *Penei Yehoshu'a*. IN THE SECOND HALF OF THE 18th CENTURY: Jonathan *Eybeschuetz; Aryeh Leib *Gunzberg, author of *Sha'agat Aryeh*, *Turei Even*, and *Gevurat Ari*; Ezekiel Landau in his *Ẓiyyun le-Nefesh Ḥayyah*. 19th CENTURY: Akiva Eger in his *Derush ve-Ḥiddush*; Moses *Sofer; Jacob *Ettlinger in his *Arukh la-Ner*; Isaac Meir *Alter of Gur, author of *Ḥiddushei ha-Rim*; Ẓevi Hirsch *Chajes. 20th CENTURY: during the present century the literature of novellae is principally concentrated around the decisions of Maimonides and investigation into their sources. The most important personalities and their works include: *Meir Simḥah ha-Kohen of Dvinsk in his *Or Same'aḥ;* R. Ḥayyim ha-Levi *Soloveichik, the initiator of a new method of study in the Lithuanian yeshivot during recent generations; R. Joseph *Rosen ("The Rogachover") in his *Ẓafenat Pa'ne'aḥ*; R. Ḥayyim Ozer *Grodzinski in his *Aḥi'ezer*; R. Abraham Isaac *Kook; R. Isser Zalman *Meltzer; R. Abraham Isaiah *Karelitz, the "Ḥazon Ish."

ḤIDKA (in the TJ, Shab. 16:3, 15d **Hundakas**, and in Schechter's edition of *Aggadat Shir ha-Shirim* (1896, p. 59) **Hindakah**; mid-second century C.E.), *tanna*. Ḥidka is mentioned a few times in the *beraitot* of the Babylonian Talmud (BB 119a; Sanh. 56b; BM 90b. cf. Tosef. Av. Zar. 8:6). His best-known *halakhah* is that a person should eat four meals every Sabbath (and not three as normally accepted: Shab. 117b). Although the *halakhah* is that three meals suffice, some meticulous individuals act in accordance with Ḥidka's view and this fourth meal is referred to as "R. Ḥidka's meal." He transmitted sayings in the name of his associate, Simeon ha-Shikmoni, a pupil of *Akiva (Sif. Num. 68, 114; cf. BB 119a). An aggadic saying attributed to him is "Love the term 'perhaps,' and hate the expression 'what of it?'" (DEZ 1).

HIEL (Heb. אֲחִיאֵל, חִיאֵל; "the [divine] brother, or kinsman, is God"), the Bethelite (see *Beth-El), who fortified *Jericho in the reign of King *Ahab of Israel (I Kings 16:34). The Hebrew verb employed in the Bible (בנה, *bnh*) commonly means "to build"; but when its object is the word for "town" or the name of some town, a town wall or other fortification is meant. Since no archaeological remains of city walls of that period have been discovered at this site but a granary of that period has been, the verse may refer merely to the construction of a fortified public building. The verse goes on to say that Hiel "laid its foundations at the cost of his firstborn son Abiram and set up its doorleaves [see *door] at the cost of his youngest [or younger] son Segub," and this was a fulfillment of the curse of Joshua (Josh. 6:26) upon anyone who fortified Jericho. It has been suggested that Hiel offered his sons as foundation sacrifices, but that can only have been the case with the firstborn, and even that is not the natural implication of either of the two scriptural passages. Both of these imply merely that the fortifier's two (or more?) sons perished successively, in the order of their birth, in the course of the work. Their deaths are understood by the writer as the fulfillment of Joshua's curse on anyone who would rebuild Jericho or any part of it.

HIER, MARVIN (1939–), U.S. rabbi and founder of the *Simon Wiesenthal Center. Hier was born in New York City, the son of a Polish-born lamp polisher who immigrated to the United States in 1917. He was raised in a strictly Orthodox enclave on the Lower East Side and received his rabbinical ordination from the Rabbi Jacob Joseph Theological Seminary. Immediately after his ordination, Hier and his wife Marlene left for Vancouver, Canada, to assume the pulpit at the city's leading Orthodox synagogue, Congregation Schara Tzedeck. He found a Jewish community whose lifestyle and religious commitment differed sharply from his own upbringing. Hier focused first on the sons and daughters of the synagogue members, believing, correctly, that the youngsters would eventually bring along their parents. Through one of his students, Hier met the boy's father, Samuel Belzberg, a leading businessman. Belzberg and his family were to become Hier's first and most consistent financial supporters.

Hier gave an early indication of his political activism when he and other rabbis confronted then Soviet Premier Alexei Kosygin, protesting the oppression of Soviet Jews during Kosygin's visit to Vancouver in 1975.

After 15 years as spiritual leader of Schara Tzedeck, doubling as Hillel director at the University of British Columbia, Hier spent a sabbatical in Israel. Inspired by the impact of the Or Sameach study center in Jerusalem on young, often alienated, Western Jews, he decided to redirect his considerable energy and entrepreneurship onto a broader stage. Backed by a $500,000 check from the Belzbergs, Hier moved to Los Angeles to establish a yeshivah. He secured an affiliation with the Yeshiva University of New York. Under the arrangement, the newly founded Yeshiva University of Los Angeles (YULA) received academic input from the New York institution but was otherwise administratively and financially independent. Despite some adult education outreach, YULA has remained primarily a high school-level institution, with separate schools for boys and girls.

Hier, most of whose parents' relatives perished in the Holocaust, embarked on an even more ambitious endeavor in 1977: the Simon Wiesenthal Center for Holocaust Studies (now known as the Simon Wiesenthal Center).

Under the leadership of Hier as founding dean and Rabbi Abraham Cooper as associate dean the Center evolved into a global institution, with 400,000 contributor-members, a film division, research staff, political influence, a popular Museum of Tolerance in Los Angeles, and another underway in Jerusalem.

With his high profile, Hier has been the target of criticism for the high-tech nature of interactive Holocaust exhibits, his dual role as dean of both the religious YULA and the secular Wiesenthal Center, his lobbying prowess for private, state, and federal funds, and his encroaching on the "turf" of older established Jewish organizations.

While the Center is a non-religious institution, its leadership is Orthodox and Hier himself personifies the more aggressive and militant attitude of contemporary modern Orthodoxy. At the same time, through the Center's emphasis on tolerance and multi-denominational outreach, Hier has exerted a strongly moderating influence on the Orthodox community.

[Tom Tugend (2nd ed.)]

HIERAPOLIS, city in N. Syria situated on the highway from Antioch to Babylon. In ancient times it was a religious cen-

ter of the goddess Tar'ata (Atargatis, Derketa). It was given its name in the Hellenistic period and from that time the temple there was considered to be the largest and richest in Syria. Pilgrims flocked to it from all over Asia Minor and Babylonia. The temple is referred to in the Talmud as "Tarata that is in Mapug" (Av. Zar. 11b). Although there is no direct evidence of the existence of a Jewish settlement there it has been suggested that the name Mabug borne by a Palestinian *amora* (Zev. 9b) is derived from the Syrian name of this city (Mabug, cf. modern Menbidj). The assumption is reasonable, since Hierapolis was a commercial center between Antioch and Babylon, both of which had considerable Jewish populations.

HIEROSOLYMITANISCHE STIFTUNG ("Jerusalem Foundation"), an institution for transferring and distributing funds in Ereẓ Israel, collected among European communities. An organization for collecting money for the support of Jews in Ereẓ Israel (Hierosolymitanische Kasse) was founded in Venice in 1601 and soon after in Hamburg, Hesse, Frankfurt, and elsewhere. Funds were collected locally and eventually channeled to the recipients through one benefactor, usually a person of standing in the Jewish community, who bore the honorific title of "Nasi Ereẓ Israel." The fund operated well for more than a century. During the course of a complex lawsuit involving R. David *Oppenheim, then "Nasi", the Austrian authorities in 1722 severely limited the right of Jews to contribute to their brethren in Ereẓ Israel as well as denying further use of the title to Oppenheim.

At the time (1722/23) the financial situation of the Jewish communities of Jerusalem, Hebron, and Safed was desperate, since an enormous sum of money was owed to Turkish moneylenders and there were no resources whatsoever for repayment. Samson *Wertheimer, the powerful Austrian *Court Jew, utilized his diplomatic connections and intervened on behalf of the Ashkenazi communities. He succeeded in having their debts reduced and solicited funds for their relief. In the process he reestablished the foundation, despite governmental restrictions, known thereafter as Hierosolymitanische Stiftung. Wertheimer succeeded so well in galvanizing public support that he assumed the title of "Nasi Ereẓ Israel." The Stiftung accumulated considerable sums; 25,000 florins were bequeathed to Wertheimer's son Wolf to be used for the benefit of Ereẓ Israel Jewry. Wolf Wertheimer finally succeeded in placating the creditors in 1727 through the good offices of the Austrian diplomatic agent in Constantinople and the Jewish physician Tobias Moshides in Jerusalem. However, in 1733 he was forced to declare bankruptcy, and only 20 years later, when he had regained his former standing and wealth, did he reestablish the foundation.

His will (1762) stipulated that the interest from his estate be allotted for the support of the communities in Ereẓ Israel. However, the money could not be disbursed and was deposited in the highest Austrian court (Oberhof-Marschallsgericht) until Francis I officially validated the foundation in 1801. The payments were thereafter made through the Austrian diplomatic agent in Constantinople and distributed by 12 representatives of Ottoman Jewry to the Jews in Jerusalem, Hebron, and Safed. In Austria two supervisors (*Kuratoren*) were appointed, one of whom had to belong to the Wertheimer family. Nathan von *Arnstein, Ignaz *Deutsch, and Moritz *Guedemann were all associated with the fund as supervisors.

Beginning in 1854, money was distributed equally to Ashkenazim and Sephardim. The annual stipend provided a secure source of income for its recipients until the chaotic post-World War I inflation.

HIGGER, MICHAEL (1898–1952), U.S. talmudic scholar. Higger, born in Rogovo, near Kovno, Lithuania, received a traditional education in Lithuania, and after immigrating to the United States in 1915, studied at New York and Columbia universities and the Jewish Theological Seminary, where he was ordained. Higger devoted his life to the study of Jewish sources and their publication. He also served as a consultant to the law committee of the Rabbinical Assembly of America and was responsible for many of the decisions made by that body.

His main contribution to Jewish scholarship is the editing of rabbinic texts with variant readings and introductions and the systematizing of various rabbinic writings. His early published works were devoted to the non-canonical tractates, including *Massekhtot Ze'irot* (1929), *Sheva Massekhtot Ketannot* (1930), *Massekhet Semakhot* (1931), *Massekhet Kallah* (1936), all with introductions, notes, and variant readings. Higger's major work was *Oẓar ha-Beraitot* (10 vols., 1930–50). In this work he collected and annotated all of the *beraitot* and the non-Mishnaic, tannaitic statements found in the Babylonian and Jerusalem Talmuds, both in the printed and manuscript editions of the Talmuds. Included are about 10,000 *beraitot* annotated, with variants, and classified according to form and provenance. This monumental work is a standard source for talmudic students.

In addition, Higger contributed many articles to learned journals and edited Yarḥi's commentary on *Kallah Rabbati* (1934). He wrote *Intention in Jewish Law* (1927) and *Jewish Utopia* (1932), a reconstruction of the rabbinic ideal society.

[Seymour Siegel]

HIGH COMMISSIONER FOR PALESTINE, head of the British Mandatory administration called the government of Palestine. On July 3, 1922, in an Order-in-Council, the high commissioner was empowered to promulgate ordinances for

the peace, order, and good government of Palestine, including the power of pardon or reprieve. His powers were not limited by any representative body in Palestine, but he was assisted by an advisory council appointed by himself. The first – and only Jewish – high commissioner, Sir Herbert *Samuel, who was appointed in 1920, two years before the mandate of the League of Nations was officially confirmed, laid the foundations of the British civil administration in the country, including Transjordan. He was succeeded in 1925 by Field Marshal Herbert Onslow Plumer (1857–1932) who served until 1928. His term was characterized by tranquility in the country and the development of local government, the promulgation of the religious ordinance, and the Palestinian Citizenship Order. Sir John Herbert Chancellor (1870–1952) served as third high commissioner in the years 1928–31. In his time the Arab massacres of August 1929 took place. He was said to have had a part in the framing of the new anti-Zionist policy as defined in the Passfield *White Paper (1930). Sir Arthur Grenfell Wauchope (1874–1947) served as the fourth high commissioner for the years 1931–38. He showed understanding for the Jewish work in Palestine and maintained friendly contact with Chaim *Arlosoroff. His plan to establish a legislative council proved abortive because of Jewish and Arab opposition. During his term momentous events occurred: Hitler's rise to power in Germany, which brought in its wake a large Jewish immigration to Palestine; and the outbreak of the Arab revolt (1936–39), leading to the appointment of the Royal (*Peel) Commission; and the publication of the first partition plan for *Palestine (1937). Sir Harold MacMichael (1882–1968) was the fifth high commissioner, from 1938–44. He implemented rigidly the anti-Zionist policy of the 1939 White Paper, refusing to admit Jewish refugees from Nazi-occupied Europe (see *Holocaust). In August 1944 an attempt was made on his life by *Loḥamei Ḥerut Israel. Field Marshal John Standish Surtees Prendergast Vereker, Viscount Gort (1886–1946) served as the sixth high commissioner only for one year, 1944 to 1945, and retired because of ill health. Sir Alan G. Cunningham (1887–1983) served as the seventh and last high commissioner in the years 1945–48, while the future of Palestine was studied by the Anglo-American Commission of Inquiry in 1946 and by the United Nations Special Committee on Palestine (UNSCOP) in 1947. Cunningham left Israel on May 14, 1948, the day the State of Israel was proclaimed.

HIGH PRIEST (Heb. הַכֹּהֵן, הַכֹּהֵן הַגָּדוֹל, (ה)כֹּהֵן הָרֹאשׁ), the priest at the head of the priestly affairs. In pre-Exilic times the common appellation for the chief priest of a community was "the priest" (Heb. *ha-Kohen*; e.g., I Sam. 14:19, 36; 21:2–10). The term "high priest" (Heb. *ha-kohen ha-gadol*) is used in reference to Aaron and his descendants who are anointed with holy oil (Lev. 21:10; Num. 35:25, 28; Josh. 20:6), and later to the chief priest of the First and Second Temples of Jerusalem (II Kings 12:11; 22:4, 8; 23:4; Neh. 3:1, 20; 13:28). An early comparable title is Ugaritic *rb khnm*. The appellation "head priest" (Heb. *kohen ha-rosh*) is an alternative for "high priest" (II Kings 25:18; Jer. 52:24; II Chron. 19:11; 24:11; 26:20; Ezra 7:5) and may have coexisted with *ha-kohen ha-gadol*.

In the Second Temple Period

Although the term and office of high priest are infrequent in early biblical literature, and the Aaronide priesthood a late development, the existence of a high priesthood in the two pre-exilic Israelite kingdoms is more than likely. From the outset of the Second Temple period not only does the term "high priest" appear more frequently, but the responsibilities of the office were greatly enhanced. Beginning either under late Persian or early Hellenistic rule in Palestine, the high priest is not merely responsible for religious and spiritual life within the country, but is also chief administrator of internal secular policy, as well as the recognized representative of the Jewish community in all matters of external diplomacy. This development of high-priestly power reached its peak under the Hasmoneans, and thus, even when the latter were already designated as kings, it was considered essential to retain the title of "high priest" which, encompassing so many functions, was probably even more revered than the monarchy itself. This fact would tend to explain the famous objection of the Pharisees to the retaining of the high priesthood by the Hasmoneans, and the outright rejection of their claims by either John *Hyrcanus or Alexander *Yannai (Kid. 66a; Jos., Ant. 13:288ff.). It is also noteworthy that the Hebrew coins of the Hasmoneans designate these rulers solely as high priests, and that the political authority of the community, the **ḥever ha-Yehudim*, appears on the coins accompanied only by the title high priest and may not have even recognized the monarchy (cf. A. Schalit, *Hordos ha-Melekh* (1960), 159–60, 561–2).

With the Roman conquest of Judea and subsequent Herodean rule, the office of high priest became a political tool in the hands of the administration, and until the destruction of the Temple was never to return to its earlier prominence. Herod, in an attempt to base his regime on new elements within Jewish society, completely disassociated himself from the Hasmonean dynasty, and thus the high priesthood passed into the hands of such houses as Phiabi and Boethus, both having been transplanted from the Jewish Diaspora (regarding this tendency under Herod, cf. M. Stern, in *Tarbiz*, 35 (1965–66), 245ff.). Although the high priests continued to serve as presidents of the *Sanhedrin, both their actual powers and measure of esteem among the people gradually deteriorated, and derision of the high priests during the late Second Temple period is commonly quoted in rabbinic literature (cf. Pes. 57a; Yoma 8b–9a). This negative attitude of the Pharisees was probably enhanced by the fact that high priests from the Hasmonean period onward were primarily Sadducees, and frequent quarrels erupted between the two factions (cf. Tosef., Yoma 1:8). By the end of the Second Temple period the high priest was considered no more than a religious functionary of the Roman administration, and thus even the garments of the high priest were entrusted at times to the hands of the local

Roman procurator and handed over to the priests just prior to the various festivals. It is understandable, therefore, that with the zealots' seizure of Jerusalem one of their first acts was the appointment of a new high priest, as if thereby to display the establishment of a new Jewish government in Jerusalem (Jos., Wars 4:147ff.).

[Isaiah Gafni]

HIJAR (**Ixar**), small town in Aragon, E. Spain. There is no record of an organized Jewish community in Híjar, though the activity of Jewish printers there points to at least a small number of resident Jewish families (cf. Isaac b. Sheshet's responsum no. 435). Eliezer b. Abraham Alantansi, a scholar, businessman, and physician, of Murcia, in partnership with Solomon Zalmati of Jativa, set up a press at Híjar and produced Jacob b. Asher's *Arba'ah Turim* (1485–87); the Latter Prophets (1486–87); the Pentateuch with Onkelos and Rashi (1490); and the Pentateuch with *haftarot* and Five Scrolls (1487–88). Possibly other books were printed by this press but have been lost. Abraham b. Isaac b. David was employed as corrector.

HILBERG, RAUL (1926–), "founding-father" of the academic study of the Holocaust in the United States. Hilberg was born in Vienna. His family escaped not only Austria but the European continent in the spring of 1939, one year after the *Anschluss*, and thus barely evaded death in the Holocaust. After a brief stay in Havana, Cuba, he arrived in the United States. The family moved to New York City, where his middle-class parents became factory workers. In New York Hilberg spent several years at Brooklyn College before joining the army at the age of 18.

After service in Europe, Hilberg returned to Brooklyn College, where he was deeply influenced by the historian Hans Rosenberg, an expert in the historical development of the Prussian bureaucracy. He went on to graduate study in political science at Columbia University, where he encountered two more professors of profound influence: Salo *Baron, the doyen of Jewish history, who imparted a sense of Jewish separateness and vulnerability even after emancipation; and Franz Neumann, the author of an early study of the structure of the Nazi state titled *Behemoth* that focused not on the personality and ideology of Hitler but rather on the four hierarchies of civil service, party, army, and industry that exercised power in Nazi Germany.

Hilberg wrote his M.A. thesis at Columbia under the direction of Neumann on the role of the German civil service in the destruction of the European Jews. When Hilberg asked Neumann about the possibility of expanding on this theme to include Neumann's other three hierarchies for his Ph.D. thesis, Neumann agreed but warned, "It's your funeral." Neumann's influence was crucial in another way as well, in that he found Hilberg work with the War Documentation Project in Alexandria, Virginia, sorting through the original complete files of captured German documents. This deepened Hilberg's understanding of the workings of the German bureaucracy and his virtually unparalleled familiarity with its documentation.

He completed his dissertation under William Fox in 1955, and then expanded upon it yet further by writing additional chapters. In the spring of 1956, he joined the Department of Political Science at the University of Vermont, which would remain his academic home until retirement in 1991 but did not teach the Holocaust. Only in the early 1970s, at the urging of a colleague and students, did he begin teaching a course on the Holocaust.

Hilberg's initial attempts to publish his massive study of the destruction of the European Jews failed. Columbia University Press, Yad Vashem, Princeton University Press, and the University of Oklahoma Press all in turn rejected it. With the help of a private subvention, *The Destruction of the European Jews* was finally published by Quadrangle Press in Chicago in 1961. Though totally unnoticed at the time and appreciated only in retrospect, this event – in the same year as the Eichmann trial in Jerusalem – marked the birth of Holocaust studies as a legitimate field of academic study in the United States.

Hilberg's major contribution was to portray the Nazi destruction of the European Jews not as a giant pogrom, but as a bureaucratic and administrative process, requiring specialists of all kinds and successfully eliciting participation from virtually every branch of organized German society. In analyzing this German propensity for widespread participation, Hilberg declared himself little interested in "German race theory" and rarely used the word "antisemitism," but he did emphasize the longstanding negative image of the Jews as "hostile, criminal, parasitical" that was deeply embedded in German culture. Hilberg created an overarching structure for his study through the interplay of two key concepts: a "machinery of destruction" comprising Neumann's four hierarchies – the party, civil service, military, and industry – and a "process of destruction" consisting of three crucial stages – definition, concentration, and annihilation, with each stage accompanied by commensurate expropriation. In *The Destruction of the European Jews*, Hilberg analyzed how the four hierarchies of the "machinery of destruction" carried out the inherent stages of the "process of destruction" in all corners of the German empire.

Hilberg's self-imposed task was to "grasp how this deed was done." Thus the primary focus of his study was on the perpetrators and the primary source was the entire collection of 36,000 captured German documents selected and numbered as "Nürnberg documents" for possible use in the postwar trials.

It was precisely through his exhaustive research on German policies through German documents that Hilberg concluded that some account of "Jewish response" was also essential to understanding "how this deed was done." He presented a spectrum of Jewish response – resistance/alleviation/evasion/paralysis/compliance – and argued that over centuries Diaspora Jews had learned that "alleviation" and "compliance" were more productive survival strategies (i.e., predictably resulting in the "least damage and least injury") than "resistance" (by which Hilberg specifically meant armed resistance). When faced with unprecedented Nazi persecution, however, these time-sanctioned survival strategies led to "Jewish institutions" becoming co-opted as "tools" in the process of destruction.

While Hilberg's larger interpretation about the Nazi destruction of the European Jews drew little attention, his comments on Jewish response attracted ferocious criticism, especially after he was specifically cited as an authoritative source by Hannah *Arendt for her own attack upon the behavior of Jewish leadership during the Holocaust in her book *Eichmann in Jerusalem: A Study in the Banality of Evil.* Yet, the arguments of Hilberg and Arendt were significantly different. Hilberg portrayed the subjective attempts of Jewish leaders to help their people through now suddenly obsolete survival strategies as facilitating German perpetrators in their use of Jewish leaders as objective instruments of self-destruction. What Hilberg portrayed as a catastrophic and tragic failure of perception, Arendt in contrast portrayed in terms of seduction by apparent power, self-serving corruption, and ultimately betrayal – in short a searing accusation of moral failure.

Hilberg drew criticism for his narrow definition of resistance and his sober conclusion that Jewish armed resistance had both occurred rarely and hindered the Nazis in no significant way in carrying out the Final Solution was for many yet more salt rubbed in an open wound. Israeli historians sought to create a more heroic image of Jewish response by uncovering many hitherto unknown cases of Jewish armed resistance that were attested to in survivor testimony but never reported in German documents. Such an approach, however, could not alter the fact that most Jewish victims had been women, children, and elderly, and most Jews had never had arms. Others articulated broader definitions of resistance to include many activities undertaken in defiance of or aimed at thwarting German intentions, what Hilberg had considered alleviation and evasion.

As the firestorm gradually subsided, awareness of the true importance of the book began to emerge. Many, but not all, of Hilberg's critics, while not dropping their reservations about particulars, began to acknowledge the book's overall achievement with such adjectives as "monumental," and "magisterial." Meanwhile, Hilberg focused his research on two additional projects: the German railway system and the diary of Adam *Czerniakow.

The German railway system was the most non-political and non-ideological of institutions that had nonetheless shipped over half the victims of the Holocaust to the death camps. It was also the German institution that, perhaps more than any other, had managed to destroy virtually all-incriminating documentation. In one sense the German railway system was for Hilberg the paradigmatic perpetrator organization. A staff of non-political technocrats facing extreme wartime demands adapted their standard routines to arrange hundreds of one-way charter trains to the death camps, charged per track kilometer at a group rate discount with children under 10 half-price and children under four generously sent to their deaths cost free. As Hilberg noted laconically, the German railway men may have shipped the Jews like cattle but they booked them like any other passengers! Quite simply, the trains were utterly indispensable to the Final Solution. The resulting book was published only in German as *Sonderzuege nach Auschwitz* ("Special Trains to Auschwitz") in 1981.

It is no small irony that Hilberg, who was said to have neglected Jewish sources, was singularly responsible for the 1979 publication of the English edition of *The Warsaw Diaries of Adam Czerniakow,* one of the two most important sources on the Jewish councils (the other being *The Chronicles of the Lodz Ghetto*) that survived the war. The English reader now could encounter a tragic figure who rolled his Rock of Sisyphus up the hill every day, knowing full well that it would come rolling back down each night. Consumed by a sense of obligation and untouched by megalomania, Czerniakow persevered in his impossible situation until he reached a line he would not cross. Faced with the demand to deport Jewish children, he took poison.

In the late 1970s, American public consciousness of the Holocaust rose dramatically. For Hilberg, now clearly recognized as America's top scholarly authority on the subject, this meant an increased demand for public and academic appearances. He also began to serve in an advisory capacity to the projected U.S. Holocaust Memorial Museum during the crucial formative years of design and construction, where his unfaltering advocacy for a major research and archival center as an essential component of the museum was successful.

The explosion of new interest in the Holocaust meant the opportunity to produce a revised and expanded edition of *The Destruction of the European Jews* (published by Holmes & Meier in 1985) that incorporated a wealth of new documentation from the Eichmann trial, the numerous postwar German trials of the 1960s and 1970s, as well as much archival material that had not yet been accessible when Hilberg had drafted the first edition in the 1950s.

Having devoted his scholarly life to analyzing the impersonal structures and processes of the Nazi assault on European Jews, Hilberg turned next to a different angle of approach. In this book, *Perpetrators, Victims, Bystanders* (HarperCollins,

1992), Hilberg not only laid out a tripartite scheme and vocabulary of categorization that has left an indelible imprint on the field, but in 24 distinct essays he also examined different subgroups of people within these broad categories as to how their experience, perspective, and behavior related to the Holocaust.

Appointed the John G. McCullough Professor of Political Science at the University of Vermont in 1978, Hilberg retired from teaching at the end of the spring term of 1991. He was, however, by no means done writing. Next to appear was his academic autobiography, published first in Germany in 1994 and then in the United States in 1996, titled *The Politics of Memory: The Journey of a Holocaust Historian*. Written at a time when Hilberg was clearly disappointed that *Perpetrators, Victims, Bystanders* had not escaped from under the shadow of the "monumental" *Destruction of the European Jews*, the memoir is suffused with a tone of melancholy. Others in his situation – widely recognized as a world-renowned scholar who had legitimized the academic standing of and inspired a veritable flood of new research in an entire field of study – might have been tempted to write a celebratory account of a gradual but inexorable triumph over the many obstacles and critics that had stood in his way. But Hilberg focused far more on the difficulties he encountered and the struggles he waged than on the vindication he eventually won. As the subtitle indicated, it was an account of his "journey," not a celebration for reaching his destination.

In general Hilberg identified himself as a "document man." Thus it was fitting that Hilberg turned his attention next to a study of the nature of the documents themselves in *Sources of Holocaust Research*, published in 2001. And finally, in 2004, Yale University Press published the third – further revised and expanded – American edition of *The Destruction of the European Jews*. By far the biggest windfall of new documents for scholars of the Holocaust had occurred just half a decade after the appearance of the second American edition, with the collapse of Communist regimes and the opening of archives in Eastern Europe and the former Soviet Union. Fortunately, he now had the opportunity to incorporate this massive additional documentation into his opus magnum.

[Christopher R. Browning (2nd ed.)]

°**HILDEBERT OF LAVARDIN**, poet and writer, bishop of Le Mans from 1096 and archbishop of Tours from 1125. Nothing in his writings indicates that Hildebert had any personal contact with the Jews. Although one of his sermons is entitled "Against the Jews," the polemic – also aimed at the heretical Christian followers of Helvidius – is confined to the problem of the virginity of Mary; Hildebert takes issue with the Jewish claim that Joseph was in fact the father of Jesus. In a sermon composed for St. James's day Hildebert interprets Isaiah 11:6, "the calf, the young lion, and the lamb will lie down together," as an eschatological vision of the time when the Jew (the calf) and the young lion (the gentile) will be reunited by Jesus (the lamb).

[Bernhard Blumenkranz]

HILDESHEIM, city and former bishopric near Hanover, Germany. A Jewish community subject to the bishop was constituted in Hildesheim toward the middle of the 14th century. It suffered during the *Black Death persecutions (1348–49) but rapidly recovered. There were about 80 Jewish residents in the city in 1379, when the community possessed a synagogue and a cemetery and the Jews lived in a *Judenstrasse*. Almost without exception they made their living as moneylenders. In 1457 all Jews were expelled from the bishopric and the synagogue was torn down.

In 1520 the right of residence was extended to "der Grosse Michel," a Jewish soldier of fortune (see Jud *Michel). He was followed by a small number of other Jewish settlers, including Medicus Herz, the physician to the bishop. In 1595 an attempt to expel the Jews was frustrated when the exiles took legal action before the imperial court and were allowed to return in 1601. In 1662 Elector Maximilian Henry of Bavaria published a letter of protection for the Jews of the city. The same year marked the promulgation of a new series of laws by Jewish authorities dealing with the government of the Jewish community. A synagogue and a cemetery were dedicated in the early 17th century. A second cemetery was consecrated in 1650.

The community grew from 10 families possessing residence rights in 1634 to 40–60 families in 1726. A relative of Joseph Suess *Oppenheimer (d. 1762), who served for many years as tax collector and finance minister to the bishops and was *Landesrabbiner* from 1732, interceded successfully on behalf of Jews without residence permits who were threatened with expulsion in 1741. The community numbered 380 persons in 1812, 513 in 1880 (2% of the total population), and 515 in 1933.

Incorporated into the kingdom of *Westphalia, the Jews of the bishopric enjoyed full equality from 1806 to 1815. In that period an elementary school was founded which continued to exist into the 20th century. When Hildesheim came under Hanoverian rule (1815), the Jews again suffered from legal disabilities. A new synagogue was consecrated in 1849. The rabbinical post of Hildesheim was filled consecutively from the 17th century; notable incumbents included Jacob *Guttmann (1874–92) and his successor A. Lewinsky, rabbi for more than 40 years, who wrote widely on the history of the community. On Nov. 10, 1938 the synagogue was burned down and many shops were looted. By May 1939 only 210 Jews remained. The majority of these were deported, 51 on July 24, 1942, to Theresienstadt. A few returned after the war but by 1970 only eight remained. A Jewish community was reestablished in 1997 after the influx of Jews from the former Soviet Union.

[Zvi Avneri]

HILDESHEIMER, AZRIEL (**Esriel; Israel**; 1820–1899), German rabbi, scholar, educator, and leader of Orthodox Jewry. Hildesheimer, who was born in Halberstadt into a family of scholars, received his early education in the local Jewish school, the first in Germany to include general subjects in its curriculum. He continued his talmudic studies under Jacob Ettlinger in Altona, and attended the lectures of Isaac *Bernays in neighboring Hamburg. At Berlin University he studied Semitics, philosophy, history, and science, and eventually received his doctorate from the University of Halle in 1844. His dissertation, "The Correct Method of Interpreting the Bible," dealt with the Septuagint. By his marriage to the daughter of Aaron *Hirsch he became financially independent, enabling him to pursue freely his university studies and his subsequent career. After receiving his doctorate he returned to Halberstadt and assumed the voluntary post of secretary to the community. In 1847, he began in earnest to fight the rise of the Reform movement. In response to a campaign on behalf of Reform by Ludwig *Phillipson, Hildesheimer wrote a pamphlet, "The Necessity of Protest against the Actions of the Reformers," which was circulated at the Magdeburg Conference in October 1847. In 1848, Hildesheimer succeeded in preventing the Reform community from seceding from the general Jewish community in Halberstadt. However, his overall attempts to maintain the Orthodox hegemony over the German Jewish communities was ultimately unsuccessful. Still and all, he continued to oppose Reform throughout his life. In 1883, he refused to sign a circular meant to counteract an accusation that Judaism had a double standard of ethics, one internal and one external, since it was sponsored by non-Orthodox rabbis. He argued that non-Orthodox rabbis were not to be the proper spokesmen for Judaism. In 1897, he seceded from the General Union of Rabbis in Germany to form the Union of Torah Faithful Rabbis. Nevertheless, he had a very strong belief in *kelal yisrael*, and was willing to work with all segments of the community, especially for the Jewish community in Israel (see below).

In 1851 Hildesheimer was appointed rabbi of the Austro-Hungarian community of Eisenstadt; there he reorganized the educational system and established a yeshivah, where the language of instruction was correct German. He also introduced limited secular studies in the elementary school, while the older students studied mathematics and other subjects that enhanced their yeshivah learning. Many of the courses were taught by Hildesheimer himself. The yeshivah was highly successful, and students came there from all over Europe as well as America. However, despite Hildesheimer's great learning and patent Orthodoxy, the great majority of Orthodox Hungarian rabbis bitterly opposed his modernism and the institution he created. The fact, as reported by his daughter, that he sang German *lieder*, read German literature, and dressed in contemporary German attire was very irksome to the old-school Orthodox rabbinic elite. At a congress of Hungarian Jewry in 1868–69, which met to decide on the establishment of a rabbinical seminary for the whole of Hungary, Hildesheimer and his sympathizers had to contend with both the Reform and the ultra-Orthodox factions. His moderate proposals might have preserved the unity of Hungarian Jewry, but the congress ended in a radical split (see also **Landesrabbinerschule*). In 1868, Hildesheimer was approached by Solomon *Gansfried, author of the *Kiẓẓur Shulḥan Arukh*, leader of the more extreme Orthodox elements in Hungary. Gansfried complained that the Reform had seceded from the general community in his town of Ungvar and had appointed their own *shoḥet* (ritual slaughterer). Since the community was supported by the taxes levied on slaughtered meat, the general community, now the Orthodox one, was losing revenue. Hildesheimer replied that there was little he could do to help, for he was quickly coming to the realization that the Orthodox hegemony over the European Jewish communities was quickly ending.

Despairing of success in Hungary, in 1869 Hildesheimer accepted a call from Berlin to become rabbi of the newly founded Orthodox congregation, *Adass Jisroel. In 1873 he established a rabbinical seminary which later became the central institution for the training of Orthodox rabbis in Europe. Hildesheimer's students carried with them all over the world the notion that their Orthodoxy was compatible with scientific study of Jewish sources. Aside from the halakhically correct *Wissenschaft des Judentums*, the Berlin *Rabbiner seminars* curriculum included Hebrew language as well as secular studies. For Hildesheimer, *Torah im derekh ereẓ* (Torah and worldly knowledge), was not just a slogan. He firmly believed that only by combining a sophisticated knowledge of Torah with a knowledge of science and other secular subjects could a religious Jew attain the Torah goal of fully recognizing and coming close to God.

Hildesheimer shared with S.R. *Hirsch the leadership of the Orthodox Jewish community of Germany. Though the two were personally close, there were fundamental differences of opinion between them. While Hirsch sought separation for the Orthodox, Hildesheimer counseled close cooperation between all bodies in the community for the sake of the Jewish people as a whole. He believed such cooperation to be particularly important in the battle against German antisemitism in which he participated together with his Reform colleagues. In 1894, he joined other Orthodox and liberal rabbis in signing a declaration against antisemitic attacks against the Jews, their institutions (such as *sheḥitah*), and their literature (the Talmud). Solomon *Breuer, Samson Raphael Hirsch's son-in-

law and successor, attacked Hildesheimer for cooperating with Reform. Hildesheimer replied that he was being myopic for not seeing the danger to the entire community. At the same time he vigorously opposed the Reform movement throughout the course of his career as a force undermining the faith of Judaism.

Hildesheimer was an active worker on behalf of stricken Jewish communities throughout the world. In 1864, he published a declaration recognizing the Jewishness of Ethiopian Jewry (republished by M. Waldman, *Sinai* 95). As a member of the central council of the *Hilfsverein der deutschen Juden, he was deeply involved in assisting the victims of Russian pogroms from 1882 onward. He was alone in pleading that the survivors be directed to Ereẓ Israel instead of the New World. Throughout his life, he was an enthusiastic supporter of Palestine Jewry and the building of the *yishuv*. In 1858, together with his brother-in-law, Joseph Hirsch, he founded the Society for the Support of Ereẓ Israel. In Eisenstadt he had collected large sums for Jerusalem Jewry. The Battei Maḥaseh dwellings in the Old City of Jerusalem were erected on his initiative (they were destroyed in 1948 and rebuilt after the Six-Day War of 1967). In 1872 he founded a Palaestina Verein with the object of raising the educational and vocational standards of Jerusalem Jews, particularly by the establishment in 1879 of an orphanage. This drew on his head the bitter antagonism of the ultra-Orthodox old *yishuv*, which placed him under a ban (*ḥerem*). Hildesheimer supported the Ḥovevei Zion and the colonization movement; he was in particularly close contact with R. Ẓevi Hirsch Kalischer. For politico-legal reasons the newly acquired lands of Gederah were registered in his name; his excellent relations with the German Foreign Office were of value in securing its support for the *yishuv*.

Hildesheimer contributed regularly to such German-Jewish periodicals as Ettlinger's *Treue Zionswaechter*, Fuerst's *Orient*, and Lehmann's *Israelit*. In 1870 he founded in Berlin the **Juedische Presse*, which was later edited by his son Hirsch. This paper was the only one in Germany at that time to give unequivocal support to the emigration of German Jews and their settlement in Palestine. Though Hildesheimer's energies were severely taxed by his labors on behalf of the community, his contributions to Jewish scholarship were by no means insignificant. Of particular importance is his edition of **Halakhot Gedolot* from a Vatican manuscript (1888–90), which represented a hitherto unknown version of this important gaonic work. He also published some smaller studies in rabbinics, generally as supplements to the annual reports of the rabbinical seminary. His responsa on the first two parts of the Shulḥan Arukh appeared in 1969. His great dream of publishing a translation of the Torah, together with a traditional commentary, never came to fruition. A collection of his essays, *Gesammelte Aufsaetze* (1923), was edited by his son Meir *Hildesheimer. A festschrift, *Shai la-Moreh* (1890), was published on the occasion of his 70th birthday. Only a small part of his voluminous correspondence has been published (Ed. M. Eliav, 1961).

Hildesheimer's impact on modern Jewish history is best understood by recognizing him as the father of Modern Orthodoxy. Four of his most basic involvements and attitudes form the basis of 20th century Modern Orthodox Jewry: (a) Hildesheimer believed firmly in educating both males and females, giving both a Jewish and secular education. (b) He established a rabbinic seminary where secular studies and academic Jewish scholarship were taught side by side with traditional yeshivah studies, very similar to present-day Yeshiva University. (c) Despite his unceasing efforts to strengthen Orthodoxy and the Orthodox community, Hildesheimer worked with all segments of the Jewish community to combat antisemitism and for the betterment of the entire community. (d) At the same time, he was an ardent Zionist, working for the betterment of those living in Israel and encouraging Jews to settle there.

[Mordechai Eliav / David Derovan (2nd ed.)]

HILDESHEIMER, HIRSCH (1855–1910), German historian and author. Hildesheimer was born in Eisenstadt, Hungary, and received his early religious education from two students of his father, Rabbi Esriel *Hildesheimer, and later under Rabbi Benjamin Hirsch Auerbach in Halberstadt. In 1876, he studied history, classical philosophy, and geography at Berlin University, attending his father's rabbinical seminary at the same time. He later studied at Leipzig under Theodor *Mommsen and received his doctorate there in 1879.

In 1880, Hildesheimer was appointed lecturer in Jewish history and the geography of Ereẓ Israel at the rabbinical seminary, but he had little time for scholarship owing to his communal work. He zealously fought against organized antisemitism and blood libels. The last years of his life were devoted to the defense of *sheḥitah* against it detractors. Hildesheimer procured 300 opinions from veterinary surgeons and professors of physiology and anatomy, all declaring *sheḥitah* to be the most

humane method of slaughtering animals. He was regarded as the leading authority on such problems, questions and appeals being addressed to him from all over the world. Hildesheimer was also active in the *Ḥibbat Zion movement, and his interest in the colonization of Ereẓ Israel was displayed in his efforts to promote the ideals of the *Esra Society in Berlin of which he was a cofounder. Theodor Herzl proposed that he should lecture on the role of charity in Ereẓ Israel at the First Zionist Congress in Basle. Hildesheimer did not attend the Congress, however, fearing that public activity would harm any practical efforts for settlement in Ereẓ Israel, and he withdrew from the Zionist Organization. He participated in the Verein fuer juedische Geschichte und Litteratur, and it was due to him that the school system of the *Hilfsverein der Deutschen Juden remained based on Orthodox Judaism.

Apart from numerous articles published in *Die Juedische Presse*, which he edited from 1883 until his death, Hildesheimer wrote *Beitraege zur Geographie Palaestinas* (1886), an important study of the historical geography of Ereẓ Israel His work in this field was continued by his pupil, Samuel *Klein. He also wrote *Gutachten ueber das rituelle Schaechten* (1894) in defense of *Sheḥitah* and *Die Blutbeschuldigung* (1891) against the blood libel.

BIBLIOGRAPHY: D. Strumpf, in: L. Jung (ed.), *Guardians of Our Heritage* (1958). **ADD. BIBLIOGRAPHY:** H. Hildesheimer, *Ein Gedenkbuch* (1911); M. Breuer, *Modernity within Tradition* (1992), passim.

HILDESHEIMER, MEIR (1864–1934), German rabbi, son of Azriel (Israel) *Hildesheimer. From 1899 he was preacher at the *Adass Jisroel Synagogue in Berlin, then became executive director of the rabbinical seminary founded in Berlin by his father. He was representative of Orthodox German Jewry on many national Jewish organizations, including the Centralverein, the Zentralwohlfahrtstelle, ORT, and OSE, and was also active in the Agudat Israel. Coeditor of the festschriften for A. Berliner (1903), S. Carlebach (1910), and D. Hoffmann (1914), Hildesheimer also edited a collection of some of his father's writings (*Gesammelte Aufsaetze*, 1923).

[Alexander Carlebach]

HILDESHEIMER, WOLFGANG (1916–1991), German writer and artist. As a participant, chronicler, and critic of the business of literature in postwar Germany, Hildesheimer can be regarded as one of the most influential, controversial, and multi-talented writers of his time and place. His oeuvre includes not only brilliant prose, but also radio plays, librettos, graphic art, and theoretical essays and lectures on music, theater, and literature. Biographical projects on Mozart (1977) and on the English aristocrat Sir Andrew Marbot (1981) earned him an international reputation.

Born in Hamburg and raised in Berlin, Nijmegen, and Mannheim, Hildesheimer immigrated with his parents to England in 1933, continuing to Palestine in the same year. He apprenticed as a carpenter in Jerusalem. After three years studying set and costume design in London, he took a job as an English teacher at the British Council in Tel Aviv. In 1943 he became an information officer for the British government in Jerusalem. Returning to London in 1946, he was hired by the American forces in Germany as a simultaneous translator for the *Nuremberg trials, ultimately editing some parts of the transcripts. In the ensuing years Hildesheimer remained in Germany, where his literary career took off. He became a member of the *Gruppe 47*, published short stories (*Lieblose Legenden*, 1952), a novel (*Paradies der falschen Voegel*, 1953) and plays (including *Der Drachenthron*, 1955), and collaborated on radio broadcasts including an opera by Hans Werner Henze (*Das Ende einer Welt*, 1953) and the drama *Prinzessin Turandot* (1954). By then the fate of humanity in the face of ecological devastation had become a lasting concern in Hildesheimer's writings; during the 1970s, not least in his radio plays (*Hauskauf*, 1974, and *Biosphaerenklaenge*, 1977), the fall of civilization becomes the dominant poetic perspective. Finally, the "end of the world" becomes "the end of fiction," the title of Hildesheimer's most provocative lecture (1975). It denies literature's ambition "to condense truth out of fiction," in favor of a world now lost to writers, the realm of science, which has taken over responsibility for converting thought into truth, facts, and reality. As a consequence of this conviction, Hildesheimer stopped his literary production, returning to graphic work for the rest of his life.

Undoubtedly, the path to Hildesheimer's vision of doomed mankind leads past the core scenes of Jewish postwar identity to which he became a late witness during the Nuremberg trials. The Holocaust exemplifies the damage humanity has suffered; the survivors are damaged in their ability to take renewed hold of narration and transform it into coherent, meaningful, promising realities, as depicted in Hildesheimer's prose monologues (*Tynset*, 1965; *Masante*, 1973). But far from being a paradigm, Judaism for Hildesheimer represents first and foremost the experience of a gap that cannot be bridged, a difference that often may require distancing, and always demands vigilance in order to sense the coming threat. Still aware of German antisemitism, he decided in 1957 to transfer his domicile to Poschiavo, Switzerland. Wary of being used as a Jew in Germany's struggle with its past, he avoided letting himself be integrated into the German culture industry. Although he made major contributions to the reestablishment of a completely destroyed literary landscape, Hildesheimer never subscribed to any notion of assimilation, refusing explicitly to continue the tradition of German Jewry – as he quotes Moritz Goldstein – "to hold in trust the cultural heritage of a nation that did not ask us for it."

[Philipp Theisohn (2nd ed.)]

°**HILDUIN** (**Alduin**, **Audoin**, **Audouin**), bishop of Limoges, 990–1012. A Hebrew source records that during Hilduin's term of office, in 994, there occurred a local persecution of the Jews in Limoges, stirred up by an apostate from Blois; the end of the account is missing but everything seems to indicate that the apostate's plan was foiled. It is not impossible that this outrage was connected with an epidemic of St. Anthony's fire which was rife in this same year, especially in Limousin. If the Christian chronicler Adémar of Chabannes is to be believed, Hilduin himself inaugurated an anti-Jewish persecution in 1012: after a series of disputations he gave the Jews of Limoges the alternative of baptism or banishment; according to one manuscript several Jews killed themselves to escape expulsion. However it is also quite likely that this incident was no more than a local manifestation of the general anti-Jewish persecution widespread in France between 1007 and 1012.

[Bernhard Blumenkranz]

HILEWITZ, ALTER (1908–1995), talmudic scholar. Hilewitz was born in Zembin, Russia. He studied at the Minsk University while studying the Talmud clandestinely and received his rabbinic diploma in 1929 from Rabbi Menaḥem Gluskin, the chief rabbi of Minsk.

He was active in the struggle for the rights of Russian Jews to immigrate to Israel, for which he was imprisoned five times, but in 1936 he received permission to immigrate as part of an exchange scheme of Polish Communists for Jews. In Israel he was a member of the editorial board and literary secretary of the *Talmudic Encyclopedia* and editor of the section on Talmud in the first five volumes of the *Encyclopaedia Hebraica* and was responsible for the punctuation of the El Ha-Mekorot edition of the Talmud (1948–52). In 1951 he was appointed rabbi to the Ḥasidic synagogue in Johannesburg (which he relinquished in 1970) and in 1954 principal of the Rabbinical Seminary there, heading it until his return to Israel in 1975. In 1951 he received the Rabbi Kook Prize for rabbinic literature from the Municipality of Tel Aviv. His publications include *Leshonot ha-Rambam* (1951) and *Meḥkerei Zemanim* (Part 1 – 1976; Part 2 – 1980).

HILFERDING, RUDOLF (1877–1941), socialist politician and theorist. Born in Vienna into a wealthy Jewish family, he studied medicine but practiced his profession only rarely and reluctantly. He joined the socialist movement as a student. In 1906 he moved to Berlin, where he was foreign news editor for the social democratic daily *Vorwaerts* until 1915. His main theoretical work, *Das Finanzkapital* (1910), often called the modern extension of Marx's *Das Kapital*, is one of the most important works of Austrian Marxism. At the outbreak of World War I he belonged to the minority in the German Socialist Party which was against the ratification of the war bonds, and in 1917 joined the Independent Social Democratic Party, which opposed the war. From 1918 to 1922 he edited the party paper *Freiheit*. After his party's reunion with the socialist majority he played a leading role in the German Social Democratic Party, twice serving as minister of finance (Aug.–Oct. 1923 in the Stresemann cabinet; June 1928–Dec. 1929 in the cabinet of Hermann Mueller). From 1924 to 1933 he published *Die Gesellschaft, Internationale Revue fuer Sozialismus und Politik*. After Hitler seized power, Hilferding lived in Zurich until 1938 and later in Paris, during this time working regularly for *Neuer Vorwaerts*, the organ of the German Social Democrats. In February 1941 he was handed over to the Nazis by the Vichy police. There is some doubt about how he died: according to one account, he committed suicide in prison, but another relates that he was murdered by the Nazis.

HILFSVEREIN DER DEUTSCHEN JUDEN ("Relief Organization of German Jews"), German Jewish organization founded in 1901 to improve the social and political conditions of the Jews in Eastern Europe and the Orient, especially after the pogroms. The Hilfsverein was planned as a central body for German Jewry on the lines of the French *Alliance Israélite Universelle, and its establishment was opposed by the Alliance; some of the German members of the latter created the Deutsche Conferenz Gemeinschaft within the framework of their own organization. On occasions the Hilfsverein policy was guided by pro-German political objectives such as the introduction of German language teaching in its schools in the Balkans and Ottoman Empire. The Hilfsverein established in Palestine a school system from kindergarten to teachers' training college level, with Hebrew as the language of instruction. The attempt to introduce teaching in German at the planned Haifa *Technion in 1913 caused an international furor in Zionist circles. After the Kishinev pogrom, the Hilfsverein called the Vienna Conference of 1903 to organize relief for Russian Jewry, and a similar conference in London in 1905. During the 1905 revolution in Russia it gave financial help to the self-defense groups of the Bund and Zionists. From 1905 to 1914 the Hilfsverein published a weekly, *Russische Korrespondenz*, in German, English, and French, on the position of the Jews and the liberal and revolutionary movements in Russia. Following a policy of assisting only "organized emigration" of Romanian Jews, the Hilfsverein decided in 1902 not to help those emigrants who were stranded in Germany, but instead to help the Jews in Romania itself. The Hilfsverein became the agent of Jacob *Schiff's project to help Russian Jews to emigrate to the southern United States (the Galveston plan), but in view of the autocratic nature of the German regime was unwilling and unable to assist Jewish emigration to Germany.

On the eve of World War I the Hilfsverein had over 10,000 members in Germany, and followers in America, Russia, and Palestine. During the war the Hilfsverein assisted in interdenominational relief work in the occupied territories in Eastern Europe and distributed American relief funds. However, the assimilationist policy of the Hilfsverein and its Eastern European agencies provoked sharp conflicts with the Zionists and other anti-assimilationist groups. As a result the *American Jewish Joint Distribution Committee began to participate to a greater degree in the allocation of funds formally channeled through the Hilfsverein.

After the defeat of Germany, the Hilfsverein ceased to play a major role in international Jewish matters but joined the Alliance and other non-Zionist organizations, though it refused to take part in the efforts for united Jewish representation at the League of Nations. Through its 290 local committees in Germany (in 1930), the Hilfsverein concentrated mainly on helping Jewish emigration from and via Germany (about 350,000 between 1921 and 1936). After the advent of the Nazi Reich, the Hilfsverein (which in 1935 had to change its name to Hilfsverein der Juden in Deutschland, "Relief Organization of Jews in Germany") was unable to continue with relief work abroad. The Hilfsverein initially advised German Jewry to postpone emigration as long as possible but was forced by circumstances to aid those who wished to leave for destinations other than Palestine. It was officially dissolved in 1939 though it continued to exist until 1941 as an emigration section of the *Reichsvertretung der Juden in Deutschland. Between 1933 and 1941 the Hilfsverein assisted over 90,000 persons to emigrate to overseas countries, with the exception of Palestine. Leading personalities of the Hilfsverein were James *Simon (president until 1932), Eugen *Landau, Paul *Nathan, and Max M. *Warburg.

[Ze'ev Wilhem Falk]

HILKIAH (Heb. חִלְקִיָּהוּ, חִלְקִיָּה; "the Lord is my portion"; e.g., Num. 18:20; Ps. 73:26), son of Shallum or Meshullam (I Chron. 5:28–41, 9:10–11; Neh. 11:11), high priest at the time of King *Josiah of Judah and a principal promoter of Josiah's reform. When arranging for the repair of the Temple, in the 18th year of Josiah, Hilkiah found the Scroll of the Law (see *Deuteronomy), which he gave to Shaphan the scribe, who read it to the king. Much impressed by what he heard, Josiah sent a delegation, headed by Hilkiah, to the prophetess *Huldah in order to inquire of the Lord's will about the words of the Law (II Kings 22:3–20).

On Josiah's orders he removed all the appurtenances of pagan worship that had been introduced into the Temple by King *Manasseh (II Kings 23:8). According to the defective genealogy in Ezra 7:1, which can be restored with the help of I Chronicles 5:28–41, this Hilkiah was an ancestor of Ezra. Hilkiah is also the name of several other biblical characters: (1) the father of Eliakim, palace official of *Hezekiah (II Kings 18:18, 26, 37; Isa. 22:20; 36:3, 22); (2) a levite, son of Amzi and descendant of Merari (I Chron. 6:30 [45]); (3) another levite, son of Hosah (I Chron. 26:11); (4) the father of the prophet Jeremiah (Jer. 1:1); (5) the father of Gemariah (Jer. 29:3), probably identical with the high priest at the time of Josiah; (6) one of the priests who returned with Zerubbabel (Neh. 12:7, 21); (7) one of those who stood beside Ezra during the reading of the Law (Neh. 8:11).

ḤILLA, town in Iraq on the Lower Euphrates, south of the ruins of ancient Babylon; founded in 1102 by the Arab prince Sayf al-Dawla of the Mazyad dynasty. Before this date, however, there was already a settlement named al-Jāmiʿān ("The Two Mosques"), which also included a large Jewish community. Once the town became the seat of the dynasty, it was transformed into an important commercial center and the Jewish population gradually grew, at least in comparison to the decline of the Jewish population in Babylonia during the late Middle Ages. R. Benjamin of *Tudela, the 12th-century traveler, relates that there were 10,000 Jews and four synagogues in Ḥilla, one of them named after R. Meir, whose tomb was situated next to it. R. *Pethahiah of Regensburg emphasizes that the Muslims also revered this tomb. A lengthy letter (mid-12th century) to the community of Ḥilla and its affiliated communities, in which Solomon, head of the *Baghdad academy, announced the death of his son Samuel, is extant. A collection of sermons *Matteh Oz* ("Staff of Strength") by Isaac Sar-Shalom (beginning of 13th century), which he delivered in various places, including Ḥilla, has survived. According to a Jewish source, many Jews were burned to death in one of the town's synagogues at the time of the conquest of the town by Tamerlane (c. 1390). The community continued to exist and even grew in size during the 19th century, so that by the beginning of the 20th century there were about 1,000 Jews. Over a long period – until the beginning of the 20th century – the Jews were persecuted by their Muslim neighbors, who imposed on them limitations considered as belonging to the Covenant of

Omar: the obligation to wear a red badge on their clothes and the prohibitions of wearing shoes, of riding horses and asses in the town, of touching fruits and vegetables and of buying them, and the ruling that no balcony of a Jew should protrude over the street so that a Muslim should not be compelled to pass under it, etc. The Jews engaged in commerce, goldsmithing and money-changing, agriculture, and brokerage in the transport of goods on the Euphrates. The river flowed through the town until the construction of the Hindiyya Canal, which changed the course of the river. Many of the Jews were poor, especially after the construction of the canal; nevertheless, there were also wealthy families, such as the Menaḥem Ṣāliḥ *Daniel family, which owned extensive properties in the town and its surroundings. The *Alliance Israélite Universelle established a school for boys in 1907 and another for girls in 1921 in Ḥilla. In 1950 there were 210 pupils in the former and 180 pupils in the latter. Ḥilla also possessed a very small *Karaite community; all the Jews of Ḥilla emigrated to Israel, with most of the rest of Iraqi Jewry in the early 1950s.

[Eliyahu Ashtor]

HILLEL (**the Elder**; end of first century B.C.E. and beginning of first century C.E.), considered one of the "fathers of the world" (Eduy. 1:4; Tosef. Eduy. 1:3) who laid the foundations for the spiritual and intellectual movement of the tannaitic period. Hillel was one of the last pair of **zugot*. At first *Menahem was his colleague but when he withdrew *Shammai succeeded him (Ḥag. 2:2). After the period of the *zugot*, Hillel's descendants established a dynasty which was to dominate rabbinic circles in the land of Israel for more than 400 years. When dealing with rabbinic or proto-rabbinic figures of Hillel's stature, it is always important to distinguish between the earlier and more historically reliable tannaitic sources, and the later talmudic traditions which often have a more legendary character. In the case of Hillel, however, even the earliest extant rabbinic sources are highly legendary in nature. For example, a tannaitic midrash (Sifre Deut. 357) provides the following outline of Hillel's "biography": "'And Moses was 120 years old' – He was one of four who died at the age of 120, and they are Moses, Hillel the Elder, Rabban Joḥanan ben Zakkai, and Rabbi Akiva. Moses was in Egypt for 40 years; in Midian for forty years; served and lead Israel for 40 years. Hillel the Elder came up from Babylonia at the age of 40; studied under the sages for 40 years; served and lead Israel for 40 years. Rabban Joḥanan ben Zakkai engaged in business for 40 years; studied under the sages for 40 years; served and lead Israel for 40 years. Rabbi Akiva began to learn Torah at the age of 40; studied under the sages for 40 years; served and lead Israel for 40 years." Clearly the point of this midrash is to establish a typological connection between these three rabbinic heroes and their biblical model – Moses. Any attempt to glean concrete historical information from this tradition would therefore be misguided. The notion that Hillel came from Babylonia is attested elsewhere (Tosef. Neg. 1:16; Sifra Tazria 9:15), but beyond this we are on shaky ground. For evidence of Hillel's character we have the following tradition from Tosef. Sot. 13:3: "Once the sages were gathered together in the upper chamber of the house of Guria in Jericho, when a heavenly voice came out and said to them: 'There is one here among you who is worth of receiving the holy spirit (prophecy), but his generation does not deserve it'. They all looked at Hillel the Elder. When he died they said: So humble; so pious – a true disciple of Ezra." This aspect of Hillel's personality developed in later *aggadot* into a stereotypical feature, standing in equally stereotypical opposition to Shammai's presumably harsh and difficult personality. Thus in TB Shabbat (31a) we find the story of three candidates for conversion who were rejected by Shammai and accepted by Hillel because of his "humility," though the terms "patience" and "insight" would better characterize Hillel's behavior there. In this context Hillel is reported to have summarized the entire Torah, saying "What is hateful to you, don't do to your companion" (cf. *The Book of Tobit* 4:15, ed. F. Zimmerman, 70, 159 ff.; *Sifra Kedosh*. ch. 4:12 and *Gen. R.* 24). Another late aggadah (Yoma 35b) tells of Hillel's "humble" origins, i.e., his devotion to the study of Torah despite his abject poverty, which nearly led to his freezing to death on the roof of the study hall when, on one occasion, he was unable to pay the entrance fee. The only obvious connection between this famous story and the earlier tannaitic traditions about Hillel is that the first three letters of the Hebrew word for "humble" also spell the Hebrew word for "poor."

The traditions surrounding Hillel's appointment to the office of *Nasi* deserve special attention. Tosefta Pes. 4:13 tells that on one occasion Passover fell on a Sabbath, and "they asked Hillel the Elder" if the offering of the paschal lamb overrode the Sabbath or not. According to the Tosefta, Hillel responded somewhat cryptically: "Is there only one paschal offering which overrides the Sabbath every year? Are there not more than three hundred "paschal offerings" each year which override the Sabbath?" We are then told that "all [those present in] the Temple courtyard descended upon him" (cf. Tosef. Ḥag. 2:11). Hillel apparently was referring to the daily sacrifice which regularly overrides the Sabbath. He then proceeded to present no fewer than four different legal justifications for his ruling. The first three justifications base the ruling in the case of the paschal offering on a legal precedent – the daily sacrifice. All three involve some form of legal reasoning, and the last two seem to use apparently standard tannaitic hermeneutical techniques for the exposition of scripture. The fourth justification consists of an appeal to accepted religious authority: "Moreover, I have received an explicit tradition from my teachers that the paschal offering overrides the Sabbath." After a brief side discussion the Tosefta concludes: "On that very day they appointed Hillel as *Nasi*, and he instructed them in the laws of the Passover." There are many points in this story which demand clarification. Who asked Hillel this question? Who were Hillel's teachers from whom he had heard this *halakhah*, and why was this tradition unknown to the rest of those present? If Hillel indeed had received such a tradition from

his teachers, why did he at first respond cryptically and then offer three independent and presumably original derivations of this law? If Hillel in fact offered three independent derivations of the law that paschal offering overrides the Sabbath and backed it up with an explicit tradition from his teachers, why do three halakhic Midrashim (Mech. Pisḥa 5; Sifre Num. 65, 142) ascribe a very similar midrashic derivation of this very law to R. Josiah, a much later *tanna*? What is the relation of this tradition to another tannaitic tradition (Tosef. Sanh. 7:11; Sifra, Baraita of Rabbi Ishmael) which states that "Hillel used seven hermeneutical methods before the elders of Patera (Batera)"?

To all these questions the later talmudic tradition (TJ Pes. 6:1, 33a; TB Pes. 66a) provides clear and unequivocal answers – though not always the same ones. First of all, later tradition identifies the events surrounding the paschal offering with the traditions concerning Hillel's use of seven hermeneutical methods before the Elders of Patera, who are apparently viewed as representing established authority in the Temple prior to Hillel's appointment (cf. TJ Kil. 9:3, 32b; TB BM 85a). Moreover, Hillel's "teachers" are identified as Shemaiah and Avtalyon, who preceded Hillel and Shammai in the traditional list of *zugot*. Since an explicit tradition from Shemaiah and Avtalyon must have been known to anyone holding legitimate office in the Temple, the talmudic story begins by stating: "This *halakhah* was forgotten by the Elders of Batera" (TJ; TB: Sons of *Bathyra). After being informed that a certain "Babylonian" named Hillel was present, who had studied under Shemaiah and Avtalyon, the Elders of Batera (apparently reluctantly) turned to Hillel to see if he had anything to offer on the subject. At this point the Babylonain and the Jerusalem Talmuds part ways in relating the story. According to the Jerusalem Talmud Hillel offered three interpretations in order to justify his position, but the Elders of Batera refuted every single one of them. Only when Hillel testified that he had received an explicit tradition on this matter from Shemaiah and Avtalyon, were the Elders of Batera willing to accept his view and to appoint him as *Nasi*. In the Babylonian Talmud, Hillel presents two original scriptural interpretations to justify his ruling, and on the basis of these original interpretations alone, they accepted his view and appointed him as *Nasi*. The difference between these two versions would seem to turn, therefore, on the question of the relative weight one should ascribe to original interpretation as opposed to accepted tradition in the deciding of this halakhic question. The talmudic versions of the story probably do not reflect ancient and reliable historical traditions, but are rather a result of later editorial elaboration and reworking of ancient literary sources. Even the earliest forms of these traditions (Tosef. Pes. 4:13; Tosef. Sanh. 7:11; Sifra, Baraita of Rabbi Ishmael) cannot be simply accepted as accurately representing actual historical events in Hillel's life. Nevertheless, even some of the greatest talmudic scholars have assumed that these traditions – in their latest and most highly elaborated talmudic versions – preserve ancient and reliable historical sources, and have used them as such (e.g. Epstein. ITL. 510–511; Lieberman, Hellenism, 54, no. 58).

Relatively few *halakhot* are actually ascribed in tannaitic sources to Hillel himself. Most of these *halakhot* consist of brief statements of no more than two to five words (Eduy. 1:1–3, Sifra, Shemini 9:5; but see Sifre Zuta Num. 30). Other *halakhot* are indirectly attributed to Hillel (Tosef. Neg. 1:16, Sifra Tazria 9:15; Tosef. Ber. 2:22; Tosef.; cf. Tosef.Ketub. 7:9). Similarly two very important rabbinic decrees – *takkanot* – are attributed to him. These *takkanot* provide evidence of Hillel's interest in civil law and economic matters. The first was the *prosbul, designed to prevent the complete cancellation of debts during the sabbatical year, since with changing economic conditions it became difficult to carry out the biblical law, and the economy which was based upon credit and loans was thereby imperiled (Shev. 10:3; Git. 4:3; Sifre Deut. 113). The second *takkanah* was with regard to the houses of the walled cities which, according to biblical law (Lev. 25:29), could be redeemed by the seller only within the year of the sale. In Hillel's time the buyer who desired to acquire the house permanently would disappear until the last day of the year, so that the seller would be unable to redeem his house. Hillel's *takkanah* provided for the seller to deposit the proceeds of the sale in the Temple treasury, to enable him later to acquire the title to his house (Ar. 9:4; Sifra Behar 4:8).

Hillel's ethical-religious teachings have been preserved in a series of proverbs, some in Hebrew (Tosef. Ber. 2:24; 7:24) and some in Aramaic (Avot 1:13; 2:6), such as: "He who magnifies his name destroys it; he who does not increase his knowledge decreases it, and he who does not study deserves to die; and he who makes worldly use of the crown of Torah shall waste away." The belief in reward and punishment is expressed in the statement, "he saw a skull floating on the surface of the water, and said to it, 'Because you drowned someone, you will be drowned, and the end of those who drown you will be that they will be drowned.'" Later sources present Hillel quoting scriptural verses which he used as proverbs. Thus on one occasion when he heard a loud cry on entering the city, he expressed his confidence that it did not proceed from his house by quoting, "He shall not fear an evil report" (Ps. 112:7; TJ, Ber. 9:5, 14b); and once when he differed from his colleague Shammai, who was in the habit of making provision for the Sabbath from the beginning of the week, he quoted the verse: "Blessed be the Lord day by day" (Ps. 68:20; Beẓah 16a). When he wished to explain to his disciples the importance of personal cleanliness, he resorted to the language of paradox interspersed with proverbs: "When he [Hillel] took leave of his students, he used to go off for a walk. His students asked him: 'Where are you walking to?' He answered: 'To perform a meritorious deed.' – They said to him: 'And what is this deed?' – And he said to them: 'To take a bath in the bathhouse.' – They said to him: 'And is this a meritorious deed?' – He answered: 'It is; if the statues erected to kings in the theaters and circuses are washed and scrubbed by those in charge of them… how much more should we, who have been created in His im-

age and likeness, take care of our bodies, as it is written: For in the image of God made He man'" (Gen. 9:6). Another version of this story runs: "'Rabbi, where are you going to?' – To which he answered: 'To do a charitable deed for a guest in my house.' – They said to him: 'Does this guest stay with you every day?' – He answered: 'This poor soul – is it not a guest in the body, here today and gone tomorrow?'" (Lev. R. 24:3).

The personality of Hillel, in which wisdom was combined with righteousness, and humility with simplicity, became a model of conduct for subsequent generations. The changes that he brought about in his day with respect to the study of the Torah and the methods of promulgating legal decisions caused him to be compared with Ezra, who, like him, came from Babylonia and reestablished the Torah (Suk. 20a). Lavish praise was also showered on his disciples: "Hillel the Elder had 80 students: 30 of them were worthy that the *Shekhinah* should rest upon them, like Moses, our teacher; 30 that the sun should stand still for them, as it did for Joshua son of Nun; 20 were average; the greatest among them was Jonathan b. Uzziel and the least among them Rabban Johanan b. Zakkai" (Suk. 28a).

[*Encyclopaedia Hebraica* / Stephen G. Wald (2nd ed.)]

HILLEL (third century C.E.), scholar. Hillel was the son of *Gamaliel III and the grandson of *Judah ha-Nasi, to whom it would seem in his youth he put halakhic queries (BB 83b). He was the younger brother of *Judah Nesiah. He is mentioned as having paid visits, together with his brother, to Kabul in Lower Galilee and Biri in Upper Galilee, where they were mocked at by the local inhabitants for not acting in accordance with local custom (Tosef., MK 2:15; Pes. 51a). They undertook to conform with the local custom. When they visited R. Zakkai in Kabul "the citizens poured out wine and oil in profusion before them" (Tosef., Shab. 7:17). Hillel is mentioned in several places as a teacher of *beraitot* (Kid. 75a; Git. 37a; Naz. 44b), and he may have been one of the "*tannaim* of the house of Rabbi" (Judah ha-Nasi). Some of the sayings given in tractate *Avot* in the name of "Hillel" may be his. Some regard him as the author of the possibly anti-Christian saying in Sanhedrin 99a: "There shall be no Messiah for Israel, because they have already enjoyed him in the days of Hezekiah" (Graetz).

[Yehoshua Horowitz]

HILLEL (II; 330–365 C.E.), *nasi*, the son of *Judah Nesi'ah and a grandson of *Gamaliel IV. After the crushing of the revolt of the Jews against the emperor Gallus and his commander Ursicinus in 351–52 C.E., which resulted in the destruction of many Jewish communities (Sepphoris, Tiberias, Lydda), new decrees were issued against the internal authority of the communities, and also against the observance of Judaism. The Roman government aspired to limit the privileges of the *nasi* and the freedom of action of the Sanhedrin in Tiberias. Because of the serious condition of the communities of Ereẓ Israel and the deterioration of the Galilean center, Hillel II agreed in principle to limit the authority of the *nasi* and his functions in connection with the proclamation of the New Moon, the fixing of the festivals, and the intercalation of the year. He thereupon published *Sod ha-Ibbur* ("The Secret of Intercalation") and *Kevi'uta de-Yarḥa* ("The Fixing of the New Month"). According to a tradition mentioned by Hai Gaon and quoted in the *Sefer ha-Ibbur* of Abraham bar Ḥiyya (ed. by H. Filipowski (1851), 97) this took place in 358 C.E. Important too is the testimony of Naḥmanides in the *Sefer ha-Zakkut* (Git., ch. 4, Leghorn (1745), 43a): "From the time of Hillel… in the year 670 of the Seleucid era, 4118 A.M. [358 C.E.], the Sanhedrin in Ereẓ Israel ceased and it ceased to have experts, and it was he who regulated the order of intercalation, reckoned the years, and fixed the months for generations to come." Some regard the year 344 as that in which the new *calendar was introduced, and it is possible that it was not immediately publicized to the same degree in all localities (Mahler). The opinion has been expressed that Hillel II was not the original creator of the fixed calendar but that it was the result of centuries of development which aimed at achieving a perfected system of fixing the calendar.

In the well-known letter of *Julian the Apostate to the Jews (written in Antioch in 362) the emperor addressed "the patriach Julius" (Hillel), calling him "brother Julos the patriarch" informing him of the rescinding of the taxes imposed on the Jews in the time of the emperor Constantine, and requesting him to withhold and abrogate the *apostoli* (the payment to the *nasi*) collected by him from the Jews through his emissaries in order to ease their financial position, and at the same time increase their prayers for the welfare of his realm (I. Bidez and F. Cumont (eds.), *Imperatori Juliani epistolae, leges, etc.* (1922), 281).

[Yehoshua Horowitz]

HILLEL, college-campus organization. Jews have been attracted to college and university life since the Haskalah and emancipation opened the doors to higher secular learning. Nowhere has this been more widespread than in the United States where the growth of public and private higher education coincided with expanding economic opportunity and massive European immigration. Colleges and universities in the U.S., reflecting agrarian values, often located in rural areas or small towns far from the major urban Jewish population centers. By the 1920s, more and more Jewish young adults left their homes, communities, and families to matriculate at land-grant public universities where basic Jewish social, educational, and religious needs went largely unmet and where Christian campus ministries and local churches welcomed opportunities to fill the void.

Hillel began as a classic campus ministry in 1923 at the University of Illinois, Urbana-Champaign. Edward Chauncey Baldwin, a philo-Semitic Congregationalist English professor, concerned about the absence of organized Jewish life at Illinois, lobbied Jewish businessmen in Chicago to hire a rabbi and establish a Jewish campus ministry. The Chicago funders appointed Benjamin Frankel, a young, charismatic Reform rabbi, as the first director of the fledgling campus ministry who named the organization for the first-century sage, Hillel, a symbol of open inquiry, lifelong learning, and pluralistic values. The name also resonated with Christian clergy and academics who recognized Hillel as an influential teacher and near-contemporary of Jesus. Operating out of a rented room over a barbershop, Frankel framed key elements of the organization. Unlike the Menorah Society, an earlier student-run club founded at Harvard University in 1906, the University of Illinois Hillel created an infrastructure with a campus professional, dedicated space, and a community-supported budget. In order to sustain and expand Hillel, Frankel also sought national sponsorship. Rebuffed by the Reform movement, he convinced B'nai B'rith to adopt the organization in 1925, and then quickly launched a second Hillel at the University of Wisconsin, and a third at Ohio State University before suddenly and tragically passing away in 1927 at the age of 30.

The Reform movement's historic rejection and B'nai B'rith's timely embrace allowed Hillel to adopt a multi-denominational, pluralistic framework as the all-inclusive Jewish community on campus. Ideally positioned to grow, the campus organization, under the aegis of the largest Jewish fraternal organization in the United States, B'nai B'rith, had grassroots support, deep pockets for that time, a strong interest in Jewish youth, and a big-tent philosophy. Under the leadership of Abram *Sachar, a University of Illinois history instructor and Frankel intimate, who would become director of the B'nai B'rith Hillel Foundations prior to founding Brandeis University, Hillel expanded rapidly by hiring rabbis – rabbis attracted to academic life who in the late 20th century might go into Judaic Studies – to provide critical spiritual, cultural, educational, and social services to Jewish campus communities throughout the United States. Local B'nai B'rith lodges undertook efforts to provide Hillel Houses on or near universities enabling Hillel to serve as "the synagogue on campus," a place where Jewish students could celebrate Shabbat and other Jewish holidays, gain access to kosher food and pastoral counseling, participate in informal Jewish learning opportunities, and socialize with other Jews. In an era when young people typically married in their early twenties, Hillel played a significant role in Jewish dating and courtship. On residential campuses, especially, Hillel offered a "home away from home" and a refuge to Jewish students in an often Christian environment. Hillel professionals with strong Judaic backgrounds pioneered serious university-level Jewish learning in the decades before Jewish Studies earned academic acceptance. When Judaic Studies positions opened in the 1960s and 1970s, many moved seamlessly into the academic world. Hillel also partnered with other Jewish organizations to rescue and resettle Jewish academics and university students before, during, and after the Holocaust.

Sachar played a seminal role in shaping the organization through the Great Depression and World War II. His emphasis on Jewish peoplehood, civilization, and diversity largely shielded Hillel from inter- and intra-denominational conflicts. His pluralistic vision and academic orientation drew like-minded rabbis and Jewish educators who eschewed denominationalism, embraced academic life, championed social activism and preferred informal interaction with young adults to more formal ministrations with multi-generational congregants.

Before the 1960s, the world of Jewish college students generally reflected a deeper Jewish connection. Parents or grandparents were likely to have immigrated to the United States from the centers of Jewish life in Europe. Living in or near urban Jewish communities, the majority of Jewish students shared a basic familiarity, if not a complete understanding, of Jewish ritual, language, and culture. Intermarriage rates were low. Affiliation rates were high. In addition, antisemitism reinforced group identity and limited other outlets and options. Admission quotas held down the number and percentage of Jews at many elite universities. Fraternities, sororities, honor societies, and other organizations openly or tacitly restricted their membership to white Christians. Hillel offered no such barriers to leadership, involvement or socialization as the number of Jewish college students grew as a result of the GI Bill of Rights and the entry of more and more Jewish families into the middle class.

Not surprisingly, the social changes of the 1960s had an immense impact on Jewish life on campus. Jewish men and women were among the beneficiaries of the civil rights revolution as barriers fell, new opportunities arose, and Jews in-

creasingly participated in every aspect of campus life. Jewish students also disproportionately embraced and even led the culture wars of the 1960s, with their concomitant intergenerational conflict, sexual freedom, drug use, radical politics, and anti-institutional bias. Like other campus ministries, Hillel struggled to respond to the challenges of a new era and to be taken seriously in an age of diminished support for organized religious life. Although a number of individual Hillels and Hillel directors rose to the challenge and planted the seeds of organizational transformation, the movement as a whole became marginalized, maligned, and factionalized through the next two decades.

The social upheavals of the 1960s also affected B'nai B'rith, the parent organization, as fraternal organizations lost their primacy in America. Financial cutbacks by B'nai B'rith exacerbated Hillel's problems. Hillel lacked the ability to expand to new campuses with large Jewish enrollments; to recruit and retain quality Jewish professionals; and to attract large numbers of Jewish students. Although Jewish federations began to play an increasingly important role in the governance and funding of local and regional Hillels, they offered little organizational vision. Viewed as ineffective and inconsequential, Hillels were often dismissed for serving both too few students and too many of the wrong kind, the proverbial "Jewish geeks and nerds," who were unable to fit in and find a place within the larger campus community. Even the name "Hillel" became a questionable brand and a potential impediment to revitalizing Jewish campus life.

The decision of the B'nai B'rith Hillel Foundation to hire Richard Joel in 1988 symbolized the desperate condition of the organization. Joel was not a rabbi, in an organization historically identified with the rabbinate. He was a Modern Orthodox Jew in an organization desperate to attract non-Orthodox and unaffiliated Jews. A former prosecuting attorney and law school administrator, he had no prior involvement with Hillel as a student, professional, or lay leader.

Joel dramatically transformed Hillel during his fourteen-year tenure. Articulating a vision of a revitalized Hillel able "to provoke" a Jewish renaissance in America, Joel jettisoned the synagogue model to promote a vision of campus communities supporting a wide range of Jewish organizations and interest groups. He eliminated rabbinic ordination as the *sine qua non* of Hillel employment by expanding and diversifying the ranks of Hillel professionals. He encouraged Hillels to eliminate student membership and dues and championed open-architecture participation over the more traditional affiliation model. He encouraged Hillels to become less building-centered, even as more and newer buildings opened each year, to connect with Jewish students in multiple campus and community settings. He attracted major financial support from key Jewish philanthropists and foundations. He engineered Hillel's independence from B'nai B'rith and deepened the partnership with a Jewish Federation system alarmed by the implications of the 1990 National Jewish Population Survey (NJPS). Like Sachar, Joel would depart from Hillel to become the chief executive of a university with his appointment as Yeshiva University President in 2003.

Hillel entered the 21st century stronger and more vital than ever with a new national headquarters in Washington, D.C., a budget quadruple that of a decade earlier, affiliates at every major university in the U.S. with significant Jewish student populations (except ironically Yeshiva University), a growing presence globally in Israel, the former Soviet Union, and South America and signature programs and partnerships in the areas of Israel advocacy, community service, arts and culture, student engagement, Jewish learning and celebration, and global exchange. With approximately 250 affiliates in the U.S. and Canada serving college and university students on more than 500 campuses, an additional three dozen campus and community-based affiliates in other countries, and a global budget in excess of $60 million, Hillel is viewed widely as one of the early 21st century's major success stories in Jewish organizational life. Thirty-four percent of Jewish undergraduate students in the U.S. participate in Hillel activities, according to a market research study conducted in 2005. Although significantly higher than in prior eras and higher than other Jewish campus organizations, Hillel would face unending challenges in its efforts to double the percentage of Jewish university students searching for memory, meaning and connection in a dangerous and rapidly changing world.

[Jay Rubin (2nd ed.)]

HILLEL, SHELOMO (1923–), Israeli politician and diplomat; member of the Second, Third, and Seventh to Twelfth Knessets and Speaker of the Eleventh Knesset. Hillel was born in Baghdad and immigrated with his family to Palestine in 1933. He studied at the Herzlia Gymnasium in Tel Aviv and was a member of kibbutz Ma'agan Mikha'el, 1941–58. After leaving the kibbutz he settled in Jerusalem and studied economics and public administration at the Hebrew University. In 1946–51 he was involved in organizing the exit of the Jews of Iraq, leading "Operation Ezra and Nehemiah" in the early 1950s, which involved the mass exodus of most of Iraq's Jews to Israel. In 1948–49 he was also involved in organizing illegal immigration from Syria and Lebanon. Hillel was elected to the Second Knesset on the *Mapai list, resigning from the Third Knesset to be appointed Israel's first ambassador to Guinea, where he served in 1959–61. In 1961–63 he served as ambassador to the Ivory Coast, Upper Volta, Niger, and Dahomey. In 1963–67 he was a member of the permanent Israeli delegation to the United Nations, while also holding the position of director of the African Department in the Ministry for Foreign Affairs. In 1967–69 he served as deputy director general for Middle Eastern Affairs.

After being reelected to the Knesset in the elections to the Seventh Knesset on the Alignment list, Hillel was appointed minister of police in 1969, holding the position until 1977. He also served briefly as minister of the interior in 1974 and again in 1977, giving way to Joseph *Burg when the NRP joined the government of Yitzhak *Rabin. In the Ninth Knesset he served

as chairman of the Knesset Interior and Environment Committee. In the Tenth Knesset he served on the Knesset Foreign Affairs and Defense Committee, and in the Eleventh, elected in 1984, was elected speaker of the Knesset. In this post he promoted education for democracy both among youths and adults and acted to stop MK Rabbi Meir *Kahane from presenting racist legislation. During his term as speaker, legislation was passed to prevent lists rejecting Israel as a Jewish and democratic state or advocating racism from running in Knesset elections. After leaving the Knesset in 1988 he was chosen to serve as head of the Foundation Fund in the Jewish Agency. He retired in 1998. Throughout his active political career Hillel supported increased representation for Sephardi members on the Labor Party list and the demand for the return of Jewish property left behind in the Arab states. He is the author of *Operation Babylon* (1987).

[Susan Hattis Rolef (2nd ed.)]

HILLEL BEN ELIAKIM (c. 12th century), talmudic scholar of Greece. Hillel lived in Salaviri near Constantinople, and is variously cited as Hillel of Greece and Hillel of Romania (i.e., Byzantium; S. Krauss, *Studien zur byzantinisch-juedischen Geschichte* (1914), 118). Hillel is best known for his commentaries on the tannaitic Midrashim, some of which are quoted in the works of contemporary tosafists (Sot. 15a; 38a), the *Ittur* of Isaac b. Abba Mari, *Samson b. Abraham of Sens, *Isaiah di Trani the Elder, and other authorities. His commentary on the *Sifrei* was published from a manuscript by S. Koleditzky. In this commentary, which excels in its clarity and simplicity, he establishes the correct text, compares the statements in the *Sifrei* with the parallel passages in the Talmud, and translates the difficult words into Greek. He also includes commentaries from *Hai Gaon, R. Nissim, and *Nathan b. Jehiel of Rome. His commentary is of particular importance in establishing the original text of the *Sifrei*. In addition Hillel wrote a commentary on the *Sifra* (also published by S. Koleditzky), a commentary on the order *Tohorot*, and also responsa.

[Zvi Meir Rabinowitz]

HILLEL BEN NAPHTALI ẒEVI (**Herz**; 1615–1690), Lithuanian rabbi. Hillel was apparently born in Brest-Litovsk, where he was a pupil of the rabbi Hirsch Darshan and, perhaps, of Heshel b. Jacob. In 1650/51 he was appointed a member of the *bet din* of Moses b. Isaac Judah *Lima in Vilna and was one of the signatories to a halakhic decision to the effect that a woman could not be deprived of her right to oppose divorce against her will. He remained in Vilna until 1666, and after serving in various Lithuanian towns, the last of which was Keidany, he was appointed rabbi of Altona-Hamburg in 1670. Shortly after his arrival the joint communities of Altona, Hamburg, and Wandsbeck, following a schism which had taken place, again united. One of the conditions of unification was that there be one rabbinate for the three communities, and Hillel served in this office from 1671. Various communal *takkanot* were enacted for the united communities during his period of office. In 1680 he returned to Poland and was appointed rabbi of Zolkiew, where he remained for the rest of his life. Hillel was active in the *Councils of the Lands in Jaroslaw, taking part in various consultations of the Council in 1684, as well as in the formulation of *takkanot* in halakhic matters and in the life of the Jews of Poland.

In his old age, Hillel requested his son Moses – who was *av bet din* and preacher in Vilna and later *av bet din* of Kepno – to arrange his novellae on the four parts of the Shulḥan Arukh, and in his will bequeathed his estate to that purpose. His son, however, succeeded in publishing only the novellae to *Yoreh De'ah* and *Even ha-Ezer*, under the title *Bet Hillel* (Dyhernfurth, 1691) with the approbation of the Council of Jaroslaw. He omitted from his father's work, however, halakhic rulings in which his father had been anticipated by earlier scholars and added his own glosses. Hillel's novellae to the other parts of the Shulḥan Arukh have remained in manuscript, as has a homiletical and kabbalistic commentary to the Pentateuch. His importance as a halakhist is reflected in Jacob *Emden's designation of him as "the pious rabbi and halakhic authority, Bet Hillel."

[Yehoshua Horowitz]

HILLEL BEN SAMUEL (c. 1220–c. 1295), physician, talmudic scholar, and philosopher. Since it has been held that Hillel lived in Verona, he has also been called Hillel b. Samuel of Verona; but, in fact, only his grandfather lived in that city. Little is known about Hillel's personality, place of birth, or life. It is known that he came from a rabbinic family, and that his grandfather, *Eliezer ben Samuel, was a tosafist and *av bet din* at Verona. Hillel is first mentioned in a legal document of 1254. He lived in Naples and then in Capua, where he practiced medicine and studied philosophy with Abraham *Abulafia. Earlier he had lived in Rome, where he became friendly with Zerahiah b. Shealtiel *Gracian and with the physician Isaac b. Mordecai (Maestro Gaio), who later served as the physician of Pope Nicholas IV. Most information about Hillel is derived from correspondence between him and these friends. Some scholars, relying upon Hillel's own, rather dubious, testimony, have concluded that between the years 1259 and 1262 Hillel lived in Barcelona, where he was a disciple of *Jonah Gerondi. Hillel's statement that he studied medicine in Montpellier finds no corroboration in other sources. Hillel played a major role in the controversies of 1289–90 concerning

the philosophical works of Maimonides (see *Maimonidean Controversy). Defending Maimonides, Hillel addressed a letter to his friend Maestro Gaio asking him to use his influence with the Jews of Rome against Maimonides' opponents. He also advanced the bold idea of gathering together Maimonides' defenders and opponents in one of the towns on the shores of the Mediterranean, in order to bring the controversy before a court of Babylonian rabbis, whose decision would be binding on both factions. From a second letter to Maestro Gaio, it appears that Hillel's efforts were partially successful: the rabbis of Babylonia, Ereẓ Israel, and Italy supported his idea and placed a ban of excommunication on the instigator of the opposition to Maimonides, *Solomon b. Abraham of Montpellier. Both letters are included in *Ḥemdah Genuzah* (ed. by Ẓ.H. Edelmann (1856), 18a–22b). The first also appears in *Ta'am Zekenim* (ed. by A. Ashkenazi (1854), 70b–73a). Hillel's position may be understood against the background of the religious-philosophical controversy prevalent at that time among the Christians. Under the influence of Christian scholasticism, Hillel believed that the threat to faith stemmed from the adherents of *Averroes, whose views concerning the human intellect brought them to deny the immortality of the individual human soul. While Hillel generally followed Maimonides' rationalistic position, he deviated from Maimonides, who tended toward an allegorical interpretation of miracles and prophetic visions, by holding that these must be taken literally (see *Oẓar Neḥmad*, 2 (1857), 124–43). Hillel's major work is *Tagmulei ha-Nefesh* (written in 1288–91; published from an imperfect manuscript by S. Halberstamm in 1874). The book is divided into two parts. The first part, which itself contains seven sections and is the major portion of the book, deals with the nature of the soul and the intellect, and relies heavily on the earlier literature on this topic. Thus, the first two sections of the first part are mainly a translation of Dominicus Gundissalinus' *De Anima*, also called *Liber Sextus Naturalium*; the third and fifth sections are based on the *Tractatus de Animae Beatitudine* ("Treatise on the Beatitude of the Soul") attributed to Averroes; the sixth section is a copy of the three treatises by Averroes on the conjunction of the hylic and active intellects, from the Hebrew translation by Samuel ibn *Tibbon; and the seventh is a translation of Thomas *Aquinas' *De Unitate Intellectus*. The second part of the book, which deals with the question of the soul's retribution, reflects the influence of *Naḥmanides' *Sha'ar ha-Gemul*. Hillel wrote this work, as he says, to explain the nature of the soul to the Hebrew reader in order to save him from the dangers inherent in blind, non-philosophical faith, on the one hand, and from the extreme conclusions of philosophic speculation, on the other. Hillel, in *Tagmulei ha-Nefesh*, maintains that the soul is a "formal substance" which is spiritual and emanates directly from the supreme being, God. The ultimate aim of the soul is to unite with the active intellect. On the question of whether there exists an infinite number of independent souls or a single soul for all individuals, Hillel follows Averroes in maintaining that there is a universal soul, from which the souls of individuals emanate like rays from the sun. However, while Averroes believed in collective immortality, Hillel, following Aquinas, believed in individual immortality. The arguments which Hillel used to prove that the immortality of the soul is individual were actually those of Thomas Aquinas. Hillel advanced these proofs of the individual immortality of the soul mainly in order to substantiate his notion of reward and punishment which he discusses in the second part of the work. In Hillel's view, which was also influenced by the Christian scholasticism of his day, the soul's retribution was spiritual rather than physical – its reward consisting in drawing close to God, its punishment in removal from God. Though Hillel does remain faithful to Jewish tradition in his description of *Gan Eden* and *Gehinnom* (heaven and hell), details of his description reflect the influence of Christian scholasticism. In addition to *Tagmulei ha-Nefesh*, Hillel wrote a commentary on the 25 propositions appearing at the beginning of the second part of the *Guide*, and three philosophical treatises, which were appended to *Tagmulei ha-Nefesh*: the first on knowledge and free will; the second on the question of why mortality resulted from the sin of Adam; the third on whether or not the belief in the fallen angels is a true belief. It is uncertain whether the commentaries on three philosophical treatises by Maimonides (published in *Ḥemdah Genuzah*, 31b–36a) which are attributed to Hillel were actually written by him. In *Tagmulei ha-Nefesh* Hillel mentions a work that he wrote himself, entitled *Ma'amar ha-Darban* (or *ha-Darkan*), dealing with tales of miracles in the *aggadah*. However, preserved excerpts of the work (Paris, Bibliothèque Nationale, Cod. Héb., 704; published by Goldblum in *Mi-Ginzei Yisrael be-Paris*, 1894) offer only an explanation of philosophical terms. Hillel also translated the pseudo-Aristotelian *Liber de causis* under the title *Ma'amar Lamed Bet Hakdamot* (extracts contained in *Tagmulei ha-Nefesh*). In composing this translation he apparently relied on Aquinas' commentary on this work. He also translated several important medieval works from Latin into Hebrew, which served in his time as textbooks for teaching medicine: (1) *Sefer Keritut* (*Chirurgia Magna*) of Bruno de Lungoburgo, which was written in 1254 (Parma, De Rossi Ms. 1281; the preface is found in *Tagmulei ha-Nefesh*, 43a–44b); (2) parts of Hippocrates' *Aphorisms* with Galen's commentaries; and (3) *Melekhet Ketannah*, Galen's *Micra Techne*, according to the Latin translation by Gerard of Cremona. Hillel, whose strength lay in his translations rather than in his original philosophical works, was a characteristic figure of the height of the scholastic period. The subjects with which he dealt, especially the question of the soul's retribution, are also dealt with by Thomas Aquinas, Dante, and *Immanuel of Rome. Despite his rationalism, Hillel emphasized, to a greater extent than did his predecessors, the dangers to faith inherent in philosophic speculation. Hillel's importance in the history of medieval Jewish philosophy results from his attempt to deal systematically with the question of the immortality of the soul, which Maimonides had avoided discussing at length.

[Joseph Baruch Sermoneta]

HILLEL OF ERFURT (d. before 1426), talmudic scholar. Known also as Hillel the Elder, he was a pupil of Meir b. Baruch ha-Levi of Vienna. From the fact that contemporary rabbis relied on the forms of *gittin* (bills of divorce) drawn up by him in Erfurt, it may be assumed that he occupied a rabbinic position there. Bruell identifies him with a "Hillel" mentioned in a document of 1416 as having been appointed by the margrave chief rabbi of Thuringia, of which Erfurt was the most important Jewish community. In fulfillment of a vow he set out for Ereẓ Israel, but on reaching Vienna was persuaded that his absence would adversely affect Jewish studies at Erfurt, and was absolved from his vow by the local rabbis. He then returned to Erfurt. Responsa and customs of his are quoted by *Isserlein and other scholars.

[Yedidya A. Dinari]

HILLELS, SHELOMO (1873–1953), Hebrew writer. Hillels was raised in Bessarabia, and he served as principal of the Jewish public school of Marcolesti (1902–17). In 1918 he headed the Office of the Federated Councils which was established in Romania to aid the refugees fleeing the Ukraine in the aftermath of the Russian Revolution. In 1921 he moved to Kishinev where he was appointed supervisor of the *Tarbut Hebrew schools in Bessarabia. In 1925 he settled in Palestine where he taught in the Mikveh Israel agricultural school (1925–35) and was the director of Beit Bialik (Bialik House) in Tel Aviv (1935–39). During World War II he lived in the United States. His early pieces appeared in the 1890s in *Ha-Ẓefirah* and in *Ha-Meliẓ*. However, his best works were written after he went to Palestine. His novel *Har ha-Keramim* (Mount of Vineyards, 1931, rev. ed. 1951), a realistic portrait of Bessarabian Jewish farmers, won great acclaim. He wrote stories of Jewish life during the revolutions and pogroms in Bessarabia and the Ukraine: *Be-Himmot Areẓ* (When Earth Totters, 1935); *Taḥat Shemei Besarabyah* (1942); *Arẓah* (1945); and an autobiography, *Tabba'ot be-Sharsheret* (Links in a Chain, 1950). His writings are realistic, and tempered by a profound faith in man. His collected works appeared in six volumes (1950–53). To mark his 80th birthday, the commemorative volume *Shai li-Shelomo* (A Tribute to Solomon) was published by K.A. Bertini and Eliyahu Meitus in 1953.

HILLER, ARTHUR (1923–), Canadian director. Born in Edmonton, Alberta, to Harry Hiller and Rose (née Garfin), Hiller attended the Victoria School for the Performing and Visual Arts, but his studies were cut short due to World War II. Hiller served as a navigator in the Royal Canadian Air Force, fighting the Nazis over Europe. Despite earning a master's degree in psychology from the University of Toronto, he took a job in programming with the Canadian Broadcasting Corporation in 1949. After moving to Los Angeles, he directed numerous television shows, including *Alfred Hitchcock Presents* (1955), *Playhouse 90* (1956), *The Naked City* (1958), *Gunsmoke* (1959), *Route 66* (1960), and the pilot episode of *The Addams Family* (1964). His first feature film was *The Careless Years* (1957) and his first big-budget film was *The Americanization of Emily* (1964). Hiller is best known for directing the 1970 film *Love Story*, which garnered him his only Oscar nomination and the Golden Globe for best director. In the early 1970s, Hiller and his wife smuggled clothing and books about Judaism to Russian refuseniks. Hiller went on to direct a variety of well-received films, including *Silver Streak* (1974), *The In-Laws* (1979), *Making Love* (1982), *Author! Author!* (1982), *The Lonely Guy* (1984), *Teachers* (1984), and *The Babe* (1992). From 1989 to 1993, Hiller served as president of the Directors Guild of America, and from 1993 to 1996 he was president of the Academy of Motion Picture Arts and Sciences. Hiller was given the Jean Hersholt Humanitarian Award at the 74th annual Academy Awards in honor of his charity work.

[Adam Wills (2nd ed.)]

HILLER, FERDINAND (1811–1885), composer and conductor. Son of a Frankfurt merchant, Justus Hiller (originally Isaac Hildesheim), he studied in Weimar and went to Vienna in 1827. He visited Beethoven just before the latter's death. From 1828 to 1835 Hiller was a music teacher and successful pianist in Paris, and was the first to play Beethoven's "Emperor" concerto in that city. He subsequently converted to Christianity, held various positions in Germany and Italy, and was the friend of outstanding composers such as Schumann and Wagner.

In 1850 he founded the Conservatory of Cologne, which he directed almost until his death. Hiller's oratorio *Die Zerstoerung Jerusalems* (1840) is considered his best composition. He also wrote the oratorio *Saul* (1853), cantatas, among them *Rebecca*, operas, symphonies, chamber and vocal music, and settings of the Psalms. Few of his works attained great success. He therefore devoted himself to conducting and to writing the lives of the Romantic composers of his generation, particularly Schumann, Mendelssohn, Chopin, Berlioz, Meyerbeer, and Liszt. His book on musical theory, first published in 1860, was reissued many times (26th edition, 1924). In 1849 he was elected a member of the Berlin Academy.

HILLER, KURT (1885–1972), German socialist theoretician and author. Born in Berlin, Hiller worked as a freelance writer there. In 1926 he was elected president of the Gruppe revolutionaerer Pazifisten. In 1933 the Nazis imprisoned him in the Oranienburg concentration camp, but he escaped to Prague a year later. Hiller lived in London from 1938 until 1955, when he returned to Germany and settled in Hamburg. He had a dialectical mind and considerable literary talent. He attracted many disciples whom he organized into activist groups. The first of these was Der neue Club (1909), out of which came the Neopathetisches Cabarett and the Gnu, the latter sponsoring literary *soirées* for young poets and intellectuals. In 1912 Hiller published *Der Kondor,* the earliest anthology of expressionist poetry. Hiller was an early supporter of socialism and radical pacifism and in 1915 formed an activist movement in which he called for an international federation of the intellect and for politically conscious writers to change the world. He aimed at rule by the intellectuals and the "actualization of the intellect in the state" (*Verwirklichung des Geistes im Staat*, 1925). Hiller was the founder and president of the Neusozialistischer Bund of Hamburg (1956) and described his creed as "libertarian socialism." His ideas are reflected in the titles of his works, which range from *Geist, werde Herr* ("Spirit, Take Over," 1920) to *Rote Ritter* ("Red Knights," 1951). In 1969 Hiller published his autobiography *Leben gegen die Zeit* ("Life against the Time").

[Kurt Pinthus]

HILLESUM, ETTY (1914–1943), writer, religious thinker, and victim of Nazi genocide. Hillesum was born in Middleburg, Netherlands, the eldest of three children of Louis Hillesum, a teacher of classical languages, and Rebecca (Bernstein) Hillesum. Her Russian-born mother suffered from psychological disorders, as did her two gifted brothers, and Hillesum also struggled with depression and mood swings. No one in her middle-class, assimilated family survived the war.

Hillesum studied law, Slavic languages, and psychology at the University of Amsterdam, earning a law degree in 1939. The German invasion of the Netherlands in 1940 terminated her studies. She was strongly influenced by Julius Spier (b. 1887), a Jungian psychoanalyst émigré from Berlin, who became her lover, mentor, and spiritual guide. At his urging, Hillesum began keeping a journal, beginning March 9, 1941 and continuing until her deportation to Auschwitz in September 1943. When the Nazis began rounding up Dutch Jews, the Hillesum family was taken to the Dutch transit camp of Westerbork. Here Hillesum worked for the Jewish Council, the organization charged with implementing Nazi orders in the Jewish community; for a time, her position accorded her some measure of privilege and freedom of movement between Westerbork and Amsterdam. She also worked in Westerbork's hospital, refusing offers of a safe haven outside the camp. Deported to Auschwitz with her family in September 1943, Hillesum was murdered on November 30.

Writing was the emotional center of Hillesum's life. Initially, the journal was less a memoir of the time and more an exploration of her inner life, focusing on philosophical, psychological, and spiritual issues. Eventually, the Nazi genocide cast a shadow over the writing and both the journals and her massive correspondence contain detailed descriptions of the Jews imprisoned at Westerbork, the atrocious conditions in which they were kept, and the brutality of the guards. The writing also speaks of her commitment to give succor to the interned Jews; accepting that she could not alter what awaited Westerbork's inhabitants, Hillesum was determined to be the "thinking heart" of the camp. She struggled to find a way to understand and accept the horrors of the world in which she found herself, and to maintain a sense of meaningfulness even as death became inevitable.

Hillesum entrusted the eight or so notebooks of her journal to her friend Maira Tuinzing, who passed them along to writer Klaas Smelik. In 1981, a selection of her journals was published, receiving great popular and critical acclaim, as *Het verstoorde leen* ("An Interrupted Life"); an English version followed in 1982. Her collected letters appeared in 1982 as *Het dendende hart van de barak* ("The Thinking Heart of the Camp"); they were later published in English as *Letters from Westerbork* (1986). A critical edition of her writing appeared in the Netherlands under the title *Etty: De nagelaten geschriften van Etty Hillesum: 1941–1943* ("Etty: The Posthumous Writings of Etty Hillesum: 1941–1943") in 1986.

[Sara R. Horowitz (2nd ed.)]

HILLESUM, JEREMIAS (1863–1943), Dutch librarian, bibliographer, and historian. He made the Bibliotheca Rosenthaliana in Amsterdam, of which he was librarian, a center of Jewish studies for students and scholars throughout the world. He was the author of numerous monographs and articles, including *Uri ha-Levi, eerste Mohel, Chazzan en Predikant der Portugeesche Joden te Amsterdam in het jaar 1593* (1904); *Menasseh ben Israel* (1899), and several auction catalogues. During the German occupation of Holland he was deported to a concentration camp, where he died.

[Frederik Jacob Hirsch]

HILLMAN, BESSIE "BAS SHEVA" ABRAMOWITZ (1889–1970), labor activist and executive board member of the Amalgamated Clothing Workers of America (ACWA). The fourth daughter of 10 children born to Sarah (Rabinowitz) and Emanuel Abramowitz, Hillman spent the first 15 years of her life in Linoveh, a small town located near Grodno, Russia. Her family enjoyed modest economic success and employed a private tutor for their children. Learning of her pending arranged marriage, Hillman left home and immigrated to Chicago, where she worked briefly in a garment factory. Dismissed when she protested low wages, Hillman was placed on a hiring blacklist. Using an assumed name, she found new employment at Hart, Shaffner, and Marx, another garment factory. When a wage cut was announced, Hillman led a walkout of 16 female co-workers, the catalyst for a strike which eventually involved over 35,000 garment workers. During this time, she met Sidney *Hillman, a fellow garment worker and strike leader. Recognizing Bessie Hillman's leadership skills, the Women's Trade Union League (WTUL) asked her to become an organizer. Over the next five years, she worked closely with Sidney on various labor efforts and supported his candidacy to become the president of an emerging labor union, which became the ACWA in 1915. During this period, the couple fell in love and married in 1916. After marriage, Hillman chose to resign her paid position as a WTUL organizer but remained an active union volunteer until Sidney's death in 1946. With the creation of the ACWA, the Hillmans relocated to New York City, and it was there that their two daughters were born, Philoine in 1917 and Selma in 1921. In additional to her continued involvement in both the WTUL and the ACWA, Hillman also served as the educational director of the Laundry Workers Joint Board and tirelessly campaigned for worker organization, particularly in industries employing large numbers of women. At the end of World War II, Hillman learned that most of her immediate family members in Europe, including three sisters, had perished in the Holocaust. Soon after, Sidney suffered a fatal heart attack and died at the age of 59. Hillman remained active, accepting a paid position of secretary/treasurer of the ACWA. In later years she also involved herself in many other organizations committed to labor and women's issues such as the Office of Price Administration, and upon President John F. Kennedy's appointment, the President's Commission on the Status of Women. Hillman dedicated herself to union recruitment and organization until her death at the age of 81.

Pastello, "A Power Among Them: Bessie Abramowitz Hillman and the Amalgamated Clothing Workers of America," dissertation, Binghamton University (2001); S. Fraser, *Labor Will Rule: Sidney Hillman and the Rise of American Labor* (1991), 98–99.

[Shira Kohn (2nd ed.)]

HILLMAN, DAVID (1895–1974), British artist. Hillman was born in Courland and brought up in Glasgow, Scotland, where his father, Rabbi S.I. *Hillman, was rabbi. He was influenced by the work of his teacher, the portrait painter Solomon J. *Solomon, who also produced works of Jewish biblical interest, but Hillman devoted himself to stained glass in which he made his main reputation. His Jewish background and learning played a fundamental role in his art. He designed some 300 stained-glass windows for Jewish buildings in Britain and Israel. The themes were biblical or related to Jewish traditions. He was the pioneer of a new kind of Orthodox synagogue decoration which used Jewish content without disturbing traditional attitudes to the depiction of form. The principal London synagogues incorporating his work are at Cricklewood, St. John's Wood, and Hampstead Garden Suburb, and include the Central Synagogue; in Israel he contributed to the Hechal Shlomo Synagogue, the President's Synagogue, and Bar-Ilan University. He was a member of the British Society of Master-Glass Painters. In 1914 he was a founder member of the Jewish Association of Arts and Sciences.

[Charles Samuel Spencer]

HILLMAN, SAMUEL ISAAC (1868–1953), Lithuanian rabbi and *dayyan* of the London *bet din*. After serving as rabbi of Berezino, Hillman was appointed rabbi of Glasgow in 1908. He was the moving spirit in calling a conference of rabbis of East European origin in Leeds (1913), which marked a turning point in the recognition of those rabbis in England and the beginning of their influence in the communal and religious life of Anglo-Jewry. In 1914 he was appointed a member of the London *bet din* and, with his profound talmudic knowledge, became its recognized halakhic authority. Shortly after his appointment World War I broke out and Hillman energetically worked to provide for the needs of the many Belgian-Jewish refugees who came to England. As a result he received a reward from the king of Belgium for his services. He was the London correspondent for the great Eastern European rabbis of his time, including H.O. *Grodzinski and *Israel Meir ha-Kohen (the "Ḥafeẓ Ḥayyim"). A number of the letters of the former to him have been published (see bibliography). Resigning his post in 1934, he settled in Jerusalem where he established a yeshivah.

Rabbi Hillman devoted himself to the Talmud and the halakhic midrashim. He wrote on practically every tractate of the Babylonian Talmud, including the *minor tractates (6 vols., 1921–45), tractates of the Jerusalem Talmud (2 vols., 1947–48), all the halakhic Midrashim (2 vols., 1949–50), and the *Yad ha-Ḥazakah* of Maimonides. These works are of special importance to the scholar as they include references to all the relevant novellae scattered through the extensive responsa literature. A volume of sermons also appeared under the same title. Hillman had two children, DAVID HILLMAN, London portrait artist and worker in stained glass, who was an active Zionist, and SARAH, who married R. Isaac ha-Levi *Herzog.

BIBLIOGRAPHY: EẒD, 2 (1960), 84–86; *Ha-Ẓofeh* (Elul 29, 5713 and Sivan 17, 5718); *Mikhtevei H.O. Grodzinski* (1970).

HILLMAN, SIDNEY (1887–1946), U.S. labor leader. Hillman was born in the small town of Zagare in Lithuania, son of an Orthodox flour merchant and grandson of a rabbi. He received a traditional *ḥeder* education, and at the age of 14 was sent to study at a yeshivah in Kovno. There he rebelled against both religion and his father, and became involved in revolutionary socialist politics, spending six months in prison as a result of his participation in the abortive revolution of 1905. Soon after his release Hillman emigrated to England, then to the United States (1907), where, after a short stay in New York, he settled in Chicago. In 1909 he went to work in the Hart, Schaffner & Marx clothing factory and a year later he helped head a strike that spread from the plant to all of the city's 35,000 garment workers. For the next five years Hillman was active as a union organizer and was instrumental in getting the Chicago garment trade to accept the principle of the "union shop." This experience was fundamental in shaping his concept of "industrial constitutionalism," that is, the idea of a structured harmony between labor and management, that was to be his main contribution to the American labor movement.

In 1914 Hillman returned to New York as chief clerk of the Cloakmakers Joint Board in the women's garment industry. Soon after, the United Garment Workers split in two and Hillman was elected president of one of the factions, the Amalgamated Clothing Workers of America, which in 1915 won recognition as chief bargaining agent of New York City's garment workers. As president of the Amalgamated, Hillman set out to achieve sweeping reforms in the industry, by negotiation where possible, through strikes where not. In 1918 the union won a 44-hour week, and in 1920 it was granted a contract that called for a union shop, guaranteed unemployment insurance, and the right to help set production standards. The union also pioneered by going into banking, by means of which it managed to tide many garment businesses through difficult times with loans and stock purchases. The period of the New Deal saw Hillman rise to positions of national leadership. He was appointed to the National Recovery Administration during President Roosevelt's first term and in 1938 he joined Philip Murray and Walter Reuther in forming the Congress of Industrial Organizations (CIO), becoming head of the executive council of its Textile Workers of America. With the outbreak of World War II Hillman became Roosevelt's chief labor adviser. He was appointed labor member of the National Advisory Committee in 1940 and associate director general of the Office of Production Management in 1941. He also served on the Supply Priorities and Allocation Board and was director of the labor division of the War Production Board. At the same time he remained active in the CIO and helped found its Political Action Committee, which sought to commit the labor movement to increased political militancy. After the war his interest also turned to the international labor movement and he was vice president of the World Federation of Trade Unions at the time of his death.

Throughout his career Hillman was sympathetic to the goals of the Jewish labor movement in Palestine. He was chosen one of the "non-Zionist" members of the Jewish Agency Executive in 1929 and as a confidant of President Roosevelt sought to win him over to a more pro-Zionist position.

HILLQUIT, MORRIS (1869–1933), U.S. socialist. Hillquit was born in Riga, Latvia. He settled in New York City in 1886 and was soon involved in the vigorous radical intellectual life of the Lower East Side. In 1888 he helped organize the United Hebrew Trades as a first step in the unionization of immigrant Jewish workers. Entering the Socialist Labor Party, Hillquit led the revolt in the late 1890s against the party's control by Daniel *De Leon. Hillquit opposed De Leon's hostility to the American Federation of Labor, and he fought the attempt to destroy established trade unions through the creation of rival socialist unions. Hillquit insisted that socialists could convince unionized workers that radical change was feasible and desirable, and accordingly he envisioned socialist control of existing trade unions.

In 1900 the Socialist Party of America was formed from an amalgamation of several groups, and Hillquit played a leading role in its affairs until his death. He was an able spokesman for the moderate elements that were in control, and also had a decisive influence in developing the program and ideology of the party. Hillquit's concept of socialism falls within the Marxian Revisionism so popular in the early 20th century. He stressed the compatibility of Marxism with social reform and an ascending standard of living for the worker. A socialist state would result from the conversion of the people, not through violent or direct means, and political action was thus the very essence of the socialist's method. It educated men about socialism, and through electoral victories socialists gained office where they might improve conditions for the workingman, thus accelerating the acceptance of radical social change.

Although often characterized as a compromiser, Hillquit helped write the defiant position of the Socialist Party against American entrance into World War I, and he ran for mayor of New York City in 1917 on a peace platform. He was also unyielding in his opposition to left-wing attempts to take control of the Socialist Party; and though he defended due process in many court battles involving radicals and trade unionists, he was prepared to discard due process when necessary in the continuing strife among factions of the Socialist Party. During the Socialist Party's rapid growth in 1908–12, as in the desperate days of the early 1930s, Hillquit constantly predicted the ultimate victory of socialism in the United States. But clearly success and political power were not immediate possibilities, and they cannot account for Hillquit's lifelong commitment to socialism. As he put it near the end of his life: "To me the socialist movement with its enthusiasm and idealism, its comradeship and struggles, its hopes and disappointments, its

victories and defeats, has been the best that life has had to offer." Among his writings are *Socialism in Theory and Practice* (1909), and *Loose Leaves from a Busy Life* (1934).

[Irwin Yellowitz]

HILLULA (Aram. הִלּוּלָא, "festivity"), especially a wedding celebration (cf. Ber. 30b–31a). Later the term was also used for the anniversary of the death of famous rabbis and scholars because such occasions were often celebrated by popular pilgrimages and rejoicings. According to a late homiletic interpretation (Moses Alsheikh on Job 30:23) the death of a saintly man is a kind of "mystical marriage" of his soul with God. Public *hillula* celebrations take place on Lag ba-Omer, the traditional anniversary of the death of R. Simeon b. Yoḥai (see *Hillula de-Rabbi Shimon bar Yoḥai), and on the 14th of Iyyar, the anniversary of the death of R. *Meir Ba'al ha-Nes, at their respective gravesides in Meron and Tiberias, in Galilee. Outside Palestine, this anniversary was observed with great solemnity in the Jewish community of Djerba (Tunisia). It consisted of a procession with a richly ornamented candlestick (*menorat Shimon bar Yoḥai*), which was followed by eating and drinking with musical accompaniment. A similar *hillula* was observed in Libya and Morocco (and now in Israel) on the first day after Passover, called *Maimuna in honor of the anniversary of the death of Maimonides, who died on Passover.

BIBLIOGRAPHY: J.T. Levinsky (ed.), *Sefer ha-Mo'adim*, 6 (1956) 407–46.

HILLULA DE-RABBI SHIMON BAR YOḤAI, THE FESTIVITY (*hillula) of R. *Simeon b. Yoḥai held in *Meron on *Lag ba-Omer. It originated in the 16th–17th centuries. As early as in the time of Isaac *Luria (16th century) Jews went on Lag ba-Omer to the traditional graves of R. Simeon b. Yoḥai and his son R. Eleazar, where they would "eat, drink, and be merry." Even Luria himself "brought his small son there together with his whole family and they cut his hair there according to the well-known custom and they spent a day of feasting and celebration" (R. Ḥayyim Vital, *Sha'ar ha-Kavvanot*, 2 (1963), 191). The "kindling" is characteristic of the *hillula* in Meron, where the celebrants threw costly garments and money into the burning oil. At the end of the 19th century the rabbis were still strongly protesting the burning of clothes, which they saw as a transgression against the prohibition of purposeless waste, but to no avail. The "kindling" is accompanied by singing and ecstatic dancing. On the next day the ceremony of *ḥalaqa* (from Arabic "to cut hair") is held in which young boys are given their first haircut. The locks of hair are also thrown in the fire. In Israel great numbers from the various communities make the pilgrimage to Meron.

HILSENRATH, EDGAR (1926–), German writer. Born in Leipzig and descending from a family with an East European Orthodox background, Hilsenrath grew up in Nazi Germany with the experience of permanent threat. In 1938 he fled with his mother and brother to Bukovina; in 1941 they were deported to a Romanian ghetto. He described the darkest experience of this time in his first novel, *Nacht* (1964). After 1944 Hilsenrath succeeded in getting to Palestine, from there in 1947 to France, and 1951 to the U.S., where he lived as a writer in New York before moving permanently to Berlin in 1975. Hilsenrath reflects on the catastrophe of the 20th century in his second novel *The Nazi and the Barber* (1971), constituting his literary breakthrough in Germany when the translated version, *Der Nazi & der Friseur*, appeared in 1977. After literary polemics – criticizing the U.S. in the form of an autobiographical satire in *Bronskys Gestaendnis* (1980) and Turkey in the form of a fairy tale in *Das Maerchen vom letzten Gedanken* (1989) – Hilsenrath turned again to Bukovina in his last novels, *Jossel Wassermanns Heimkehr* (1993), an epitaph on the lost world of Eastern Jewry, and *Die Abenteuer des Ruben Jablonski* (1997). Like other survivors of the Holocaust from Jurek *Becker to Georg *Tabori, Hilsenrath developed a non-aesthetic approach to writing, trying to break taboos and speak the unspeakable in an appropriate form.

[Andreas Kilcher (2nd ed.)]

HILSNER CASE, blood libel trial held in Bohemia at the beginning of the 20th century. When on April 1, 1899, the corpse of a murdered seamstress, Anežka Hrůza, was found in a forest near Polna, Bohemia, with a deep cut on the neck, the *blood libel spread immediately and was taken up by the Czech, German-National, and Christian-Social antisemitic press. Leopold Hilsner of Polna, a 22-year-old Jewish vagabond of ill repute and low intelligence, was arrested. The basis of the accusation was the statement of the investigating physicians that only a minute quantity of blood was found in and around the body. Both the investigation and the trial at the Kutna Hora court were conducted with a strong bias against Hilsner – though suspicion was voiced against Hrůza's brother, who immigrated to the United States – and many measures requested by his counsel were not admitted, such as a test of the chief witness' eyesight. The jury condemned Hilsner to death. As the medical faculty had doubted the first medical statement, Hilsner was retried in Pisek. On this occasion he was also charged with the murder of Mary Klima, who had been missing since July 1898, because her corpse was found covered with branches like that of Hrůza. Hilsner named two Jewish accomplices in the

murder, but both had unassailable alibis. He was once more condemned to death.

The central antisemitic personality in both trials was Karel Baxa (1862–1938), counsel for the Hrůza family, who was financed by a joint German-Czech committee and whose invective was spread by the antisemitic press, which named him the "savior of Christendom." (He was later to refute his opinions, and in 1923 was elected mayor of Prague for Beneš' National Socialist Party with the support of the *Židovská Strana (Jewish Party); his later attitude in all Jewish matters was positive.) Of importance was the intervention of T.G. *Masaryk, later the first president of Czechoslovakia, who published two pamphlets demanding a revision of the trial "not to defend Hilsner, but to defend the Christians against superstition." Because of this action, Masaryk became the object of mob demonstrations and his lectures at the university were suspended. However, the popularity he acquired by his stand was to help his cause during World War I, mainly in the United States. Hilsner's sentence was commuted to life imprisonment. Repeated endeavors to renew the trial were unsuccessful, but Hilsner was pardoned when Charles I succeeded to the Hapsburg throne (1916). Until his death in 1927, he traveled as a beggar through the successor states of the Hapsburg monarchy under the name of Heller. When Masaryk, as president, declined to grant him an audience, he reproached him with ingratitude, as he considered that he had made Masaryk famous.

The affair was accompanied by an antisemitic campaign throughout Europe, conducted by the Vienna blood libel "specialist," Ernst Schneider. It led to riots in several towns in Bohemia and Moravia and was one of the main factors contributing to the increase of antisemitism in the Bohemian countryside and to the exodus of many small rural Jewish communities. Its repercussions were felt for many years. After the German invasion (1939), a Czech Nazi-sponsored Fascist organization opened an appeal for funds to erect a monument on the site where Hrůza's body had been found, but it met with no response.

In 1961, a rumor spread in Czechoslovakia that Jan Hruza, brother of the murdered Anežka, made a deathbed confession in the hospital of Havličkov Brod that he had killed his sister. He had wanted to receive the entire inheritance after their parents. After the murder, he allegedly left for the United States. The priest confessor allegedly refused to receive the confession. The Communist authorities, according to the rumor, did not publicize the case for fear that it would add popularity to the memory of the beloved late president Masaryk. There was no verifiable evidence to substantiate the rumor. The Czechoslovakian-born Israeli chargé d'affaires in Prague, Eliahu Kurt Livne (Liebstein), gathered a good deal of evidence about the rumor and sent it to the Israeli Foreign Office.

HIMMELFARB, GERTRUDE (1922–), historian of Victorian England. Born in Brooklyn, N.Y., to Max and Bertha (Lerner) Himmelfarb, she received her B.A. from Brooklyn College in 1942 and also attended the Seminary College of Jewish Studies at the Jewish Theological Seminary. Himmelfarb earned her M.A. in 1944 and her Ph.D. in 1950 at the University of Chicago. Presumably because it was difficult for a married woman with two young children to pursue an active academic career during those years, Himmelfarb was an independent scholar from 1950 to 1965. She became professor of history at Brooklyn College in 1965, teaching there until 1978, when she was named distinguished professor of history at the Graduate Center of the City University of New York; following her retirement in 1988, she became professor emerita.

Gertrude Himmelfarb devoted her scholarly career to understanding the intellectual foundations of British political culture in the 19th century. A prolific and admired scholar, her books include *Lord Acton: A Study in Conscience and Politics* (1952); *Darwin and the Darwinian Revolution* (1959); *Victorian Minds* (1968); *On Liberty and Liberalism: The Case of John Stewart Mill* (1974); *The Idea of Poverty: England in the Early Industrial Age* (1983); *Poverty and Compassion: The Moral Imagination of the Late Victorians* (1991); and *The Roads to Modernity: The British, French, and American Enlightenments* (2004). She also published *Marriage and Morals among the Victorians: Essays* (1986).

In addition to her work on Victorian culture, Himmelfarb addressed contemporary political and cultural issues, criticizing contemporary culture for falling short of the ideals and civic virtues of the Victorian liberals. Her criticism is in line with the conservative political views she shares with her husband, Irving Kristol, and their son William Kristol, likewise important exponents of neo-Conservatism in American politics. Books pointing out the moral failures of contemporary society include *On Looking into the Abyss: Untimely Thoughts on Culture and Society* (1994); *The De-Moralization of Society: From Victorian Virtues to Modern Values* (1995); and *One Nation, Two Cultures* (1999), which calls for a return to such Enlightenment values and Victorian virtues as shame, responsibility, and self-reliance. In *The New History and the Old: Critical Essays and Reappraisals* (1987; revised edition, 2004), Himmelfarb critiqued social history for its leftist inclinations, its moral relativism, and its aversion to the major political transformations of the past, and argued that post-modernism distorted history and harmed the historical profession.

Himmelfarb was the recipient of many awards and honors. She was a member of the council of the National Endowment for the Arts from 1982; the council of scholars of the Library of Congress from 1984; the board of trustees of the Woodrow Wilson Center in 1985–96; and the council of academic advisors of the American Enterprise Institute from 1987.

[Marsha L Rozenblit (2nd ed.)]

HIMMELSTEIN, LENA (**Lane Bryant Malsin**; 1881–1951), U.S. chain store founder. Born in Lithuania, Himmelstein was taken to the United States at the age of 16. After the death of her first husband, David Bryant, she opened a small dressmaking shop in uptown New York City. In 1907 a customer asked her to design and make a maternity dress, then unknown in the country, so that she would not be forced to remain in seclusion, as was then the case with women during pregnancy. Himmelstein's design was an immediate success and, with the help of her second husband, Albert Malsin (d. 1923), her business was enlarged. In 1916 the firm was incorporated under the name of Lane Bryant, Inc., and in 1969 it consisted of more than 100 stores and affiliations. By 1917 sales exceeded $1 million and by 1968 they reached almost $200 million. In addition to maternity dresses, Lane Bryant began to design dresses and accessories for special "plus" sizes, and these became a substantial part of the firm's turnover. She was a pioneer in employee benefits, offering employee support beyond wages. By 1950, the more than 3,500 Lane Bryant employees participated in profit-sharing, pension, disability, and group life insurance plans, and fully reimbursed physician's visits and hospitalizations. Both Lane Bryant Malsin and her husband advocated prenatal care and gave generous support to its advancement. Both were also active in the American Red Cross, the Federation of Jewish Philanthropies, and *HIAS.

Her son, RAPHAEL BRYANT MALSIN (1900–1995), at one time worked as a reporter for the *New York Journal*. In 1929 he was persuaded to enter his mother's firm and in 1938 became its president and helped to expand it. He was also chairman of the boards of Town and Country Distributors and the Coward Shoe Company, Inc. In 1982 the chain was bought by The Limited. For many years Malsin was president of Music for Westchester. He was also chairman of the board of trustees of New York's Hospital for Joint Diseases and was a generous supporter of many Jewish philanthropic causes.

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

HIMMELWEIT, HILDEGARD (1918–1989), British social psychologist. Born Hildegard Litthauer in Berlin, the daughter of a chemist whose family had been prominent in German culture, Himmelweit emigrated to Britain in 1934 after her father's death and was educated at Cambridge. In the early 1940s she qualified as a clinical psychologist at London University, but gained a lasting reputation as a social psychologist and was professor of social psychology at the London School of Economics from 1964. Himmelweit became known for her studies of the effects of television, co-authoring *Television and the Child* (1958), and for her studies of political voting patterns and how individuals came to alter them.

°**HIMMLER, HEINRICH** (1900–1945), Nazi leader and one of Hitler's principal lieutenants. Son of a Bavarian school teacher, Himmler received military training in 1918 but never participated in military action during WWI. After the war he studied agriculture, was active in right-wing and paramilitary organizations, joined the Nazi Party in 1923, and participated in November of the same year in the Munich *putsch*. In 1929, appreciating Himmler's devotion and organizational talents, Hitler appointed him chief of the *SS, the elite guard of the Nazi leadership, which, under his rule, increased from several hundred members to a huge organization of several hundred thousand men. On June 30, 1934, it played a key role in the "Night of the Long Knives," the purge of the leadership of the SA ("storm troops"), the old rival of the SS. By 1939, with the aid of *Heydrich, Himmler had made the SS the mainstay of Nazi rule. Himmler molded the SS into a racist order, based on the presumed existence of a "Nordic race" to be improved and restored to its former greatness by eugenics. Himmler therefore admitted only "Nordics" as members of the order on the basis of their right to rule "inferior races."

With the Nazi accession to power, Himmler became first chief of the Munich police and then commander of the Bavarian Political Police. By spring 1934 he had managed to get the Political Police Forces of all German states, including the Prussian Gestapo, under his control, and by June 1936, he was appointed chief of German police. He incorporated existing concentration camps in Germany into his system of police terror. The defeat of *Poland in September 1939 enabled Himmler to realize his social fantasies further. Appointed Reichskommissar "for the strengthening of Germandom," he ordered the deportation of the Jewish and Polish population from the annexed provinces into the territory of the *Generalgouvernement*, to be replaced by "Reichsdeutsche" and ethnic Germans from all over Eastern Europe, and carried out the confiscation of the evacuees' property. When Hitler charged the SS in 1941 with the "Final Solution" (see *Holocaust: General Survey), Himmler became the butcher of Europe's Jews. He regarded the murder of the Jews as a glorious chapter in German history and gave orders to adapt death camps for the "Final Solution," enabling them to effect the mass murder – the Nazi term was liquidation – of thousands of persons daily and the disposal of their corpses. In a speech to SS Gruppenfuehrer at Posen in October 1943 Himmler praised the integrity of his men, "To have stuck this out and – excepting cases of human weakness – to have kept our integrity, that is what has made us hard." He spoke but urged silence. "This is an unwritten and never-to-be-written page of glory [in German history]."

In the rear of the room his words were recorded for history. In late 1941 and 1942, Himmler ordered the utilization of the concentration camp inmates for war production. Hundreds of thousands of prisoners, including Jews set aside in the "selections" from immediate death in the gas chambers, died as slave laborers of malnutrition and ill-treatment. Thousands more were victims of pseudoscientific experiments that were carried out on Himmler's specific orders. Himmler gradually changed his tactics as Germany began to suffer defeat. In May 1944 he permitted negotiations to exchange Hungarian Jews for trucks needed for the war effort (see Joel *Brand). In November 1944 he assumed that for all practical purposes the Jewish question had been solved, and ordered the dismantling of the gas installations. Before the end of World War II, he allowed the transfer of several hundred prisoners to Switzerland and Sweden, hoping thus to exact better peace terms. As a result, Hitler ordered the arrest of Himmler, before committing suicide himself. In May 1945 Himmler was finally dismissed by Doenitz, Hitler's successor, and killed himself the same month following his capture by the British Army.

[Yehuda Reshef / Peter Longreich (2nd ed.)]

ḤIMYAR, the name of a large tribe in S. Arabia which settled in the mountains south of *Ḥabbān. The name Ḥimyar is found in Greek secular and Church literature in the form ʾΟμηρῖται (also Ιμμιρηνοί), as well as in the *Bet She'arim inscriptions on the series of graves of Jews from *Arabia. The tribe succeeded in expanding its territory of settlement by defeating the inhabitants of neighboring territories, the south Arabian kingdoms, and in stabilizing the last independent south Arabian kingdom before the rise of Islam. There is evidence to support the opinion that the beginning of the Ḥimyarite Era (115 B.C.E., according to most scholars, although there are some who set it a year or two earlier or later, i.e., 117–113 B.C.E.) also designates the beginning of the kingdom of Ḥimyar. In official inscriptions engraved in stone the kings of Ḥimyar preserved the historic titles of the preceding dynasties, each addition to a title designating an additional conquest and the expansion of sovereignty over new territories. The title "king of Sabaʾ, Dhū Raydān, Ḥaḍramawt [Hadhramaut] and Yamanāt and of their Arabians [Bedouins] in the mountains and in the Tihāma [the plains]" (540 CIH, from the year 564 Him., i.e., 449 C.E., engraved by King Sharaḥbʾil Yaʿfur in commemoration of the repair of the Maʾrib Dam, was aimed at emphasizing both the geographic expansion of the Ḥimyarite rule in south Arabia and his historic continuation of the kingdoms which preceded him, after wars lasting hundreds of years. In fact, during the time of Shamir Yuharʿish (305–315) all of south Arabia was under the control of the Ḥimyarites. Later, however, the Abyssinian kingdom on the other side of the Red Sea, which was a dangerous enemy of the Ḥimyarites – especially after Abyssinia accepted Christianity at the time of Constantine the Great (c. 327) – regained its power. After a few years the Abyssinians infiltrated south Arabia, and a Christian mission began to operate among the Ḥimyarites in the middle of the century. Philostorgios, a church scribe who recounts this, admits that Christian propaganda in Ḥimyar was received with great opposition on the part of the Jews. This is the first indication in literature of the existence of Jews in south Arabia. It is reasonable to assume, however, that Jews had lived in this area for hundreds of years previously, and that at least part of the Jewish brigade sent by King Herod with Aelius Gallus (25 B.C.E.) to south Yemen settled in this country (see *Arabia). The attempts by the Christian Abyssinians to conquer Ḥimyar opened the eyes of its inhabitants to the dangers threatening the independence of their land from the Christians, and drew them closer to Judaism and Jewish ideas, which posed no political threats. It is related that the king Ab Karib Asʿad (385–420), who was well known for expanding the borders of Ḥimyar, converted to Judaism. This is the background for the normal Jewish-Arab relations in the south. To a great extent this also explains the activity of the king *Yūsuf ʾAsʾar Yathʾar Dhū Nuwās (Masrūq) in the sixth century. During the following period many south Arabians converted to Judaism. The fourth–fifth centuries C.E. saw the beginning of the national and cultural decline of Ḥimyar-south Arabia. The major reason for this may be seen in the socioeconomic changes which occurred during the decline of the Roman Empire as a result of the victory of Christianity. The decline of interterritorial trade led to the neglect of agriculture and the irrigation of lands, the erosion of dams, reservoirs, and watersheds with resultant floods, etc., and a series of disasters which brought about the wanderings of south Arabian tribes and their settlement in north Arabia. Some of them, the Aws and the Khazraj, settled in the vicinity of *Medina (Yathrib), in the Jewish sections. The decline of south Arabia was caused by a combination of political factors (the Abyssinian conquest), economic factors (the decline of trade with lands of the Roman Empire), and cultural factors (the social schisms between Christians, converts to Judaism, and adherents of traditional gods). The Byzantine conquest, 525–75, was a very difficult period for the country, while the period of Persian rule, 575–630, was also not easy. Nevertheless, with the advent of *Islam the general level of south Arabia was still incomparably higher than that of the *Hejaz.

HINDUS, MAURICE GERSCHON (1891–1969), U.S. author. Hindus, who was born in Bolshoye Bikovo, Belorussia, was taken to the United States in 1905. A prolific contributor to the press from 1917 onward, he wrote many books about the Soviet Union, which he visited in 1923 on an assignment for *Century Magazine* and on a number of other occasions as a freelance writer. These accounts of his travels in the U.S.S.R. include *Humanity Uprooted* (1929), which discussed social conditions and policies in post-revolutionary Russia; *Red Bread* (1931); *The Great Offensive* (1933); *Mother Russia* (1943) and *The Cossacks* (1945), two World War II books; and *House Without a Roof* (1961). Hindus also wrote three novels, *Moscow Skies* (1936), *Sons and Fathers* (1940), and *Magda* (1951). In time his initial sympathy for the Soviet regime gave way to disenchantment with the totalitarian nature of Russian communism. In his autobiography, *Green Worlds* (1938), Hindus described his boyhood in a Russian village and his search for employment on a farm after his arrival in the U.S. This work includes an interesting assessment of the contrasts between country life in the United States and in Russia.

HĪNENI HE-ANI MI-MA'AS (Heb. הִנְנִי הֶעָנִי מִמַּעַשׂ; "Behold, I the poor in deeds"), initial words of the silent prayer recited by the *ḥazzan* before *Musaf on *Rosh Ha-Shanah and the *Day of Atonement, according to the Ashkenazi ritual. In this prayer the *ḥazzan* confesses his imperfection and prays that he be worthy despite his own shortcomings to be the congregation's delegate to bring its supplications before God. The prayer, of anonymous authorship, originated in Europe during the Middle Ages. In the *Reform ritual main parts from it were chosen as *The Rabbi's Prayer,* to be recited at his discretion.

HINRICHSEN, family of music publishers. In 1880, Dr. MAX ABRAHAM (1831–1900), founded the Edition Peters and the Peters Music Library. After Abraham's death the business was inherited by his nephew HENRI HINRICHSEN (1868–1942). Under his direction the firm developed a personal association with such famous composers as *Mahler, *Schoenberg, Richard Strauss, and Hugo Wolf. In 1931 his sons MAX (1901–1965) and WALTER (1907–1969) joined the firm. The original Leipzig headquarters were confiscated by the Nazis in 1939. In 1938 Max settled in London, and established Hinrichsen Edition, Ltd. Walter Hinrichsen, who had emigrated to the United States in 1936, founded C.F. Peters Corporation in New York in 1948. In 1950, new headquarters were founded by the two brothers and Dr. J. Petschull in Frankfurt/Main (C.F. Peters Musikverlag). The firm succeeded in reestablishing Edition Peters as one of the most important music publishers in West Germany. In 1989, the Leipzig firm came into the hands of C.F. Peters-Frankfurt. Today the companies make available globally over 15,000 titles ranging from the Renaissance to the avant-garde compositions of today.

[Naama Ramot (2^{nd} ed.)]

ḤĪRA (Ar. **al-Ḥīra**), capital city of the Lakhmid Arab vassal state of the Sassanid emperors in Persia, located on the Euphrates. The kingdom and the Jewish community supposedly date from the time of *Nebuchadnezzar (sixth century B.C.E.). It flourished during the early centuries C.E., particularly in the fourth century under the prince Imru ʾal-Qays. Contemporary Arab poetry describes several Jewish ceremonies (e.g., *Kiddush*) and attests that Jews were masters of the art of writing, unlike many Arabs of the period. An academy, headed by the Babylonian *amora* *Hamnuna, also flourished at that time. There was close contact between the community at Ḥīra and the leading centers of nearby Babylonian Jewry.

HIRAM (Heb. חִירוֹם, חִירָם, "My-(divine) Brother-is-Exalted," apparently shortened from Aḥiram, a longer form attested as the name of a king of Byblos).

(1) King of Tyre, contemporary of David and Solomon. According to the quotations from Dius and Menander preserved by Josephus (Apion, 1:112–121; Ant., 8:144–149), Hiram was the son of Avibaʿal (Abibalus). He was 19 years old when he ascended the throne, and reigned 34 years (c. 969–936 B.C.E.). Under his rule Tyre became the leading city on the Phoenician coast, and the beginnings of its empire spreading over the whole Mediterranean must be dated from this time. Menander says that Hiram campaigned personally against a revolt of the people of Citium (Kition) (= Larnaka in Cyprus). Furthermore, it is known that he enlarged the island city by uniting it with a smaller island, on which the temple of Zeus (Baal Shamêm) stood. He beautified Tyre and its temples and engaged in extensive constructions, such as embankments and marketplaces. All this demonstrates the rise of the overseas trade, and also the necessity for a bigger harbor for the large "ships of Tarshish." He demolished the ancient temples and built new ones to Heracles (= Melqart) and Astarte. This building program must have influenced the Hebrew kings. The Bible tells of the friendly relations between Hiram and David. W.F. Albright has suggested that the power of the Philistines was broken by an alliance between the Tyrian kings Avibaʿal and Hiram on the one hand (at sea), and David on the other (on land). The messengers of Hiram who brought cedar trees and artisans to build a palace for David (II Sam. 5:11; I Chron. 14:1) presumably had political and mercantile assignments as well. It appears that when David took the census of Israel, the kingdom of Hiram was only a small strip on

the coast; however, in the days of Solomon it must have been much wider, because the land of *Cabul ceded by Solomon to Hiram (I Kings 9:11ff.) must have bordered on Hiram's realm in the west. According to the Bible, the relations between Solomon and Hiram were on a basis of equality. When Solomon succeeded to the throne, Hiram, while congratulating him, took advantage of the opportunity of initiating closer contacts between the two states. After the congratulatory mission had been sent from Tyre, there was an "exchange of letters" (cf. I Kings 5:16ff.; II Chron. 2:2ff.) between Hiram and Solomon until an agreement was signed. According to Josephus "many of the letters… are preserved at Tyre to this day" (Apion, 1:111). In Antiquities (8:50–54) these letters were paraphrased by Josephus (and later by Eupolemos; in Eusebius, *Praeparatio Evangelica*, 9:33ff.). Tyrian aid, skill, and building material, chiefly cedar wood from the Lebanon, were given in exchange for wheat and oil. Furthermore, Hiram received mercantile concessions in exchange for assistance in sending a merchant fleet from Ezion-Geber to Ophir (I Kings 9:26–28). Both Dius and Menander knew of an exchange of riddles between Hiram and Solomon, a story which reminds one of the story of the queen of Sheba "to prove him [Solomon] with hard questions" (I Kings 10:1). B. Mazar has suggested that there may be a direct connection between the cult of Baal-Shamêm, whose worship apparently grew from the 10th century, and Hiram's help in planning, building, and equipping the Temple of Solomon. The date of the founding of the Temple at Jerusalem in the 11th (Jos., Ant., 8:62) or in the 12th (Jos., Apion, 1:126) year of Hiram, which is given by Josephus as based on the Tyrian chronicles, should be rejected; these dates should be applied to the temples rebuilt by Hiram in Tyre. It should be added that Hiram left the throne of Tyre to his son Baal-Ezer. In the *aggadah* Hiram plays a prominent role, because of his assistance in the building of the Temple (cf. Ginzberg, Legends, index).

(2) Another Hiram, whose title "King of the Zidonians" (cf. I Kings 16:31) is found on a bowl discovered in the vicinity of Limassol (Cyprus), was king in Tyre at the time of Tiglath-Pileser III. This Hiram is also mentioned (as Ḫi-ru-um-mu) by the Assyrian king in a list of kings paying tribute to him (next to Rezin of Damascus and Menahem of Samaria; Pritchard, Texts, 283; Tadmor, 89). In another text Hiram is accused of conspiring with Rezin (Wiseman, in: *Iraq*, 18 (1956), 117ff. = Tadmor, 186–87).

(3) Hiram, half-Phoenician, half-Israelite metal craftsman employed in casting the copper (or bronze?) objects for Solomon's Temple (I Kings 7:13–45; II Chron. 2:12–13; 4:11–16).

[H. Jacob Katzenstein]

HIRSCH, ARON SIEGMUND (1858–1941?), German industrialist. Hirsch, who was born in Halberstadt, became one of the principals of the Halberstadt metal business of Aron Hirsch and Sons which his grandfather, ARON HIRSCH (1783–1842), had established in 1806 and in which his own father was a partner. Aron Siegmund early recognized the importance of unifying trade and industry in the production and sale of metals, and he devoted himself to the reorganization of the firm. In 1906, on his initiative, the copper and brass foundry Hirsch Ltd. was founded, and the original firm of Aron Hirsch and Sons was merged in the new concern. The Kupferwerke Ilsenburg und Harz and the Messingwerke at Eberswalde were added later to form one giant enterprise under Aron Hirsch's direction and the enlarged firm achieved a leading role in German economic life. Hirsch held an important place in the life of the Jewish community and was a noted philanthropist. He was chairman of the administrative council of the Akademie fuer die Wissenschaft des Judentums.

BIBLIOGRAPHY: K. Zielenziger, *Juden in der deutschen Wirtschaft* (1930), 199–205. **ADD. BIBLIOGRAPHY:** P. Schulze, "Vom Handelshaus 'Aron Hirsch & Sohn' zu den 'Hirsch Kupfer- und Messingwerken,'" in: J. Dick (ed.), *Wegweiser durch das jüdische Sachsen-Anhalt* (1998), 290–99.

HIRSCH, AUGUST (**Aron Simon**; 1817–1894), German physician, founder of the branch of historical and geographical pathology. Hirsch, who studied in Leipzig and Berlin, had originally intended to enter the Anglo-Indian service. His monumental work, *Handbuch der historisch-geographischen Pathologie* (2 vols., 1860–64), was translated into English (1883). It deals with the geographical distribution of diseases and with their appearance and disappearance throughout the ages. It became a standard textbook on the subject. From 1863 until his retirement he held the chair of medical history at Berlin University. Hirsch was active in the fight against cholera and the plague. He was cofounder of the German Public Health Association and its president from 1871 to 1885. In this capacity, he described various outbreaks of cholera in Prussia and Russia. Hirsch was a prolific writer and made numerous contributions on medical historical subjects. He was also interested in ophthalmology and his *Geschichte der Augenheilkunde* was published in 1877. From 1884 to 1888 he was one of the editors of the *Biographisches Lexikon der hervorragenden Aerzte aller Zeiten und Voelker.*

[Suessmann Muntner]

HIRSCH, EMIL GUSTAVE (1851–1923), U.S. rabbi, scholar, and civic leader. Hirsch was born in Luxembourg and went to the United States in 1866 when his father, Samuel *Hirsch, the chief rabbi of the Grand Duchy of Luxembourg, served a Reform congregation in Philadelphia. After graduating from the University of Pennsylvania (1872), Emil Hirsch studied at the universities of Berlin and Leipzig. His rabbinic studies were pursued at the Hochschule fuer die Wissenschaft des Ju-

dentums at Berlin, which brought him under the influence of Abraham *Geiger, Hermann Heymann *Steinthal, and Moritz *Lazarus. Briefly occupying pulpits in Baltimore and Louisville, Rabbi Hirsch moved to the Chicago Sinai Congregation in 1880, where he remained until his death. For many years he taught rabbinic literature and philosophy at the University of Chicago, which he helped found. He was also the editor of the Bible section of the *Jewish Encyclopedia*, and he contributed scholarly articles to it and to the Hastings *Encyclopedia of Religion and Ethics*. Rabbi Hirsch was generally recognized as the outstanding spokesman for the radical wing of Reform in the United States. As editor of and prolific writer in *The Jewish Reformer* (1886) and *The Reform Advocate* (1891–1923), he widely extended the influence of his forceful preaching. In eloquent prose laced with satirical wit, he defended an evolutionary concept of Judaism – nurtured by German idealistic philosophy – in which the disciplines of *halakhah* yielded to the primacy of the ethical idea. "The Jew was by history called to be the proclaimer of an ethical view of the universe and of man, of ethical monotheism" (*The Reform Advocate*, 2 (1891), 362) summarizes his outlook. Identifying the primary mission of the emancipated Jew with a commitment to social justice, Hirsch championed the rights of organized labor and supported pioneering welfare reforms in Chicago.

Although an opponent of Jewish nationalism, Hirsch spoke of the Jews as a people (*Volk*) and conceded that "the mission of Israel is by no means incompatible with the possible re-nationalization of a Jewish political life. A Jewish state, if truly Jewish, would be founded on the precepts of the prophets and as such be the organized effort of rendering justice real in the interrelations of state and state and man and man" (*My Religion* (1925), 290). For all his liberalism, Hirsch was mordantly critical of Jewish apostates and did not spare kinsmen who turned to Ethical Culture, founded by his friend Felix *Adler. Hirsch summoned the Jew to remain steadfast to his particular vocation until the age of universal humanity dawned.

[Samuel E. Karff]

HIRSCH, ERIC DONALD, JR. (1928–), U.S. literary scholar and educator. Born in Memphis, Tennessee, Hirsch was educated at Cornell University (B.A., 1950) and Yale (M.A., 1953; Ph.D., 1957) and served in the U.S. Navy during the Korean War (1950–52). He taught at Yale (1956–66) and the University of Virginia (1966–2002), where he became university professor of education and humanities, emeritus; he was a visiting professor at Northwestern and Oxford universities and a visiting fellow at the Hoover Institution. He was the founder and chairman of the Core Knowledge Foundation.

A respected academic literary critic whose work was concerned with problems of interpretation and the history of the Romantic movement, Hirsch in 1987 published *Cultural Literacy: What Every American Needs to Know*, a book that told an increasingly conservative country that its schools were failing to teach its children the basic information they needed to succeed, and worse, failing to establish a common, shared culture which Hirsch believes is essential to maintaining democracy. It became a bestseller and launched Hirsch on a new career as an educational reformer. He followed this with *The Dictionary of Cultural Literacy* (1988; revised edition 1993; with Joseph Kett and James Trefil), which collected much of the vital information whose absorption would make for a common culture and economic success. Hirsch also founded the Core Knowledge Foundation (originally the Cultural Literacy Foundation) which has developed a detailed, comprehensive curriculum for elementary schools, intended to "[foster] autonomous and knowledgeable citizens, [give] every person an equal chance, and [foster] community." The curriculum calls for uniform content and instruction by age group and abandonment of "progressive" ideas that he believes rule American public schools and destroy the chances of poverty-stricken students. Critics, while agreeing that content is important, have challenged Hirsch's assumptions and have particularly singled out his refusal to take seriously such issues as racial inequality and underfunding as factors in poor outcomes.

Hirsch's critical works include *Wordsworth and Schelling: A Typological Study of Romanticism* (1960), *Innocence and Experience: An Introduction to Blake* (1964), *Validity in Interpretation* (1967), *The Aims of Interpretation* (1976), and *The Philosophy of Composition* (1977). His educational-reform oeuvre includes, beside *Cultural Literacy* and *The Dictionary of Cultural Literacy*, *A First Dictionary of Cultural Literacy: What Our Children Need to Know* (1991), *The Schools We Need and Why We Don't Have Them* (1996), and an edited volume, *Books to Build On: A Grade-by-Grade Resource Guide for Parents and Teachers* (1996, edited with John Holdren).

[Drew Silver (2nd ed.)]

HIRSCH, JOHN STEPHEN (1930–1989), Canadian theater director. John Hirsch was born in Siofok, Hungary. He lived with his family in Endrod (today Gyoma Endrod). When he was 14, his parents and brother were murdered during the Holocaust. Hirsch was first hidden from the Nazis by a maid who secreted him to the Budapest ghetto where he survived the war. A Jewish orphan in postwar Europe, he was part of a group of 175 Jewish children smuggled out of a Displaced Person's camp into Romania. From there he was taken to Greece, then Palestine, before finally coming to Canada. He arrived in Winnipeg, Manitoba, in 1947, where he and another orphan boy were welcomed into the home of a local Jewish family.

Hirsch first studied English in classes organized by the National Council of Jewish Women and went on to study at the University of Manitoba. In 1957 he co-founded (with Tom Hendry) Theatre 77, which, in 1958, joined with Winnipeg Little Theatre to become the country's first regional theater, the Manitoba Theatre Centre. Hirsch was the company's first artistic director. He went on to become associate director of the Stratford Festival in 1967–69 and was its director between

1981 and 1985. He was head of CBC television drama from 1974 to 1978. He directed at the National Arts Centre, Toronto Arts Productions (now CanStage), Young People's Theatre (now Lorraine Kimsa Theatre for Young People), and the Shaw Festival. He also directed in the United States, where he won Obie, Outer Critics, and Los Angeles Critics awards for his productions. Hirsch was awarded the Order of Canada in 1967 and was one of the first high-profile Canadian artists to die of AIDS. Before his death he made a bequest to the Jewish Immigrant Aid Service which has been used to set up a Scholarship Fund to support students in the arts and performing arts.

[Joel Greenberg (2nd ed.)]

HIRSCH, JOSEPH (1910–1981), U.S. painter and lithographer. Born in Philadelphia, Hirsch studied at the School of Industrial Design (1928–31) before he moved to New York. As a Works Progress Administration artist he painted the mural *Football* for Benjamin Franklin High School in Philadelphia. During World War II Hirsch produced around 75 paintings and drawings as an artist-correspondent for the U.S. Navy in the South Pacific and for the U.S. Army in Europe. He is best known for his social realist work in the 1930s in which he rendered the human condition in a representational manner.

[Samantha Baskind (2nd ed.)]

HIRSCH, JUDD (1935–), U.S. actor. Hirsch was born in the Bronx, New York. His first success on Broadway was in a revival of Neil Simon's *Barefoot in the Park* (1966). Hirsch followed this with two off-Broadway hits, *Scuba Duba* (1967) and *Hot L. Baltimore* (1973). He then moved back to Broadway in Jules Feiffer's play *Knock Knock* (1975) and won the Drama Desk Award for Best Featured Actor of 1975–76. Hirsch then starred in Neil Simon's *Chapter Two* (1977) and Lanford Wilson's *Talleys' Folly* (1980), for which he won an Obie Award for Best Actor and was nominated for a Tony Award. He then had a successful run with Herb Gardner's comedy *I'm Not Rappaport* (1985–88), garnering a Tony Award for Best Actor in 1986. Gardner's *Conversations with My Father* (1992–93) earned Hirsch another Best Actor Tony in 1992. His subsequent Broadway performances were in *A Thousand Clowns* (1996), *Art* (1998), and the short-lived *Sixteen Wounded* (2004).

Hirsch starred in the popular television sitcom *Taxi* (1978–83), winning two Emmy Awards (1981, 1983) for his role as the affable cabbie Alex Rieger. He starred in several other TV series as well, although none were as successful as *Taxi*. These include *Dear John* (1988–91), for which he shared a Golden Globe in 1989 for Best Actor in a Comedy Series with Richard Mulligan and Michael J. Fox. He also served as the narrator of the 2003 documentary miniseries *Heroes of Jewish Comedy.*

Hirsch began his film career with a small role in the 1971 movie *Jump* and a bit part in *Serpico* (1973). He then landed a major role in *Ordinary People,* for which he received an Oscar nomination for Best Supporting Actor in 1980. His subsequent major film appearances include *Without a Trace* (1983); *The Goodbye People* (1984); *Teachers* (1984); *Running on Empty* (1988); *Independence Day* (1996); *Out of the Cold* (1999); *A Beautiful Mind* (2002); and *Zeyda and the Hitman* (2004). Hirsch was also the narrator of the 1986 film *Isaac in America*. Nominated for an Academy Award for Best Documentary, it tells the story of author Isaac Bashevis *Singer.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

HIRSCH, JULIUS (1882–1961), economist. Born in the Rhineland, Germany, Hirsch began teaching at the Graduate Business School in Cologne in 1911. During World War I he was deputy head of the German price control administration. As secretary of state in the German Ministry of Economics from 1919 to 1923, he took part in negotiations on German reparations, designed plans for the stabilization of German currency, and was instrumental in drafting anti-trust legislation and creating economic advisory councils. A visit to the United States in 1924 resulted in *Das amerikanische Wirtschaftswunder* (1926), a study of U.S. mass production and distribution, and of the non-Marxist policies and tactics of the U.S. labor movement. From 1926 to 1933 Hirsch taught in Berlin, both at the university and at the Graduate Business School, and served as a consultant to many public institutions. He left Germany for Denmark in 1933, and for several years was a professor at the Copenhagen Graduate Business School. In 1941 he emigrated to the United States, where he taught at the New School for Social Research. He also served as chief consultant for the U.S. Office of Price Control, and later as a private economic consultant.

Hirsch's professional interests were focused on two major topics – distribution and quantitative economic analysis – and both are reflected in his numerous publications. These include *Das Warenhaus in Westdeutschland* (1910), *Die Filialbetriebe im Detailhandel* (1913), *Die deutsche Waehrungsfrage* (1924), *Deutschlands Betriebskapital* (1927), and *New Horizons in Business* (1955).

His wife EDITH (1900–2003), the daughter of the Berlin banker Adolph Jarislowsky, was active from 1931 to 1933 in establishing kitchens for the unemployed based on the principle of self-help. In the United States she was active in her husband's firm. Her special interests were agro-economics, the world food situation, and commodity problems. Specializing in agricultural trends and food distribution, she served as a consultant to the Department of Agriculture in the 1940s and 1950s. In 1946 she wrote *Food Supplies in the Aftermath of World War II*. To give the book more credibility, it was issued under her husband's name; but in 1993 it was republished under the name of its rightful author. She was a professor of economics at the New School of Social Research. She was a board member of the *Leo Baeck Institute in New York.

BIBLIOGRAPHY: K.C. Behrens (ed.), *Der Handel heute: In Memoriam Julius Hirsch* (1962).

HIRSCH, MARKUS (**Mordecai Amram;** 1833–1909), rabbi. Born in Tiszabö, Hungary, Hirsch studied at the yeshivot of Pressburg (Bratislava) and Miskolc-Csaba. From 1853 he studied at the yeshivah of S.J. *Rapoport in Prague, and also attended lectures at the university there, served as rabbi of Karcag, and of Tiszabö, and between 1861 and 1880 of Obuda (Alt-Ofen, now part of Budapest). Under Hirsch's leadership this community began to flourish again. He founded a yeshivah and undertook various civic functions. He was appointed to the government commission charged with the arbitration of conflicts within the Jewish communities of Hungary. In 1864, with Rabbi S. Brill of Pest and J. Steinhardt of Arad, Hirsch was entrusted with the task of reorganizing the Jewish elementary school system, as well as with preparing a curriculum for the new rabbinical seminary. He endeavored to mediate between the progressive and Orthodox trends in Judaism, and played the role of conciliator at the General Jewish Congress of Hungary in 1868–69. From 1880 he served the community of Prague and in 1889 became chief rabbi of Hamburg, where he was known as a leader of the enlightened Orthodox movement. His works published in Hebrew, German, and Hungarian include *Divrei Shalom ve-Emet*, and sermons.

[Jeno Zsoldos]

HIRSCH, BARON MAURICE DE (**Moritz Freiherr von Hirsch**; 1831–1896), German financier and philanthropist. Born in Munich, Hirsch was the son of Baron Joseph von Hirsch auf Gereuth (1805–1885, from 1869 Baron) and grandson of Baron Jacob von Hirsch (1765–1840, from 1818 von Hirsch auf Gereuth), founder of the family fortune and the first Jewish estate owner in Bavaria. His mother, Karoline Wertheimer, ensured that Maurice de Hirsch received the best instruction in Hebrew and religion. In 1851 Hirsch joined the banking firm of Bischoffsheim & Goldschmidt in Brussels and four years later married Clara, daughter of Senator Jonathan *Bischoffsheim, head of the firm. He did not, however, become a partner; instead, he pursued his own business interests, mainly the Oriental Railway scheme linking Constantinople to Europe, which was financed by the Turkish Lottery Bonds (1869 concession). Hirsch was granted control of the railway concession by the Turkish government and by personal supervision and skillful engineering ensured the success of the venture. The railway project and pioneer enterprises in the sugar and copper industries brought Hirsch's fortune to an estimated $100,000,000 by 1890, and gained for him a reputation as an outstanding industrialist and financier.

During this period Hirsch became acquainted with the plight of Oriental Jewry and gave the *Alliance Israélite Universelle one million francs for the creation of schools. He provided additional sums for the establishment of trade schools and eventually consolidated his donations to the Alliance in a foundation yielding an annual income of 400,000 francs. Thereafter, he established his own organization, the Baron de Hirsch Foundation, for educational work in Galicia and Bukovina (1888); the *Baron de Hirsch Fund, in New York, for assisting and settling immigrants to the United States (1891) and later Canada; and the Jewish Colonization Association (ICA) to facilitate mass emigration of Jews from Russia and their rehabilitation in agricultural colonies particularly in *Argentina and Brazil. With these foundations (with a capital of several million U.S. dollars), Hirsch became the first Jewish benefactor to plan large-scale resettlement of Jews. The ICA was formed in 1891 after the czarist government had refused Hirsch's offer of 50 million francs to alleviate the miserable conditions of Russian Jewry by establishing a modern education system for the Jews because it was not given complete control over the allocation of the funds. Within a few years the ICA capital stood at about 180 million francs. The objective of the ICA was defined as the purchase of large tracts of land for "… establishing colonies in various parts of North and South America and other countries for agricultural, commercial and other purposes." A central committee was formed in St. Petersburg in 1892 to organize the emigration of Russian Jews (with the agreement of the Russian government), and a governing body was set up in Argentina to direct work in the colonies. Most of the settlers later drifted to the towns. Later the accumulated funds of the JCA were largely directed to agricultural projects in Israel. In 1955 the JCA was therefore renamed the Israeli Colonization Association (ICA). The foundations in the former Habsburg Empire had lost most of their fortunes after World War I and were dissolved by the successor states.

Countering widespread antisemitic prejudice, Hirsch was firmly convinced of the ability of Jews to be successful in agriculture if they were provided with suitable conditions. In an article in *The Forum* (August 1891), he wrote: "My own personal experience, too, has led me to recognize that the Jews have very good ability in agriculture … and my efforts shall show that the Jews have not lost the agricultural qualities that their forefathers possessed. I shall try to make for them a new home in different lands, where as free farmers on their own soil, they can make themselves useful to that country." The main concern of his idea of philanthropy was less relief than improvement through education. Thus he maintained a certain autocratic approach and preferred to guide his donations through the ICA, the Alliance Israélite Universelle, and a few other organizations that had his confidence. His agricultural projects led the Ḥovevei Zion and later *Herzl to request Hirsch's support for the Zionist movement, but Hirsch, who regarded the creation of a Jewish state as a fantasy, refused assistance. It is impossible to assess accurately the amount of money Hirsch devoted to benevolent purposes. He donated large sums to London hospitals and a Canadian fund for helping immigrants, and gave all his horse-racing winnings to phil-

anthropic causes, saying that his horses ran for charity. On the death of his only son Lucien in 1887, he replied to a message of sympathy with the words "My son I have lost, but not my heir; humanity is my heir." His generous donations were made possible by his outstanding economic and personal skills, assets which had made him a central figure in European society; he was counted among the intimates of the Bulgarian Prince Ferdinand, of the Prince of Wales, later King Edward VII, and of the Austrian archduke Rudolph.

[Hanns G. Reissner / Marcus Pyka (2nd ed.)]

His wife, CLARA (1833–1899), was a cultivated woman and accomplished linguist. As a niece of Solomon H. Goldschmidt, the president of the AIU, and a daughter of Jonathan Bischoffsheim, she was conversant with business affairs and philanthropic organization already in her youth. She worked as a secretary first for her father and, after her marriage to Moritz von Hirsch, for her husband, in whose charity interests she played a guiding and counseling role. As well as assisting in the work of founding colonies and developing schools and farms, she worked to relieve the misery of individuals and supported alms-houses and soup kitchens, distributed clothes for children, and financed loan banks for traveling hawkers. Between 1892 and 1895, she donated over 200,000,000 francs. When her husband died in 1896 she became sole administrator of his vast fortune. She continued her husband's work, turning her home in Paris into her administrative office. During the three remaining years of her life she donated $15,000,000 to charitable works in New York, Galicia, Vienna, Budapest, and Paris. In her will she left a further $10,000,000 to endow philanthropic foundations.

HIRSCH, MENDEL (1833–1900), educator and writer. The eldest son of Samson Raphael *Hirsch, from 1855 he taught Jewish and general subjects at the high schools founded by his father in Frankfurt. From 1877 he was their principal and for 17 years was also headmaster of the Jewish elementary school. He contributed a series of articles on pedagogical subjects to the monthly *Jeschurun*, published by his father. Among his other works are *Das reine Menschentum im Lichte des Judentums* (1893; *Humanism and Judaism*, 1928); a German translation of and commentary on the *haftarot, Die Haftorot uebersetzt und erlaeutert* (1896, 1913[2]; also Eng., 1966); on the minor prophets (*Die zwoelf Propheten, uebersetzt und erlaeutert*, 1900); and on Lamentations (*Die Klagelieder*, 1903). In a published lecture (*Der Zionismus*, 1898) Hirsch adopted a stand against political Zionism, while recognizing it as an admission that assimilation had failed.

HIRSCH, OTTO (1885–1941), leader of the German-Jewish community under Nazi rule. Born in Stuttgart, Hirsch studied law. In 1912 he entered the legal profession and was in charge of the municipal Food Control Office of Stuttgart during World War I. In 1919 he was appointed a senior official in the Ministry of the Interior. Hirsch was a member of the board of the *Centralverein, belonging to its pro-Zionist wing, and deputy member of the Jewish Agency and promoted emigration to Palestine and adult Jewish education. In 1919 he became head of the Union of Jewish Communities in Wuerttemberg, and in 1933 he was elected executive chairman of the Reichsvertretung der Juden in Deutschland (later the Nazi-imposed *Reichsvereinigung), a post in which he devoted his efforts to the twofold process of organizing emigration and ameliorating the situation of the remaining Jews. His courageous interventions to free Jews under arrest led to his imprisonment several times by the German authorities, but he rejected several offers from abroad to emigrate and take up another post. He was finally arrested (spring 1941) by *Eichmann, who disliked Hirsch's fearless behavior, including his attempts to influence the Gestapo. Hirsch was murdered at Mauthausen camp on June 19, 1941. A memorial for him was set up in 1959 in Shavei Zion.

[Yehuda Reshef]

HIRSCH, RACHEL (1870–1953), German physician. She was the first Jewish woman to receive the title of professor of medicine in Prussia (1913). In 1905, while working at the Charité Hospital in Berlin, she was the first to describe the unchanged passage of orally given starch grains into the blood vessels through absorption from the intestine. She described the mechanism whereby corpuscular elements, passing through the system of lymphatic vessels, are finally eliminated from the blood through renal capillaries. At that time nobody took her seriously and, greatly disappointed, she discontinued her research. The phenomenon was "rediscovered" some 50 years later by Gerhard Volkheimer, working in the same hospital. At his suggestion the process was named the "Rachel Hirsch Effect." Hirsch was the granddaughter of Samson Raphael *Hirsch, founder of the neo-Orthodox movement in Germany. Miss Hirsch left Berlin when Hitler seized power, and she died in London.

[Suessmann Muntner]

HIRSCH, RICHARD (1926–), U.S. Reform rabbi and Zionist leader. Hirsch was born in Cleveland and earned his B.A. from the University of Cincinnati and B.H.L. from *Hebrew Union College (HUC) in 1947. He received his ordination and M.H.L. from HUC-JIR in 1951. The seminary later honored him with a Doctor of Divinity degree (1976) and a D.H.L. (1999).

After serving as rabbi of Chicago's Temple Emanuel (1951–53) and Denver's Temple Emanuel (1953–56), he was appointed director of the Chicago Federation and Great Lakes Council of the *Union of American Hebrew Congregations (1956–61). In this capacity, he was instrumental in establishing new Reform synagogues, initiated the Live and Learn Institutes (an intensive adult education retreat program), and organized the Chicago Interreligious Conference on Religion and Race.

Hirsch was the founding director of the UAHC Religious Action Center (RAC) in Washington, D.C., charting the course of the Reform movement's national center for political action and social justice from its inception in 1962 until 1973. He invited the Leadership Conference on Civil Rights, the United Negro College Fund, and the Citizens Crusade Against Poverty to set up their headquarters in the RAC; in effect, it became Martin Luther King's Washington office, and much of the legislation of the United States' Civil Rights Acts was formulated on its premises. As a civil rights leader, he organized Jewish participation in the March on Washington (August 28, 1963) and Jewish response to King's call to Selma, Alabama. Hirsch also served as the Washington representative of the *Synagogue Council of America as well as of the *National Conference for Soviet Jewry, testifying frequently before Congressional Committees.

In 1972, he was elected the executive director of the *World Union for Progressive Judaism, accepting the position on condition that the International Headquarters be moved to Jerusalem. The Reform movement acquiesced; and in 1973, he and his family moved to Israel.

In 1978, Hirsch helped found the Association of Reform Zionists of America (ARZA) and later ARZENU, the International Body of Reform Zionists. He was instrumental in helping organize kibbutz Yahel, dedicated in 1976, and kibbutz Lotan, dedicated in 1983. Hirsch advocated building attractive facilities for synagogue-community centers and was influential in planning and raising funds for the construction of many buildings, including Beit Daniel in Tel Aviv and Or Hadash in Haifa.

Hirsch was also assuming leadership positions in the broader Zionist world. He was elected chairman of the Zionist General Council (1987–92); served as chairman of the *World Zionist Committee for Redesign and Reorganization of the WZO (1993–96); elected president in 1997 of the 33rd World Zionist Congress, and co-chairman of the Jewish Agency's Commission on the Former Soviet Union, a full-time position he continues to hold. He also remains a member of the Executives of both the WZO and the Jewish Agency.

Upon his retirement from the WUPJ in 1999, Hirsch was elected honorary life president of the World Union. The auditorium in Mercaz Shimshon was designated the Bella and Rabbi Richard G. Hirsch Theater. The following year, Hirsch published his fifth book: *From the Hill to the Mount – A Reform Zionist Quest* (2000); his previous works include *Judaism and Cities in Crisis* (1961); *There Shall Be No Poor* (1965); *The Way of the Upright* (1973); and *Thy Most Precious Gift* (1974). In addition, he contributed chapters and introductions to more than a dozen other books as well as articles to numerous publications, in both English and Hebrew.

[Bezalel Gordon (2nd ed)]

HIRSCH, ROBERT PAUL (1925–), French actor and director. Hirsch was a member of the Comédie Française from 1948 and distinguished himself as a comic actor and mime. He appeared in several films including *Notre Dame de Paris, 125 Rue Montmartre*, and *Maigret et l'affaire Saint Fiacre*. In 1965 he made a film in Israel, *Pas question le samedi* (Never on Saturday), in which he played several parts.

HIRSCH, SAMSON (**Ben**) **RAPHAEL** (1808–1888), rabbi and writer; leader and foremost exponent of *Orthodoxy in Germany in the 19th century. Born in Hamburg, Hirsch studied Talmud with his grandfather Mendel Frankfurter there. His education was influenced by the enlightened Orthodox rabbis Jacob *Ettlinger and Isaac *Bernays, and by his father, R. Raphael, an opponent of the *Reform congregation at the temple in *Hamburg but also a supporter of *ḥakham* Bernays who included secular studies in the curriculum of the talmud torah of the city. Bernays had a great influence on Hirsch's philosophy of Judaism. Hirsch attended the University of Bonn for a year (1829), where he studied classical languages, history, and philosophy. He formed a friendship there with Abraham *Geiger, and with him organized a society of Jewish students, ostensibly to study homiletics but with the deeper purpose of drawing them closer to Jewish values. The friendship of these two future leaders of the two opposing movements of German Jewry, was disrupted after Geiger published a sharp though respectful criticism of Hirsch's first publication (see below).

During the years 1830–41 Hirsch served as *Landrabbiner* of the principality of Oldenburg, a period in which he wrote his most significant works, *Neunzehn Briefe ueber Judentum* (*Iggerot Ẓafon*; "Nineteen Letters on Judaism"), first published under the pseudonym "Ben Uziel," Alatona 1836 (it has since appeared in many editions, including English, 1899; revised 1966), and *Choreb, oder Versuche ueber Jissroels Pflichten in der Zerstreung* (1837, 1921[5]; *Horeb – Essays on Israel's "Duties" in the Diaspora*, 1962). These two works form a complete unit, in which Hirsch laid down his basic views on Judaism which were elaborated and explained in his subsequent writings. The first made a profound impression in German Jewish circles. It takes the form of an exchange of letters between a spokesman for the "perplexed," who expresses in the first letter the doubts of a young Jewish intellectual, and an older representative of

traditional Judaism, who formulates his answers in 18 letters. Thus Hirsch employs a semi-dialogical form for his apologetic polemic. H. *Graetz, who was deeply impressed by the "Nineteen Letters," came to Oldenburg in 1837 and remained there for three years in order to complete his Jewish education under the guidance of Hirsch.

In 1841 Hirsch moved to Emden, where he served as rabbi of Aurich and Osnabrueck in Hanover. From 1846 to 1851 he lived in Nikolsburg (Mikolov) as *Landrabbiner* of Moravia. Here Hirsch took an energetic part in the struggle to obtain emancipation for Austrian and Moravian Jewry during the 1848 revolution, and was unanimously elected chairman of the Committee for the Civil and Political Rights of the Jews in Moravia. In Nikolsburg he also applied himself to reorganizing the internal structure of Moravian Jewry and drafted a constitution for a central Jewish religious authority for the whole country. Hirsch adopted moderate Orthodox positions in various areas, including ritual practices and *Talmud Torah* (the study of Torah), thereby provoking opposition among the extreme Orthodox element in Nikolsburg. In 1851, Hirsch was called to serve as rabbi of the Orthodox congregation *Adass Yeshurun in Frankfurt on the Main, a position he held for 37 years until his death. Here he found a small circle of like-minded friends whose encouragement and moral support helped him develop and crystallize his conception of Judaism. The Orthodox congregation of Frankfurt, whose institutions, especially the educational system that he established and supervised, embodied Hirsch's ideas, served as a paradigm for other *neo-Orthodox congregations in Germany and abroad.

Hirsch on Jewish Education

Hirsch based his educational ideal on the rabbinic saying (Avot 2:2): "*Talmud Torah* is excellent when combined with *derekh ereẓ*." Hirsch interpreted *derekh ereẓ*, originally meaning worldly involvement, or ethical behavior and respect toward fellow persons, as referring to the entire domain of worldly occupation, namely secular culture. His ideal of the educated Jew – the *Jisroel-mensch* – was that of an enlightened Jew, deeply engaged in the higher levels of general (i.e., non Jewish) culture and civilization, who remains fully loyal to the Torah and faithfully observant of the *halakhah*. In contrast with the ultra-Orthodox, he viewed secular education as a valuable means for the perfection of the Jew and not merely a practical means for a better adjustment to the non-Jewish society and economy. In that sense the most significant component of this slogan is the word "combined" (*im*), namely the constant effort to bridge the gap between traditional Jewish learning and practice on the one hand and the modern identification with general culture (in its German, Central European version) on the other hand. It was this idea that Hirsch endeavored to embody in the three schools he founded: a primary school, a secondary school, and a high school for girls. Besides the Hebrew language and Jewish subjects, the school curriculum included secular studies (such as German, mathematics, and natural sciences). This modern notion of Jewish education clearly diverges both from the traditional notion of *ḥeder* and yeshivah education and the modern non-Orthodox Jewish schools that were established in Germany in this generation and tended towards assimilation.

Hirsch's attitude to Reform and Secession

Besides Jewish education, the chief contemporary issue that Hirsch faced was the rapid and speedy growth of Liberal Judaism in Germany and its demand for radical reforms in religious and communal life. The challenge of the Liberal-Reform movement put Hirsch's conception of Judaism and his attitude towards emancipation and modernity to a test. In 1854 he published a pamphlet *Die Religion im Bunde mit dem Fortschritt* ("Religion Allied with Progress") in which he attempted to refute the argument of the Liberals that it was impossible to combine traditional Judaism and secular education. In this pamphlet he acknowledged that there was a need for revision within Judaism of external and esthetic elements, but rejected changes affecting the very principles of Jewish faith proposed by the Reform rabbis, or alterations in the observance of the Law. In Hirsch's opinion it was not Judaism that needed to be reformed by the Jews but rather the Jews who needed to be reformed by Judaism; there was not a need for "progress" but for "elevation." For Judaism to have access to the cultural life of Europe it was essential for Jews to rise to Judaism's eternal ideals rather than to bring it down to adjust to contemporary requirements, which he perceived as merely the expression of a desire for a more comfortable life.

Hirsch introduced some external improvements in the liturgy, such as a choir under the direction of a professional director, participation of the congregation in the singing, and preaching twice a month in German. At the same time he defended the traditional Jewish synagogue (*Schul*) against attacks by the Liberals and stressed the "inner harmony" within it. Similarly, he defended the Hebrew language as the sole language for prayer and instruction of Jewish subjects. On the other hand Hirsch removed the *Kol Nidrei* prayer on the ground that it was susceptible to misunderstanding.

Hirsch considered a formal, institutional separation between Orthodox and Reform Judaism to be unnecessary, so long as the latter exercised caution in its demand for reforms and remained attached to halakhic tradition. However, in 1844 the Liberal rabbinical synod at Brunswick took a radical direction in regard to several prohibitions, especially those relating to the dietary and marriage laws. Hirsch urged them to reconsider their decision, warning that this approach of the Liberal rabbis would lead to a point where rupture within "the House of Israel" would be unavoidable. From the Liberal point of view, his demands were unacceptable.

As authority in the congregations increasingly passed to the hands of the Liberals, a breach between the Orthodox and Reform and formal separation became a main focus of Hirsch and his supporters. As a precedent, Hirsch pointed to the congregation in Hungary, where the government in 1871

had recognized the Orthodox congregations as separate bodies. In a memorandum written by Hirsch (published in his writings, vol. 4, 239 ff.), the representatives of Orthodox Judaism in Prussia asked "to permit the Jews to leave their local community organizations for reasons of conscience." In 1873 the Prussian *Landtag* debated a bill which would permit every person to leave his church or religious congregation and added to that bill a statement "that a Jew is permitted to leave his local congregation, for religious reasons, without leaving Judaism." In July 1876 the move was completed when the "Law of Secession" ("*Austrittsgesetz*") was passed and a legal basis created to establish a specific, organizational framework for neo-Orthodoxy.

The "separatist" movement ("*die Austrittsgemeinde*") was joined, besides Hirsch's own congregation, only by small groups of the Orthodox in the congregations of Berlin, Koenigsberg, Wiesbaden, Cologne, and Giesen. These groups then created a complete system of religious services and congregational life, including *kashrut*, education, and a rabbinical seminary. Nevertheless, to Hirsch's deep disappointment, the large majority of Orthodox Jews in Germany continued to remain within the framework of the general community (*Gemeindeorthodoxie*).

In 1885 Hirsch established the *Freie Vereininung fuer die Interessen des orthodoxen Judentums* ("The Free Society for the Advancement of the Interests of Orthodox Judaism") with its seat in Frankfurt. This organization remained restricted during the lifetime of Hirsch and was broadened only after 1907.

Hirsch's Modern-Traditionalist Conception of Judaism

Hirsch's essentialist view of Judaism led him to oppose the conception of the historical development of Judaism, as advocated by H. Graetz and Z. *Frankel. He regarded genuine Judaism as the expression of Divinity, revealed both in nature and in the Torah. Since the Torah is the revealed expression of the Divine will, fully parallel to the law of nature, none of its principles may be denied, even when they transcend human comprehension. It is incumbent on man to search for the revelation of God's wisdom in the Torah, as in nature; nevertheless, this search should be based on the evidence that this wisdom is actually contained in the *mitzvot* to no lesser extent than in natural laws. The character of the Torah as an objective reality lies in the fact that its central pivot is the Law. The Law is an objective disposition of an established order that is not dependent on the will of the individual or society, and hence not even on historical processes. Although the historical process is alien to the eternal Divine law, humanity attains religious truth through experience acquired in time. As a pledge and guarantee, however, that humankind will reach its religious goal, one people was created to whom the religious truth was given directly. Accordingly, that people has no need to learn the truth through experiences acquired in time. Hence that people is not dependent on the historical process. *Menschentum* (humanity), as a concept based on ancient classical civilization and on humanism, is merely an intermediate preparatory stage, which attains its highest expression in *Jisroeltum*.

This view also largely determined Hirsch's attitude to the modern, academic research of Judaism (*Wissenschaft des Judentums). For him there was one criterion according to which Jewish studies were to be measured, namely whether they contributed to the preservation and strengthening of actual "Jewish life." Where faithfulness in observance of the commandments is not put before speculation about them, the speculation becomes imprudent and deleterious.

Interpretation of the Commandments and Their Classification by Various Levels of Rationale

Hirsch's interpretation of the commandments places him in an intermediate position between the Liberal non-halakhic approach and the ultra-Orthodox one. While opposing sharply any view of the observance of *mitzvot* as conditioned on their reasons and their relevance for contemporary Jewish life, Hirsch emphasized the significance of the reasons for *mitzvot*, both on the level of each individual commandment and on the level of comprehending the entire halakhic system as an educational one, aiming at the perfection of human life. According to Hirsch, it is not the practical observance of the *mitzvah* alone that endows it with religious meaning, but rather the conscious deed rooted in understanding its rationale.

Hirsch viewed the entire halakhic life as a holistic educational process consisting of six dimensions: (a) teachings (*torot*) – the principles of the Jewish faith, namely the theoretical groundings of religious life; (b) laws (*mishpatim*) – precepts concerning human relations and ethics; (c) ordinances (*ḥukim*) – commandments the refer to ecological issues and treatment of animals; (d) commandments (*mitzvot*) – expressions of the humanistic domain of religious life, namely the duty to love all fellow humans; (e) testimonies (*edot*) – commandments that constitute and strengthen the memory of the sacred history of Israel; (f) worship (*avodot*) – prayer and sacrifice as an expression of human loyalty to the Divine. Through this multidimensional system, the observant Jew can elevate his or her life and sanctify it.

Hirsch's reasoning with regard to each individual commandment is based on a method of "speculative etymology" or philosophical etymology (a term coined by F. Schlegel). It views the various halakhic deeds and their names as components of a symbolic system, which is at the essence of the Jewish "language" that places human life before God.

Translations of the Bible and its Exegesis

Since Moses *Mendelssohn's Bible translation project, German Jews had repeatedly translated the biblical texts. From the 19th century on, modern Jews repeatedly issued translations and adoptions of the *siddur* (Jewish prayer book). Hirsch too devoted a considerable part of his spiritual energy to the translation of and commentary on the biblical texts, including the Pentateuch (*Der Pentateuch uebersetzt und erklaert*, 5

vols., 1867–78; 1920^{8}; English translation of the commentary, 1956–62), the Book of Psalms (*Psalmen uebersetztund erklaert*, 1883; 1924^{3}; and *The Psalms*, 2 vol., 1960–66). He also issued a German translation of the prayer book (*Israels Gebete, uebersetzt und erleutert*, 1895; English: *The Hirsch Siddur*, Jerusalem 1969). These translations by Hirsch of traditional texts paralleled those of his Liberal contemporaries, who like him responded to the fact that German Jewry could no longer cope with the Hebrew texts of the scriptures and the prayers, and who viewed the Bible and the prayer book as the two main foci of the Jewish heritage. At the same time, those translations clearly distinguish his attitude from theirs. While the Liberal prayer books reflected the view that synagogue worship should be reformed and should be held largely in German, Hirsch's translation aims to preserve and strengthen the traditional forms, which ought to be implemented entirely in Hebrew even when many of the congregants needed an aid in order to follow and understand it. The same is true for his Bible translation.

Views on Jewish Nationalism

Hirsch believed that God established Israel as a people and not merely as a religious community. In his writings a love for Zion can be easily traced. "The Jewish people, though it carries the Torah with it in all the lands of its dispersion, will never find its table and lamp [i.e., its economic and spiritual development] except in the Holy Land" (*Gesammelte Schriften*, vol. 3, p. 411). Nevertheless, in contrast to the first proto-Zionist thinkers, Z. *Kalischer and M. *Hess, he opposed the negation of *galut* by "both Jews and non-Jews whose description of *galut* is always accompanied by a violation and derogation of our rights" (ibid., vol. 4, p. 82). Israel's mission, as Hirsch sees it, is to teach the nations "that God is the source of blessing." For this reason "there was given to it as a possession the Land and its blessings; it was given a state system; but these were not conferred as an end in themselves but as the Torah." These views, particularly in conjunction with the other aspects of his philosophy became in the course of time – through the efforts of his son-in-law, S.Z. *Breuer, his grandson Isaac *Breuer, and Jacob *Rosenheim – the ideological basis of *Agudat Israel.

Hirsch was the founder and editor of the German periodical *Jeschurun* (1854–70; new series 1883–90, edited by his son Isaac Hirsch), which served as a vehicle for the dissemination of his ideas. In that journal, Hirsch published his essays, some of which were later republished in his *Gesammelte Schriften* (6 vols., 1902–12). In English, Hirsch's collected essays appeared as *Judaism Eternal* (ed. and tr. by I. Grunfeld; 2. vols., 1960–66); an anthology of his writings, *Timeless Torah*, appeared in 1957.

[Simha Katz / Yehoyada Amir (2nd ed.)]

HIRSCH, SAMUEL (1815–1889), rabbi, philosopher of Judaism, and pioneer of the Reform movement in Germany and the United States. Samuel Hirsch belonged to the first generation of modern European rabbis who, combining traditional Jewish learning with university training, founded the *Wissenschaft des Judentums ("science of Judaism"). He was born at Thalfang, Prussia, and served as rabbi in Dessau (1839–41), and as chief rabbi of Luxembourg (1843–66). He then emigrated to America, where he led the Reform congregation Keneseth Israel in Philadelphia until 1888. He spent the last year of his life in Chicago with his son Emil G. *Hirsch, who was the leading Reform rabbi in the United States at the turn of the century.

In his major philosophic work, *Die Religionsphilosophie der Juden* (1842), Hirsch interpreted Judaism as a dialectically evolving religious system. In the manner of the contemporary speculative idealism, which tended to comprehend all of reality under a single unifying concept, Hirsch's system was based on man's self-awareness. Conscious of his distinctive self, man comes to know the freedom of his sovereign will by which he alone among all creatures transcends the determinism of nature. This capacity for freedom is something "given" and implies a transcendent Source, "an Essence that bestows freedom upon him… This Essence he calls God" (*Religionsphilosophie*, 30). A critical disciple of Hegel, Hirsch rejects his philosophic master's contention that Judaism holds a rank inferior to Christianity on the scale of religions. In Hirsch's view, Judaism and Christianity are both equally valid. Judaism is "intensive" religiosity, a way of living with the true God who has entered Israel's midst, while Christianity represents "extensive" religiosity, whose function is the proclamation of this God to the pagan world. Both religions are destined to become perfected as absolute religiosity in the messianic era when the Christians will complete the conversion of the pagans and the Jews will obey the true God freely, no longer by compulsion.

Hirsch opposed sporadic and unprincipled attempts at religious reform by radical lay groups, such as the Frankfurt Verein, who in 1843 disavowed the authority of the Talmud and belief in the Messiah. He was a leading participant at the rabbinic conferences of 1844–46 at Brunswick, Frankfurt, and Breslau, which formulated the basic positions of the Reform movement. Hirsch upheld the rite of circumcision and the use of Hebrew in public services; yet he was the first rabbi to

advocate the transfer of the Sabbath to Sunday, which he actually carried out as rabbi of Keneseth Israel in Philadelphia. Though at first adopted by a number of communities, this innovation was gradually abandoned by nearly all American Reform congregations.

Hirsch was president of the first Conference of American Reform Rabbis, which convened in Philadelphia in 1869 and played a leading role in framing the so-called "Pittsburgh Platform" (1885); this platform set the course of American Reform Judaism until the advent of the Hitler era (see *Reform Judaism). Hirsch founded the first American chapter of the Alliance Israélite Universelle and was a frequent contributor to Jewish journals. His other works include *Messiaslehre der Juden in Kanzelvortraegen* (1843), and the polemical *Briefe zur Beleuchtung der Judenfrage von Bruno Butler* (1843).

[Joshua O. Haberman]

HIRSCH, SOLOMON (1839–1902), U.S. politician and merchant. Hirsch was born in Wuerttemberg, Germany. He immigrated to America in 1854 and worked as a clerk in the East before entering business with his brother, Edward (1836–1909), in Oregon in 1858. In 1864 he was a founder of the Fleischner, Mayer Company in Portland, which became the West's largest general wholesale and dry goods firm outside San Francisco. Taking an interest in politics, Hirsch secured his brother Mayer's (1829–1876) election as Republican National Convention delegate in 1864. In 1872 Solomon was elected a Republican state representative. In 1874, 1878, and 1882 he was elected state senator, serving as senate president in 1880 and as Republican state chairman in 1882. He was defeated in the election for U.S. senator by one vote in 1885. Hirsch served as minister to Turkey during 1889–92, and declined the nomination as minister to Belgium in 1897. He was president of Portland's Congregation Beth Israel during 1900–01. His brother Edward was state treasurer of Oregon for two terms.

[Robert E. Levinson]

HIRSCHBEIN, PERETZ (1880–1948), Yiddish dramatist, novelist, journalist, travel writer, and theater director. Born in Kleszczele, Poland, Hirschbein left home at the age of 14 to study in various yeshivot, moving first to Grodno and then to Vilna. Beginning in 1901, he published Hebrew poetry and Yiddish short stories. Soon he shifted to drama, starting with *Miryam* (1905), the story of a prostitute, which he wrote in Hebrew and later translated into Yiddish. In 1904, he moved to Warsaw, where he associated with Ḥ.N. *Bialik, I.L. *Peretz, and S. *Asch, all of whom were impressed with his first efforts as a dramatist and encouraged him to continue. *Miryam* and other early plays, published in the fortnightly *Ha-Zeman*, 1904–06, dealt with proletarian themes. Such works included other naturalist dramas like *Nevelah* ("Carcass"), which would later enjoy great success in its Yiddish version, *Di Neveyle*. Before long, Hirschbein, strongly influenced by Maeterlinck, shifted from naturalism to symbolism, in such works as *Oyf Yener Zayt Taykh* ("Across the River," 1905), *Olamot Bodedim* ("Lonely Worlds," 1906), and *Di Erd* ("The Earth," 1907), in which he expressed his distaste for city life and his yearning for nature, a major motif in his later works. Other important plays from this period include *In der Finster* ("In the Dark," 1907) and *Der Tkies-Kaf* ("The Pact," 1909).

After moving to Odessa in 1908, Hirschbein took a far more active role in the production of his own plays. With the support and encouragement of Bialik and students from an Odessa acting studio, Hirschbein organized a dramatic group in Odessa to produce Yiddish plays of quality. For two years this group, under Hirschbein's direction, toured a number of Russian cities and towns with productions of plays by Sholem *Asch, David *Pinski, Jacob *Gordin, and *Sholem Aleichem, as well as Hirschbein's own plays and Yiddish translations of dramas by Semyon Yushkevitsh and Hermann Heijermans. When the Hirschbein Troupe, as it came to be known, disbanded, Hirschbein began a series of journeys that eventually took him to the U.S. Between 1912 and 1917 he wrote a series of folk dramas, which were staged with great success by the New York Yiddish Art Theatre after 1918. His *Di Puste Kretshme* ("The Idle Inn," 1914) was produced in New York under the title *The Haunted Inn* (publ., 1921). During this period he also wrote his famed pastoral romance *Grine Felder* ("Green Fields," 1923).

In 1920 Hirschbein married the poet Esther *Shumiatcher, and they traveled around the world for two years. His travelogues, among the best in Yiddish literature, were serialized in the Yiddish daily, *Der Tog*, and appeared in book form entitled *Arum der Velt* ("Around the World," 1927). Wherever Hirschbein traveled he sought out Jewish inhabitants whom he found even in the most remote corners of the world. His impressions of a trip to Palestine appeared in *Ereẓ Israel* ("The Land of Israel," 1929), where he displays much sympathy for the pioneers who, amid great difficulties, were trying to develop new modes of living in the kibbutzim. Other travels took him to India, Japan, and China.

In 1930 Hirschbein settled in New York, and from 1940 until his death he lived in Los Angeles. During this period he wrote a historical tragedy about the life of King Saul, *Der Ershter Melekh fun Yisroel* ("The First King of Israel," 1934), the novels *Royte Felder* ("Red Fields," 1935) and *Bovl* ("Babylonia," 1942), as well as the collection *Monologn* ("Monologues,"

1939). A five-volume edition of 26 plays was issued in 1916. The first five volumes of a projected edition of his collected works appeared in 1951. Hirschbein translated a group of Tolstoy's stories into Yiddish, and some of his own writings have been translated into Hebrew, English, Russian, and German. Seven of his plays, originally written in Yiddish or translated into Hebrew by the author, were published in the volumes *Deramot* ("Dramas," 1922) and *Maḥazot* ("Plays," 1923).

During the early period of his literary activity, when he was under the influence of Peretz and Bialik, Hirschbein tried to achieve a synthesis of naturalism and symbolism, but in the course of time he became a neo-realist. However, even his most realistic stories are imbued with lyricism. His plays display mastery of natural dialogue, and despite the occasional stereotype of character, his figures are robust and alive. Hirschbein is an important personality among the Yiddish writers of the postclassical period who combined new European literary forms with Jewish tradition.

[Sol Liptzin / Joel Berkowitz (2nd ed.)]

HIRSCHBERG, ḤAÏM Z'EW (1903–1976), Israel historian. Hirschberg born in Tarnopol, Galicia, studied at the Israelitisch-Theologische Lehranstalt and the University of Vienna. He was rabbi in Czestochowa, Poland (1927–39), and in 1943 he emigrated to Ereẓ Israel, where he held a number of teaching posts and was a research fellow at the Hebrew University (1947–56). In 1960 he began teaching Jewish history at Bar-Ilan University and he headed the Institute for Research on the History of the Jews in the Eastern Countries (1970).

Hirschberg's published work includes *Yaḥas ha-Aggadah la-Halakhah* (with B. Murmelstein, 1929, "The Relation of *Aggadah* to *Halakhah*"); *Der Diwan des as-Samau'al ibn Adija* (1931); *Juedische und Christliche Lehren im vor-und fruehislamischen Arabien* (1939); *Yisrael ba-Arav* ("Jews in Arabia," 1946); *Be-Ẓel ha-Islam* ("In the Shadow of Islam," 1957); *Me-Ereẓ Mevo ha-Shemesh* ("From the Land of the Setting Sun," 1957); and his major work *Toledot ha-Yehudim be-Afrikah ha-Ẓefonit* (2 vols., "History of the Jews in North Africa," 1965). Hirschberg also translated *Nissim b. Jacob's *Ḥibbur Yafeh me-ha-Yeshu'ah* (1954) with notes and an introduction. In his introduction he presents a history of the Jewish scholars of Kairouan and a biography of Nissim b. Jacob. He was coeditor of two geographical studies, *Ereẓ Kinnarot* (1950) and *Kol Ereẓ Naftali* (1968) as well as of memorial volumes for P. Churgin (1963) and S. Bialoblocki (1964). He was editor of the division of the history of Islamic lands and departmental editor of Islam and Judaism, the Muslim world, Arabia, Ereẓ Israel (640–1917), Muslim Spain, and Yemen for the *Encyclopaedia Judaica* (first edition).

HIRSCHBERG, JULIUS (1843–1925), German ophthalmologist. Hirschberg, the son of a small merchant in Potsdam, studied medicine in Berlin and served as assistant to the famous Albrecht von Graefe, under whose influence he specialized in ophthalmology. He soon became a renowned teacher and in 1869 opened a private eye clinic where poor patients were treated free of charge. A year later he became lecturer in ophthalmology at Berlin University. In 1877 Hirschberg founded a specialist monthly, *Centralblatt fuer praktische Augenheilkunde*, which he edited for over 40 years. He was a most prolific writer, covering the whole field of ophthalmology, and a very successful ophthalmic surgeon of international repute. Correlating clinical ocular findings with those of the pathological laboratory, he was one of the first to define the specific ocular complications of a number of general diseases, including diabetes and syphilis. His most important contribution to clinical practice was the use of a hand magnet for extracting foreign bodies from the eye. His greatest work, however, was an encyclopedic study of the history of ophthalmology entitled *Geschichte der Augenheilkunde* (9 vols., 1899–1918). This work, together with a series of special historical monographs and translations – with the help of two Arabists – of the manuscripts of eminent Arabian medieval writers, placed him in the ranks of medical historians. Though an ardent champion of German national culture, Hirschberg never denied his Jewishness and was therefore refused the post of a professor ordinarius, for which he had the highest qualifications.

[Aryeh Feigenbaum]

HIRSCHEL, LEVIE (**Louis**; 1894–1944), Dutch bibliographer and librarian. Born in Amsterdam, Hirschel graduated from the rabbinical seminary and the University of Amsterdam, later serving as a teacher at the seminary and at a grammar school in Alkmaar. In 1923 he was appointed assistant librarian of the Bibliotheca Rosenthaliana, succeeding J.M. Hillesum as chief librarian in 1930. He remained in this post until his dismissal by the German authorities during the occupation of Holland. He was also minister and later assistant rabbi of the synagogue Be'er Mayim Ḥayyim in east Amsterdam until his deportation, first to Westerbork concentration camp and then transported to Poland, where his death was registered on March 31, 1944.

Hirschel's field of specialization was the history of Dutch Jewry and Dutch Jewish writers of Hebraica and Judaica. He was secretary of the Society of Jewish Knowledge in the Netherlands and wrote an historiographical study of the Jews of the Low Countries. His system of a uniform transcription from

Hebrew into Dutch was applied in many scientific studies, and he also compiled the bibliographical biographies of L. *Wagenaar (1925) and the historian A.M. Vaz Dias (1940), and edited a selection of the former's works (1932). Hirschel contributed many articles to Jewish and non-Jewish magazines, proving in *Amstelodamum* (1934) that Hebrew had been printed in Holland before 1627, the year in which Manasseh Ben Israel started his printing office. During World War II he wrote for *Het Joodse Weekblad*, the only Jewish periodical permitted by the Germans. His last contribution was in November 1942. He prepared a systematic catalogue of the Rosenthaliana collection (five parts until 1940) and looked after some smaller libraries (Beth Hamidrash), private collections, and archives. Some fragments of his thesis about Dutch Christian Hebraists, which was written partly at the Westerbork concentration camp, were posthumously published in *Studia Rosenthaliana* (1967).

[Jacob H. Copenhagen]

HIRSCHEL (Herschel), SOLOMON (1762–1842), chief rabbi of Great Britain. Hirschel, the son of Ẓevi Hirsch *Levin (Hart Lyon), was born in London while his father was serving as a rabbi there. However, he was educated on the continent and became rabbi in Prenzlau, Prussia. In 1802 he was appointed rabbi of the principal Ashkenazi London synagogue, the Great Synagogue, in succession to R. Tevele *Schiff, his authority also being acknowledged by the provincial communities which were becoming prominent. He was thus the first formally recognized chief rabbi of Britain; his authority also extended to the British possessions overseas. He was basically a European rabbi of the old type, with an imperfect knowledge of English and out of touch with the new currents beginning to permeate the community. He preached in Yiddish, opposed even mild reform, and his literary production was virtually nothing. After his death, his library, comprising also a number of important manuscripts, passed to the London *bet ha-midrash*. A biography of Hirschel, *Forty Years a Chief Rabbi,* by H.A. Simons has been published (1979). His son, known as R. DAVID BERLINER (or Hirschel), settled in Jerusalem, where he was murdered in 1851.

[Cecil Roth]

HIRSCHENSOHN, family of rabbis, who were among the first in the revival of settlement in Ereẓ Israel in the 19th century.

JACOB MORDECAI HIRSCHENSOHN (1821–1888), rabbi and yeshivah administrator, was born in Pinsk. He studied in the yeshivot of Lithuania and Belorussia and served as rabbi in several communities there before emigrating to Ereẓ Israel in 1848. He settled first in Safed, but moved to Jerusalem in 1864, remaining there for the rest of his life. In both cities he administered yeshivot. He was connected with the Yishuv Ereẓ Israel movement founded by Ẓevi *Kalischer and Elijah *Gutmacher.

His elder son, ISAAC HIRSCHENSOHN (1845–1896), rabbi and scholar, was born in Pinsk. In his youth he was educated in Safed and as a young man studied in various yeshivot in Europe. He settled in Jerusalem and on his father's death succeeded him in yeshivah administration in that city. He contributed to the *Ha-Ẓevi* of Eliezer *Ben-Yehuda and signed his name as its responsible editor. He was persecuted by zealots who accused him of heretical views. Isaac pursued research into *variae lectiones* of the Talmud on the basis of old manuscripts and published articles on talmudic themes. He also published various works from manuscripts, including the novellae of *Nissim Gerondi to the tractate *Megillah* (1884). He moved to London where in 1896 he published *Teḥiyyat Yisrael*, a religious Zionist weekly, and there he died.

ḤAYYIM HIRSCHENSOHN (1857–1935), Jacob Mordecai's second son, was born in Safed. In 1864 he went with his father to Jerusalem. In addition to studying Torah, he applied himself to secular studies, and as a result he too was persecuted by zealots. He also worked for Zionism; he supported Eliezer Ben-Yehuda in his effort to revive spoken Hebrew and was one of the founders of the *Safah Berurah* ("Plain Language") society in Jerusalem. From 1885 to 1889 he edited and published a monthly for Jewish scholarship entitled *Ha-Misderonah*. In 1892/93 he published in Jerusalem – together with his wife Eve and his brother Isaac – a Yiddish paper, *Beit Ya'akov*, as a supplement to the *Ha-Ẓevi* of Ben-Yehuda. In 1904 he went to the U.S., where he was appointed rabbi of the four communities of Hoboken, New Jersey, and died there. Ḥayyim wrote many books on Jewish subjects, including *Ateret Ḥakhamim* (1874), on the relationship between the views of scientists and those of the talmudic aggadists; *Yamim mi-Kedem* (1908), on biblical chronology; *Malki ba-Kodesh* (6 parts, 1919–28), on the laws which should govern a Jewish state according to the Torah. He was the father of Tamar, wife of David de Sola *Pool, and Tehilla Lichtenstein head of the Jewish Science movement (see *Christian Science).

[Zvi Kaplan]

HIRSCHENSOHN-LICHTENSTEIN, JEHIEL ẒEVI HERMANN (1827–1912), apostate and missionary. Born in Russia, he converted to Christianity in 1855 at Jassy, Romania, but keeping this secret he spent some time among the Ḥasidim of *Lubavich and worked on his *Derekh ha-Kodesh* ("The Way of Holiness," 1872), which deals with the fundamentals of the Jewish faith, but betrays the author's Christianizing tendencies. From 1868 to 1878 he worked, under the name of Hermann Lichtenstein, for the Protestant mission in Berlin. He then returned to Russia where, disguised as a ḥasidic rabbi, he distributed his book. He married in Kishinev, Moldavia, a sister of Joseph *Rabinovich who later, probably under Hirschensohn's influence, founded the sect called Community of Evangelian Jews. His true character discovered, he had to leave Russia, and became lecturer at Franz *Delitzsch's Institutum Judaicum at Leipzig. He also wrote *Ḥizzuk Emunat ha-Emet* ("Support of the True Faith"), directed against the *Ḥizzuk Emunah* of the Karaite Isaac *Troki; *Sheva Ḥokhmot* (1883), an anthology of rabbinic statements on science (geography in particular), with annotations; *Toledot Yeshu'a* ("The Life of Jesus," 1883); and *Yeshu'a ve-Hillel* ("Jesus and Hillel," 1894), based on Delitzsch's work under the same title.

[Shimon Ernst]

HIRSCHFELD, AL (**Albert**; 1903–2003), U.S. caricaturist. Born in St. Louis, Hirschfeld moved with his family to New York where he was 12 and had already started art lessons. He attended the Art Students League. By 18 he was art director for Selznick Pictures. In 1924 he went to Paris, where he continued his studies in painting, sculpture, and drawing. On a trip to Bali, where the intense sun bleached out all color and reduced people to "walking line drawings," he recalled, he became "enchanted with line" and concentrated on that technique. At the theater in New York in 1926 he doodled a sketch in the dark on the program. Asked to repeat it on a clean piece of paper, he produced a sketch that appeared on the front page of the *New York Herald Tribune*, which gave him more assignments. Some weeks later he was engaged by the *New York Times* to sketch Harry Lauder, the Scottish entertainer, who was on one of his innumerable farewell tours. Thus began a lifelong relationship with the *Times*. His sketches over a 75-year career captured the vivid personalities of theater people. He was a familiar figure at first nights and at rehearsals, where he had perfected the technique of making a sketch in the dark, using a system of shorthand notations that contributed to the finished product. He drew Barbra *Streisand birdlike, with wide-open mouth and lidded eyes. Zero Mostel, the original Tevye in *Fiddler on the Roof*, appeared as a circle of beard and hair with fierce eyes peering upward, as at a heaven that did not understand. Hirschfeld's work also appeared in books and is in the collections of many museums, including the Metropolitan Museum of Art, the Museum of Modern Art, and the Whitney Museum of American Art in Manhattan. In the 1930s and 1940s he wrote articles on comedians, actors, Greenwich Village, and films for the *Times*. In the 1920s and 1930s, imbued with a sense of social concern, Hirschfeld did serious lithographs that appeared, for no fee, in the *New Masses*, a Communist-line magazine. Eventually he realized that the magazine's interest was politics rather than art. After a dispute about a caricature he did of the Rev. Charles E. Coughlin, the right-wing, antisemitic priest, he renounced a political approach to his work. He was represented by the Margo Feiden Galleries, which once estimated that there were more than 7,000 Hirschfeld originals in existence. In 1991 the United States Postal Service issued a booklet of five 29-cent stamps honoring comedians as designed by the artist. In 1996 a film documentary of the artist's life by Susan W. Dryfoos, *The Line King*, rich in tributes from those he had drawn and from those he worked with, was nominated for an Academy Award. That year he was also named one of six New York City landmarks by the New York Landmarks Conservancy. A few days before the end of his life, he was notified that the American Academy of Arts and Letters had elected him a member and President George W. Bush notified him that he was one of the recipients of the National Medal of Arts. On June 21, 2003, his 100th birthday, the Martin Beck Theater of West 45th Street in New York was renamed the Al Hirschfeld Theater.

[Stewart Kampel (2nd ed.)]

HIRSCHFELD, EPHRAIM JOSEPH (c. 1758–1820), author and active Freemason at the end of the 18th century. Hirschfeld was born in Karlsruhe, the son of the learned cantor Joseph Hirschel Darmstadt. In his youth his talents came to the attention of Prince Charles Frederick of Baden who enabled him to study in the high school of Karlsruhe and then to study medicine in Strasbourg. Hirschfeld did not complete his studies but acquired a wide general background in addition to his traditional education. From 1779 to 1781, Hirschfeld was a tutor in the house of David *Friedlaender; he frequented the home of Moses *Mendelssohn and was in contact with the Haskalah circles of Berlin. His sensitive character and his quarrelsome nature were conspicuous in his relations with others. In 1782 he worked in Innsbruck, where he met with the founder of the order of masons of a theosophic bent, the Asiatic Brethren, an order organized by the cooperation among monks with theosophic tendencies, Freemasons, and aristocrats. One of its founders was an important Frankist convert to Christianity, Franz Thomas von Schoenfeld (see *Dobrushka), who introduced into the writings of the order portions of Shabbatean literature in German translation. Hirschfeld was received into the order and for several years was secretary to its founder, Hans Ecker von Eckhofen, who opened the order to Jewish fi-

nanciers, members of the Enlightenment who wished to form closer ties with Christian society. As was customary in mystical orders of Freemasons, he took a pseudonym, Marcus ben Binah. Hirschfeld occupied an important position in the order, especially after the departure of Schoenfeld. Until 1786 he lived in Vienna where he first assumed the name Hirschfeld, and later, until 1791, in Schleswig, which had become the center of the order. Because of a quarrel with Ecker, Hirschfeld was expelled from the order and in 1790, placed under house arrest for several months. However, several important Jews in the organization came to his defense. During those years, Hirschfeld was active as translator of the mystical writings of the order, making it seem as if they had been originally written in Hebrew or Aramaic, and he interpreted the mystical teachings of the order. In 1791 his former friend Schoenfeld took him to Strasbourg, but Hirschfeld left him and returned to Germany. From 1792 until his death he lived alternately in Frankfurt and in nearby Offenbach and maintained close contact with the Frankists who had their center there. His aspiration toward a religious fusion of Judaism and Christianity within a kabbalistic framework was close to the spirit of Frankism. But Hirschfeld never converted to Christianity and died a Jew.

In 1796 he and his brother Pascal published *Biblisches Organon*, a kabbalistic-theosophic translation and commentary on the beginning of Genesis, intending this to be the start of a large work elaborating mystical insights on biblical topics. Hirschfeld moved away from the Haskalah spirit and lived in the intellectual milieu of the order, dreaming of its reestablishment after its decline around 1791. He was close to the Catholic professor Franz Josef *Molitor, later a distinguished student of Kabbalah in Frankfurt, who was greatly influenced by Hirschfeld. In the lively disputes in Masonic circles over the acceptance of Jews into their organizations Hirschfeld was prominent and he was attacked vehemently by opponents of their admission. Even after his death, important persons in these organizations attempted to obtain manuscripts rumored to be in his legacy. He was completely forgotten in the 19th century because his mysticism was not to the taste of the Jewish Freemasons of that period. Much material on Hirschfeld is preserved in the archives of the Freemasons in The Hague and Copenhagen. He was a unique figure at the beginning of the Emancipation, both because of his many-sided personality and because of his activities as a Jew in organizations which then generally were inimical to Jewish membership.

[Gershom Scholem]

HIRSCHFELD, GEORG (1873–1942), German playwright and novelist. Dissatisfied with a business and industrial career in his father's Berlin factory, in 1893 he read humanities at the Munich University. He began to write plays, encouraged by Gerhart Hauptmann and Otto *Brahm. Hirschfeld's first drama, *Die Muetter* (1896), was his most effective work and a stage success for many years. Written in the tradition of Ibsen and Hauptmann, this example of German naturalism brings to life characters drawn from the Jewish bourgeoisie. Hirschfeld's own experiences inspired his hero's struggle between bourgeois respectability and artistic yearning, between obligations to others and loyalty to his own personality. A second drama, *Agnes Jordan* (1897), also dealt with Berlin's Jewish society. Although Hirschfeld continued to write naturalistic, neoromantic, and sensational plays, he never fulfilled the hopes roused by his first drama. He also published a short story about Kleist, *Daemon Kleist* (1895), and one outstanding novel, *Der Bergsee* (1896). Hirschfeld's later tales were, however, essentially sentimental and entertaining. In 1905 he moved to Dachau, where he became member of the local artist's colony; from 1912 he lived in Muenchen-Grosshadern. He died in Munich.

[Sol Liptzin]

HIRSCHFELD, GUSTAV (1847–1895), German archaeologist. Hirschfeld, who was born in Pyritz, Pomerania, was a specialist in Greek and Roman epigraphy. One of the first Jewish scholars to become a fellow of the important Institute of Archaeological Correspondence in Rome, he worked in Italy, Greece, and Asia in the early 1870s and from 1875 to 1877 directed the German government's excavations at Olympia which uncovered the Heraion and the Temple of Zeus. He helped to raise the immortal Hermes of Praxiteles and the statue of Nike by Paionios. It was he who first proposed the excavation of Pergamum, which was eventually carried out by other German archaeologists. Baptized in 1877, Hirschfeld was given an appointment by the University of Koenigsberg, where he was made professor of archaeology in 1879. His writings include *De Cn. Manlii Consulis Itinere ex Pamphylia in Galatiam Facto* (1879) and *Aus dem Orient* (1897). He wrote the section "Knidos, Halikarnassos, and Branchidae" in the *Collection of Ancient Greek Inscriptions in the British Museum* (part 4 section 1, 1893) and articles for the publications of the Prussian Academy for Science.

[Penuel P. Kahane / Bjoern Siegel (2nd ed.)]

HIRSCHFELD, HARTWIG (1854–1934), scholar of Judeo-Arabic literature. Hirschfeld, who was born in Thorn, Prussia, received his doctorate from Strasbourg (1878). He immigrated to England in 1889 and taught first at Montefiore College in Ramsgate. In 1901 he became both librarian and professor of Semitic languages at Jews' College, London, and

lector in Hebrew, Semitic epigraphy, and Ethiopian at University College, London, where he was appointed full professor in 1924. Hirschfeld's chief interest lay in the interplay between the Arab and Jewish cultures as well as in the Arabic literature of the Jews. He published *The Book Chasari (Kusari) by Judah ha-Levi* (1886), a critical edition of the original Arabic text and the Hebrew translation by Judah ibn Tibbon, and also a German (1885) and an English translation of this work (1905; enlarged edition 1931); the Hebrew translation of *The Book of Definitions* by Isaac Israeli (*Steinschneider-Festschrift*, 1896); various studies on the Koran (*Jewish Elements in the Koran* (dissertation, 1878); *Contributions to Explication of the Koran* (1901), among others); *Arabic Chrestomathy in Hebrew Characters* (1892); *Descriptive Catalogue of the Hebrew Mss. of the Montefiore Library* (1904); *Yefet ibn Ali's (Karaite) Arabic Commentary on Nahum* (1911); *Qirqisānī Studies* (1918); and *Literary History of Hebrew Grammarians and Lexicographers* (1926). In addition, Hirschfeld wrote numerous articles in various journals concerning problems of Arabic and Hebrew philology and bibliography; of especial importance is a series of essays concerning the Arabic fragments in the Cairo **Genizah* (JQR, vols., 15–20, 1903–08).

HIRSCHFELD, HEINRICH OTTO (1843–1922), German historian. Hirschfeld, born in Koenigsberg, Prussia, studied classical philology. While at Berlin he was strongly influenced by Theodor *Mommsen, and became his protégé and close collaborator. He was lecturer at Goettingen (1869), and professor at Prague (1872), Vienna (1876), and Berlin (1885), where he succeeded Mommsen. Hirschfeld was one of the group of scholars who collaborated in the preparation of the *Inscriptionum Galliae Narbonensis latinae…*, as planned by Mommsen. Between 1888 and 1904 he published the Latin inscriptions of Gaul for this work. Hirschfeld's principal scholarly interests were Roman imperial administration and Roman Gaul. His work on Gaul illustrated his concept of the imposition of Roman civilization throughout the empire as a most important aspect of Roman history. Hirschfeld was one of the founders of the Archaeological and Epigraphical Seminar of the University of Vienna, and worked on the systematic investigation of the ancient remains in the Austro-Hungarian provinces. This early work provided the basis for the study of Roman civilization in Central Europe and the Balkans. In addition to his volumes of the *Inscriptionum*, Hirschfeld's major published work is *Die kaiserlichen Verwaltungsbeamten bis auf Diocletian* (1905^2). Most of his numerous smaller works are collected in his *Kleine Schriften* (1913).

BIBLIOGRAPHY: Wilcken, in: *Sitzungsberichte der Preussischen Akademie der Wissenschaften zu Berlin* (1922), xcvii–civ; Muenzer, in: *Neue Jahrbuecher fuer das klassische Altertum, Geschichte und deutsche Literatur fuer Paedagogik*, 49 (1932), 304–6.

[Irwin L. Merker]

HIRSCHFELD, ISADOR (1882–1965), U.S. specialist in gum diseases. Hirschfeld, who was born in Riga, Latvia, was taken to the U.S. in 1890. In 1916 he began teaching at the New York Postgraduate School of Dentistry. From 1915 to 1925 he was chief of the first periodontological clinic in a U.S. hospital, at the New York Nose, Throat and Lung Hospital. Hirschfeld occupied similar positions at the Beth Israel Hospital (1924–34) and at the New York Hospital for Joint Diseases (1927–34). In 1928 he founded and headed the department of periodontology at the Columbia University Dental School. From 1929 to 1947 he was attending surgeon at New York's Presbyterian Hospital. In 1941 he was president of the American Academy of Periodontology. In addition to many articles in dental publications, he wrote *The Toothbrush: Its Use and Abuse* (1939). He was active in raising funds to advance dentistry in Israel.

HIRSCHFELD, MAGNUS (1868–1935), medical scientist and sexual reformer. Born in Kolberg on the Baltic coast to a prominent and prosperous Jewish doctor, Hermann Hirschfeld, he attended schools in Breslau and Strasbourg and graduated as a doctor from the University of Munich. He practiced as a general practitioner in Magdeburg, from 1894 to 1896 when he moved to Charlottenburg, a suburb of Berlin. Like his father, specializing in public hygiene problems, he founded a workers' health insurance institution which was widely imitated.

The trial of Oscar Wilde and the suicide of a patient on the eve of his marriage triggered Hirschfeld's lifelong devotion to sexual research in general and homosexuality in particular. In his first work, *Sappho and Socrates* (1896), he maintained that the homosexual urge, like the heterosexual, was the result of an "inborn goal-striving constitution" influenced biologically by "glands of internal secretion."

Heartened by the response to his work, in 1897 he founded the Scientific-Humanistic Committee and gained immediate attention with a petition to the Reichstag for the repeal of Section 175 of the German Criminal Code dealing with homosexual offenses. The petition was signed by most of the prominent figures of his time including Martin Buber, Hermann Hesse, Max Brod, Albert Einstein, Heinrich and Thomas Mann, Stefan Zweig, Rainer Maria Rilke, and Arthur Schnitzler.

In 1908, in collaboration with other leading sexual researchers, he founded the *Journal of Sexual Science*, and in 1909, his *Yearbook for Sexual Intermediate Stages*, which between 1909 and 1923 produced one of the richest collections of homosexual studies in the areas of history, literature, art, music, and psychology. In 1918, he launched his most ambitious project, the Institute for Sexual Science housed in the mansion of Prince Hatzfeld, the former German ambassador to France, which was a clinic, a free university with lectures and classes, and a research center housing 20,000 volumes and a collection of 35,000 photographs from all over the world. Its marriage consultation department was the first in Germany and widely copied elsewhere.

In 1933, he was invited to deliver a lecture at the Hebrew University in Jerusalem.

The Nazis closed the Institute for Sexual Science when they came to power, and his books were publicly consigned to the flames, Hirschfeld moved to France and died in Nice.

His other major works, all in German, are *Berlin's Drittes Geshlecht* (1904), *Die Transvestiten* (1910), *Sexualpathologie* (three volumes, 1917–1920, 1921–1928), *Homosexualität des Mannes und des Weibes* – (two volumes, 1920), *Geschlechtskunde* (1925–1930), *Geschlecht und Verbrechen* (1930), and *Die Weltreise eines Sexualforschers* (1933). Only a few of his works have been translated into English: *Sex in Human Relationships* (London, 1935) and *Sexual Anomalies* (New York, 1942, rev. ed. 1956).

BIBLIOGRAPHY: *Encyclopedia Sexualis* (1936); A. Ellis and A. Abarbanel (eds.), *The Encyclopedia of Sexual Behavior* (1967), 373–383, 485–493, 956–966, 967–975; N. [Jack Nusan Porter]

HIRSCHFELD-MACK, LUDWIG (1893–1965), German painter, printmaker, and art teacher. Hirschfeld was born in Frankfurt-on-the-Main into a prosperous Jewish family of leather manufacturers. He started to work in his father's business in 1910/11 but enrolled in the Debschitz School of Arts and Crafts in Munich in 1912–14, specializing in graphic arts. After military service in World War I until 1918, Hirschfeld went to the Dessau Bauhaus, where he took part in the workshop for graphic arts as a printmaker from 1919 to 1925. He started teaching in 1922/23, taking up the theory of colors as developed by Wassily Kandinsky, Paul Klee, and Johannes Itten. For teaching purposes he created a cinematograph called "*Farbenlichtspiel,*" which demonstrated the impact of color prisms on art. After the Dessau-Bauhaus was shut down he became an art teacher in the successor organization in Berlin and taught color and form to children. He had several exhibitions showing his "*Farbenlichtspiele*" as well as musical instruments constructed for children's use and models of interior design applying color prisms. After the rise to power of the Nazis he immigrated to England together with his family in 1936 but was detained and finally deported as an "enemy alien" to Australia in 1940. During his stay in London he developed a musical instrument called "Color Chord," a cinematograph transmitting color prisms moving to the sound of triads to demonstrate the interdependence of color and sound. After the end of his internment, Hirschfeld-Mack settled in Australia and served as head of the art department of the Geelong Church of England Grammar School until his retirement in 1957. His teaching as a pioneer of Bauhaus pedagogy had a significant impact on the Australian educational system, especially at the pre-school level. His paintings and watercolors reveal the influence of Bauhaus, especially of Itten and Klee.

[Annette Weber (2nd ed.)]

HIRSCHHORN, SAMUEL (1876–1942), author and journalist, a leader of Polish Jewry between the two world wars. Born in Slonim, Belorussia, of a wealthy and assimilated family, in 1889 he settled in Warsaw, where he completed his studies at a Polish commercial school. The rise of the Jewish nationalist movement awakened Hirschhorn's interest in the problems of the Jews and their culture, and from 1903, when he published the Yiddish pamphlet *Vegn Tsionizm* (Concerning Zionism), he devoted himself to public and literary activity. In 1916 he participated in the foundation of the *Folkspartei in Poland, and as one of its members was elected to the Warsaw municipal council, and in 1919 as a delegate to the Polish Sejm (parliament).

Hirschhorn contributed to a large number of Jewish periodicals in Polish and Yiddish, including *Głos Żydowski, Moriyyah, Ershte Tagblat*, and *Moment*. His Polish work on the history of the Jews in Poland between 1788 and 1914 was published in Warsaw in 1921 (Yid. tr. 1923). From an early age he wrote poems in Polish and translated many Russian and French poems into this language. His translations of Jewish poetry of various periods included an anthology of the poems of Ḥ.N. *Bialik (1917) and a collection of poems by 60 Jewish authors (*Anthologia Poezji Żydowskiej*, 1921). He pursued his activities until the Nazi occupation and wrote a diary, which has been lost, on life in the Warsaw Ghetto, where he perished.

[Joseph Kaplan]

HIRSCHKAHN, ẒVI (pseudonym of **Ẓvi Hirsch Cohen**; 1886–1938), Yiddish novelist, short story writer, and essayist. Born in Tzasnik (Belorussia), as a youth Hirschkahn became involved in the Socialist Revolutionary Party and left Russia in 1905, settling for several years in Switzerland. When he returned to Russia, he began his literary career, publishing an essay in Chaim *Zhitlovsky's *Dos Naye Lebn* (1908) under the pseudonym Zvi Girschkahn. His first novel, *Tsvey Veltn* ("Two Worlds," 1910), describes a Jewish city in Belorussia at the beginning of the 20th century and established his reputation as a talented writer. In 1921, Hirschkahn left the Soviet Union and settled in Germany before immigrating to the U.S. in 1925, where he became a regular contributor to *Der Tog* and, in 1934, the *Morgn-Frayhayt*. His other books include *Fun Dervaytns* ("From Afar," 1918), *Nit Hinter a Ployt* ("Not Behind a Fence," 1919), *Unter Eyn Dakh* ("Under One Roof," 1931), and *Akhad Ha-Am*, a biographical novel (1933). He was at various times a Socialist, a Zionist, an anarchist, and a Communist.

HIRSCHLER, IGNÁC (1823–1891), pioneer ophthalmologist in Hungary. Born in Pressburg, he studied medicine in Vienna and Paris, returning to Hungary in 1849. Unable to obtain the position of lecturer at the University of Pest, he became ophthalmic physician in the hospital for poor children and later physician in Pest general hospital. His skillful eye surgery and scientific work won him the status of researcher. He introduced new methods and published studies in various European periodicals. From 1869 he was a member of the Hungarian Academy of Sciences. Hirschler was also active in Jewish public life and from 1861 to 1863 was president of the Jewish community of Pest, acting as chairman of the general Jewish Congress of 1868–69. From 1885, he was a member of the Hungarian Upper House. Among his important works are *Zur Casuistik der Anaesthesie und Hyperaesthesie der Netzhaut* (1874), *Adat a szaruhártya gyurmájába lerakódott festanyag ismeretéhez* (1872), *Adatok a látóhártya maradvány kórodai ismertetéséhez* (1874), and his *Autobiographisches Fragment* (1891).

[Jeno Zsoldos]

HIRSCHLER, PÁL (1907–1944), Hungarian rabbi and biblical scholar. Hirschler was born in Nagykanizsa and was ordained at the Jewish Theological Seminary of Budapest, in 1931. That same year he was appointed rabbi of Szekesfehervar, Hungary. Hirschler's major work is his commentary to the books of Esther and Nahum, published as part of the Bible commentary edited by A. Kahana, *Perush Madda 1* (1930). His critical study of the Septuagint translation of the Book of Ezekiel was published in A. Scheiber (ed.), *Jubilee Volume in Honour of Professor Bernhard Heller on the Occasion of his Seventieth Birthday* (1941), 18–31 (Heb. sect.). While in the ghetto in 1944 he completed a Hungarian translation of the Book of Ezekiel: however, this work was never published. Hirschler was deported to Auschwitz, where he died.

[Alexander Scheiber]

HIRSCHLER, RENÉ (1905–1944), French rabbi and social worker. Born in Marseilles, Hirschler graduated in 1928 from the Rabbinical School of Paris and was rabbi of Mulhouse. At the outbreak of World War II he became itinerant chaplain for the Foreign Legion units in which many thousands of foreign-born Jewish volunteers served. After the Franco-German armistice of June 1940, Hirschler became very active in various fields of relief work in the free zone of France, his main activity consisting of relief work in the various concentration, detention, and forced labor camps to which he had access. On March 13, 1943, the *grand rabbin* of France appointed Hirschler chief chaplain (*aumônier général*) for foreign-born Jews interned in camps in the free zone. In view of the shortage of rabbis in all camps, he was permitted to appoint over 200 auxiliary chaplains (*aumôniers auxiliaires*). He was also active in underground relief work for Jews in hiding. On Dec. 23, 1943, Hirschler and his wife were arrested in Marseilles by the Gestapo. They were both deported to Auschwitz early in 1944 and perished there.

HIRSCHMAN, ALBERT OTTO (1915–), economist. Hirschman, who was born in Berlin, studied at the Sorbonne, the London School of Economics, and the University of Trieste, where he earned his doctorate in economics in 1938. He was a Rockefeller Fellow at the University of California, Berkeley (1941–43), and then served in the United States Army (1943–46). He was chief of the West European and Commonwealth section of the Federal Reserve Board from 1946 to 1952. He served for two years as financial adviser to the National Planning Board of Colombia, and then as private economic counselor in Bogota (1954–56). In 1956 Yale University appointed him research professor in economics, and in 1958 he became professor of international economic relations at Columbia University. In 1964 he was named professor of political economy at Harvard, later serving as Littauer Professor of Political Economy from 1967 to 1974. In 1975, he joined the School of Social Science at the Institute for Advanced Study in Princeton, becoming professor emeritus in 1985.

Hirschman's main interests are economic development and international economics, as well as interdisciplinary fields such as sociology and anthropology. Described as a playful genius who enjoys being unconventional, Hirschman is regarded as a master of viewing old problems in a new way.

Among his many honors, Hirschman received the Talcott Parsons Prize for Social Science from the American Academy of Sciences (1983); the Toynbee Prize (1997–98); and the Thomas Jefferson Medal, awarded by the American Philosophical Society (1998).

His writings include *National Power and the Structure of Foreign Trade* (1945), *The Strategy of Economic Development* (1958), *Journeys toward Progress* (1963, 1965^2), *Development Projects Observed* (1967), *Exit, Voice, and Loyalty* (1970), *The Passions and the Interests* (1977), *Shifting Involvements* (1982), *Rival Views of Market Society* (1986), *The Rhetoric of Reaction* (1991), *A Propensity to Self-Subversion* (1995), and *Crossing Boundaries* (1998).

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

HIRSCHMANN, IRA ARTHUR (1901–1989), U.S. business executive. He held key positions in several large New York department stores, eventually becoming vice president of Saks

Fifth Avenue, 1931–1938, and vice president, Bloomingdale Brothers, 1938–1946. In 1935 he served as the chairman of the board of the University-in-Exile which employed many refugees from Nazi Germany. That year he also joined the New York City Department of Education. In July 1938 he was an observer at the *Evian Conference on refugees, which led him to more intensified action on behalf of those who sought to flee from Hitler. A supporter of President Franklin D. Roosevelt, Hirschmann was named special assistant to William H. Davis of the National War Labor Board in 1942. The Emergency Committee to Save the Jewish People in Europe (the Bergson Group) asked him to investigate rescue possibilities in mid-1943.

In February 1944 he arrived in Turkey as the Special Representative of the War Refugee Board. Working with the United States ambassador, Laurence Steinhardt, Hirschmann helped convince the Turkish authorities to allow refugees to pass through Turkey on their way to Palestine. He made a great effort to find a suitable sea-route to Turkey from the Balkans and procure shipping for the refugees. Hirschmann also played a key role in the Transnistria scheme. Through the International Red Cross, he met the Romanian ambassador in Turkey, Alexander Cretzianu, and induced him to press his government to permit the return to the traditional areas of Romania of the remaining Jews, who had been deported to Transnistria. Hirschmann also assisted Hungarian Jewry. After interviewing Joel *Brand, he recommended that the Western Allies enter into negotiations with the Nazis, with the hope that the process would earn valuable time and thereby save their lives. With the help of Monsignor Angelo Roncalli (later Pope *John XXIII), Hirschmann obtained baptismal certificates for Hungarian Jews. He also successfully prevailed upon the Romanians to allow Hungarian refugees into Romania in the summer of 1944. Through the Bulgarian minister in Turkey, Nicholas Balabanoff, he persuaded the Bulgarians to revoke their anti-Jewish legislation.

In 1946 Hirschmann went to work for the United Nations Relief and Rehabilitation Administration (UNRRA) as a special inspector-general. In that capacity he toured displaced person's camps in Germany and contributed to the improvement of conditions in them. In addition to his other interests, Hirschmann was a talented pianist and musicologist. He established and assumed the presidency of the New Friends of Music in 1946. That same year he became the president of the Metropolitan Broadcasting and Television Inc. Hirschmann published two memoirs, *Lifeline to a Promised Land* (1946) and *Caution to the Winds* (1962).

[Robert Rozette (2nd ed.)]

HIRSCHPRUNG, PINHAS (1912–1998), Canadian rabbi and talmudic scholar. Hirschprung was born in Dukla, Poland, and was educated in rabbinic literature by his grandfather, R. Tevel Seman, and at the Yeshivat Ḥakhmei Lublin, where he gained renown for his remarkable memory in Torah scholarship. He arrived in Montreal in 1941, having escaped the Nazis in a journey which took him through Russia, Japan, and Shanghai. His escape is described in his book *Fun Natsishen Yamertal: Zikhroines fun a Palit* (1945). In Montreal, he was involved in the affairs of the Rabbinical Council (Va'ad ha-Rabbanim) of the Jewish Community Council of Montreal (Va'ad ha-Ir). In 1969, having served some years as *rosh* Beth Din, he succeeded Rabbi Joshua Herschorn as president of the Rabbinical Council and was thus widely accepted as Montreal's chief rabbi. In this capacity, Hirschprung expanded the Montreal Beth Din's arbitration of personal and business disputes. He also engaged in a campaign to help provide prayer books and other religious articles to Soviet Jewry.

He was internationally known for his grasp of the entire range of talmudic literature and his opinion was sought on numerous halakhic issues in Israel and the Diaspora.

He was the head of Montreal's Merkaz ha-Torah, and established Jewish day schools, notably the Beth Jacob School for girls in Montreal, which was named Bais Yaakov d'Rav Hirschprung after his death.

Hirschprung co-edited the rabbinical journal *Ohel Torah* (1928–32), and contributed many articles to journals of Torah scholarship. He also published a collection of short addresses, *Kuntres Penei Shelomo* (1967).

[Ira Robinson (2nd ed.)]

HIRSH, NURIT (1942–), Israeli composer and arranger of Israeli folk songs. She was born in Tel Aviv and graduated from the Rubin Music Academy. She also studied movie and electronic music at UCLA in Los Angeles, and composition in New York.

After her military service as a musician she started composing songs. Her first song, "*Peraḥ ha-Lilakh*" ("The Lilac Flower"; lyrics Uri Asaf) appeared in 1965. Since then she has composed and orchestrated more than one thousand songs performed by the best Israeli singers and ensembles. Hirsh also wrote the score for 14 motion pictures, such as *Ha-Shoter Azulai* (The Policeman Azulai), *Immi ha-Generalit* ("My Mother the General"), the musical *Salah Shabbati*, and television series, such as *Parpar Neḥmad* and *Kerovim Kerovim*. Her song "*Osei Shalom bi-Meromav*" was awarded third prize in the first Ḥasidic Song Festival (1969) and became a major hit on the international scene and adopted in prayers by many Jewish communities.

In 1973, her song "*Ei-sham*" ("Somewhere"; lyrics, Ehud *Manor) took fourth place at the Eurovision song contest. In 1978, another of her songs, *Abanibi* (lyrics, Ehud Manor) took first place in that contest. Her songs won first prizes in a number of song festivals organized by the Israeli state radio and television authority and in children songs festivals. Her hits reached the international scene and she won first prizes in Japan (1974), Chile (1975), Portugal (1978), Greece (1971),

Malta (1972), Ireland (1979), Yugoslavia (1979), to name but a few.

In 1992 she produced together with lyricist Michal Rosen a videocassette for children, "*Did dig doog*." Hundreds of thousands of copies were sold. In 1999 in the wake of that success she made a second videocassette, "*Pim Pam Po*." Four collections of her songs have been released: *Fifty Hits* (Ma'ariv, 1969), *La-Lekhet Shevi* (Yediot Aḥronot, 1984) *Only for Now* (Yediot Aḥronot, 1990), *Dag Digdoog* (Sheva, 1996).

[Nathan Shahar (2nd ed.)]

HIRSHBERG, JEHOASH (**Yehoash**; 1938–), Israeli musicologist. In 1955–62 he studied violin and music theory at the Music Academy in Tel Aviv. He continued his education at the University of Pennsylvania (1966–71) where he wrote a Ph.D. thesis on the theme "The music of the late 14th century: a study in musical style" (1971). The same year he began teaching at the Department of Musicology at the Hebrew University of Jerusalem where he served as the head of the Institute of Arts and Letters (1993) and became professor of musicology (1995). His versatile research fields include 14th-century music, the origin of the early classical concerto in 18th-century Italy, the history of music in Palestine (1880–1946), Israeli music, and, in the realm of ethnomusicological research, the musical tradition of the Karaite community.

Among his numerous publications are three monographs connected with Israeli music, either as a whole (*Music in the Jewish Community of Palestine 1880–1948: A Social History,* Oxford University Press, 1995) or dedicated to prominent Israeli composers (*Paul Ben-Haim: His Life and Works*, Jerusalem, 1990, *Alexander Uriah Boskovich: His Life, Works, and Ideas*, in Hebrew, Jerusalem 1995, together with H *Schmueli); a monograph on the Italian concerto written by Hirshberg together with Simon McVeigh, *The Italian Solo Concerto 1700–1760: Rhetorical Strategies and Style History* (The Boydell Press, Woodbridge, 2004). These co-authors also published jointly a number of concerts by prominent Italian composers of the 18th century.

HIRSHBERG, YEHUDAH (1905–1962), Israeli physical chemist. Hirshberg, who was born in Poland, went to Palestine in 1923 to join a kibbutz. In 1933 he joined the Daniel Sieff Institute (later part of the Weizmann Institute) at Reḥovot. Hirshberg worked on the photochemistry of glycine, alcohols, aldehydes, the deamination of amino acids, the decomposition of solid compounds of hydrogen at low temperatures, absorption spectroscopy, fluorescence spectra, photoisomerization, and other effects of light. Essentially an experimentalist, Hirshberg discovered the phenomenon of photochromism – the reversible transformation of colorless dianthrones by ultraviolet light into colored forms, and also of spiropyrans by visible light.

[Samuel Aaron Miller]

HIRSHEL (**Hirschel**), **MEYER** (**Naphtali Hirz b. Judah Selke**; **Joseph Naphtali Hirz Levita**; d. c. 1674), functionary of the Vienna community at the time of the expulsion of 1670, tax collector, and informer. A native of Langenlois, near Krems, and court agent of Emperor *Ferdinand III, he is first mentioned in 1651 when he and other notables were arrested in connection with the murder of the Jewess Leonora, for which the community was held responsible. He was released (as were others later, on payment of large sums) when he undertook to collect the taxes of Austrian Jewry with the assistance of soldiers and without recourse to the lawcourts. He performed this task in an autocratic and corrupt fashion, substituting falsified tax records. Through collecting part of the taxes in textiles and uniforms in lieu of cash he became a forerunner of the Jewish textile industry. He was in a unique legal position: entitled to all amenities provided by the community, he was exempted from its jurisdiction and protected by the imperial court. In 1665, when another body of a murdered woman was found in the Jewish quarter, Hirshel denounced some Jews as connected with her death. However, in 1667 he himself was imprisoned and his possessions confiscated. Although he was sentenced to expulsion, the order was postponed because the judges considered that the authorities could not do without his services as an informer. The evidence collected by a special commission set up to inquire into his affairs contributed to the expulsion of the Jews in 1670. Hirshel settled in Nikolsburg (Mikulov), where he was a leader of the delegation which had secret meetings with the Viennese authorities to try to secure the readmission of rich Jews to Vienna. He arranged the authorization for Jews to attend fairs in Lower Austria.

Moses, *Die Juden in Niederoesterreich* (1935), index; M. Grunwald, *Vienna* (1936), 108–12; idem, in: MGWJ, 81 (1937), 439–43.

[Meir Lamed]

HIRSHENBERG, SAMUEL (1865–1908), Polish painter, born in Lodz, Poland. Hirshenberg painted large historical canvases in the fashion of the time and also many Jewish subjects such as "the Yeshiva," "Uriel Acosta," "Young Spinoza," and the "Jewish Cemetery." His "Wandering Jew" and "Golus" (exile) were especially popular. In 1907 he emigrated to Palestine and accepted a teaching post at the Bezalel School of Art, Jerusalem. He died a year later.

HIRSHENSON, HAYIM (1857–1935), U.S. educator and scholar. Eliezer Schweid and Daniel Elazar call Hirshenson one of those great and almost forgotten men of early Zionist history who undertook one of the most comprehensive efforts of anyone to demonstrate how the traditional Torah and modern democracy went hand in hand. His response was bold and daring even as it remained inside the confines of Jewish law.

Born in Safed, Hirshenson moved with his family to Jerusalem in 1864 after an earthquake. There his father Yaakov

Mordecai established Yeshivat Succat Shalom. His contacts in the *yishuv* were wide including the yeshivah world, where he was well respected, and the world of Maskilim. In the middle part of the 19th century, these worlds were less divergent than they were to become. He worked at a time when Zionism was interested in continuity and synthesis rather than revolution. Thus, he worked with Ben Yehuda and Rabbi David Yellin to develop Hebrew as a spoken language. He took to speaking Hebrew in his own home as well. He traveled to Russia in 1878 where he met with some of Eastern Europe's most distinguished rabbis and in 1884 he traveled to Hungary and Germany where in Frankfurt he established a Torah scientific journal *Ha-Misderonah*, which featured articles by great Talmudic scholars as well as *maskillim*. He returned to Jerusalem where he published a Yiddish paper *Beit Yaakov* and worked at the Abrabanel Library. He also continued his wide range of contacts working with the secular organization of B'nai B'rith and also constructing housing outside of the city walls. He was a teacher in the Lemel School in Jerusalem and faced some problems – including the threat of excommunication – for being too involved in the advance of Hebrew. Financial instability forced him to travel to Constantinople where he became a principal of the Hebrew School Tifereth Zvi and Or Torah. While in Constantinople, he studied Spinoza and Maimonides. He was part of the delegation to the 6th Zionist Congress in Basel and was encouraged to immigrate to the United States where he became a rabbi at a Hoboken synagogue in 1903. While he bemoaned the materialism of the U.S. and the sad state of Torah education in the beginning of the 20th century, he developed an admiration for American democracy.

In the U.S. he became a member of the Agudath ha-Rabbonim. He remained an active Zionist and became well known for his writings, which were not uncontroversial. His works include *Yamim mi-Kedem* (1907), which grappled with the then prevalent issue of Biblical criticism, and *Malki be-Kodesh* (1919), in which he established the theoretical presentation of the future Jewish state within a halakhic perspective. Hirshenson regarded the advent of the Messiah as a historical process, not a metahistorical event and worked to see that there would not be a rupture between the Jewish past and its future.

[Michael Berenbaum (2nd ed.)]

HIRSHFIELD, MORRIS (1872–1946), U.S. primitive painter. Born in Poland, he immigrated to America and went into the slipper producing business. At the age of sixty-five he retired and began to paint. He completed seventy-four pictures, some very large. He painted female nudes and animal subjects.

HIRSHHORN, JOSEPH HERMAN (1899–1981), U.S. financier, mining executive, and art collector. Hirshhorn, who was born in Mitau (Jelgava), Latvia, went to the U.S. in 1905 with his widowed mother and her 12 other children. He began working at the age of 15 as an office boy. At the age of 17 he became a stockbroker and accumulated substantial wealth during the 1920s. Having avoided heavy losses during the 1929 crash, he turned his attention to Canada where he first successfully engaged in gold mining. At the end of the 1940s, Hirshhorn began to finance uranium ventures which led to the significant discoveries in the Blind River region (Ontario). In 1954 he consolidated his numerous Canadian mining properties into a large interest in Canadian Rio Tinto. This reorganization enabled him to concentrate on his collection of contemporary art. In May 1966 President Johnson, on behalf of the United States, accepted Hirshhorn's collection of 4,000 paintings and 1,500 sculptures. In October 1966 Congress voted $15 million for the construction of a gallery and a sculpture garden to house them. The collection is one of the most comprehensive and representative assemblies of modern visual art. The Joseph H. Hirshhorn Museum and Sculpture Garden was formally inaugurated in Washington on October 1, 1974. Consisting of 6,000 paintings and sculptures, it gives Washington the status of a major modern art center. The sculpture collection is regarded as one of the greatest in the world, with examples of virtually every notable sculptor of the 19th and 20th centuries.

[Joachim O. Ronall (2nd ed.)]

HIRSZFELD, LUDWIK (1884–1954), Polish physician, immunologist, serologist, and microbiologist. Hirszfeld, who was born in Warsaw, spent from 1907 to 1911 in Heidelberg where in 1910, in collaboration with the German scientist Emil von Dungern, he demonstrated the heredity of the different blood groups. During his World War I army service in Serbia, Hirszfeld discovered the bacteria of paratyphoid C, which is known as *Salmonella hirzfeldi*. In 1924 he was appointed professor at the Free University of Warsaw. After the occupation of Poland in World War II he escaped from the Warsaw Ghetto, and described his experiences in the book *Historia jednego życia*. In 1945 he organized the faculty of medicine of Wroclaw University where he became professor of microbiology. He also established the Institute of Immunology and Experimental Therapy. He founded a research center in Wroclaw for the pathology of pregnancy. A member of the Polish Academy of Sciences, he introduced the study of seroanthropology in his country. Among Hirszfeld's most important books are *Grupy krwi w zastosowaniu do biologji, medycyny i prawa* ("Blood Groups in Relation to Biology, Medicine and Law," 1934) and *Dochodzenie ojcostwa w świetle nauki o grupach krwi* ("The Establishment of Paternity in the Light of the Science of Blood Groups," 1948).

BIBLIOGRAPHY: H. Hirszfeldowa et al., *Ludwik Hirszfeld* (Pol. and Fr., 1956).

[Stefan Lutkiewicz]

HIRSZOWICZ, ABRAHAM (second half of the 18th century), wealthy merchant, purveyor to the court, and financial agent to King Stanislas Augustus Poniatowski. Active in

the efforts of the *maskilim to improve the status of the Jews, he submitted to the king and the Four Years' Sejm (in 1791) a memorandum on the improvement of the condition of the Jews of Poland. In it he suggested that those Jews who had no means of livelihood should be employed in public works. He also advocated professional training for adolescent Jewish youth; the abolition of the restrictions preventing Jews from engaging in crafts; encouraging the Jews toward agricultural settlement by offering them land in the Ukraine; the prohibition of wearing luxurious clothing (especially of silk); raising the legal age of marriage; the abolition of rabbinical positions in small towns; and the establishment of hospitals for needy Jews in every town, as well as Jewish representation in every province ("*syndykatura generalna*").

[Arthur Cygielman]

ḤISDA (c. 217–309), Babylonian *amora* whose long life spanned the second and third generations of *amoraim*. Ḥisda is one of the most frequently quoted scholars in the Jerusalem and Babylonian Talmuds, both in *halakhah* and *aggadah*. According to some scholars, he went to Palestine for a while, and this may account for the fact that he cites many Palestinian traditions and rulings (Pes. 117a; Yev. 25b, et al.), as well as the fact that he is frequently quoted in the Jerusalem Talmud. According to the Talmud, he was of a priestly family (Ber. 44a), and came from the town of Kafri (Er. 62b; BM 6b). His principal teachers were *Avimi (Men. 7a; Ar. 22a) and *Rav (Abba Arikha) in Sura. After Rav's death he attended the lectures of his successor Huna and was counted as one of his outstanding pupils (BM 33a). He nevertheless continued to speak of Rav as "our great teacher" (Suk. 33a) and was always eager to hear any of his teachings which might have escaped him (Shab. 10b). In spite of his own dictum that a disciple who disagrees with his teacher is like one who disagrees with the Divine Presence (Sanh. 110a), he did not always accept Huna's positions on points of law (Ber. 25a). Recognizing R. Huna's authority, however, he never gave a halakhic ruling even on the simplest matter in Sura, Huna's town, as long as he lived (Er. 62b). A question that he asked R. Huna about "a teacher who needed his disciple," was taken by the latter as a personal affront, which led to a rupture between them for some time (BM 33a). They later effected a reconciliation but Ḥisda returned to live in Kafri, south of Sura, where, since it was not within Huna's jurisdiction, he could give independent rulings. After Huna's death the scholars in the academy of Sura moved to Pumbedita, of which the head was R. Judah b. Ezekiel; but after Judah's death they returned to Sura, where Ḥisda was the head for the last 10 years of his life (300–310; *Iggeret R. Sherira Ga'on*, ed. Lewin, 85).

Because of Ḥisda's prominence, the Talmud preserves many traditions concerning his character, his manner of learning and his personal life. He and R. Huna are styled the "pious men of Babylon" (Ta'an. 23b). R. Ḥisda and R. Huna prayed jointly for rain in the hope that their joint prayers would be answered (Ta'an. 23b). In another passage (MK 28a) it is stated that on account of their piety, the prayers for rain of Ḥisda and Rabbah were answered. His scholarship was contrasted with that of R. Sheshet. While the latter's was greater in extent, his own was characterized by depth and thoroughness. Huna advised his own son Rabbah, one of the foremost *amoraim* of the following generation, to attend Ḥisda's lectures, since they were very thorough and sound (Shab. 82a). Rabbah objected that Ḥisda spent too much time on "mere mundane issues" (Shab. 82a) – traditions concerning health and hygiene (cf. Ber. 39a). Huna's response to his son that traditions concerning health and hygiene are not "mere mundane issues" and were worthy of his attention, is indicative of their view of what religious study should include. In spite of the general principle that laws can only be derived from the Pentateuch, but not from the later books of the Bible, he did derive some from the latter (Ber. 25a; Sanh. 83b). His statement, "the Almighty loves the schools which are distinguished by *halakhah* more than all other synagogues and academies" (Ber. 8a), reveals the bent of his mind as does his statement that mountains of exposition could be piled up on every single letter of the Torah (Er. 22a). Nevertheless numerous aggadic sayings are ascribed to him; many of these are on health and hygiene, as already noted; others are on modesty and sexual behavior (Shab. 33a; 140b; Sanh. 110a, et al.), in which he adopted an extreme attitude, stating a man should not converse even with his own wife in the street (Ber. 43b).

His early years were spent in poverty (BK 91b; Shab. 140b) but he became very wealthy as a brewer (Pes. 113a; MK 28a), and in the year 294 he rebuilt at his own cost the academy of Sura, which had fallen into disrepair (*Iggeret R. Sherira Ga'on*, ed. Lewin, 84). He married at the age of 16, though in his opinion it would have been better to have married two years earlier (Kid. 29b). In his private life he was humble and modest, affable and friendly to all. He went out of his way to be the first to greet everyone in the marketplace, even heathens (Git. 62a). His life was apparently very happy and he celebrated many joyous occasions during his lifetime: "In R. Ḥisda's house 60 weddings were celebrated" (MK 28a). He had a large family: seven sons and at least two daughters, who married two brothers, Rami b. Ḥama and Mar Ukba b. Ḥama, who became outstanding *amoraim* (Ber. 44a). He lived to the age of 92 (MK 28a) and the story is told that he was so intensely involved in his studies that the Angel of Death was powerless over him, until finally he succeeded in distracting Ḥisda from his studies long enough that he could take his soul (MK 28a; Mak. 10a).

ḤISDAI IBN ḤISDAI, ABU AL-FAḌL (b. ca. 1050), Hebrew poet; son of Joseph ibn Ḥisdai, the author of the *Shirah Yetumah* in honor of *Samuel ha-Nagid; born apparently in Saragossa. Ḥisdai was Abu al-Faḍl's family name. In his youth, in the cultural atmosphere created by the Banu Hud, he studied the exact sciences, especially mathematics and astronomy, and later also medicine, music, and philosophy. But above all, he was well versed in Arabic literature and was a distinguished author of Arabic and Hebrew poetry and prose. Aḥmad I al-Muqtadir (1046–1081), the king of Saragossa, who was fond of intellectuals and scientists and drew them into his service, appointed Ḥisdai as his vizier; from that time the latter served as counselor and minister of the king, writing his letters. Aḥmad's heirs, Yusuf al-Mutamim and Aḥmad ibn Yusuf al-Mustain, retained him in this post. The Arabic writers, who collected the best poems of their poets in Spain, also quote some of the poems sent by Ḥisdai to princes and fellow authors. They, however, also repeat the report, which was apparently already current during his life, that he had become a Muslim. In the opinion of some scholars, this seems to be a fabrication, since his younger contemporary, Moses *Ibn Ezra, numbers him in his book *Kitab al-Muhadara wal-Mudhakara* (36b) as being among the Jewish writers in Spain, without mentioning his apostasy, which Saadiah *Ibn Danan explicitly denies (*Ḥemdah Genuzah*, 15, p. 1). Other specialists, like Schirmann, accept the opinion of Arab historians who think that Ḥisdai became a Muslim and that this was the origin of his political success.

[Eliyahu Ashtor / Angel Sáenz-Badillos (2nd ed.)]

ḤISDAI (Ḥasdai) IBN SHAPRUT (c. 915–c. 970), the first of the Jewish dignitaries in the service of Spanish rulers on whom information is extant. The family originated in the city of Jaen in eastern Andalusia. From there, Ḥisdai's father, who was a wealthy man, came to Cordoba, the capital of the Umayyad caliphate. Ḥisdai studied primarily medicine, entering the service of the Umayyad caliph Abd al-Raḥmān III (912–961). He was a practicing physician who also engaged in medical research. In the late 940s, when a diplomatic delegation from Byzantium arrived in Cordoba, bringing as a gift a manuscript of the famous pharmaceutical work of Dioscorides, Ḥisdai was a member of the group which translated it from Greek into Arabic. After the fashion of the Muslim rulers who also entrusted their physicians with administrative and political responsibilities, Abd al-Raḥmān appointed Ḥisdai director of the customs department, one of the most important positions in the country's administration. His talents were also applied to various diplomatic activities. When the abbot Johannes of Goerz (Gorizia) was in Cordoba in 953 as emissary of the Holy Roman Emperor Otto I, the negotiations were carried on through Ḥisdai. In 956 he was sent, together with a Muslim emissary, to the court of the king of Leon in order to negotiate a peace treaty with him. The culminating point of his diplomatic activity was his mission to the royal court of Navarre in 958. He was at first sent there in order to cure Sancho, a Navarre prince who had been crowned king of Leon and then had been expelled. Ḥisdai succeeded in persuading the Christian king and his grandmother Toda to travel to Cordoba in order to conclude a peace treaty with the caliph. The appearance of the two Christian rulers in Muslim Cordoba was widely hailed, and justly considered as an important diplomatic achievement. After Ḥisdai had become an important dignitary in the court of the caliph, he was also appointed leader of the Jewish population in Muslim Spain.

He is rightly considered the founder of Sephardi Jewry in laying the foundations of the cultural and religious efflorescence that came to be known as "The Golden Age." He wisely used the antagonism that existed between Umayyad Spain and Abbasid Babylon to create the conditions that would enable Spanish Jewry to establish its religious independence from the *geonim* of Babylon. Abd al-Raḥmān was obviously interested in putting an end to the Babylonian tutelage over Spanish Jews. Ḥisdai embarked on a project that made Spain a major center of Jewish culture. He acquired the best manuscripts, offered opportunities to scholars from Spain and elsewhere, and acted as their patron. His activities were most beneficial to his coreligionists. He supported scholars and intellectuals such as *Menahem b. Saruq, who acted as his Hebrew secretary for a long time – until he lost favor – and naturally bestowed presents on poets, as was the custom of the Spanish magnates of that period. *Dunash ibn Labrat, the most outstanding of the Jewish poets living in Spain at that time, wrote poems dedicated to him. It was Ḥisdai who had appointed the refugee *Moses b. Ḥanokh, who appears to have arrived from southern Italy, to the rabbinical seat of Cordoba. The appointment of this eminent rabbi in Cordoba was of great historical importance for the development of the Jewish community of Spain. It brought about a loosening of the ties between Spanish Jews and the Jewish center in Babylonia; Spanish Jewry thus became independent of the guidance of the Babylonian *geonim*. After the death of R. Moses b. Ḥanokh, Ḥisdai supported the candidacy of his son *Ḥanokh (ben Moses) who was rivaled by Joseph ibn Abitur. Due to Ḥisdai's influence, Ḥanokh was elected rabbi in succession to his father. Ḥisdai is especially well known for his (alleged) letter to Joseph, king of the *Khazars, and the (alleged) reply sent by the latter. In his letter Ḥisdai describes the Umayyad kingdom in Spain and his own status therein, and asks many questions about the Khazar kingdom, while the letter of reply contains a detailed report of the Khazars' conversion to Judaism. There is a divergence of opinion among scholars as to the authenticity of these letters. A text found in the Cairo *Genizah* consisting of a letter sent to Ḥisdai Ibn Shaprut, describing the war conducted by a Christian army in Sicily and the great suffering of the community

of Palermo, was published by A. Scheiber and Z. Malachi, in: SPAAFJR, 41–42 (1973–74), 207–218.

[Eliyahu Ashtor]

ḤISIN, ḤAYYIM (1865–1932), *Bilu pioneer in Ereẓ Israel. A native of Mir, Belorussia, Ḥisin was roused by the 1881 pogroms and joined the Bilu association, going to Ereẓ Israel in July 1882 with the second Bilu group. He worked in Mikveh Israel and Rishon le-Zion. He joined the Bilu settlement of *Gederah, which he later left because he refused to live on the dole. He tried to support himself and his family by working as a coachman carrying passengers between Jaffa and Jerusalem. In 1887 he returned to Russia and studied pharmacology. In the late 1880s and early 1890s Ḥisin contributed articles to the Russian-Jewish journal *Voskhod*, including the diary written during his stay in Ereẓ Israel and a description of his visit to the country in 1890. In 1898 he went to Berne, Switzerland, to study medicine. He was active in propagating Zionism among the Russian-Jewish students in Western Europe, attended the early Zionist congresses, and was an active member of the "*Democratic Fraction." He again went to Ereẓ Israel in 1905, this time settling as a qualified physician, and was appointed as the representative of the Odessa committee of the Ḥovevei Zion in Jaffa. He helped to found the first workers' settlements – *Ein Gannim, *Be'er Ya'akov, *Naḥalat Yehudah, and *Kefar Malal. In 1909 Ḥisin was one of the founders of Aḥuzat Bayit, the first nucleus of the city of Tel Aviv. He died in Tel Aviv.

His diary, translated from Russian into Hebrew by S. Herberg under the title *Mi-Yoman Eḥad ha-Bilu'im* ("From the Diary of a Bilu Member," 1925), is a valuable aid to understanding the period.

HISTADRUT (abbreviation of **Ha-Histadrut ha-Kelalit shel ha-Ovedim be-Ereẓ Israel**, the General Federation of Labor in Israel; until 1966, **Ha-Histadrut ha-Kelalit shel ha-Ovedim ha-Ivriyyim be-Ereẓ Israel**, the General Federation of Jewish Labor), founded in 1920 (for its history, see *Israel, State of: Development of Jewish Labor Movement), the largest labor union and the largest voluntary organization in Israel and largest Jewish labor organization in the world. In 1969 it had a membership of 1,038,653, including housewives and members of its working youth organization, *Ha-No'ar ha-Oved. Excluding the two latter categories, its membership was 719,937, approximately 75% of the labor force in Israel. By 1985 it numbered 1.5 million members, who together with their families included 2.5 million people. From 1995, after the election of Haim *Ramon as secretary general, the Histadrut underwent radical changes in its organization and operation (see below).

The Histadrut until 1995

CONSTITUTION. The Histadrut is more than a trade union organization; according to its constitution, it "unites and organizes all workers, without distinction of creed, race, nationality or outlook, who live on the fruits of their labor without exploiting the labor of others, for the purpose of arranging all the communal, economic, and cultural affairs of the working class in the country for the building of the labor society in the Land of Israel." It therefore conducted extensive economic, mutual aid, and cultural, as well as trade union, activities. Membership was personal and direct. There was no collective or group membership; the member joined the Histadrut first and was then registered in the appropriate union. Wives of members could join with full voting and other rights, even if they were occupied only as housewives. Since 1960, Arab workers and their wives have been admitted with full membership rights.

The policy-making bodies were the convention (*ve'idah*) and the council (*mo'eẓah*). The convention was the highest authority and was elected by the entire membership approximately every four years. In the elections any faction already represented was entitled to submit a list of candidates; any group of members could submit a new list if they had the legal number of signatures, which depended on the ratio of the number of delegates to the number of registered voters (at the 11th convention, it was around 800). Lists were generally submitted by political parties; all national parties except the religious ones, which had their own labor organizations, were represented at the 1969 convention. Members voted by secret ballot, and each party was allotted delegates in proportion to the votes it obtained. The convention elected the council (351 members in 1970), which, in turn, elected the Executive Committee (Ha-Va'ad ha-Po'el), the operative governing body. The Executive Committee appointed the Central Bureau (Ha-Va'adah ha-Merakkezet), which had 20 members in 1970, and the secretary-general of the Histadrut, who was nominated by the majority party. All of these executive organs were divided according to the pattern of the convention, in accordance with the election results. In each town a local labor council (Mo'eẓet ha-Po'alim) was elected simultaneously with the convention. At the same time, and on the same basis, farm work-

ers elected the Agricultural Center (Ha-Merkaz ha-Ḥakla'i), and women members elected the Women Workers' Council (*Mo'eẓet ha-Po'alot).

As set out in its constitution, the Histadrut had four main fields of activity: trade unionism, economic and cooperative activities, mutual aid, and education.

TRADE UNIONS. The Histadrut's trade union activities were controlled by its Trade Union Department, in which the parties were represented according to their proportions in the convention. By agreement, the religious workers' organizations, *Ha-Po'el ha-Mizrachi and Po'alei Agudat Israel, were also represented, and their members received trade union protection in return for an organization fee. Thus, over 90% of wage earners in Israel were organized within the Histadrut's trade union framework. The department was headed by a member of the Central Bureau. The basic unit of the Histadrut trade union organization was the Workers' Committee (Va'ad ha-Ovedim), which was elected on a personal, nonpolitical basis in each place of work: office, factory, plantation, or building site. Local unions were formed by all members in the same trade or industry in any locality. The local union then became a constituent part of the national union, which had jurisdiction in nationwide matters in the industry.

The Histadrut Executive Committee set up national unions when it deemed that the size of an industry justified it, and these unions received their funds from the Executive rather than vice versa. Generally, the executive of these unions was elected by a convention, which in its turn was elected by the membership on a political party basis; in a number of cases there were very long intervals between elections to national union executives. Members of other labor organizations and unorganized workers in the trade were permitted to participate in national union elections. Bargaining on labor contracts, which cover a wide range of social benefits as well as wages, took place on two levels. The Trade Union Department conducted negotiations at the national level with the National Union of Manufacturers on the general guidelines for the collective agreements. In these negotiations, the position of the country's economy and national economic policy were borne in mind. (At the beginning of 1970, for example, the Histadrut's national wages policy formed part of a national economic "package deal" in which the government promised to limit tax increases and the employers undertook not to raise prices.) At the same time, each national union entered into negotiations with representatives of management from its own trade or industry for an agreement which had to be within the general framework of the agreed national policy. Where there was no industry-wide union, local labor councils with works committees conducted negotiations on a plant or district level. The wage agreement normally set out wage rates in detail, dealt with social benefits and working conditions, and specified procedures for the handling of grievances and disputes. Among the social conditions, benefits included were: sick pay, employer participation in the cost of workers' health insurance, paid annual vacations and public holidays, severance pay, and a variety of provident and pension plans.

ECONOMIC ACTIVITIES. For ideological and historical reasons, the Histadrut was engaged in a wide range of economic and social activities not traditionally associated with trade unionism. As the founding members saw in the Histadrut not only a means of protecting the interests of the workers but also an instrument for the development of a modern, independent Jewish society along socialist lines, the organization initiated and developed a large number of economic enterprises, some in the form of autonomous cooperative societies and others owned directly and collectively by the entire membership (see also *Cooperation). The earliest and best-known of these ventures were the *kibbutz, the collective village, and the *moshav, the smallholders' cooperative settlement.

In its aspect as economic agent, the Histadrut was constituted as *Ḥevrat ha-Ovedim, the General Cooperative Association of Labor in Israel. Membership in Ḥevrat ha-Ovedim was automatically acquired upon joining the Histadrut, so that the two bodies were co-extensive. The convention and council of the Histadrut were the highest policy-making authorities of Ḥevrat ha-Ovedim, and the secretariat and secretary-general of Ḥevrat ha-Ovedim were appointed by the Histadrut's Executive Committee. Ḥevrat ha-Ovedim held ordinary and founders' shares in most of the economic institutions owned directly by the collective membership of the Histadrut. It was not responsible for the liabilities of these institutions, but exercised influence through appointment of people in top management, and in cases of divergency on general principles of labor cooperation, the Ḥevrat ha-Ovedim representative was entitled to ask for a decision by arbitration. In the case of the cooperative societies, which were owned and run by their worker-members, the influence of Ḥevrat ha-Ovedim was more diffuse, although its representatives sat in the managements of their central societies and their audit unions.

The labor sector was a major force in the country's economy. At the beginning of 1969 it comprised 211,000 workers: 23.5% of the labor force, 74.7% of the workers in agriculture, 15.6% in industry, 25.2% of those in building, 11.0% of the commercial and financial employees, 24.0% of the transportation workers, 11.8% of public service employees, and 32.9% of employees in the personal services. The net product of the labor sector in 1968 (at current prices) was IL 2,347,000,000, 20.8% of the net national product; the Histadrut's agricultural enterprises in 1968 produced IL 672,000,000, some 75% of the net national agricultural product, while its industrial undertakings had a net product of IL 483,000,000, about 20% of the national total.

The major centrally run economic agencies were as follows:

*Solel Boneh, the biggest Histadrut enterprise, comprised: a Building and Public Works Company with a turnover of IL 462,000,000; an Overseas and Harbors Works Company

operating in Africa, Asia, and the Middle East, with a turnover of IL 138,000,000; and Koor, an industrial holding company, whose factories employed 12,000 workers with a turnover of IL 700,000,000 – all in 1969. Koor had a large number of enterprises in heavy and medium industry with plants all over the country, including the Vulcan foundries, Nesher cement, Phoenicia glass, and the steel complex at Acre. Among other subsidiary enterprises of Solel Boneh and Koor were quarries and factories producing building materials, sanitary installations, ceramics, rubber, tiles, electrical and electronic products, laboratory instruments, paper, etc.

*Ha-Mashbir ha-Merkazi, the Wholesale Cooperative Society, had (1969) about 550 affiliated cooperative enterprises, together with a chain of about 1,500 consumer cooperatives and retail department stores over the entire country,

*Tnuva, which markets the products of the Histadrut agricultural settlements and is cooperatively owned by them, handled over two-thirds of all farm produce and was increasingly active in exports. Bank ha-Po'alim, with its subsidiary and associated companies – Ampal, to channel foreign investments; the Israel-America Bank for the development of industry; a bank for housing mortgages; and Gemel, which serves provident and pension funds – had become the second-largest investment company in the country with 150 branches.

Shikkun, the Cooperative Housing Society, raised the standards of workers' housing and enabled thousands of wage earners to buy their own houses.

Hassneh was one of the largest insurance companies in Israel.

Industrial and service cooperatives engaged in such diverse activities as light metalworking, woodwork, printing, baking, kerosene distribution, laundries, and restaurants. Nearly the whole field of road passenger transport was covered by cooperatives, the largest being Egged and Dan, in which the great majority of the drivers and employees were shareholding members; there were also many cooperatives in the field of freight transport by road.

In the early 1980s Israel faced a severe economic crisis, with extremely high rates of inflation. The crisis affected many companies in Israel, including those owned by the Histadrut. Consequently, during the 1980s and the 1990s, in order to survive economically, the Histadrut gradually sold off all its economic assets, liquidating Ḥevrat ha-Ovedim.

MUTUAL AID. The mutual aid institutions of the Histadrut were Kuppat Ḥolim, the Workers Sick Fund; Keren Nekhut, a fund for the aid of members who are chronically ill or permanently disabled; Mishan, which supported orphans' and old-age homes; Maẓẓiv, a fund to aid indigent families with burial expenses; Dor le-Dor, a fund to supplement pensions that do not reach a basic minimum; and an unemployment fund. Kuppat Ḥolim was one of the Histadrut's major instruments of mutual aid. It provided for comprehensive medical care, including treatment in clinics or at home; hospitalization; medical appliances and drugs; treatment and, if necessary, hospitalization for chronic diseases; and rehabilitation therapy.

Every member of the Histadrut paid approximately 4.5% (up to a maximum fixed from time to time) of his wages to the union as dues. Around half of this payment was allocated to Kuppat Ḥolim, of which every member of the Histadrut was automatically a member. Members could also insure their families in the fund by adding 80% of this payment to the fund. Unemployed members were exempt from payment, and new immigrants were given special privileges, including three months' free insurance and nine months at reduced rates. Social welfare cases were given free care with a minimum contribution from the Ministry of Social Welfare. Members of Ha-Po'el ha-Mizrachi, Po'alei Agudat Israel, and certain other organizations were also insured with Kuppat Ḥolim. At the end of 1968, it covered 1,990,000 people – 68% of the population. Membership dues covered 30–40% of the overall expenses of Kuppat Ḥolim, while government participation rose from 7.4% in 1948 to 13.1% in 1968.

There were several provident funds for various types of employees. The largest was Mivtaḥim, which provided pension, holiday, and other payments for a large variety of workers, including casual laborers. There were also funds for clerks and officials, employees of Histadrut industries, members of cooperatives, agricultural workers, and building workers. Mivtaḥim and the last two funds also covered payments for holidays, work accidents, rehabilitation where necessary, and so forth. Pension rates were raised in accordance with the rise in the cost of living and kept pace with wage increases. The total membership of the funds was in 1968 over 350,000 – together with families about half the population of the country – and their accumulated capital amounted to more than IL 20,000,000,000. The funds were under treasury supervision, and 80% of their capital had to be invested in government-recognized securities; half of this was generally invested in securities issued by Gemel, the Histadrut investment company. Of the remaining 20%, about half was used for low-interest loans to members for housing, etc. The operations of the funds not only contributed a valuable social service, but were of considerable economic importance as a method of saving and a source of capital investment.

EDUCATIONAL AND CULTURAL ACTIVITIES. The Histadrut's Cultural Department provided a variety of services for members in town and country. These included lectures; films; publications and periodicals; organized trips; courses in Hebrew, geography, Bible, music, dancing, and the arts; clubs and libraries; educational books and materials; theater performances for immigrants; libraries for schools in immigrant centers, in cooperation with the Beth Hanassi Children's Libraries Fund; educational circles for parents; and schools for trade union leaders. In addition, the local labor councils engaged in similar activities on their own initiative, and there was a wide network of cultural committees in towns and villages. There were special departments for the kibbutzim and

the moshavim. Among the permanent central educational institutions were a labor archive; a museum; two colleges, one in Tel Aviv and one in the Jordan Valley; and the Amal chain of vocational high schools. The Afro-Asian Institute, set up to train people from developing countries in trade unionism and cooperation, was established in Tel Aviv in 1961. *Davar* was the Histadrut's daily newspaper; a special, vocalized daily in simple Hebrew for immigrants, *Omer*, was also published. In the 1980s *Davar* began to lose its audience to other newspapers, and was finally closed in 1996. Am Oved ("Working People"), the Histadrut publishing house, published both original Hebrew literature and translations. Ha-Po'el ("The Worker"), the Histadrut's sports association, was the largest in the country. There was also a trade union and social organization for young people, Ha-No'ar ha-Oved ve-ha-Lomed, with some 100,000 members.

ARAB WORKERS. Arabs and members of other minority communities joined the Histadrut as full members. There were union branches in Arab centers, and, in mixed places of work, joint workers' committees were elected by Arab and Jewish workers. With the assistance and advice of the Histadrut, agricultural, industrial, consumer, and housing cooperatives were established in Arab areas; Kuppat Ḥolim operated general and mother-and-child clinics, and the Histadrut, especially through its youth and women's movements, maintained clubs and cultural activities in Arab towns and villages. There were 118,098 Arab members in 1969 – 29% of the Arab population, including about 5,000 in Jerusalem, who joined after the reunification of the city in 1967 and were served by a Kuppat Ḥolim branch in East Jerusalem.

INTERNATIONAL AFFILIATIONS. The Histadrut was affiliated to the International Confederation of Free Trade Unions, and maintained close ties with its member federations. It sent experienced trade unionists to advise on labor organization, particularly in Asia and Africa, and many delegations and groups of students, particularly from developing countries, came to Israel to study its methods and achievements. The trade unions in these countries were interested in the Histadrut's unitary structure, its success in integrating members with varied cultural and educational backgrounds, and its prominent role in national life. Its Afro-Asian Institute was an important international center for labor studies. The Histadrut also belonged to the International Cooperative Alliance, which represented cooperative movements in both Western and Communist countries, and Israel's cooperative economy aroused widespread interest. Despite Israel's small size, its representatives played a prominent part in the work of the International Labor Office and were regularly elected to its governing body. The Histadrut's influence in all branches of the international labor movement was an asset of considerable political importance for Israel and reflected the socialist ethos that prevailed in the country until the 1980s.

[Lois Bar-Yaacov and Moses Aberbach]

The Histadrut since 1995

On the eve of the May 1994 elections for the Histadrut leadership, a group of three Labor Knesset members, headed by Haim *Ramon, then minister of health, decided to run as an independent list called New Life. It challenged the old-guard leadership headed by Secretary-General Haim Haberfeld and the Labor Party rule of the Histadrut that had lasted since its creation in 1920. The New Life list argued that the Histadrut must adapt itself to the realities of Israel on the eve of the year 2000, shed its old image as a wasteful and bloated bureaucratic organization that had lost touch with the Israeli worker, and above all stated that the time had come to institute an orderly and honest accounting and administration of the vast holdings of the Histadrut.

On May 10, 1994, the Ramon list won 47% of the votes, while Labor (headed by the incumbent Haberfeld) won 33%. Ramon was elected secretary-general, a title he soon changed to Histadrut chairman, and, upon entering office on July 6, 1994 (in coalition with Labor), announced far-reaching reforms. Among them was the firing of some 45% of the Histadrut and various Workers Council staff, moving the headquarters to Jerusalem by December 1995 (a failed effort; the headquarters returned to Tel Aviv a few years later), the sale of holdings and assets (which had already begun), and a general restructuring of the Histadrut. The reforms were underscored by changing the Histadrut's name to the New Histadrut (Histradrut ha-Oevdim ha-Ḥadashah). Following the Rabin assassination in November 1995, Ramon joined the Peres government as minister of interior and was succeeded by Amir *Peretz. By the time Ramon had returned to the government, he was responsible for a number of dramatic changes, including the legislation of two major laws. The first was the State Pension Law, in which responsibility for the Histadrut pension funds, whose projected deficit was estimated at IS 40 billion, was transferred to the government. Responsibility for the health services of Kuppat Ḥolim (the Sick Fund) were also transferred to the government, after the passage of the State Health Insurance Law in January 1995, a law initiated by Ramon as minister of health. In accordance with the law, residents of Israel would pay a health tax to the state (for this purpose the National Insurance Institute), and be free to choose free health services in one of four health funds.

The Histadrut leadership was reduced in number, the membership of the central committee dropping from 40 to 24; the 374 members and alternates of the Histradut Committee was reduced to 137, becoming what was now called the Histadrut's Elected Assembly. The internal comptroller's office was strengthened and given greater independence.

A massive campaign was launched to investigate charges of corruption, mismanagement of funds, and use of Histadrut funds for personal primary campaigns. Some of the results were submitted to the police for additional investigation and a number of former leaders were charged. This was accompanied by massive budgetary cuts, from IS 740 million in 1994 to IS 440 million in 1995. The number of members was 661,855

in June 1995. Among them, 534,920 were salaried and the rest pensioners, members of kibbutzim and moshavim, students, and household workers.

At the outset of the 21st century the Histadrut operated mainly as a conventional trade union. The organization suffered from a constant deficit, which made its work difficult. The trade union department became the center of Histadrut activity, coordinating and supervising the operations of the national associations and big company unions (such as Bezek and the Electric Corporation), which are seen as dominating the Histadrut. The main tools left to the Histadrut after the reform were demonstrations and strikes, which were resorted to mainly in the public sector. As a trade union, the Histadrut provides such services to its members as representation in national and sectoral negotiations, protection of workers' salaries, legal and economic advice to unions, and information on labor relations.

In 1997 Amir Peretz founded a new workers' party, Am Eḥad (One People), aiming at representing the workers politically and promoting social legislation. In the 1999 elections it won two seats, and in 2003 it increased its representation to three Knesset members. In 2004 it joined the *Israel Labor Party and in 2005 Peretz won a surprise victory over Shimon Peres in the Labor primaries to become the head of the party, with Peretz relinquishing the role of Histradrut chairman.

The Histadrut reforms were probably the first major changes in those Israeli institutions that played a dominant role in the Mandatory period and the formative years of Israel. With the passage of time, and in view of their inability to adjust to the new environment, changes were inevitable.

HISTADRUT HA-OVEDIM HA-LE'UMMIT ("National Labor Federation"), organization founded in Jerusalem in 1934. It came into being as a result of a basic clash of outlooks between *Revisionist workers and the *Histadrut. The Revisionists criticized the Histadrut for being socialist and a class organ, demanded that it confine itself to trade union organization, and charged it with discriminating in the allocation of employment against members of the Revisionist Labor Bloc, which emphasized the national rather than the class interests of the workers.

In 1930, the convention of the Revisionist Labor Bloc decided to leave the Histadrut and founded Irgun Ovedei ha-Ẓohar u-Vetar (the Organization of Revisionists and Betar Workers) in Palestine, which, in 1934, became the Histradut ha-Ovedim ha-Le'ummit. Its purpose, according to its constitution, was to "unite all national workers in Palestine loyal to the principle of the establishment of the Jewish state in all of Palestine." It advocated compulsory national arbitration in all labor disputes, the establishment of neutral labor exchanges, the entrenchment of Jewish labor, fair conditions for the worker, and the development of good relations between workers and employers. Its symbol was the blue and white flag (in contradistinction to the red flag used by the Histadrut); its anthem was "*Ha-Tikvah," not the "Internationale"; and it chose the anniversary of Herzl's death, the 20th of Tammuz, rather than the First of May, as its annual workers' holiday.

Later the National Labor Federation became unaffiliated with any political party. In 1970 it had about 80,000 members. It stressed the need for a complete separation between the functions of the employer and those of the trade union, and opposed the combination of the two functions in the Histadrut, whose economic arm, Ḥevrat ha-Ovedim, owned many enterprises employing workers whose interests are represented by the Histadrut's trade union department. Histadrut ha-Ovedim ha-Le'ummit advocates the establishment of a national institution for compulsory arbitration in labor disputes and of nationwide trade unions whose elected organs will decide their policies independently of political party decisions. It is in favor of the provision of basic social services, such as medical care, by the state and the enactment of pensions and unemployment insurance laws.

The trades union department of the federation has negotiated labor contracts with more than a hundred concerns employing some 8,000 workers. It has insurance and pension funds, a labor-disputes fund, an unemployment fund, a members' credit fund, a mutual loan fund, and a disablement fund. The National Workers' Sick Fund, Kuppat Ḥolim le-Ovedim Le'ummiyyim, now called Kuppat Ḥolim Le'ummit, provides medical care for over 220,000 persons in over 100 clinics, including some in Druze villages, and maintains laboratories.

Sela, the federation's housing company, has constructed thousands of apartments for newcomers and veterans, shopping centers, synagogues, and public buildings, some as part of government housing projects. The federation runs a guesthouse and holiday company, Beri'on, which owns guesthouses and convalescent homes. It also owns two cooperative building companies. Merkaz ha-Avodah and Ha-Massad. Its youth wing, Ha-No'ar ha-Oved ve-ha-Lomed ha-Le'ummi (the National Working and Student Youth Association), runs youth clubs in cities, suburbs, and immigrant centers. The organization also runs day care centers under the name Nili. The supreme body of the federation is the National Conference, which meets once every five years, its 251 delegates being elected directly on a personal basis by secret ballot. Workers' councils in each locality are elected in the same way. The conference elects a national committee, an executive committee, a control committee, and a members' court. The secretary-general of the federation in 1970 was Eliezer Shostak and in 2005 Yiẓḥak Russo.

In 1995, under the new health law, the Kuppat Ḥolim was separated from the Histadrut. Furthermore under a re-

organization program, the workers' councils were abolished and, instead, regional service centers were established. The idea was that now the organization representative would visit the worker, and not vice versa. In addition, new cooperative agreements were signed between the Histadrut ha-Ovedim and employers, including human resource companies. Since that time new members have joined the organization. In 2005 the Histadrut ha-Ovedim had 350 employees.

[David Jutan / Shaked Gilboa (2nd ed.)]

HISTADRUT IVRIT OF AMERICA, U.S. organization devoted to encouraging the knowledge and use of the Hebrew language, the publication of Hebrew books and periodicals, and an interest in Hebrew culture. The organization held its opening convention in December 1917 as a result of the activity of Zionists and Hebraists who found themselves in the United States as the result of World War I, in particular Shmarya *Levin, who served as president of the organization (1917–18). In 1923, under the editorship of M. Ribalow, the Histadrut Ivrit began to publish the Hebrew newspaper *Hadoar* as a weekly. Since then *Hadoar* was the only Hebrew weekly in the Diaspora to be published regularly without interruption. The Histadrut Ivrit established its own publishing house, Ogen, in 1926. For a number of years it also published an annual *Sefer ha-Shanah li-Yhudei Amerikah* ("Yearbook for American Jews"). It founded a Hebrew-speaking youth organization which published its own magazine *Niv*, and for a number of years sponsored a Hebrew theater and other activities for younger speakers of the language. In 1954 under the direction of Samuel K. Mirsky the Histadrut Ivrit also established Ha-Akademyah ha-Ivrit ("The Hebrew Academy"), an organization that annually organized a series of scholarly and academic lectures in various fields delivered by Jewish scholars in the Hebrew language. The Histadrut Ivrit was associated with the *Brit Ivrit Olamit.

Ironically, a Diaspora Hebrew language publication became the victim of the flattening of the universe, the availability of Israeli newspapers in the United States, of weekly newspapers geared to Israelis living in the United States and the accessibility of Hebrew language writing on the Internet and the ability of American Hebrew writers to publish their material in a timely manner in Israel. In 2002 the Histadrut Ivrit appointed Prof. Lev Hakak as the editor of *Hadoar*. He revitalized it and gave the Hebrew language highly respected representation in America. Histadrut Ivrit subsequently merged with Hebrew College. The organization ran out of funds and ended its existence, including the publication of *Hadoar*, in 2005.

[David Mirsky / Michael Berenbaum (2nd ed.)]

HISTORIA AUGUSTA, a collection of biographies, in Latin, probably by various hands, of emperors, pretenders, and heirs apparent to Rome's imperial throne from *Hadrian to Numerianus (117–284). It was written probably in the late fourth or early fifth century, and it has been claimed that it was written against the Christians as an apology for paganism. The biographies of the Antonines contain a few misleading references to Jews. The rebellious spirit of Jews under *Trajan, restrictive measures by Hadrian, and the Jewish revolt in 132 are treated lightly (*Hadrian*, chs. 5, 14), and no wars in Hadrian's reign are depicted as important (21:8ff.). The more lenient attitude of *Antoninus Pius goes unmentioned, and there is only an isolated statement that he suppressed rebellious Jews (*Antoninus* 5:4). Nothing is said of the reputed scorn of Jews by *Marcus Aurelius. The respective lives show a severe *Septimius Severus, who punished converts to Judaism (*Severus* 17:1), and a sympathetic *Caracalla, who at the age of seven was disturbed by the beating a father administered to a playmate for practicing Judaism (*Caracalla* 1:6).

Elagabalus (218–222), unmindful of the Jewish principle of religious exclusiveness, deemed it desirable to incorporate Jewish, Samaritan, and Christian rites in a syncretistic worship (*Elagabalus* 3:5); he thought that a Jewish commandment ordered the eating of ostriches (28:3). Even *Alexander Severus (222–235), who preserved Jewish privileges (*Alexander Severus* 22:4) and who recognized the moral elevation of Judaism (45:7) and its golden rule (51:7 – though the golden rule is a pagan commonplace as well), did not distinguish clearly between Christianity and Judaism, and in syncretistic fashion placed the image of Abraham beside those of Orpheus, the pagan philosopher and wonder-worker Apollonius of Tyana, and Jesus, as well as those of his own ancestors, in his private chapel (29:2ff.). The biography of Gordian III (238–244) mentions an epitaph of that emperor in Greek, Latin, Persian, Hebrew, and Egyptian (*Gordianus* 34:2–3).

HISTORIANS. Though Jews began to take part in modern European cultural life in the 18th century, none made anything of a mark in historiography until the 19th. Isaac d'Israeli's attempted rehabilitation of the character of Charles I attracted some attention in his day, but was of slender value. On the other hand, Sir Francis *Palgrave (Cohen) was perhaps the first English scientific historian, and founder of systematic research into archivistic source material in England. Samuel *Romanin may be said to have done the same for Venice. Later, Jews (e.g., Harry Bresslau and Philip Jaffe), took a prominent role in the publication of the great collection of source material of German history, the *Monumenta Germaniae Historica* (MGH). It is perhaps natural that the Jew should be drawn to the investigation of the history of other countries than his own. Thus the Germans Robert *Davidsohn and Ludo Hartmann were among the foremost historians of Italy, Felix Lieberman of Anglo-Saxon England, and the Frenchman Elie Halévy (only remotely Jewish) of the Victorian period.

Among the great historiographical organizers was Sir Sidney *Lee, who was responsible for bringing the *Dictionary of National Biography* to successful conclusion. Jewish writers such as Lewis *Melville, Philip *Guedalla, and Stefan *Zweig were among the best known popularizers of history. In later years historians like Daniel *Boorstin, Eric *Hobsbawm, Simon *Schama, and Barbara *Tuchman achieved considerable popularity.

For writers on Jewish history see *Historiography.

Women Historians

American Jewish women became prominent within the historical profession during the 1960s, as discrimination against Jews and prejudice against women declined in the academic world in the decades after World War II. Perhaps because of their sensitivity to the situation of powerless groups, many focused their attention on ordinary people, workers, peasants, minority groups, Jews, and women.

Jewish women who became leading social historians included historians of Europe, such as Natalie Zemon *Davis and Joan Wallach Scott, and historians of America, such as Tamara Hareven. In a series of ground-breaking articles and books, Davis explored family relationships, daily life, and religion among peasants in 16th- and 17th-century France. Scott wrote on the lives of industrial workers in France, and Hareven studied workers and the family in the United States. Other Jewish women who became leading American social historians in the 1950s and 1960s include Elaine Tyler May, Paula S. Fass, Regina Morantz-Sanchez, Sheila Rothman, and Mary Flug Handlin.

By the 1970s many of these social historians helped develop the newly emerging field of women's history. Joan Wallach Scott turned to the study of female workers and how industrial wage work failed to liberate women from traditional power relations within the family. Similarly, Renate Bridenthal, Atina Grossman, and Marion Kaplan explored the experience of women in Weimar and Nazi Germany from a feminist perspective. Among historians of the United States, Alice Kessler-Harris, Nancy Cott, Gerda Lerner, Linda Kerber, and Kathryn Kish Sklar took the lead in developing the new field of women's history in the 1960s and 1970s. Nancy Cott and Kathryn Kish Slar dealt with the "cult of domesticity" in colonial and 19th-century America, while Linda Kerber wrote important studies of women in Revolutionary America. Alice Kessler-Harris focused her attention on the experience of female workers, and Gerda *Lerner, a refugee from Nazi Vienna, discussed black and white women who fought against slavery and injustice.

In the late 1980s many women's historians, influenced by developments in literary criticism like deconstructionism and post-modernism, turned to the issue of gender and the ways gender hierarchies are created and legitimized. Joan Wallach Scott was at the forefront of this development with her book, *Gender and the Politics of History* (1988). Other Jewish women who study intellectual or political history, often influenced by modern theory, include Jan Goldstein, Jane Caplan, Temma Kaplan, Gabrielle Spiegel, and Brigitte Bedos-Rezak.

Gertrude *Himmelfarb, an active scholar since the 1950s who wrote over 10 works on intellectual and political culture in England in the 19th century, resisted many of these new trends in historiography. Her book, *The New History and the Old* (1987; 2004), was especially critical of social history and post-modernism.

Jewish women were also prominent in developing the field of modern Jewish history in America. Such pioneering professional Jewish historians were Naomi W. *Cohen, a prolific scholar who taught at Hunter College, who concerned herself with Jewish politics, Jewish-non-Jewish relations, and the status of Jews in American society; Lucy *Dawidowicz, a professor at Yeshiva University, who worked on East European Jews and on the Holocaust; and Nora *Levin, an instructor at Gratz College, who wrote about the Holocaust, Jewish Socialist movements, and the Jews of the Soviet Union.

As modern Jewish history grew as a field in the 1970s, women became increasingly prominent, publishing pathbreaking works in Jewish social history, including Jewish women's history, and occupying prominent positions at leading American universities. Paula *Hyman, professor at Yale University, wrote on the social history of the Jews in France and also devoted much scholarly attention to Jewish women. Marion Kaplan of New York University was the leading historian of German-Jewish women. After her 1979 study of the *Juedischer Frauenbund*, a feminist Jewish organization in early 20th century Germany, she wrote *The Making of the Jewish Middle Class* (1991), on the crucial role Jewish women played in Imperial Germany in acculturating their families into bourgeois social mores and in maintaining religious tradition, social life, and Jewish ethnic solidarity. Kaplan also wrote about how Jewish women helped their families cope with persecution in *Between Dignity and Despair: Jewish Life in Nazi Germany* (1998). Other important historians of European Jewry include Frances Malino of Wellesley College, who worked on Sephardi Jews in France and North Africa; Harriet Freidenreich of Temple University, who wrote on interwar Yugoslavian and Viennese Jewry and on the first generation of Central European Jewish women to receive higher education; Marsha Rozenblit of the University of Maryland, who studied Jewish assimilation in late Habsburg Vienna and Jewish identity in Habsburg Austria during World War I; Vicki Caron of Cornell, who worked on French Jews; Deborah Hertz of the University of California at San Diego, who published several books on the salon Jewesses of late 18th century Berlin; and Elisheva Carlebach of Queens College, who studied Jews in early modern Central Europe.

Within American Jewish history, Jewish women have been equally prominent since the 1970s. Deborah Dash Moore of the University of Michigan wrote such major works as *At Home in America: Second Generation New York Jews* (1981), a study of the process by which the children of East European Jewish immigrants in New York in the 1920s and 1930s

Americanized and yet still maintained a strong Jewish ethnic identity; *To the Golden Cities: Pursuing the American Jewish Dream in Miami and L.A.* (1994); and *GI Jews* (2004), which analyzes the impact of military service on the Jewish identity of American Jewish soldiers during World War II. Jenna Weissman Joselit of Princeton University is likewise an important figure in American Jewish social history; her books included *Our Gang: Jewish Crime and the New York Jewish Community, 1900–1940* (1983); *New York's Jewish Jews: The Orthodox Community in the Interwar Years* (1990); and *The Wonders of America: Reinventing Jewish Culture 1880–1950* (1994). Beth Wenger of the University of Pennsylvania wrote on the experiences of New York Jews during the Great Depression; Susan Glenn, Sydney Stahl Weinberg, and Judith E. Smith have studied the experience of Jewish immigrant women, and Pamela Nadell of American University and Karla Goldman have dealt with the role of women in American Jewish religious life.

Hasia Diner of New York University made major contributions to the fields of American immigrant history, women's history, and Jewish history. Her first book, *In the Almost Promised Land: American Jews and Blacks, 1915–1935* (1977), studied how the Yiddish press viewed the civil rights struggles of the early 20th century. The author of several innovative studies of immigrant groups, as well as a number of books on the American Jewish experience, Diner provided a new understanding of 19th-century Jewish immigrants to America from German-speaking Central Europe in her volume, *A Time for Gathering: The Second Migration, 1820–1880* (1992).

[Marsha L. Rozenblit (2nd ed.)]

HISTORIOGRAPHY. This article is arranged according to the following outline:

The Bible

One can best appreciate biblical historiography by comparing it with Greek historiography. Herodotus, a contemporary of authors of the later parts of the Bible, begins his book by explaining that he was publishing his researches "in the hope of preserving from decay the remembrance of what men have done." In contrast, biblical historiography explains the events of history as parts of a divine plan at the center of which is God's chosen people. The point of biblical "remembrance" is religiously didactic. Past events, some real, others imagined, are recounted in order to show that the fortunes of the Israelite-Jewish people are directly proportional to their loyalty to Yahweh. The sequence of historical works in the Hebrew Bible is probably unparalleled in ancient historiography, in that it endeavors to place the history of a particular people – the Hebrews – in the setting of the history of the human race. The record begins in Genesis at creation and traces the beginnings of all humankind. From Genesis 12 the purview is narrowed to the story of the Hebrews from the days of their progenitor, Abraham, onward. Yet even then the wider setting is not overlooked: the genealogical data (Gen. 25, 36, et al.) purporting to give the broad outlines of the record of the kindred peoples who were neighbors of the Hebrews. Whatever the origin of the various documents which go to make up the pentateuchal story, they have been skillfully welded together into a narrative with a majestic sweep.

The Pentateuch's narratives are succeeded by an account of the conquest of the land of Canaan by the invading Hebrew tribes in the Book of Joshua. The major traditions of the Pentateuch, including the Egyptian enslavement, the exodus from Egypt, and the trek through the desert must be understood as political and religious allegories (Sperling) rather than factual accounts. The nature of the lost *Book of the Wars of the Lord, mentioned in Numbers 21:14, can only be conjectured, but it seems to have been a poetical elaboration of some part of the pentateuchal story. The Book of Judges comprises a somewhat heterogeneous collection of episodes relating to the pre-monarchic period: there is considerable chronological overlapping; no differentiation is made between happenings restricted to part of the country and those affecting it as a whole; and while some stories are dismissed in a few lines, others, e.g. the epic of Deborah (4–5), Abimelech (9), Samson (13–16), and the gruesome story of the concubine in Gibeah (19), are given extended treatment which does not necessarily reflect their significance in the overall story. Despite the presence of mythical and legendary elements, the Book of Judges presents a picture of pre-monarchic life that conforms reasonably well to the picture drawn by archeology.

Attention to national historiography is resumed in the Book(s) of Samuel. This gives a consecutive history of the Israelite people and its principal leaders in the period approximately coinciding with the 11th century B.C.E., with special emphasis on the lives of Samuel (1–7), Saul (8–31), and David (16ff., II Sam. 1–24). The writer displays an intimate knowledge of his subject and background material: as an attempt to convey an objective picture of the times and the personalities involved it is probably unique in ancient Oriental literature. The detailed biography of David, perhaps incorporated from an independent composition, is a splendid piece of historical writing and character delineation. The hero is presented as a human being with traits of nobility but at the same time capable of the basest actions. The story of the physical decline

of the great amorist (incorporated in the first chapters of the Book of Kings) is dramatically but delicately indicated in three telling words (I Kings 1:4). Some descriptive passages show an extraordinary mastery of the literary craft – e.g., the last days of Saul (I Sam. 31), and the rebellion of Absalom and David's mourning for him (II Sam. 14–19).

Possibly a good deal of this material was derived from the composition of an official court chronicler or historiographer, an office that may already have existed at this period. This seems to have been the function of the royal *mazkir* (lit. "remembrancer"; cf. II Sam. 8:16; I Kings 4:3). The first specific mention of a contemporary historiographical record is the Book of the Acts of Solomon (referred to in I Kings 11:41) which obviously contained a great deal more biographical material than that part which was incorporated in the extant Books of Kings and of Chronicles. The period of the monarchy was also covered wholly or in part by the Books of the Chronicles of the Kings of Judah and Israel and – apparently another work – the Book of Kings of Israel and Judah (II Chron. 27:7). The extant Book of Kings, which used these sources, is an uneven work, expatiating on the reign of Solomon (I Kings 1:11), the division of the kingdom after his death (12–14), and the epic of the house of Ahab and its dramatic fall (I Kings 16–II Kings 9), which contains some of the finest descriptive writing in the whole of historical literature, ancient or modern (especially II Kings 9:4–13, 29–37). The Book(s) of *Chronicles retells a good deal of the contents of Samuel and Kings, but with different stresses and from a different point of view, more favorable to David and later emphasizing the centrality of the Temple and adding many incidental details regarding the organization of the cult. The chief historiographical contribution of Chronicles is its consistent theodicy. Whenever a "good" king suffers, it is due to some impiety otherwise unattested outside of Chronicles. In like manner when a "bad' king prospers Chronicles attributes that to an otherwise unattested good deed. The Hebrew Bible also contains historical monographs relating to a more restricted field or period in the Books of Daniel (with much extraneous material), Ruth, and Esther.

[Cecil Roth / S. David Sperling (2nd ed.)]

Second Temple Period

The period of the Second Temple, until its last days, was far poorer in its historiography (as in other literature) than the period of the First Temple. On the other hand, the historical works then produced were memorable because they were admittedly based to some extent on what many termed archivistic research. The official documents and correspondence found in the Book of Ezra (see chs. 4, 6) were derived – or purported to be derived – from official records preserved in public collections. The Book of Nehemiah, meanwhile, claimed to embody extensive quotations from the actual autobiography or memoirs of Nehemiah himself, whose authenticity seems to be established by the pathetic personal interjections ("Remember unto me, O my God, for good") which are interspersed (5:19, et al.). Thereafter there is a virtual blank in Jewish historiography extending over some three centuries. Two writers then devoted works to the revolt of the Hasmoneans, both of which have been incorporated in the Apocrypha. The author of I Maccabees – who wrote in Hebrew – was obviously an admirer of the Hasmonean dynasty who probably lived in the reign of John Hyrcanus, when independence seemed to have been definitely reestablished. Factual and straightforward, it is a historical source of first importance. Perhaps earlier than this work was the original author of II Maccabees, who may be regarded as the earliest Jewish historian known by name. This was *Jason of Cyrene, a Hellenistic Jew probably of the second century B.C.E., who wrote in Greek, though his writing indicates no knowledge or influence of the great classical Greek historians. The work – an abstract of a five-volume history on an ambitious scale – centered around the personality of Judah Maccabee, except insofar as it cites a number of authentic documents drawn probably from public records. In contrast to I Maccabees it is naive in tone and credulously recounts a number of "miracles" in which the author implicitly believed. The other narrative books of the Apocrypha and Pseudepigrapha (III and IV Maccabees, Judith, Tobit) are basically fictitious rather than historical and need not be taken into consideration here. A separate work of John Hyrcanus, now lost, is mentioned in I Maccabees 16:23–4.

The last days of the Second Temple period were marked, it seems, by a reawakening of a historical sense among the Jews which led to the emergence of a significant historical literature. *Philo of Alexandria, as well as his philosophical writings, wrote a historical work, basically theological in inspiration, intended to demonstrate the operation of Divine Providence in protecting the Jewish people. Of this work, only two of the original five parts have been preserved: an account of the persecution of the Jews of Egypt by the Roman governor Flaccus and the retribution that was meted out to him; and a vivid description of the delegation of the Alexandrian Jews, including Philo himself, to the unbalanced Roman emperor Caius Caligula. Philo shows himself in these writings to be master of vivacious descriptive powers. His contemporary Nicholas of Damascus, the private secretary of Herod the Great, was not a Jew, but had a considerable influence on Jewish historiography because of the lengthy account of Herod's reign in his voluminous universal history. The full text of this has been lost, but considerable portions of it were incorporated, apparently almost unchanged, in the historical writings of *Josephus. The latter's political rival, *Justus of Tiberias, private secretary of King Agrippa II, wrote in Greek an account of the great war against Rome of 66–73 – or at least of its earlier stages – in which Josephus' ambiguous conduct in Galilee at this time was scathingly described. It is now lost, but is of significance because it goaded the latter (who indeed did not scruple to make use of the information which it contained) to defend himself in his own historical writings. Justus also wrote a work on the Jewish monarchy, similarly no longer extant.

The personal character of Josephus has no bearing on his importance as a historian, which was extremely significant: it is indeed possible to regard him as one of the great historians of antiquity. Beginning to write at the conclusion of the great war against Rome in order to excuse his own conduct and reply to the attacks which were being made on him, he soon extended his interests and became a historian by vocation. His failings as well as some of his qualities are obvious to the most casual reader. He did not have the virtue of consistency, sometimes giving contradictory accounts of the same episode in different passages. To this he was impelled to some extent by his constant need to justify himself and to present a favorable picture of Vespasian and Titus, his attitude toward whom was nauseatingly sycophantic. On the other hand, he took pains to consult documents in public archives, which he often quotes *in extenso* – though his paradoxical Jewish patriotism (except as far as concerned those Jews who set themselves in opposition to Rome) sometimes may have led him to modify his texts. His great virtue in his historical writing however was his tremendous sweep and effortless mastery of his materials. His *Jewish Antiquities* is a history of the Jewish people from its beginnings down to the period of the Hasmonean monarchy. The first part is based on the biblical accounts, reinforced by legend and allegorical moralizing: while it adds nothing to the known factual knowledge, it is memorable as an attempt, almost in a modern idiom, to reinterpret the ancient traditional accounts in accordance with the standards of contemporary historiography. The story enters a new phase with the account of the Hasmonean rising and monarchy, the Roman conquest, the reign of Herod and the Herodian house, and the events leading up to the revolt of 66 and the great war against the Romans which followed: this is contained in overlapping accounts at the end of the *Jewish Antiquities* and in the *Jewish War* – a work memorable in that here the author, instead of merely describing the revolt and the progress of hostilities, considers it necessary to give a detailed account of the political background and of the remote events indirectly leading up to the outbreak of the war.

Chronicles of the Jews

EARLY MIDDLE AGES. It is remarkable that for centuries subsequently to the publication of Josephus, Jewish historiography was utterly stagnant apart from the exceptional attempt made in the *Seder Olam Rabbah, plausibly ascribed to *Yose b. Ḥalafta (c. 150 C.E.), to establish a chronological framework of biblical history. So far as is known, the Jews of the age of the Talmud had no knowledge of Josephus' fundamental writings; while the serious contribution of the Books of Maccabees to history were naturalized into Hebrew in the historically worthless *Scroll of Antiochus, written as a liturgical exercise. The revival of Hebrew studies in Italy in the eighth century, in an environment strongly affected by the culture of the outside world, resulted in an attempt to present the historical writings of Josephus in Hebrew in the chronicle ascribed to Joseph b. Goryon (Book of *Josippon), compiled probably in southern Italy in the tenth century: a fine literary exercise, though lacking basic historical importance. It was of great significance in Jewish historiography, however, as it was the main source of information for Jews in the Middle Ages – including even the greatest scholars – for the events of the last years of the Second Temple period. Its literary influence on the other hand was slight, except in such works as the 12th-century world chronicle of *Jerahmeel b. Solomon, also an Italian production though emanating from the north rather than the south of the peninsula. The most important historical work of Italian origin of the early Middle Ages was the Chronicle of Ahimaaz, compiled in 1054 but admittedly incorporating earlier materials as well as family tradition (see *Ahimaaz b. Paltiel). This is basically a delightful family chronicle, naively written and embodying much preposterous legend. On the other hand, it gives a vivid (if credulous) picture of Jewish life in southern Italy of the time with which it deals – formerly utterly unknown – and has important sidelights on conditions in Sicily, Byzantium, North Africa, and Ereẓ Israel. The Chronicle of Ahimaaz is preserved in a single manuscript, discovered last century (1869) – a fact which raises the tantalizing possiblity that it followed a prevailing literary fashion, and that there may have been similar family chronicles of the period which have disappeared without leaving even the slightest trace.

A wholly different production is the Letter of R. *Sherira b. Ḥanina, gaon of Pumbedita (987), written in reply to an enquiry addressed to him by the scholars of Kairouan. The information was needed as guidance in the study of the Talmud; but in reply Sherira gave a complete account of the chain of transmission of rabbinic tradition from remote times down to his own day, in the spirit of contemporary Arab writers on similar themes. The information that he gave was based on the archives of the academies, which may have comprised some methodical chronicles. This remains to the present day the framework for the history of Mesopotamian Jewry in the period between the close of the Talmud and the 11th century.

No historical record of any sort that has survived was produced by the Jews of northern Europe during the first centuries of the development of Ashkenazi Jewry: it is for this reason that knowledge of it is in so great a degree hypothetical. A couple of narrative fragments describe in a somewhat legendary vein persecutions in France in 992 and 1007 respectively. With the First Crusade of 1096, Jewish historiography, or at least chronography, somewhat abruptly begins. The precise interrelationship between the three accounts of the Rhineland massacres at the time of the First Crusade (by Solomon b. Simeon or Samson, *Eliezer b. Nathan of Mainz, and an anonymous author) is as yet undetermined, but they certainly do not greatly postdate the events which they describe: the anonymous account may be the original source, but on the other hand it is possible that all three derive from another source now lost. In any case, the somewhat abrupt beginning seems to suggest that these accounts are part only of a more extensive chronicle which has not survived. More-

over, the elevated and superb narrative style does not give the impression that this is a new literary experiment: the writer had models before him and was only continuing an already familar tradition. There is here in fact a further suggestion that medieval Jewish historiography is not to be measured only in terms of those relatively sparse fragments that have survived. The chronicles of the First Crusade were continued by the record of *Ephraim b. Jacob of Bonn covering the years 1146–96; this includes accounts of the blood libel at Blois and the sufferings of the Jews during the Second and Third Crusades, the passages relating to England being particularly noteworthy. It is significant that these works are all in the nature of martyrologies. They are accounts not of Jewish history but of Jewish suffering: chronicles of a wider historical nature were not produced by the Jews of northern Europe then or for a long time afterward.

SPANISH AND PORTUGUESE. Possibly the first medieval Jewish writer who may be considered a historian in the wider sense was Abraham *Ibn Daud of Toledo, who wrote brief histories of the Second Temple period and of Rome in addition to his famous *Sefer ha-Kabbalah*, dealing with the transmission of rabbinic lore from the earliest times down to his own day, written in a vivid Hebrew style in the rhetorical tradition of Arabic historiography. Basically, the work is an attempt to prove historically the continuity of rabbinic teaching from the remotest times, in order to disprove the Karaite counterclaims; incidentally, it comprises a number of famous "purple patches" relating to individuals and episodes of Spanish Jewish history which have entered into the common store of Jewish historical legend. The latest editor, Gerson D. Cohen (1967), is, however, inclined to doubt fundamentally the historicity of these insertions, believing that many of them were adapted from Muslim sources.

The "chain of tradition" remained henceforth one of the main preoccupations of Spanish Jewish historiography: in the *Sefer Yuḥasin* of Abraham *Zacuto, in the continuation of the *Sefer ha-Kabbalah* by *Abraham b. Solomon of Torrutiel (b. 1482) and others; though in all such works historical data (mainly relating to persecutions and massacres) were interspersed almost at random in the basic chronological account of scholars and scholarship. The same applied to the *Shalshelet ha-Kabbalah* (Venice, 1586) by Gedaliah b. Joseph *Ibn Yaḥya, member of a distinguished family of Portuguese exiles domiciled in Italy. This comprises a perplexing medley of information on scholarship and scholars, bulked out with much legend which later became part of Jewish folklore, and occasionally diverging into historical byways of considerable significance as raw material for the historian rather than a contribution to historiography as the term is now understood. Immanuel *Aboab's Spanish defense of Jewish tradition, *Nomología* (Amsterdam (1629), but written in Italy), though more serious and less diffuse, was in much the same category.

Seemingly of a different type, and historiographically more significant, was a chronicle dealing basically with the Jews of the south of France between 1187 and 1240, a precis of which (from a manuscript in the hands of Yom Tov Sanzolo, a rabbi of Spanish origin then living in Turkey) was incorporated by Joseph *Ibn Verga as an appendix to his father's *Shevet Yehudah* (see below).

Probably at the beginning of the 15th century, Profiat *Duran compiled a history of Jewish persecutions and suffering. The wide competence and general culture of the author makes it probable that this was a work of considerable significance. It is known, however, only through incidental mentions in later literature, though apparently it was used extensively by the 16th-century chroniclers, with whom Jewish historiography entered on a fresh phase. Outstanding among these was Samuel *Usque, in his great threnody written in classical Portuguese, *Consolaçam as Tribulaçoens de Israel* (Ferrara, 1553). It is in form a dialogue between a much-suffering shepherd and his comforters, following what was then a popular literary convention. Incidentally, the first part gives an account, wholly based on the Bible and some post-biblical traditions, of the First Temple period; the second deals similarly with the Second Temple; the third with a series of Jewish persecutions and sufferings in the Middle Ages. From the literary point of view this is one of the most memorable productions in the entire field of Jewish literature: it is certainly the most remarkable work of its type of Jewish significance written in the vernacular (other perhaps than Arabic) until recent times. It does not, however, purport to be a history and the episodes, except those relating to the writer's own period, are taken from other sources, sometimes heavily manipulated to suit his purpose.

Almost exactly contemporaneous with the publication of the *Consolaçam* was that of the *Shevet Yehudah*, one of the most curious Hebrew literary productions of the age. It seems to have been based on a chronicle of Jewish persecution, written by the martyred R. Judah ibn Verga of Seville, probably leaning heavily, so far as the earlier period is concerned, on the lost work of Profiat Duran. This in turn was edited and supplemented for the contemporary period (the expulsions from Spain and Portugal and the accompanying events) by the original writer's son, Solomon; it was prepared for press, with various supplements such as the brief chronicle mentioned above, by Joseph ibn Verga (Adrianople, 1553). The work as it has survived, however, is in the main the production of Solomon *Ibn Verga, who regarded it not as a mere chronicle but as a vehicle for conveying his critique on his Jewish coreligionists and the place of the Jews in a gentile society. He therefore interspersed among the historical episodes accounts of discussions and disputations at various Spanish courts which seem to be nothing more than the fabrication of his own perplexed imagination. Moreover, even in the historical episodes, he sometimes inserts caustic asides which throw more light on his own psychology than on the events which he describes. This is the case, for example, in the few pages which he devotes (§40) to the disputation of *Tortosa: it is significant that of this cataclysmic and relatively recent event in Spanish Jew-

ish history he knew details of only five sessions out of the total of 69, the antipope Benedict XIII appearing in these pages as a kindly sponsor rather than the venomous oppressor that he was (cf. the parallel account to that in the *Shevet Yehudah*, differing from it however in many significant details, in Kobak's *Jeschurun*, 6 (1868), 45–65). In fact, there is barely any record of the disputation after the first few days in any medieval Jewish source, such was the historiographical myopia of even the most erudite Jewish writers of the period.

SIXTEENTH TO SEVENTEENTH CENTURIES. It is significant of the then prevailing backward state of Jewish intellectual life, which in the Middle Ages had been at the forefront of European cultural activity, that in the field of Jewish historiography Hebrew literature was only just arriving at the stage of the chronicle – that is, the treatment of independent episodes in chronological order – whereas European literature had already discovered, through the writings of Bruno, Guicciardini, and Machiavelli, "history" in its modern sense, with analysis of cause and effect, of motives and results, and the concatenation of events. Similarly Azariah de' *Rossi in his *Me'or Einayim* (Mantua, 1573) had introduced to Jewish scholarship the novel idea of using secular sources to supplement or check the data in talmudic literature and consulting the extraneous materials to establish a chronological framework for Jewish history. However, his work was frowned upon – if not worse – even by some of his more liberal contemporaries; its study was discouraged, and it had virtually no influence until the era of the *Juedische Wissenschaft* in the early 19th century. In any case, de' Rossi's writings were in the nature of prolegomena to Jewish historiography: so far as is known, he made no attempt to apply his scientific principles in any straightforward historical writing of his own.

It is possible that other significant works now lost were written at this period, the age of what might be termed the tyranny of the printing press. What was published entered into the common store of literature, while a work for some reason or the other not published, however great its merit, had only a restricted influence or none at all. Moreover, at this time so much of what there was to be recorded about the Jews centered on their persecution at the hands of their neighbors that its publication was difficult if not impossible. This may be one of the reasons why Isaac *Cantarini's *Paḥad Yiẓḥak*, describing the attacks on the Jews in Padua in 1684, was written in such cryptic language and published in Amsterdam (1685), though Abraham Massarano's *Ha-Galut ve-ha-Pedut*, giving an account of the sufferings of the Jews at Mantua at the hands of the German *Landsknechten*, appeared in Venice (1634). The Italian Jews, with their mastery of limpid Hebrew, their facility for self-expression, and their familiarity with the advanced literary standards of their non-Jewish neighbors, were always highly articulate and had a facility for recording events which touched them closely. The recently-discovered record by Benjamin Nehemiah b. Elhanan of Civitanova, largely personal, of the times of Pope Paul IV and his relations with the Jews is a significant contribution to Hebrew prose literature as well as to Jewish historiography. The same may be said of the account of the plague in Padua in 1631 by Abraham Catalan (published in *Kobeẓ al Jad*, 14 (1946), 67–102). Parallel to this is the Spanish story, largely legendary, of the arrival of the first settlement of Marranos as professing Jews in Holland at the close of the 16th century. This, however, is an almost unique composition. The paucity of Jewish historical literature in Hebrew is perhaps less surprising than its virtual absence in languages other than Hebrew.

The newly-awakened chronographical (rather than historiographical) sense among the Jews is best exemplified in the writings of *Joseph ha-Kohen, who at least used non-Jewish sources, showed a broad geographical sweep, and tied up – clumsily, it is true – Jewish historical events with general history. However, his writing loses much of its effectiveness by his cloying attempt to imitate biblical narrative style, especially regrettable in a period when the Hebrew prose style of Italian Jews was so spontaneous and vivacious. His magnum opus was his history of the kings of France and Turkey, *Divrei ha-Yamim le-Malkhei Ẓarefat* (Sabionetta, 1554; Amsterdam, 1733), which earned him from Basnage the title of "the second Josephus." It is in fact a somewhat jejune production, not restricted to the subject matter of the title but giving a broad account of European history in chronological form, mainly in the 15th–16th centuries, all derived from familiar sources; there are occasional sidelights on Jewish history, mostly, however, repeated in his other writings. The book was nevertheless very popular, most copies of the first edition having many pages thumbed out of existence; and it helped to give its reader some idea of the main issues in general, and the background of Jewish history. Of greater importance as a source of Jewish history, however, was Joseph ha-Kohen's *Emek ha-Bakha* ("Valley of Tears"; cf. Ps. 84:7). For obvious reasons (for it was basically an account of the persecution of the Jews by their neighbors, stressing the share of the popes of the period of the Catholic Counter-Reformation) this was not published at the time (it was rediscovered only at the close of the 19th century) and underwent revisions and updating by the author, and after his death by an anonymous editor. The author makes use not only of Hebrew sources and Usque's chronicle but also of some non-Jewish authors whom he cites by name. This type of research was an innovation in Jewish historiography, but there are few other traces of modernity in the work, which is an episodic treatment in chronological sequence, valuable mainly for the information that the author gives on his own age and environment.

Even more blatantly chronological is the work of David *Gans. Notwithstanding his wide general culture, his intimacy with the most distinguished astronomers of his day, and his acquaintance with the broad outlines of general history, his *Ẓemaḥ David* (Prague, 1592) is no more than a chronological record in two parts, the one dealing with general, the other with Jewish historical events, with occasional narrative amplifications. Notwithstanding its obvious defects it was important

in helping to arouse some sense of history among the Jews of central and northern Europe. Yet it is significant that Jehiel *Heilprin, in his *Seder ha-Dorot* (Karlsruhe, 1769) in which he tried to systematize the confused data about the rabbis of the Talmud and their successors (down to 1696), spoke scathingly about his contemporaries' lack of interest in history and historical literature.

Perhaps none of the 16th-century Jewish historians was more capable than Elijah *Capsali, a Cretan scholar-physician who had studied in Padua. His parallel works on the history of Turkey and of Venice, the former including a remarkable account of the expulsion from Spain and the fate of the exiles, cannot be evaluated properly until they are published in full. To a large extent, however, they are based on personal observation and reminiscence, and the latter especially contains much autobiographical material which removes it from the strict category of history. Crete being at that time under Venetian rule, Capsali was essentially European in culture, and his work is therefore in a different category from the chronicle of scholars by the Egyptian Joseph *Sambari (Neubauer, Chronicles, 1 (1887), 115–62), the *Kore ha-Dorot* of David *Conforte (1677), or the later History of Fez (ed. by G. Vajda).

The *Chmielnicki massacres in Poland (1648–49) occasioned a spate of historical publications, the most noteworthy being the *Yeven Meẓulah* of Nathan Nata *Hannover (Venice, 1653), true to medieval precedent in concentrating on massacre and suffering. The autobiographies produced at this period by Leone *Modena and *Glueckel of Hameln, invaluable though they are for reconstructing the history of the period, are hardly to be considered in the category of historiography.

Systematic Histories

EARLY STUDIES. *Manasseh Ben Israel included in a list of his unpublished works a Heroica Historia of the Jewish people, intended as a continuation of Josephus. If this was ever written, it has disappeared. After his day editions of Josippon appeared both in Hebrew and in Yiddish with a supplement entitled She'erit Yisrael (Amsterdam, 1741) by Menahem Mann b. Solomon ha-Levi *Amelander. This gave the Jewish reader some idea of the continuous history of his people. But the first systematic history of the Jews, from remote times onward, was compiled not by a Jew but by the French Protestant pastor Jacques *Basnage (*Histoire des Juifs*…, 7 vols., 1706–11; Eng. tr. 1708) which he wrote while living in exile in Holland. Unoriginal and of little independent value, it is nevertheless memorable as the first attempt since the days of Josephus to give a comprehensive history of the Jewish people from antiquity onward. It therefore enjoyed great popularity, and was often translated and republished. The occidental Jew who wished to learn in a systematic fashion something about the past of his people had for many years no other work to consult except this. It constituted, moreover, the basis for several more popular and less voluminous presentations such as *The History of the Jews from the Destruction of Jerusalem to the Present Time* (New York, 1812) by the American Christian writer Hannah *Adams (which included for the first time in Jewish historiography some lines devoted to America). The once popular work by H.H. Milman, later dean of St. Paul's Cathedral, London (London, 1830), was in much the same category, as was the history by Charles Malot (Paris, 1826) in French. The first Jew to attempt a consistent history of his people in a modern European language was Solomon *Loewisohn in his *Vorlesungen ueber die neuere Geschichte der Juden* (Vienna, 1820). He was followed by Peter *Beer, while David *Ottensosser published a similar work in Hebrew characters (Fuerth, 1821–25). *The History of the Jews, from their Origin to their Ultimate Dispersion* (1824) by M. Mayers of Yarmouth, England, was based, like his other writings, on Beer.

Meanwhile, as a by-product of the interest in Hebraic studies by Christian (mainly Protestant) theologians, a number of local histories by more or less well informed Christian scholars appeared in the 18th century, before any similar work by a Jew made its appearance: e.g., *Anglia Judaica* by D'Blossiers *Tovey (Oxford, 1738); Giovanni di Giovanni's *L'ebraismo della Sicilia* (Palermo, 1748); J.C. *Ulrich's *Sammlung juedischer Geschichten in der Schweiz* (Basle, 1768); Andreas Wuerfel's history of the Jews in Fuerth (1754) and Nuremberg (Nuremberg, 1755); and J.C. Aretin's history of the Jews in Bavaria (Landshut, 1803) – all of them serving to prepare the ground for more consistent and thorough treatment of Jewish historical material.

THE WISSENSCHAFT. The period of the *Wissenschaft des Judentums witnessed the first serious attempt by a Jew to present the history of his people as a whole in accordance with the standards of modern scholarship. It was only in 1820 that Isaac Marcus *Jost, a teacher in the Jewish school in Frankfurt, published the first volume of his history of the Jews from the Maccabean period to contemporary times: the ninth and last volume appeared in 1829. This was the first history of the Jews written in accordance with the criteria of modern scholarship by a person with an intimate knowledge of the Hebrew sources and capable of making full use of them. The deficiencies of the work resulted from the personal attitudes of the author. A leader of German Reform Judaism in its early stages, he was to some extent out of sympathy with traditional Jewish life: he was coldly rationalistic, and his intention was nakedly apologetic; literary history rather than the history of the people occupied the forefront of his picture, and he lacked historical training as well as the personal warmth which is needed for a great historian. His later work, a history of Judaism and its sects concentrating on religious history (3 vols., 1857–59), has similar defects but made use of a greater range of research and was therefore in certain respects definitely superior. Nevertheless, the two works still retain some importance, and Jost may fairly be regarded as the father of serious Jewish historiography.

It is said that when Moritz *Steinschneider, the father of Hebrew bibliography, heard that Heinrich *Graetz was en-

gaged on his great work, he observed disapprovingly: "What, another history of the Jews?" to which his interlocutor replied, "Yes, but this time a Jewish history." The claim was justified. Graetz's great *Geschichte der Juden* (11 vols., 1853–76, not produced however in chronological order) was different from that of Jost mainly in the warm and sympathetic spirit that infused it, and a style which is sometimes of classical beauty; it covered moreover the whole of Jewish history from biblical times onward. He used a bewildering mass of source material in many languages. Whereas Jost had used the obvious sources, Graetz revealed for the first time many that had previously been overlooked, and the analyses in his learned appendices (omitted in the English editions) are sometimes of fundamental importance. The results of the research of the emergent *Juedische Wissenschaft* up to his day were exhaustively exploited and incorporated. He showed himself, inevitably, a child of his time. He paid too little attention to social and economic factors; his lack of sympathy with Jewish mysticism is readily apparent; and he tended to overlook the vast importance of Russian and Polish Jewry in Jewish history. Intellectual history sometimes overwhelms entirely the political history, and in the latter greater prominence is given to suffering than to achievement. Nevertheless, his history remains one of the most remarkable products of a single individual in the entire course of Jewish literature, and is still to be regarded as the standard history of the Jews down to the early 19th century. The subsequent editions by M. Brann modified the work only in inconspicuous details. On the other hand, the Hebrew translation by S.P. *Rabbinowitz, supplementing and at the same time modifying the original in important respects and containing appendices by A. *Harkavy and others, has an independent importance. It acquired moreover additional significance in that it introduced Jewish history in a modern sense to large numbers of Hebrew readers in Eastern Europe. This was also one of the merits of Wolf Ze'ev *Jawitz' presentation of Jewish history down to the medieval period from the point of view of strict Orthodoxy, which moreover reexamined the talmudic sources on the basis of a minute knowledge which Graetz lacked.

THE TWENTIETH CENTURY. Simon *Dubnow set out deliberately to correct the defects of Graetz's history. Of Russian birth and author of the history of Eastern European Ḥasidism (1930–32) and of the Jews of Russia and Poland (1916–20), he did not find the task difficult. Belonging to a later generation, he was naturally able to pay proper attention to factors which his precursors had overlooked. Nevertheless, notwithstanding his professed intention, he failed to carry out his plan of devoting adequate attention to social and economic life. Moreover, the subsequent Holocaust, in which he himself perished, threw his work out of balance; and indeed the annihilation of Eastern Jewry, and the consequent catastrophic decline of Yiddish in its former homeland, removed from the realm of actuality the living centers which were the focus of his treatment.

The only remaining massive treatment of Jewish history as a whole is the *Social and Religious History of the Jews* by Salo W. *Baron (27 vols., 1952–83²). This work, overwhelming in its vast erudition and its superb bibliographical equipment, has elevated the author to the first rank among Jewish historians, but it is essentially a discussion of the interplay of social and religious forces in Jewish history rather than a consistent history of the Jews. Popular single-volume histories of the Jews have also been produced in many languages in the course of the past generation, e.g., in English by M.L. *Margolis and A. *Marx, S. *Grayzel, R. Learsi, A.L. *Sachar, C. *Roth, and others.

During the past century there has been a spate of historical writing on specific periods, aspects, or geographical areas of Jewish history – without taking into account the mass of writing on biblical history to which Jewish scholars such as E. *Speiser and B. *Mazar made fundamental contributions. Thus a number of Christian scholars such as Emil *Schuerer and Eduard *Meyer have dealt with the period of the birth of Christianity – for the most part in a somewhat biased religious spirit. This has been counterbalanced on the Jewish side by the work of Adolf *Buechler, Joseph *Klausner, Gedaliah *Allon, Solomon *Zeitlin, Yitzhak *Baer, and, so far as Hellenistic Egypt is concerned, by Victor (Avigdor) *Tcherikover, and for the Roman Empire generally by Jean *Juster. Social history engaged the attention of Moritz *Guedemann, Israel *Abrahams, Abraham *Berliner, and Simḥah *Assaf, and economic history that of Levi *Herzfeld, Georg *Caro, Mark *Wischnitzer, and a devoted band of Eastern European writers, for the most part Dubnow's disciples, such as Ignacy Isaac *Schipper, Bernard *Weinryb, and Jacob *Lestschinsky. The history of the Khazars was treated by the non-Jewish scholar D.M. Dunlop, that of Beta Israel by Wolf *Leslau, the German Court Jews by Selma *Stern-Tauebler and the Marranos by Cecil Roth and Benzion *Netanyahu. The relations of the Catholic Church and the Jews engaged the attention of Moritz *Stern, Bernard *Blumenkranz, and Grayzel, and, from the Christian side, of Peter Browe and (more objectively) James William *Parkes. Gershom *Scholem, as a logical sequel to his works on Jewish mysticism, wrote the definitive account of the messianic movement associated with the name of Shabbetai Ẓevi.

There is an extremely large number of monographs of varying value on individual towns and communities, such as Rome (H. *Vogelstein and P. Rieger, A. Berliner, H.J. *Leon), Florence (U. *Cassuto), Frankfurt (I. *Kracauer), Vilna (I. Cohen), Paris (L. *Kahn), Cologne (A. *Kober), Mantua (S. Simonsohn), Vienna (M. *Gruenwald), Baghdad (D.S. *Sassoon), Salonika (J. Nehama, I.S. *Emmanuel), Castoria (M. Molho), Ragusa [i.e. Dubrovnik] (J. Tadić), and many more. This material has in some cases been digested in histories of the Jews in individual countries, such as Germany (I. *Elbogen), Spain (Y. Baer; for the Muslim period E. *Ashtor), Italy (C. Roth, A. *Milano), Portugal (Mendes dos Remedios), England (A.M. *Hyamson, C. Roth), Egypt (V. Tcherikover for the Hellenistic period; J. *Mann, E. Ashtor, and J. Landau for the

Muslim period), Babylonia (J. *Neusner) with later Iraq (A. Ben-Jacob), Persia (W.J. *Fischel), North Africa (Ḥ.Z. *Hirschberg), Holland (H. Brugmans and A. Frank: vol. 1 only), Sweden (H.M. *Valentin), Switzerland (F. *Guggenheim-Gruenberg), Russia and Poland (S. Dubnow), the Byzantine Empire (J. *Starr), South Africa (L. Herman, G. Saron and L. Hotz), and Canada (B.G. *Sack). The history of the Jews in Latin America has been partially investigated by Boleslao Lewin, S.B. Liebman, A. Wiznitzer, Martin Cohen, I.S. Emmanuel, and others. Some of these works made only slender use of the Hebrew sources, while some areas (e.g., Turkey, notwithstanding the learned volumes of S. *Rosanes and the long series of monographs by A. *Galanté) still lack adequate histories. On the other hand, the breadth of David *Kaufmann's interests probably prevented him from producing a major historical work, though his incidental contributions to Italian and German Jewish history were of the highest importance. The historical dictionaries *Gallia Judaica* and *Germania Judaica* deal preponderantly with the scholars and intellectual history relating to the individual centers.

This is apart from the thousands of separate articles both on aspects of general Jewish history and on the annals of individual communities which have appeared in general scientific periodicals (especially those devoted to local history) and in specialist Jewish reviews such as the **Revue des Études Juives, Zeitschrift fuer die Geschichte der Juden in Deutschland* (two series), the *Jewish Quarterly Review, **Tarbiz, Rivista Israelitica, Historia Judaica*, and *Zion* (the historical quarterly published since 1936 by the Historical Society of Israel). Salo W. Baron's monumental *Social and Religious History of the Jews* is thus far the only major work that has attempted to take into account the entire range of this vast accumulated source material.

PUBLICATION OF SOURCES. From the close of the 19th century, following the tendencies in general scholarship, a beginning was made with the systematic investigation and publication of historical sources. This was the principal object of the Historische Kommission fuer Geschichte der Juden in Deutschland, established in 1885, which published a number of important source books on the subject. In England, investigation of medieval sources was begun in a systematic though superficial fashion by Joseph *Jacobs. The *Jewish Historical Society of England, of which he was the founder, subsequently began the complete publication of the records of the medieval English Exchequer of the Jews. A calendar was made of the rich 13th and 14th century material in the archives of the crown of Aragon by Jean *Régné. Jacobs had carried out in 1894 a cursory inquiry into the manuscript sources for the history of the Jews in Spain, setting the example for the more systematic investigation made by Y.(F.) Baer in the 1920s. The rewriting of Spanish Jewish history was thus made possible. *Magyar-zsidó oklevé tár (Monumenta Hungariae Judaica*, 11 vols., 1903–67) collected the basic material regarding Hungarian Jewry, and *Regesty i Nadpisi* (3 vols., 1899–1910) materials regarding Russia. The General (now Central) Archives for the History of the Jewish People at the Hebrew University of Jerusalem has been engaged since 1939 in collecting archivistic material both from governmental archives and Jewish communal bodies from every land. The discovery of the Cairo **Genizah* at the end of the 19th century revealed a vast amount of hitherto unknown record material for Middle Eastern Jewry in the early Middle Ages: this has been investigated by a number of scholars, on the historical side, especially by Jacob Mann and S.D. *Goitein in his studies on social and economic life.

Historical source materials in Hebrew have been collected and published by Adolf *Neubauer (*Medieval Jewish Chronicles*, 1887–95), Abraham *Kahana (*Sifrut ha-Historyah ha-Yisre'elit*), Simḥah Assaf (especially his source book for the history of Jewish education), Simon *Bernfeld (*Sefer ha-Dema'ot*, on the history of Jewish persecution), and Benzion *Dinur, in an ambitious collection covering a great part of the Middle Ages. Jewish historical source books have been published in English by J.R. *Marcus and L.W. *Schwarz. Inscriptions and epitaphs have been collected and published by numerous scholars, such as J.B. *Frey (classical period), I.S. *Emmanuel (Salonika, Curaçao), F. *Cantera (Spain), M. *Schwab (France, Spain), S. *Hock (Prague), D. Henriques de Castro (Amsterdam), E. Shilstone (Barbados), D. de Sola *Pool (New York), B. Wachstein (Vienna), and many others.

LOCAL JEWISH HISTORY. Meanwhile attention began to be paid by various scholars to local Jewish history in different lands, cities, or environments. Societies for the study of local Jewish history, all producing valuable publications, were established in the U.S. (*American Jewish Historical Society, 1892), England (Jewish Historical Society of England, 1893), Czechoslovakia (Society for the History of the Jews in the Czechoslovak Republic, 1927), etc. In addition, societies for Jewish studies in the various countries, such as the French Society of Jewish Studies (*Société des Études Juives), naturally devoted special attention to local Jewish history. The result was the publication of important monographs which otherwise might not have seen the light, and of hitherto neglected source material without which Jewish history in its fuller sense could not be written.

Local Jewish historiography may be illustrated by two 20th-century works in which the revival of Jewish studies reached its climax. Yitzhak (Fritz) Baer's *History of the Jews in Christian Spain* (Heb. 1945, Eng. 1931, 1961–1966[2]) was based on the corpus of documents on Spanish Jewish history which he had collected and published under the auspices of the *Akademie fuer die Wissenschaft des Judentums (2 vols, 1929, 1936), and an exhaustive study of all the published sources, both Hebrew and secular, literary archivistic. This placed the history of one of the greatest centers of Jewish life in the Middle Ages on a sound basis for the first time, replacing former works on the subject such as those of M. *Kayserling and J. *Amador de los Rios. It immediately took its place as one of the fundamental works on medieval Jewish history. Baer's

later interest is in the religious history of the period of the Second Temple, in which he has shown how the earlier rabbinic sources, long considered legendary, reflect actual conditions and have to be taken into account in any attempt to understand life and institutions in Ereẓ Israel before 70 C.E. Of a smaller scope than Baer's work on Spain is U.(M.D.) Cassuto's exhaustive study of the Jews in Florence during the period of the Renaissance, based on a minute study of the contemporary archives and of all other available material, literary and administrative, printed and manuscript, Jewish and secular. This work laid down new principles for the identification of Jews prominent in the business world and mentioned in secular sources with scholars and patrons of learning known to us under different names in Hebrew documents. It thus illustrated the interaction of Jewish and general culture at one of the seminal points of intellectual history, and provided a model for all similar studies in the future.

In Ereẓ Israel, scientific historiography in a modern sense may be said to have been instituted with the establishment of the history faculty at the Hebrew University of Jerusalem, mainly under the direction of Y. Baer from 1930 onward: later, the universities of Tel Aviv and Bar Ilan created important historical faculties. Naturally such historiography has concerned itself largely with the history of the Jews in Ereẓ Israel, the centrality of the country in Jewish history, and the development of the national idea among the Jews.

There has also been a tendency to extend serious historical research almost for the first time into the history of the Jews in Oriental countries, among whom the historical sense was almost undeveloped. Izhak *Ben-Zvi, second president of Israel, was particularly interested in this, and was responsible for the founding of the Ben-Zvi Institute for research on the Jewish communities in the Middle East. After the establishment of the State of Israel, the Central Archives for the History of the Jewish People were officially established, comprising manuscript materials which had survived the Holocaust in Central Europe and elsewhere and a systematic collection of microfilms or photocopies from private and public archives throughout the world. The outstanding scholars who are working or have worked in the history faculties of Israel universities include, besides those mentioned above, R. *Mahler, important for his economic interpretation of the history of the Jews in modern times; I. *Halpern, who edited the surviving fragments of the records of the Council of the (Four) Lands, besides his other contributions to Eastern European Jewish history; A. *Schalit, biographer of Herod the Great; H.H. *Ben-Sasson, specializing in late medieval European Jewish history; and J. *Katz, who has studied penetratingly Jewish-gentile relations in medieval and early modern times. Historiography in Israel has been strongly influenced by the desire to perpetuate the memory of the annihilated Eastern European Jewry as well as by specific attention to military and activistic elements in Jewish history. More important probably is the fact that it has been able to rid itself of the somewhat apologetic tendencies which were inevitably discernible in even the most objective of the works written by Jews in the Diaspora of the history of their people.

[Cecil Roth]

For Holocaust historiography, see *Holocaust.

United States

The first specimen of historical writing about American Jews appeared in a Hebrew oration written by Gershom Mendes Seixas and delivered by Sampson Simson at the Columbia College commencement of 1800. A better-researched and more substantial discussion, based on correspondence with Jews, appeared in a history of the Jews (1812) by the Protestant scholar Hannah Adams. This and other early, brief efforts by Mordecai M. Noah (1818) and Isaac Harby (1826) possess limited historical value beyond their authors' observations concerning their own generation. However, they contained one idea which characterized American Jewish historiography: that the Jews of the United States represent a unique departure in Jewish history by virtue of having enjoyed equal rights and full opportunity from their first arrival, all as a matter of course. This conception of the uniqueness of American Jewry and its history paralleled American historiography's view of the United States as a fresh beginning in world history. During the 19th century little historical research was done, although the traveler I.J. Benjamin furnished historical information supplied to him in numerous communities, Isaac Markens published historical sketches of notable Jews (1888), and Charles P. Daly and Max Kohler produced a survey of *The Settlement of the Jews in North America* (1893). American Jewish history became a subject of serious study with the founding in 1892 of the American Jewish Historical Society, the establishment of its archives, and the appearance from 1893 of its *Publications* (92 vols. to 2004; from 1961, *American Jewish Historical Quarterly*, from 1978, *American Jewish History*). The regnant point of view during the late 19th and early 20th century paralleled that of historical studies among other ethnic and religious groups, seeking to honor notable ancestors and demonstrate the depth, range, and fervor of Jewish patriotism and contributions to American life. Notwithstanding their antiquarianism, filio-pietism, and isolation from general historical scholarship, studies of value were produced by M.J. Kohler, L. Huehner, A.M. Friedenberg, S. Oppenheim, L.M. Friedman, C. Adler and others. They focused on Jews in Colonial and Revolutionary America, rarely passing the year 1840. Broader surveys appeared in a supplement to the American edition of K. Magnus, *Outlines of Jewish History* (1890), written by C. Adler and H. Szold, and in the *Jewish Encyclopedia*.

From approximately 1940 there was substantial improvement in the range of subjects, extent of sources employed, and quality of interpretation. The rising interest of professional American historians in subjects closely bearing on American Jewish history, such as immigration, religion, ethnic and racial groups, and philanthropy, stimulated Jewish research and helped to elevate its standards. In 1947 the American Jewish Archives was established at the Cincinnati campus of Hebrew

Union College, and its journal of the same name began to appear in 1949; historical studies were also published under the Archives' imprint. YIVO also developed a major archive on American Jewry. Jewish institutions began to teach American Jewish history, and the American Jewish Tercentenary observances of 1954–55 demonstrated Jewish communal interest in the field. Subsequently, the development of ethnic studies, the funding of positions in American Jewish history at American universities, and the 350th anniversary commemoration of American Jewish Life in 2004–05 all helped to strengthen the field and bring it greater respect and recognition.

Initially, the best cultivated chronological period was that from 1654 to approximately 1790, in which J.R. Marcus made the prime contributions, in addition to others by S.F. Chyet, L. Hershkowitz, E. Faber, W. Pencak, S. Rezneck, and historians of older local communities. The period from the Revolution to 1881 drew attention later, with valuable broad studies by, among others, A. Barkai, N. Cohen, H. Diner, and J.R. Marcus, and more specialized studies, including biographies, community studies, and studies of religion by D. Ashton, E. Bingham, M. Davis, R. Glanz, H.B. Grinstein, J. Hagy, L. Jick, B.W. Korn, J.D. Sarna, A. Silberstein, L. Sussman, and G. Zola. The great era of East European Jewish immigration, and its implications, were broadly surveyed by I. Howe and G. Sorin. More specialized studies of the era include books by G. Best, S. Brumberg, S. Cassedy, E. Eisenberg, S. Glenn, A. Goren, A. Heinze, T. Kessner, B. Marinbach, T. Michels, M. Rischin, R. Sanders, J.D. Sarna, M. Slobin, D. Soyer, S. Tenenbaum, and S. Weinberg. The era from World War I through World War II is less studied. In addition to valuable surveys by H. Feingold and J. Teller, specialized studies include volumes by M. Alexander, J. Oselit, D.D. Moore, and B. Wenger; as well as two fine books on the Leo Frank case by L. Dinnerstein and S. Oney, and books on the New York Jewish intellectuals by, among others, A. Bloom, C. Kessner, and A. Wald. A shelf of books treats diverse aspects of World War II, American aspects of the Holocaust, as well as Holocaust memory in America, including works by G. Arad, H. Feingold, W. Helmreich, D. Lipstadt, A. Mintz, D. Moore, P. Novick, M. Penkower, D. Wyman, and E. Zuroff. Finally, scholars have now turned their attention to the postwar era. Key books have been authored by M. Dollinger, D. Moore, M. Staub, S. Svonkin, and J. Wertheimer.

Institutional and community histories dominate the field of American Jewish history. Organizational histories written by professional historians include the histories of the American Jewish Committee (N.W. Cohen), American Council for Judaism (T. Kolsky), B'nai B'rith (D. Moore), Hebrew Union College-Jewish Institute of Religion (M. Meyer), Jewish Publication Society (J. Sarna), Jewish Theological Seminary (J. Wertheimer), Joint Distribution Committee (Y. Bauer), National Council for Jewish Women (F. Rogow), ORT (L. Shapiro), Rabbinical Assembly (R. Fierstien), Yeshiva University (J. Gurock), and the Jewish fraternal organization, Zeta Beta Tau (M. Sanua). Hundreds of synagogue and community histories have appeared, many produced by significant scholars. For a survey see A.S. Korros and J.D. Sarna, *American Synagogue History: A Bibliography and State of the Field Survey* (1988) as well as the list of community histories in Daniel Elazar's *Community and Polity* (1995²).

Topical studies have become more common in the field. The most important works on American antisemitism are by L. Dinnerstein, D. Gerber, and J. Higham. On black-Jewish relations, see especially works by H. Diner, C. Greenberg, S. Forman, M. Friedman, J. Schorsch, and C. Webb and edited works by M. Adams and J. Bracey as well as J. Salzman and C. West. Cultural history is covered in older works by I.S. Meyer, J. Kabakoff, and A.G. Duker, as well as newer works by S.B. Cohen, P. Ewens, L. Friedman, N. Gabler, L. Harap, A. Heinze, J. Hoberman, A. Most, J.D. Sarna, S. Rubin Schwartz, J. Shandler, and S. Whitfield. The economic history of American Jewry has scarcely been written; see preliminary works by B. Chiswick, S. Kahan, and S. Kuznets. No definitive work on the history of Jewish education in America has appeared either, but see valuable studies by A. Dushkin, P. Gold, M. Ben-Horin, L. Gartner, I. Janowsky, J. Krasner, S. Niger-Charney, J. Pilch, E. Rausch, J. Sarna, A. Schiff, and Z. Scharfstein. The central work on genealogy is by M.H. Stern. For studies of immigration and labor, see works by G. Alroey, D. Berger, M. Epstein, L. Gartner, R. Glanz, O. and M. Handlin, I. Howe, T. Kessner, A. Kahan, S. Kuznets, E. Lederhendler, T. Michels, E. Morawska, M. Rischin, Z. Szajkowski, E. Tcherikower, M. Wischnitzer, and I. Yellowitz. Political history has also been inadequately studied; the best single book is the collection of essays edited by L.S. Maisel and I. Forman. J.D. Sarna's *American Judaism* (2004) synthesizes work on Jewish religious life in America; other contributors to this area include J.L. Blau, K. Caplan, M. Davis, E. Diamond, J. Gurock, L. Jick, A.J. Karp, D. Kaufman, B.W. Korn, B. Kraut, C.S. Liebman, M. Meyer, P. Nadell, R.E. Prell, M.L. Raphael, A. Rothkoff, S. Rubin Schwartz, A. Silverstein, H. Soloveitchik, L. Sussman, A. Tarshish, and J. Wertheimer. On Sephardim in America, see works by M. Angel, A. Ben-Ur, M. Cohen and A. Peck, and J.M. Papo. The most important work on American Jewish thought is by A. Eisen. The field of American Jewish women's studies (see also below) has burgeoned with valuable books by J. Antler, L. Davidman, H. Diner, S.B. Fishman, R. Glanz, K. Goldman, P. Hyman, D.R. Kaufman, M. Klapper, L.G. Kuzmack, J.R. Marcus, M. McCune, P. Nadell, R.E. Prell, J. Sochen, L.M. Schloff, and E. Umansky and D. Ashton. For the history of American Zionism, see works by N.W. Cohen, E. Friesel, A. Gal, S. Halperin, R. Medoff, M. Raider, R. Rojanski, and M. Urofsky.

Methodological discussion and bibliographic surveys include M. Davis and I.S. Meyer, eds., *The Writing of American Jewish History* (1957); S.W. Baron, "American Jewish History: Problems and Methods" PAJHS, 39 (1950), 207–266; M. Rischin, *An Inventory of American Jewish History* (1954); L.P. Gartner, "The History of North American Jewish Communities…," *Jewish Journal of Sociology*, 7 (1965), 22–29; E. Lifschutz, *Bibliography of American and Canadian Jewish Memoirs and*

Autobiographies (1970); D. Zubatsky, *Jewish Autobiographies and Biographies* (1989); O. Handlin (ed.), *Report of a Conference on the Jewish Experience in America* (1948; mimeo.); A.G. Duker, "An Evaluation of Achievement in American Jewish Local Historical Writing," PAJHS, 49 (1960), 215–53; I.S. Meyer, "American Jewish Biography: An Introductory List," *Jewish Book Annual*, 8 (1949–50), 77–96; John J. Appel, "Hansen's Third-Generation 'Law' and the Origins of the American Jewish Historical Society," JSOS, 23I (1961), 3–20; O. Handlin, "A Twenty Year Retrospect of American Jewish Historiography," AJHQ, 65 (June 1976), 295–309; R. Singerman, *Judaica Americana: A Bibliography of Publications to 1900* (1990); N. Kaganoff, *Judaica Americana: An Annotated Bibliography of Publications from 1960 to 1990* (1995); J. Gurock, *American Jewish History: A Bibliographical Guide* (1983); J.Sarna in *Modern Judaism,* 10 (1990) and in *The Schocken Guide to Jewish Books* (1992) and in *Jewish Studies,* 33 (1993); and J. Wertheimer in *The Modern Jewish Experience: A Reader's Guide* (1993).

[Lloyd P. Gartner / Jonathan D. Sarna (2nd ed.)]

Women's Studies

The recognition that women's lives and experiences in any particular historical era may differ significantly from men's has wrought profound changes in how many historians approach and interpret their research data. The use of gender as a category of analysis by historians of the Jewish past began in the 1980s, under the influence of the academic field of women's studies. In recent decades, both female and male historians have delineated the constructions and consequences of gender in Jewish societies of many times and places, producing a growing body of historical scholarship about Jewish women's social and economic roles, religious lives, and creative contributions. Valuable reference works include *The JPS Guide to Jewish Women: 600 B.C.E.–1900 C.E.*, ed. E. Taitz, S. Henry, and C. Tallan (2003); *Jewish Women: A Comprehensive Encyclopedia*, ed. P.E. Hyman and D. Ofer (2006); and *Jewish Women in America: An Historical Encyclopedia*, ed. P.E. Hyman and D.D. Moore (1997). For collections of scholarly essays that include analyses of women's situations in a number of times and places, see edited volumes by Y. Azmon, J.R. Baskin, S. Grossman and R. Haut; R. Levine-Melammed, and L. Levitt and M. Peskowitz. Historical studies focused on Jewish women in late antiquity include works by C. Baker, B. Brooten, M. Peskowitz, R. Kraemer, and T. Ilan; for recent historical studies of medieval and early modern Jewish women in Europe, see H. Adelman, J.R. Baskin, E. Baumgarten, N.Z. Davis, A. Grossman, R. Levine Melammed, A. Rapoport-Albert, and R.L. Winer. Historians who write about Jewish women in Europe from 1700 to 1939 include N. Deutsch, R. Elior, H. Friedenreich, C.R. Freeze, M. Galchinsky, B. Hahn, D. Hertz, P.E. Hyman, M. Kaplan, L.G. Kuzmack, I. Parush, E. Umansky, and C. Weissler. Anthologies on women and the Holocaust have been edited by D. Ofer and L. Weitzman and by R. Baer and M. Goldenberg. Historians who study Jewish women in the early modern and modern Muslim world and in pre-state and post-1948 Israel include D. Bernstein, R. Lamdan, R. Kark, F. Malino, S. Reinharz, M. Shilo, and R. Simon; for historical essays on women in pre-state and post-1948 Israel, see the anthologies edited by D. Bernstein, M. Raider and M.B. Raider-Roth, E. Fuchs, and M. Shilo, R. Kark and G. Hasan-Rokem. For a review of historical scholarship on Jewish women in North America, see the section above on U.S. Historiography.

HISTORY. This article is arranged according to the following outline (for Prehistory, see *Archaeology):

BEGINNING UNTIL THE MONARCHY

The Patriarchs of Israel

The beginning of the history of Israel, like that of many other nations, is obscure. The passage of time caused many features to fade from the memory of the people, while others were altered. Furthermore, the early period of Hebrew history, which was of decisive importance for Israel, did not leave any impressions on the environment in which the ancestors of Israel lived and functioned; and therefore, no external evidence concerning the beginning of the process of national consolidation has been found.

The Bible is the only source on the lives and activities of the *Patriarchs, and the traditions it preserves about them are evaluated very differently by different scholars (see *Genesis). There are those who completely negate the historicity of the Patriarchs and their period, regarding the pertinent biblical data as myths or literary epics; while others discern in these stories cores of historical facts overgrown with later revision and editing. The difficulties that the biblical narratives raise for historical research relegate the dispute about the existence of the Patriarchs to a secondary place. At present, research is focusing on attempts to discover the period and the political, ethnic, and cultural background that was likely to have served as the setting for the emergence of the nation. Because the Book of Genesis has been held to contain obscure chronological allusions, anachronistic descriptions (*Philistines and *Arameans; camels), and later adaptations, and redactions, no way has been found of utilizing it for the purposes of chronology. Therefore, sources other than the Bible, such as epigraphical and archaeological finds from the Fertile Crescent, are employed as indirect proof of the reality reflected in the patriarchal narratives. The setting of the patriarchal period would correspond in modern chronology to the first half of the second millennium. It is during this period that West Semitic ("*Amorite") elements began their migrations and movements in *Mesopotamia. These West Semitic elements also increased their migrations west of the Euphrates, becoming nomads or settling in new, or already existing, settlements. The Egyptian Execration Texts dating from the 19th–18th centuries B.C.E. provide clear evidence of the integration of these Western Semites in the city states of Syria and Palestine and of the existence of West Semitic rulers, especially in the plains and coastal areas which were then under Egyptian control. It can be seen that the mountain regions, on the other hand, were underpopulated. Apparently the Western Semites reestablished the settlements in Transjordan and within a limited period (19th century B.C.E.) brought prosperity to the settlements in the Negev and Sinai along the routes to Egypt. Unfortunately, the attempt to correlate the historically documented West Semitic movements with the biblical accounts have proved elusive.

The biblical accounts reflect conflicting traditions that circulated in ancient Israel. According to Genesis 11, *Abraham's family came from *Ur in *Chaldea, in southern Iraq. Inasmuch as Ur did not become Chaldean until the 9th–8th centuries, the traditions of Abraham's migration cannot be any earlier. In all probability, Abraham's migration from Ur to Palestine belongs to the latest stratum of biblical traditions, and reflects the desire of Babylonian Jews in the later first millennium B.C.E. to claim that Israel's founding father came from their homeland. In contrast, the earlier *Haran traditions connect the Hebrews to the Arameans of Syria and are part of the general migrations of the Western Semites in that period. In the biblical traditions, Abraham and his descendants traveled along the routes in the hill country and in the Negev. In these regions they were able to find subsistence and pasturage for their cattle. The connection between the Patriarchs and the Western Semites, particularly the Arameans, and their existence in the first half of the first millennium, is attested by a comparison between Genesis and written sources from Syria and Mesopotamia, which reflect the material and spiritual world of that period. Earlier documents dating from about the 18th century B.C.E. found in the royal archives of *Mari on the Middle Euphrates include useful evidence about organizations of West Semitic tribes, ultimately related to the Arameans and Hebrews, their patriarchal society, ways of life, language, leadership, and wanderings. They provide no direct evidence of the patriarchal period as was once thought. The *Nuzi documents, although likewise much earlier than the biblical sources, are also very important analogically because they shed light on various aspects of the family customs and laws described in the Bible. The Nuzi documents illustrate the mixed Semitic and *Hurrian society of Nuzi in Eastern Iraq in the 15th–14th century B.C.E. Late second millennium Syria-Palestine likewise had Hurrian and West Semitic populations. By the 19th century B.C.E. and perhaps even earlier, the first

waves of Western Semites arrived in Egypt, at the southern edge of the Fertile Crescent. In the course of the following centuries these peoples declined under the pressure of foreign ethnic elements of Indo-European and Hurrian origin, who invaded certain regions of Mesopotamia, *Syria, and Palestine and sought to establish themselves there. Allusions to these events, which occurred in the second quarter of the second millennium B.C.E., are preserved mainly in documents recovered by archaeological expeditions, but find few echoes in the Bible. Indeed, the social terminology of Syria-Palestine in the second millennium is virtually absent from the Bible. An Egyptian tradition in the Hellenistic period (see *Manetho) preserved the memory of a wave of Western Semites and non-Semitic foreign groups which it called *Hyksos, a corruption of an ancient Egyptian term for "rulers of foreign lands" referring to Asiatics. From later sources it seems clear that the Hyksos gained control over large areas in Egypt and set up their headquarters in the Delta region of the Nile, which is the biblical *Goshen. They established an empire and maintained relations with Syria and Palestine. Royal dynasties were descended from them (XV–XVI Dynasties); names like Yaqob-har, Anat-har, Khyan, etc. indicate that they were of Semitic origin. Manetho, followed by Josephus, identified the Hyksos with the Israelites. It appears that the migration of Jacob's sons to Egypt and the rise to power there of Joseph reflect dim memories of the rule of the Hyksos. Similarly dim memories are the biblical accounts of the descent from Canaan to Egypt for food (Gen. 12, 26, 41–50), which reflect the reality of famine and migration in the late 13th to 11th centuries B.C.E. (Na'aman), and the fact that Egyptians allowed nomads to enter the Delta region during such periods (COS III, 16–17). Attempts to derive any useful chronology from the patriarchal narratives founder on the gaps and inaccuracies in the chronological and genealogical data of the Bible, which are mutually contradictory. Thus the number of years that the Hebrews sojourned in Egypt is given as 400 years (Gen. 15:13) or 430 years (Ex. 12:40), which is far more than four generations. In the light of the evidence available at present, it seems that the patriarchal period is legendary; the stories of the patriarchs provide theological and ideological lessons and not history, though certain details provide verisimilitude. The Patriarchs supported themselves by raising cattle, sheep, and goats (only Isaac engaged in seasonal agriculture in the western Negev, Gen. 26:12). Light is also shed on the depiction of the sociological makeup of the Patriarchs by the possible connection between the biblical designation "Hebrew" and the appellation for the social class *Ḥabiru (Ḥapiru) or ʿApiru, known from many sources, and current in the Ancient East over a long period. In the Bible non-Israelites called the Patriarchs and their descendants "Hebrews" (e.g., Gen. 39:17; 41:12) and the Israelites themselves used this name to identify themselves when dealing with foreigners (Gen. 40:15). Thus the name "Hebrew" came to designate Israel on the social level and did not refer to their obscure ethnic origin. If there is any comparison to be made between "Hebrew" and Ḥabiru, it is that the Hebrews belonged to this large class of people who were scattered over a wide area and consisted of nomads or vagabonds who lived on the margins and under the protection of societies whose laws did not apply to them. Their relation to their Canaanite hosts is that of *gerim* or metics (Gen. 23:4), and Canaan is the land of their *megurim* or sojourn as metics (Gen. 17:8; 28:4; 36:7; 37:1; 47:9; Ex. 6:4; see *Stranger). From all that has been said thus far it may be assumed that the general term *ivri* (if related to Ḥabiru) was applied only at a later stage to the tribes of Israel as a branch of this class and thus became an ethnic designation. It is possible that their non-Israelite neighbors, because they regarded the ancient Hebrews as a component of the general class of Ḥabiru, ignored those specific features which distinguished this small group from the other Ḥabiru and West Semitic elements.

The Exodus and Wanderings in Sinai

The Bible describes the Hebrews' migration to Egypt and their stay at Goshen as a favor bestowed upon them because of Joseph who had attained prominence in Egypt. There is no external evidence about their life and activities there. The Bible relates that after a certain period they were subjugated by the pharaohs. It is actually not unreasonable to suppose that after the expulsion of the Hyksos the Egyptians should have enslaved kindred Semitic elements still living in Egypt. Nonetheless, the elaborate story of the slavery of the Israelites and their Exodus from Egypt are considered unhistorical by most scholars. Although the traditions about the enslavement and liberation can be dated to the ninth or eighth century (Hoffmann, Carroll), the traditions that the enslaved Hebrews built the cities of Pithom and Raamses (Ex. 1:11) originated among Egyptian Jews living in Egypt after the fall of Judah. The garrison city Per-Raʿmses (biblical Ramses) was built in the sixth century B.C.E., as was the reconstructed Per-Atum (biblical Pithom). The earliest extra-biblical reference to a group called "Israel" comes from *Merneptah, son of the long-lived Ramses II. In a stele from the fifth year of his reign (c. 1220) celebrating Merneptah's defeat of his enemies in Palestine, "Israel" is written with the determinative sign indicating that a people is named rather than a place. Unfortunately, we must wait until the ninth century for the next mentions of "Israel" in datable sources.

The discussion of the Exodus is connected with the Israelite Conquest of Canaan. Both of these events are not historical, as will be seen below.

The Exodus from Egypt, although not a historical event, became the symbol of the hope of liberation for all generations. In theological terms, the Exodus from Egypt was a divine act which preceded the revelation at *Sinai, or according to Deuteronomy, *Horeb, the dwelling place of the God of Israel where Moses was given the tablets and the laws.

Truth to tell, there was never any external evidence for the enslavement in Egypt and the subsequent exodus. Those scholars who supported some version of the enslavement tradition argued, irrelevantly, that no one would have made up a tale of enslavement, and that the tradition was persistent. As

for the the exodus through the desert, the 1967 victory of the Israel Defense Forces opened up biblical Israel (Judah and the West Bank of the Jordan) and the Sinai desert to extensive archaeological excavation. These showed no evidence of population in the Sinai during the required time period, nor could the Sinai have ever supported a population remotely close to the biblical numbers. The general consensus at present is that the people Israel arose in the land itself or perhaps from an area slightly to the east, with no indication of an Egyptian cultural past (see below). Na'aman departs from this consensus, arguing that the rise of Israel in the 12th–11th centuries must be seen as part of an enormous wave of migration in which Sea Peoples, Syro-Anatolian groups, and West Semitic groups and refugees from the Hittite empire that fell ca. 1200 reached Canaan. But these are all "northern" immigrants, not Egyptian. The unhistorical character of the biblical traditions of the exodus and the trek through the desert is evidenced by the Bible itself, which describes these events as miraculous, i.e. impossible (see e.g. Ex. 12:9–36; 14:15–15:19; 24:18; Deut. 8:2–4; 9:9–12). Accordingly, in studying the biblical accounts of the pre-settlement period, even allowing for the survival of some dim recollections, we should understand that these shed far more light on the periods of their composition than the periods of their setting. As such, our goals should be to reconstruct the literary history of the traditions and to understand the theological, political, and ideological agenda of the authors. For example, the tradition that the people of Israel originated outside of the land serves to distance Israel from peoples to whom there were ethnically quite close. The *Golden Calf story of Israelite *idolatry (Ex. 32), set in the desert in pre-settlement times, has been shown to be a polemic against the Northern Israelite cult of monarchic times. Nonetheless, we have to attempt to understand the details of the biblical traditions, and many remain unclear. The geographical aspects of the journey of the Hebrews in the Sinai desert have not been clarified. Even the location of the *Red Sea, where Pharaoh and his soldiers died, and of Mt. Sinai or Horeb, are unknown. The biblical account, according to which the Hebrews did not choose the shortest way to Canaan "through the way of the land of the Philistines" (Ex. 13:17), i.e., the road along the seashore of the Mediterranean to Egypt, has its inner logic, and reflects historical realities no earlier than the reign of Ramses III (1183–1152), when *Philistines settled the coastal plain and became Egyptian mercenaries. The reason that the Israelites did not choose the coastal route, the normal one followed by invading Egyptian armies, was that they wanted to avoid confrontation with the Egyptian forces stationed in the fortresses along "the way of the land of the Philistines" which defended the approaches to Egypt. The indirect journey was difficult and very long, and was dependent on places with drinking water and oases. In the biblical account, the journey in the desert ended in *Kadesh-Barnea, an oasis with abundant water in northeastern Sinai. From here the Israelites attempted to penetrate Canaan. On the basis of biblical descriptions and archaeological evidence it becomes clear that the references are to Ein Qudeirat on which fortresses stood from the tenth century (Manor). Accordingly, traditions that may hark back to Solomonic times have been traced back to Moses. Given the unhistorical character of the Bible's grand narrative, it is better to understand the rise of Israel against the events of the later second millennium. In general terms, the rise of Israel was facilitated by a breakdown of the international system, which had been in place between 1550–1200. This enabled Western Asiatics, including Israel, to consolidate in Cisjordan and Transjordan thanks to a weakened Egypt and a destroyed *Hittite empire. Though some LB cities persisted in Palestine into Iron I, in the 12th century all Anatolian and Syrian kingdoms except for Carchemish and Melid were utterly destroyed. The wave of destruction reached the Aegean and Balkan regions (Na'aman, Drews). By the reign of Ramses VI (1143–1136), or Ramses VIII (1129–1126) Egypt had completely withdrawn from Asia. For reasons of their own, the Bible's writers describe the Egyptian withdrawal from Asia in terms of the Israelite exodus from Egypt (Sperling).

The Conquest and Settlement of Canaan

As is true of the Egyptian enslavement and subsequent exodus, the account of the conquest is regarded by most scholars as unhistorical. The various biblical sources dealing with this subject are heterogeneous and there are many contradictory descriptions. Moreover, there are also inconsistencies in important details between these sources and archaeological finds. The biblical material, especially that which is found in Joshua, gives the impression that it has gone through a selective and unified editing to produce an "official" version of the "Conquest." This version represents the Conquest as a single campaign that was conducted according to an earlier plan which distributed the country in advance and was led by a sole leader, Moses, and later *Joshua. Apart from this version there are traditions that point to an entirely different situation. *Judges 1, a late text, describes military actions by individual tribes or small tribal coalitions. The late book *Chronicles views the Israelite presence in the land as continuous, ignoring the conquest and muting the exodus. Joshua appears in Chronicles 7:27 not as a war hero but as a distant descendent of Ephraim. The archaeological data do not usually support the biblical accounts of the Conquest. (1) The description of the conquest of *Ai by Joshua (Josh. 7–8) is contradicted by the fact that this place was desolate from the late 16th century to the early 12th. (2) Heshbon, Arad, and Jarmuth were deserted throughout the second millennium. Hebron and Gibeon were not occupied in the late Bronze Age (Na'aman). (3) Jericho was completely abandoned by the end of the Middle Bronze age (ca. 1550), probably because of some combination of earthquake and plague. The famed walls of Jericho go back to the Early Bronze Age (Kenyon apud Holland and Netzer). The site was probably resettled in the ninth century. (4) In contrast to the Bible, excavations show that the destruction of what archeologists call Late Bronze urban culture took place over more than a century. Hazor was destroyed in the

mid-13th century and Lachish in the second half of the 12th. (5) After the Egyptian withdrawal from Canaan in the late 12th century, Beth-Shean, Megiddo, Ashdod, and other Canaanite cities were destroyed but they are all located in the lowlands, whereas Israelite settlement was in the highlands. From the archeological finds it becomes clear that the biblical accounts of a unified conquest are unhistorical. Writing minimally two to three centuries after the rise of Israel, and later, the authors of the conquest accounts made use of written and oral traditions of varying veracity. They tended to project conditions of their own day backward, and of course, to explain defeats and triumphs theologically. In addition, it was natural for them to attribute ruined sites of their own time to the activities of their victorious ancestors.

DETAILS OF SETTLEMENT. Actually, the tribes of Israel occupied only the hill country where the Canaanites were not able to use their chariots and the southern regions that were underpopulated or not populated at all. The general picture of the settlement points to four Israelite regions, separated by narrow strips of fortified Canaanite cities. This picture, as is known, follows the topographic structure of Palestine and emphasizes the contrast between the population of the mountainous regions and the population of the plains. The northern region of settlement was bordered on the south by a strip of plains (Jezreel and Beth-Shean) with fortifications ranged from Beth-Shean to Megiddo. Further, even in the territories of the northern tribes there were numerous Canaanite enclaves which undermined the unity of the Israelites; the large block of central mountains was between the Canaanites of the valleys and the chain of Canaanite fortresses in the south, starting with Jerusalem and ending in Gezer. This chain separated the central tribes from the southern tribes. Between these three blocks and the Israelite settlements in the east there was a natural border – the Jordan. Thus, the Canaanite fortresses interrupted the continuity of the Israelite settlement and prevented close contact among the groups of tribes. This isolation created specific local developments in each group of tribes and weakened their attachments to one another. It is noteworthy that the break between the central and southern tribes was so absolute that even the most reliable biblical sources (including the "Song of Deborah") do not mention the tribe of Judah at all as a component of the tribal alliance during the period of settlement.

Within the framework of the limited Israelite territory there began, according to the archaeological finds and surveys, a process of gradual expansion. The early Israelites were faced with grave difficulties, in particular a lack of fields suitable for cultivation and a shortage of water. As a consequence, the settlers had to cut down the forests within their territories (Josh. 17:14–18). Archaeological research shows that the settlement was, to a great extent, made possible by the extension and greater use of cisterns. Although it had been argued that Israelite settlement in the mountains was also facilitated by the use of iron, it appears that widespread use of iron did not come to Palestine until the 10th century. Bronze and tin implements were sufficient (Stager, 1985, 11). The settlement of the Israelites was accompanied by shifts and movements of tribal and sub-tribal units both within and outside the tribe's territory. A variety of reasons motivated these units to seek new territories, including lack or shortage of land suitable for cultivation, pressure from Israelite or alien neighbors, etc. Evidence for such events is found especially in the genealogical lists in the Bible and in particular in I Chronicles 1–11. In the genealogical lists are included fragments of information and various traditions about tribal and sub-tribal movements. These genealogies give information on their wanderings, their attachments with (and separations from) kindred or alien elements, and their elevation and decline. The tribal genealogy was constructed in a schematic way using familial terminology. This clarifies various phenomena such as the affiliation of clans and families to two tribes which obviously attests the transition of tribes from one territory to another. Such relations existed between Judah and Reuben (cf. e.g., Josh. 7:18 with Num. 26:6) and between Asher, Ephraim, and Benjamin (Josh. 16:3; I Sam. 9:4; 13:17), among others. It is also known that Manassite families in the west migrated to Transjordan and that families from Ephraim moved in the same direction (II Sam. 18:6). A good example of the migration of a family-tribal unit is Dan who, because it was compressed between the territories of its brother tribes and of alien inhabitants of the plains, moved to the northern border of the Israelite territory (Judg. 18). As mentioned above, echoes of the absorption of alien elements into Israelite tribal units or territories are preserved in genealogical lists, in the terminology of matrimonial relations and by tracing their lineage to the ancestor of the tribe. Most instructive are the genealogical lists of the tribe of Judah which are very complicated (I Chron. 2;4:1–23). These lists show Judah's affiliation with Canaanite, Edomite, Horite, and Gileadite groups (as *Ephrath, *Caleb, Kenaz, *Hur, *Ethan, *Heman, *Machir, and others).

Similar affiliations and assimilation can be found also in the tribe of Manasseh, whose genealogy reflects the absorption of Canaanite territories. One can assume that the changes in the status of the tribes, the description of their achievements, their territories, and occupations as they appear in the Blessing of Jacob (Gen. 49), the Blessing of Moses (Deut. 33), and the Song of Deborah (Judg. 5) reflect changes that took place within the tribes during Israel's formative period and later. They do not necessarily represent events that occurred simultaneously.

SOME RESULTS OF SETTLEMENT. Despite the fact the major biblical traditions about the rise of Israel are unhistorical, we have to deal with the undisputable fact that Israel arose. (For summaries of current archaeological theories, see Bloch-Smith and Nakhai.) Archaeologists discern a significant shift in settlement patterns from the Late Bronze Age to the Iron Age. There is a large increase of population in Iron I, especially in the hill country. Most archaeologists agree that these new

settlers were from Canaan itself. Finkelstein argues that they were originally pastoral nomads. Dever sees them essentially as having been sedentarized in the lowlands. (Halpern, more from the biblical traditions than from archaeology, argues for a Transjordanian origin.) The newer settlements seem to have been founded peacefully on new sites, not on destroyed ones. The development of these sites was gradual and lasted some time, beginning either in the 13th century (Dever) or the 12th through 11th (Finkelstein). The type and pattern of settlement differ from the LB large walled urban Canaanite sites. These small towns are characterized by the so-called "four room" house with a courtyard and, usually, a cistern and a silo, indicating an agrarian economy, based on terrace farming and livestock. There is some evidence of trade with Canaanite urban centers. Pottery traditions do not represent a significant break with LB forms, though the collared rim pithos may be an ethnic marker. Perhaps most significant is that the houses in these towns show little variation and are clustered closely together. There are no grand residences or administrative structures. There is evidence for a domestic shrine at Khirbet Radanna (Bloch-Smith and Nakhai, 73). This same site seems to attest to occupational specialization, literacy, and a social and economic hierarchy. There are few fortified sites. Two mountaintop shrines have been identified in the biblical territory of Manasseh; Mt. Ebal and the open-air "Bull Site" in the hills near Dothan. It is most likely that this new highland population is Israelite, or "proto-Israelite" (Dever). Some scholars view the absence of pig bones as significant, but of the prohibited animals, the pig was not singled out for opprobrium until post-exilic times (Isa. 65:4; 66:3, 17). The archaeological picture points to small-scale settlement, initially peaceful, of indigenous former pastoralists, farmers relocated from Canaanite city-states. The population was augmented by some movement from the coastal regions and from the North, and possibly by some nomadic groups (Bloch-Smith and Nakhai, 119). The biblical conquest tradition is based on (a) exaggeration of actual military encounters: some of the destroyed sites of the 13th–12th centuries may have met their end through the activity of elements of Israel; (b) retrojection of the wars beginning with Saul through the monarchic period to the time of Israel's rise. The Bible describes early Israel as a group of tribes with weak political attachments, not as a firmly consolidated framework with distinct political aims and characteristics.

There is disagreement among scholars as to how the unification of the tribes into a nation took place. Nevertheless, it would be a mistake to assume that the tribes of Israel consisted of entirely separated and disconnected units. Merneptah recognizes Israel as an ethnic entity. The name Israel, "El-is-Upright," indicates the common worship of the ancient Syrian god El, who in the Bible is blended with Yahweh. Judges gives examples of concerted supra-tribal actions (ch. 5, 11, 19ff.) Moreover, the schematic pattern of 12 tribes, which always remains unchanged even if its components undergo changes, should not be ignored.

The Judges

In contrast to the Pentateuch and the Book of Joshua, Judges provides a picture that is reasonably consistent with archaeology. Most instructive is the fact that during the period of settlement there was no one leader of all the tribes or national leader – a clear indication that an overall national consciousness had not crystallized.

Nevertheless, the settlement period laid the foundation for a new type of leadership institution which had not existed previously. As it was a product of the period it rose and declined with it. The Bible defines the new type of leader as "judge." To the judge and his period a whole biblical book was dedicated, i.e., the Book of *Judges.

This book is the only source of information about the characteristics of the judges as leaders – their qualities and activities. However, Judges is only a selection of stories concerning a few judges, and does not describe all the judges who lived and functioned nor all the events that occurred in this period. These stories were included in the book in a pragmatic pattern and were edited so as to stress the overall national character of the judges' activity. According to the available data, all these tendentious ingredients date from a later period. It is obvious that the judge was the answer to the problem of leadership that appeared at a particular stage of the settlement period, when the neighbors started to react to Israel's existence in Canaan, in the hope of taking advantage of the weakness and disunity of the tribes. The judge was first of all a prominent tribal leader who was elevated to this position in a time of crisis when an external menace threatened his tribe's existence. The period of leadership was limited to the time that was needed to subjugate the enemy. Authority was given to the judge by the traditional leaders of the tribe. The judge was also impelled by the spirit of God to succeed so that the faith of the people in his political and military skill would be strengthened. The divine favor that descended upon the judge increased the influence and authority of the judge over the tribe. Since the task of the judge was completed when the objective which made leadership necessary had been attained, the principles of inheritance or pedigree which characterized the typical tribal leadership were not applied. This type of judging is not identical with the office of a judge in court. The Book of Judges presents two prototypes of the judges: (1) the charismatic leader, the "deliverer," who goes to war against Israel's enemies and defeats them (six: *Othniel, *Ehud, *Deborah, *Gideon, *Jephthah, *Samson); (2) the "minor" judge who did not accomplish heroic deeds on the battlefield but who possessed tribal pedigree (Judg. 10:1–5; 12:8–15). It appears that these two types of judges were current during the period which is named after them. Whether this division is historical or literary is difficult to determine.

Insufficient chronological evidence makes it difficult for the historian to reconstruct the dates of the events recounted in Judges. The same applies to the order of the judges from the point of view of their time and activity. In only isolated cases is it possible to show that a certain event preceded an-

other one. Anyway, it is obvious that the order in which the stories concerning the judges appear is not necessarily parallel to any chronological order.

The background of the activity of the first judge, Othniel son of Kenaz, who fought against Chushan-Rishathaim king of Aram-Naharaim, is not at all clear (Judg. 3:8–10). According to one theory his deliverance was connected with the invasion of the territory of Judah by a northern ruler in the 12th century B.C.E. Another opinion is that the reference is to an Edomite ruler. No less vague is the background of the deliverance story of Ehud son of Gera and the period in which it took place. There was, apparently, a Moabite invasion of Cisjordan which subjugated the territory of Benjamin (Judg. 3:12ff.). Taking advantage of the weakness and disunity of the Israelites, the Moabites succeeded in occupying parts of their territories in the center of the country for some time.

The section dealing with Samson belongs to a comparatively late period (Judg. 13–16). The historical nucleus of this episode is obscure, as a result of the literary-legendary nature of the stories. One can recognize that the traditions about Samson are connected with the period marking the beginning of *Philistine settlement; in any case, it took place before the migration of the tribe of Dan to the north (see above). Nonetheless, the tale in its current form cannot be earlier than the borrowing of the word *ḥiddah*, "riddle" (Judg. 14:12) from Aramaic.

Another episode meriting special notice is the conflict between the tribes of Israel and the Canaanite element. It is possible that the battle of Deborah and Barak against the Canaanites illustrates a central event of the settlement period, a consequence of which was the liberation of the northern bloc of tribes from the increased pressure of the Canaanite chariotry. In the light of the parallel account in Joshua (Josh. 11:1ff.), this narrative presents many difficulties which have increased with the excavations at *Hazor. According to one opinion Hazor and *Jabin are a later addition to the story, and the Canaanite elements who took part in the battle were from the entrances to the valley of Jezreel. The Canaanite army was defeated in a battle at the foot of Mt. Tabor by Israelite troops, who took advantage of topographic and climatic advantages. Relatively many Israelite tribes participated in this battle (all the central and some of the northern tribes). In their victory they destroyed the Canaanite hegemony in the north including the valley of Jezreel. Moreover, for the first time territorial continuity was established between the northern tribes and the group of central tribes (Judg. 4–5).

The battle of Deborah and Barak should be dated, it seems, to the second half of the 12th century B.C.E. when the Philistines were in the country. This conclusion is based on the fact that the battle is recorded after mention is made of the judge *Shamgar son of Anath who fought against the Philistines, and also on the fact that the tribe of Dan is mentioned as living in its northern territory. Another consideration is that *Taanach in the Song of Deborah is mentioned as being "by the waters of Megiddo." This testifies to the latter's destruction which has been proved to have taken place in the last quarter of the 12th century B.C.E.

The Canaanite opposition was broken, and this destroyed the fragile balance of power in the north. There were no more Canaanite fortresses to stand in the way of peoples who looked enviously upon the fertile fields of the plains. The raiders of the border regions of the desert, being aware of the new situation, poured across the Jordan on their way west. The Midianites, and those accompanying them (Judg. 6:3–5; 7:12), plundered the Canaanite and Israelite settlements. The Israelites were the greater sufferers, since they lived in unwalled settlements until they were delivered by Gideon's troops which were supported by Gideon's tribe Manasseh and by the northern tribes. Gideon decisively defeated the Midianites and pursued them into Transjordan.

The Bible relates that after Gideon's victory he was offered the kingship, but declined the royal honor (Judg. 8:22–23). However, there are many indications in the stories about Gideon that he still occupied a high position after his task was accomplished, some of which may be interpreted as signs of kingship: his receiving a portion of the spoil of the tribes, his marrying many women, and his making Ophrah, his hometown, into a religious center by erecting a sanctuary there in which he placed an ephod (Judg. 8:24–27). In addition, there are allusions to political and military control that he exercised over the Canaanite city of Shechem. After Gideon's death, his son *Abimelech (Judg. 9) attempted to succeed to his position by utilizing the relations his father had with Shechem, his mother's native city. After disposing of all potential rivals to the succession, he attempted to exert his authority over Shechem by forming an alliance with the city's nobility. He also planned to maintain his authority among the Israelite tribes. However, Abimelech's efforts ended in failure with the destruction of Shechem (which is attested by the Bible and archaeological excavations at the site), shortly after which he died.

The Israelites' offer of kingship to Gideon has often been interpreted as the first sign of a change in the attitude of tribal leadership toward centralized rule – a change whose results were not felt until later. Scholars have seen in the Abimelech episode an experiment in imitating non-Israelite rule, and the creation of a transitional stage between a tribal order and a monarchy. However, these two stories concerning Gideon and Abimelech are actually only isolated episodes which had no sequel. Thus, it is difficult to deduce from them to what extent they were the precursors of the establishment of monarchy in Israel, although they are instructive in their own right.

KINGDOMS OF JUDAH AND ISRAEL

Samuel and Saul: The Beginnings of Israelite Monarchy

Our earliest datable extra-biblical written sources for the Israelite monarchy come from the ninth century when we find references to the northern kings Omri and Ahab, and a reference to *bytdwd*, "House of David." The documentation becomes richer thereafter. For the origins of Israelite monarchy

we must rely on the Bible's I and II Samuel, which contain material composed over centuries and subjected to a Deuteronomistic redaction. The literary problems are complex. Much like Moses, Samuel has been inserted into all of ancient Israel's important institutional offices. He is simultaneously a prophet, judge, warrior, Nazirite (so Qumran Hebrew and LXX to I Sam 1:11), and king maker. For the monarchic period following David, our primary sources are I and II Kings and I and II Chronicles; books that combine historical material with elements that are miraculous and legendary. There are also clear indications that the biblical writers sometimes projected events and institutions of their own time onto earlier times. Finally, it must be observed that, in a manner not at all unique in the ancient world, the Bible's historians provide theological explanations for historical events. In recent years there has been a tendency to attribute less historical reliability to the biblical accounts, with some "minimalist" writers (P. Davies, Niels Lemche, and Thomas Thompson; see in Long, Handy, Day) going so far as to question the existence of an "ancient Israel" altogether. These efforts have not gone unopposed, and the different sides in the debate have not always been above resorting to *ad hominem* attacks and charged terms including, but not limited to, "Zionism," "anti-Zionism," "fundamentalism," "silencing Palestinian history," "antisemitism," "post-modern piffery," "hidden agenda," and "nihilism." Archaeology has not decisively settled many of the outstanding issues, and there is doubtless a good deal of idealization in the accounts of the "empire" of David and Solomon. Nonetheless, complete dismissal of the biblical accounts is unwarranted given the large amount of material in I and II Kings that preserves accurate information confirmed by outside sources (Halpern apud Long).

On the biblical account, the eastward expansion of the Philistines and the westward expansion of the Israelites made conflict inevitable. The heavy Philistine subjection of Israel provoked resistance among the two most oppressed tribes, Benjamin and Ephraim. Given the nature of Israel's tribal organization, it was natural that the centers of resistance were in the hill country, where the influential spiritual leader *Samuel, the seer, was active. Samuel is credited, anachronistically, with overthrowing Philistine rule (I Sam. 7; 7–12) after a rally at Mizpah, a city built by the later King Asa (I Kings 15:22; Na'aman 1994). Their oppression again brought home to the tribes the advantages of centralized government, which they had already felt in dealing with the neighboring Canaanite city-states. The division inherent in the weak tribal organization that led to defeat in the Israelites' confrontation with well-organized forces which functioned on the principle of centralization encouraged a disposition to exchange the traditional leadership of the elders, and even the charismatic leadership of the judges, for a stronger leadership which on the one hand would embody the qualities of a leader who rallied the tribes, and on the other convert his leadership into a permanent institution. There appears to have been a desire among the Israelites for leadership based first and foremost on military capabilities, with authority succeeding by inheritance, in the spirit of the suggestion made to Gideon. It is probable that the intention was to establish a ruler modeled on the example of the Canaanite king.

I Samuel 7:3–15:35 describes the emergence of monarchy and Samuel's role in the process. The extant narrative presents two contradictory viewpoints: Yahweh chose the first king and the institution of monarchy in order to save his oppressed people (I Sam. 9:16); the people's wish for a king is a rejection of Yahweh motivated by the people's desire to be "like all the nations" (I Sam. 8:4–8). Regardless of the dates of composition it is likely that both pro-monarchic and anti-monarchic groups existed and that each attributed its position to Yahweh. By the time of the biblical authors, monarchy was a reality of which Yahweh had once approved either enthusiastically or grudgingly. As a transitional figure, the first Israelite king, *Saul, resembled the charismatic judges, at the same time clearly displaying the qualities of being a ruler like those of "all the other nations." His selection was no doubt related to his military leadership exhibited in the liberation of Jabesh-Gilead, a city with blood and family ties to Benjamin, Saul's own tribe. The biblical description of Saul's anointment as king is not sufficiently explicit, however, as to whether his anointment did, in fact, result from his war with the Ammonites in northern Gilead. Considering the fact that Benjamin was still subject to the rule of the Philistines of the Shephelah, it is surprising that there is no mention of intervention on their part in the activities of Saul. It seems that they considered them only a local matter. After a brief period of organization, however, Saul turned his power in their direction. Near Michmas, northeast of Jerusalem, the Philistine armies were routed and driven back to Philistia. Their control of the mountain areas was thus broken, although the Philistines remained a threat to Israel throughout Saul's life. The battles were renewed periodically, since the Philistines did not easily relinquish their hold on Israelite territories. In one attack the Philistine armies penetrated to the vale of Elah. According to a late unhistorical source (Rofé), perhaps the most popular tale in the Bible, *David, a young shepherd from Bethlehem in Judah, defeated *Goliath (I Sam. 17) while the soldiers from both sides watched the contest between them.

The expulsion of the Philistines marked the beginning of Saul's career. He then had to assert his authority over the Israelite population of the central mountain area and unite the tribes under his rule. It is in this context that his uprooting of the foreign enclaves in his tribe's portion – the Hivite cities which remained as a result of their covenant with Joshua and the elders – must be seen. From biblical accounts of his wars with Moab, Ammon, Edom, the kings of Zobah (I Sam. 14:47), and possibly the Hagrites (I Chron. 5:10) in Transjordan, it is possible to conclude that Saul tried to attract the Israelite tribes in Transjordan by protecting them. He also fought the Amalekites who had penetrated into Judah, again to win this tribe over to him (I Sam. 15). The break between Saul and Samuel was exposed in this war, as the latter was dissatisfied

with Saul's usurpation of authority, which he saw as offensive to sacred practices and to God's authority over Israel.

The Bible does not tell much about Saul's tactics in organizing his kingdom. It appears that he lacked sufficient time, or otherwise could not manage, to establish a truly central authority. He continued to rely upon the traditional tribal structures and institutions, raising members of his own family to important positions. There are, however, some signs of centralization during his rule, e.g., an indication of taxation and of royal landholdings from which Saul distributed property to his officers and others who were close to him. Of special significance is the establishment of a standing army, which was with him in his capital, Gibeath-Shaul (whose fortifications were rebuilt after its capture from the Philistines). Saul's concept of monarchy is also evidenced by his ambition to establish a dynasty of his descendants.

One of the most dramatic and moving sections of the Bible concerns Saul's relationship with David, who became a well-known military officer, the king's son-in-law, and friend of *Jonathan, the heir apparent. After a falling-out with Saul, David was forced to flee to the border regions of Judah and later as far as Gath, in Philistia. During his wanderings he gathered about him various elements which he fashioned into a band of warriors. They helped protect the border settlements and lived off the contributions earned from those thus protected. During his stay in Gath, David received Ziklag from Saul's enemies the Philistines as a landholding and fortress, ranging out from there against tribes that endangered the population. It was there that he began to develop relations with the elders of Judah, who followed Saul.

Achish, king of Gath, and the Philistine chiefs prevented David and his band from joining the battle near Jezreel, where Saul and his sons died. In this war the Philistine armies penetrated the mountain area, with the Canaanite fortifications in the valley serving as their rear and support. This is yet another indication of how the Philistine hegemony extended far beyond the Shephelah base. Philistine rule over the central tribes was reestablished with the defeat of Saul. For this reason Eshbaal (*Ish-Bosheth), the son of Saul, was able to reign only in Gilead – a region that kept faith with the line of their benefactor. The Bible lists the areas and tribes over which Eshbaal reigned, but these almost certainly reflect the kingdom of Saul, rather than of Eshbaal: Gilead, the Ashurites (= Asherites), Jezreel (the territory of Manasseh in the hills and that of the other tribes in the valley), Ephraim, Benjamin and "over all Israel" (II Sam. 2:9).

The United Kingdom: David

After the death of Saul, David settled in Hebron, the center of his own tribe, Judah. He was crowned by the elders of Judah, who had not accepted the monarchy until then. Within a few years he ruled over the rest of the tribes of Israel (II Sam. 5:5), which accepted his authority especially after Eshbaal's failure to establish his kingdom in Transjordan. At about the same time he captured *Jerusalem from the Jebusites, converting it into the capital of the kingdom and the estate of the Davidic dynasty. This conquest revealed David's far-reaching ambitions and statesmanship, for Jerusalem in Israelite hands served as the desired unifying bond between the southern tribes – Simeon and Judah – and their brothers in the north. The new capital stood at the very heart of the kingdom, yet because it was outside the Israelite territory it did not serve as a focal point of strife among the tribes or lead to charges of favoritism.

With this decisive step David's aims became clear to the Philistines. It appears that until then they had hoped to rule over Judah by means of a vassal in Hebron. Now, however, they brought their army to the very gates of Jerusalem and were defeated by David (II Sam. 5:17–21). Another attempt that threatened to cut off Ephraim and Benjamin from David ended in failure; the Philistine force was broken and pursued to Gezer (II Sam. 5:22–25). At a minimum the Philistines had to relinquish their inland holdings, ending an era of expansion. As of the time of David the Philistines were confined to a strip on the southwest of the Mediterranean coast (Ehrlich). How much if any control David excercised over the Philistines is debatable. I Kings 2:39 has been taken to show that there was an extradition treaty between Israel and Gath. With the removal of this major military obstacle, David was able to take the first step toward converting his kingdom into a united national state – the creation of territorial continuity of all the tribes. In pursuing this goal David conquered foreign enclaves along the seacoast and in the fertile Jezreel and Beth-Shean valleys. A similar fate befell the non-Israelite population of Galilee. He also turned to eastern Transjordan in order to establish his rule over Ammon and Moab, which were endangering Israelite settlements there and controlled long stretches of the international "King's Highway." The Israelite threat also involved the Aramean kingdoms in Transjordan and Syria, which were summoned to the aid of Moab and Ammon. These allies were defeated by the Israelites, though not annihilated. After they recruited reinforcements from across the river they met David in battle and were routed this time (II Sam. 10:6–19). According to the Bible, a vast territory fell to David – Transjordan and the Aramean kingdoms, including the valley of Lebanon. The Israelite borders now reached *Hamath, north of the valley and, judging by the borders at the beginning of Solomon's reign, David would even have extended his rule as far as Tiphsah on the Euphrates (I Kings 5:4).

This last passage is probably late and depicts Solomon in terms of a Neo-Babylonian or Persian emperor. Indeed, this biblical account of a vast Davidic empire inherited by Solomon seems unsubstantiated archaeologically, and would appear to be greatly exaggerated. Nonetheless, the rise of the Davidic kingdom, like the other small Levantine kingdoms, was enabled by the decline of the two traditional centers of power of the ancient Near East, Egypt and Mesopotamia. David strengthened his rule by means other than military ones. He wisely established friendly relations that were reinforced by treaties with the kingdoms of Hamath and *Tyre.

The treaty with *Hiram, king of Tyre, was particularly important because of the economic advantages flowing from connection with this maritime-commercial power. In the field of internal organization David concentrated his activities on the establishment of an administrative apparatus suitable for the needs of the kingdom. He understood the necessity of uniting the tribes round his throne and the capital, Jerusalem. He had the requisite organizational and executive abilities necessary to create proper tools.

It is difficult to determine what model was used to lay the foundation for the Israelite administration at the beginning of David's reign. It seems that the administration inherited from Saul was not developed and was not on a much higher plane than the traditional tribal institutions. It is reasonable to assume that, as a Philistine vassal, David studied means of government, but it is almost certain that he was also influenced by the organizational structure of the non-Israelite cities in Palestine, especially that of Jebusite Jerusalem which he had conquered. It appears that the traditional administrative institutions of these cities derived from older Bronze Age models, and were well adapted to the needs of a national monarchy and vital to weakening the older tribal sysem. It is not necessary to suppose, as do some scholars, that David built his administration according to foreign prototypes (Fox, 9–14). It is not surprising, therefore, that some of the names of David's highest officials and members of his military units are non-Israelite. (II Sam. 8:18; 21:23–5; 23:24–39). It is instructive, however, that control of the military forces remained in the hands of a relative of David, *Joab, and Israelites close to him.

David acted in other ways intended to centralize control and weaken the older tribal system. It appears that the division of the kingdom into 12 administrative districts – known from Solomon's time (I Kings 4:7–9) – began to crystallize during David's reign. The framework of these administrative districts did not include territories beyond the areas covered in the census conducted by David. The task of unification which David set before himself succeeded substantially in placing Jerusalem and the monarchy at the center of national life. Toward this end, David moved the Ark of the Covenant to Jerusalem, a city outside the tribal holdings, and made preparations for the construction of a royal palace and a *temple, whose presence in the capital would reflect divine aura on David and his line. Still, he did not entirely succeed in preventing the resentment and dissatisfaction of a tribal spirit opposed to the interests of the centralized monarchy, which, by their nature, undermined tribal individualism and the authority of tribal institutions. It appears to have been difficult to maintain, at one and the same time, a kingdom based on a developed administration – with all the royal needs – and separatist tendencies widespread among the tribes, who wished to maintain a large degree of independence. Certain difficulties arose during David's reign. The population *census (II Sam. 24) carried out on royal initiative, almost certainly for the purposes of *taxation and recruiting, met with open opposition. Furthermore, natural disasters, added to the many wars, aggravated the dissatisfaction. It appears that the widespread dissatisfaction within the king's own tribe of Judah found expression in the revolt of *Absalom (II Sam. 15–19), which was joined by other tribal elements. Only because of the loyalty of certain followers and the mercenary army, his personal guard, was David able to overcome the rebellion and return to Jerusalem. At a later stage, the revolt of *Sheba, son of Bichri of Benjamin, who attracted a following from among all the tribes except Judah, shook the throne. The source of the revolt may have been the widespread feeling of discrimination in favor of Judah, the king's tribe. In this incident David was able to extricate himself from the rebellion with the help of those loyal to him and supporters in his own tribe.

At the end of David's reign, a bitter struggle developed over the succession to the throne. It divided the court into the followers of *Adonijah, who claimed the throne by reason of seniority, and the supporters of *Solomon – the son of *Bath-Sheba – who succeeded in eliciting the support of the aging king. Under their influence, David crowned Solomon in his lifetime in order to preserve the continuity of dynasty desired by him. This act did not pass without drastic opposition on the part of Adonijah and his followers.

Solomon

Biblical historiography represents Solomon as a wise sovereign who sought justice and peace. The extent of his domain is greatly exaggerated, but he did control a people that had begun to become accustomed to a centralized framework. Most of his activities thus tended toward the strengthening and development of his father's achievements through political, economic, and administrative means. Through a series of treaties made with neighboring kings, which he reinforced by politically motivated marriages, he sought to ensure tranquility within the borders of his kingdom. The Bible comments negatively on these marriages because they involved, for diplomatic reasons, the introduction of foreign cults into Jerusalem (I Kings 11:1–14). In particular, Solomon cultivated ties with Hiram, king of Tyre, and Sidon. Like his father, he benefited from these relations, receiving the support of Hiram's fleet to import essential raw materials, securing his technological assistance in building projects, and exploiting natural resources. The Phoenicians may have allowed Solomon some participation in the Red Sea trade in return for access through Judah (Miller). Another treaty, also reinforced by marriage, was made with a pharaoh who he gave his daughter to the king of Israel in marriage, along with the city of Gezer as a dowry (I Kings 9:16). Inasmuch as pharaohs generally did not marry their daughters to foreign kings this would have reflected very highly on Solomon and was seen as such by the author of I Kings 3:1 (contrast I Kings 11:1).

As is true of the biblical account of David, the chronology of the events of Solomon's reign is theologically motivated. Thus Solomon's reign is peaceful until he builds altars to foreign gods under the influence of his foreign wives (chapter 11). The biblical writers attribute to Solomon in his period

of success control of the international roads and his hold on ports on two seas, leading to the development of international trade. He is said to have formed a cadre of royal merchants with a fleet that sailed great distances. Biblical accounts reminiscent of Assyrian royal inscriptions describe exotic products, precious metals, and rare fauna flowing into the kingdom. These supposedly came by sea in exchange for copper mined and worked in plants established specifically for this purpose (I Kings 9:26–28; 10:11, 22). Although the visit of the Queen of Sheba (I Kings 10:1–10) is unhistorical, and its motif of foreigners praising the Hebrew god similar to the tales of Jethro (Ex. 18) and Naaman (II Kings 5), queens often ruled Arabian tribes. In addition, the early date of south Arabian trade takes a 10th-century visit to Jerusalem out of the realm of impossibility, though it hardly confirms the visit (Na'aman). The difficult passage I Kings 10:28–30 has been taken to portray Solomon establishing a corps of royal traders involved in international commerce, purchasing horses from Anatolia and chariots from Egypt for resale to other kings in the area (I Kings 10:28–30), but may simply mean that he could afford to buy horses and chariots at market prices (Miller). The monopolistic nature of Solomon's enterprises and taxation of his own population enriched the royal treasury and served as a stimulus to ramified and comprehensive building projects, some of which it seems were planned during David's reign. At the very center of his construction activity stood the complex of royal buildings, consisting of the palace and the *Temple in Jerusalem. In this fashion Solomon sought to strengthen the relationship of the tribes to Jerusalem and the reigning dynasty. He hoped that the Temple would unite Israel, overcoming the traditional and widespread separatist tendencies.

Many cities in the kingdom were developed and fortified. Some served as bases for the chariotry, which was introduced into Israel for the first time (I Kings 10:26; II Chron. 9:25). According to the Bible (I Kings 4:2; 10:27), and in keeping with claims found in ancient Near Eastern royal inscriptions, the economic development was not limited to royal circles but benefited other elements of the population. But Solomon's many activities, royal administration, and the support of the royal household, required a system of 12 districts rather than tribal units. His use of corvée (*mas*) that included laborers among the Israelite population had its predecessors in the *massu* of Canaan in the Late Bronze Age. The combined tax burden resulted in the impoverishment of the population and substantial agitation. Along with this, feelings of discrimination began to grow among the northern tribes, especially Ephraim. Against this background, the aborted rebellion inspired by *Jeroboam son of Nebat, of Ephraim, who had been administrator of the forced Israelite labor, stood out (I Kings 11:26–40).

It is therefore evident that the prosperity during Solomon's reign was limited. Economic discontent was compounded by important factors that existed even before the establishment of the monarchy and by a rebelliousness whose roots were in the antagonism between the central monarchy and tribal separatist aspirations. These factors undermined the positive aspects of the monarchy until they destroyed the united kingdom.

Division of the Kingdom: The Earliest Kings

The internal dissension and rebelliousness did not topple Solomon's throne but broke out in full force after his death. *Rehoboam, his son, did not enjoy his father's and grandfather's popularity with the people. He was faced with the difficult problem of perpetuating the monarchy in the face of a growing wave of strong demands from the tribes to ease the economic burdens. The leaders of the tribes saw the time as propitious for putting pressure on the new king. Rehoboam's rule was accepted without protest in Judah and Jerusalem, but the king required the assent of the rest of the tribes, which is a clear indication of the seriousness of the state of affairs. Rehoboam was unable to find a suitable way of complying with the demands of the tribes in *Shechem to ease their burden, without risking his prestige, administrative dislocations, and loss of control. As a result of his refusal, the elders of Israel felt themselves free to sever their ties with Jerusalem, and crowned Jeroboam son of Nebat, who had returned from refuge in Egypt, with the support of certain prophetic circles (see *Ahijah).

The aims of those who wished to secede from Jerusalem and the Davidic dynasty were realized, but the recognition of the need for a monarchy remained in Israel. The crowning of Jeroboam proves that the elders wanted to perpetuate the monarchy, though separate from and without connection with the dynasty of David. The slogan circulated during the revolt of Sheba son of Bichri was used again: "What portion have we in David? We have no inheritance in the son of Jesse" (I Kings 12:16).

With the division, there arose two sister kingdoms, hostile to one another. In the south was established a small kingdom, including the territories of Judah, Simeon, and Benjamin, which appears to have broken its connection with the tribes of Israel even during the period of the united kingdom. Judah controlled Edom and the Shephelah. The kingdom of Israel in the north included all the territories of the remaining tribes, maintaining its rule over Moab and probably over Ammon. Its first capital was Shechem.

The kingdom of Judah and the House of David did not accept the secession of the tribes. They regarded the move as illegal and sinful, in contradiction to national and religious imperatives. This viewpoint finds expression in biblical *historiography. It was not, of course, shared by Jeroboam son of Nebat and the advisors who established the kingdom of Israel. Jeroboam's very first acts were directed toward the establishment of a separate framework, free of all spiritual and political dependence upon Judah and the Davidic dynasty and of any cultic relationship with the Temple in Jerusalem. To this end, he made use of the ancient cultic centers at the ends of his kingdom, *Beth-El and *Dan. *Golden Calves, the base upon which the unseen God of Israel hovered, were placed in them;

they were not, as biblical tradition would have it, intended for idol worship. This tradition clearly reflects feelings in Judah toward Jeroboam (see I Kings 12:26–33); northern opposition to the Calves is not recorded before the prophet Hosea (eighth cent.; cf. Hos. 8:5f.; 10:5f.; 13:2). Jeroboam ordained a change in the times for festivals in order to discourage pilgrimages to the Jerusalem Temple (I Kings 12:33). The change was also in keeping with the northern agricultural calendar. Despite the negative opinion displayed toward Jeroboam in the Bible, it is becoming increasingly clear that his actions were based on an earlier northern Israelite priestly tradition, not in any way connected with abandonment of the worship of Yahweh. His acts also brought about the collapse of the administrative system in Israel, which until that time had been based upon Davidic loyalists. Judah, for its part, refused to regard the division as a *fait accompli*. This was the cause for the frequent wars between the two kingdoms. It appears that at first Judah was the more successful.

Five years after the division an Egyptian military expedition into Palestine was headed by Pharaoh *Shishak, who had been Solomon's enemy and had given asylum to Jeroboam when he fled after the abortive revolt. The final aim of and pretext for this expedition are the subject of some controversy. According to the data in Shishak's topographical list, the largest Israelite cities were destroyed and razed and the most fertile areas of the Northern Kingdom were damaged. The amount of damage to Judah was much less, either because Shishak was not interested in Judah proper but rather in the Negev and the Aravah, or because Rehoboam had bribed the pharaoh with tributes. In any case, as a result of the Egyptian invasion, Rehoboam began to establish a chain of fortified cities (II Chron. 11:5–12). It is significant that Judah's northern boundaries were not fortified, perhaps because of the hope that continued control over the kingdom of Jeroboam would be possible. Rehoboam's expansionist aims were advanced by his son *Abijah (911–908 B.C.E.), who had assumed some royal powers during his father's lifetime. He defeated Jeroboam's army and controlled the southern part of the hill country of Ephraim (II Chron. 13:13–19). There is reason to suppose that Abijah was in contact with Aram-Damascus, which had grown in strength since its liberation from Israelite rule at the end of Solomon's reign, and concluded a treaty with them directed against Jeroboam. From that point on, Aram-Damascus was a factor in the conflict between the two sister kingdoms and the chief beneficiary of their rivalry.

These frequent defeats undermined Jeroboam's rule, which apparently had not been sufficiently strong since the division. This may be seen from the short reign of his successor *Nadab (907–906 B.C.E.). When fighting the Philistines – who sought to take from Israel its territory in the lowlands – he had also to deal with a rebellion led by *Baasha son of Ahijah of the tribe of Issachar. This rebellion brought to an end the dynasty of Jeroboam and the hegemony of the tribe of Ephraim over the northern kingdom. The new king (906–883 B.C.E.) ensured himself against Aram-Damascus' intervention and succeeded in recapturing the territories lost during Jeroboam's time, from Judah, which was now ruled by *Asa (908–867 B.C.E.). Baasha penetrated almost as far as Jerusalem, posing the serious danger of isolation to the capital of Judah. Asa was forced to turn to *Ben-Hadad I, king of Damascus, and succeeded in breaking off the treaty between Ben-Hadad and Baasha and in provoking the penetration of the Arameans into the northern parts of the kingdom of Israel (I Kings 15:9–22; II Chron. 16:1–5). It is possible that at this time Israel also lost control of Moab. Baasha had to withdraw from Judah in order to protect his own kingdom from Aram. Asa utilized the lull in the fighting to fortify his northern boundary by means of the total conscription of the inhabitants of Judah. Some scholars see in this an abandonment of the hope of annexing Israel, which had been current in Judah since the division.

In Baasha's time, too, there was a diminution of earlier achievements as a result of his defeats. Baasha did succeed in preserving his throne, but with his death, civil war broke out in Israel and a few ministers struggled to obtain the throne. Elah (883–882 B.C.E.) was murdered in a plot instigated by *Zimri, one of the officers of the army. Zimri was killed by *Omri, with part of the nation backing *Tibni son of Ginath. After several years of conflict, Omri succeeded to the throne of Israel.

Asa, King of Judah, and His Descendants. The Omride Dynasty in Israel

Whatever hopes there had been during Abijah's successes for reunification under the Davidic dynasty were destroyed by the military failures of Asa against Baasha. Asa was successful, however, in defending the south of Judah from *Zerah the Cushite (II Chron. 14:8–14). Exact identification of Zerah is lacking and the numbers of his forces are fantastic, but there may be some historical core behind the report (Japhet, 709–13). In internal policy Asa's name is connected with the purification of Judah of cults of gods other than Yahweh. The purging of these foreign cults, some native, some imported, was connected with the removal of the queen mother from her high office and the reversal of her policies, which had almost certainly been responsible for the growth of Asherah-worship in Jerusalem (I Kings 15:13). Asa had the support of popular and prophetic circles for his purges.

The accession of Omri to the throne put a halt to the collapse of the central government in Israel which had resulted from Elah's death. Omri took decisive steps to stabilize the kingdom, such as the construction of the new capital in *Samaria. Like Jerusalem, this city became the king's personal landholding. It appears that Omri was subject to Aramean pressures, as is seen by the fact that Aramean commercial agencies (*ḥuẓot*) were located in Samaria and had special privileges (I Kings 20:34). At a later stage, Omri succeeded in establishing an independent foreign policy, concluding a treaty with Ethbaal, king of Sidon. This, like the treaties of David and Solomon, opened Phoenician markets to Israel's agricultural products and made it possible to import essential

goods and luxury products for Omri's kingdom. This treaty may have been intended as a stabilizing factor against the political aspirations of Aram-Damascus. The ties with Ethbaal were strengthened by the marriage of Israel's heir apparent to Ethbaal's daughter. Israel's main contribution to the alliance was control of the heights of Moab, in the territory north of the Arnon, whose conquest by Omri is attested by the *Mesha stele. The conquest enabled him to control and direct the products carried over the "King's Highway." It may be assumed that the efforts made by the king of Israel to improve relations with the kingdom of Judah were made out of his desire to establish an anti-Aramean alliance on the one hand, and to get Judah to join the Tyre-Samarian axis on the other. Judah's joining the axis was important, because of the Judahite control of the southern part of the "King's Highway," which passed through Edom, a land subject to it. In Omri's time Israel had become an important political factor. The stability and prosperity began to be felt when *Ahab son of Omri started his reign; he added to the achievements of his father. Despite this, Ahab is negatively evaluated in the biblical historiography because of his toleration of the expansion of Phoenician culture in his personal and royal affairs. The Tyrian cult began to gain popularity among Israel's upper classes – the officers and merchants – because of the close ties with Tyre, and especially because of the activities of *Jezebel, the daughter of Ethbaal, and her followers (I Kings 16:32–33). The attitude of the biblical historiographer toward Ahab reflects that of circles close to Elijah. Elijah attacked the king, Jezebel, and the Baal prophets, who had attained a foothold in Israel (I Kings 18:18–45). Elijah enjoyed wide support among the populace, which bitterly resented the penetration of foreign cults and indeed suffered because of the innovations brought about by the Phoenician way of life (see also *Naboth).

The biblical view, however, does not negate the positive aspects of Ahab as a ruler. During his time solidarity between Judah and Israel increased, strengthened by political marriages. There appears to have been a treaty between the two nations, which placed both on an equal footing. In addition, Ahab enjoyed considerable success in his battles against Assyria and Aram-Damascus; these battles had taken on considerable importance by the end of his reign. It appears that Aram's intention was to destroy the Israel-Judah alliance, which was directed against it. Furthermore, the rule of Jerusalem and Samaria in Transjordan bothered the ruler of Damascus, *Ben-Hadad II. The unchanged economic interests of Aram made it necessary to hold the territory east of the Jordan as an economic hinterland for its caravan routes and agricultural products. At first the Aramean army tried to subjugate Israel by a quick campaign, which ended with its defeat at the gates of Samaria. The next battle took place at Aphek and also ended in a clear-cut victory for Israel. It is instructive that despite the Aramean defeat Ahab entered into a treaty with Ben-Hadad, whose terms were especially lenient: certain cities were returned to Israel and she received commercial concessions in Damascus. This desire to make peace with Aram without hurting her too much is criticized by the prophets. It is clear, however, that this desire resulted from political and military considerations connected with the events outside the borders of Aram and Israel, namely, the methodical penetration by *Shalmaneser III, king of Assyria, into Syria, which posed a concrete danger for the states in that area. These states came to the realization that Assyria had to be fought by an alliance of powers, and Ahab was no doubt party to this feeling. For this reason Ahab did not want to harm Aram's power to fight against the common enemy. One of Shalmaneser's inscriptions, in which the Assyrian king claims a victory over a coalition of kings of Syria and Palestine near Karkar (853 B.C.E.), prominently mentions "Ahab the Israelite" alongside the kings of Damascus and Hamath. Ahab came to the battle, according to this inscription, with a force of 2,000 chariots – the largest contributed by any of the allies; besides, he supplied 10,000 infantry. This is evidence not only of his political-military standing but also of the economic strength of the kingdom which could sustain such a force. Especially instructive is the find of Ahab's stables at Megiddo. To this may be added other archaeological evidence which testifies to the great development of Israelite cities, including the capital, in that period. The existence of an "ivory house," which is known from the Bible (I Kings 22:39), is confirmed by ivory plaques found in Samaria. Among the cities he refortified, according to the Bible, was Jericho. The fortification of this city appears to be connected with the increased control of Moab, north of the Arnon, over which Israel ruled. There too, according to the Mesha stele, widespread fortification activity took place. During the battle with Assyria, or shortly thereafter, Mesha revolted against Ahab, and began to eradicate Israel's rule in Moab. He may have been encouraged by Aram-Damascus, which resumed its thrusts against Israel after the battle at Karkar, at which the allies, at least temporarily, were able to stop the advance of Shalmaneser III into central Syria. (Another theory holds that Mesha revolted during the reign of Ahab's successor.) The renewed battle between Aram and Israel took place near Ramoth-Gilead, which appears to have been an area contested by the two sides. This time, Judah allied itself with Israel. The battle ended in the death of Ahab and the disengagement of forces following the king's death. It appears that the Arameans were unable to cross Israel's border in Transjordan, which means that the battle did not end in Israel's defeat.

Ahab's reign was a period in which Israel came to be a considerable force in the international affairs of the region; this resulted from her prudent policies and her highly developed military capabilities, which gave her an advantage over Aram. The great building and fortification activities reflect advanced economic development in the kingdom, as well as its stability which remained unbroken in Ahab's time despite the internal struggle against foreign religious and cultural influences. Attention should be drawn to the political, economic, and military ties that existed between Samaria and Jerusalem, which was ruled by *Jehoshaphat son of Asa

(c. 870–846 B.C.E.). As a result of this alliance, which was strengthened by a treaty, Judah enjoyed a relatively long period of peace. Jehoshaphat exploited these conditions by attempting a renewal of Red Sea commerce, which appears to have been interrupted after the death of Solomon. There is no doubt that Judah also received Phoenician technical support in this matter. The fleet which was built, however, sank before it could sail. The assertion of authority over Philistia and the Arabian tribes must be understood in the framework of the attempts to reestablish Judah as a commercial power (II Chron. 17:11). The rule of Edom was carried out by Jehoshaphat with the help of a governor, and at a later period by a vassal king. Because of Edom, Jehoshaphat feared a deep Aramean penetration into Transjordan which would have endangered his bases there. This is probably one of the reasons for the treaty with Ahab and the joining of the forces of Judah to those of Israel in the battle at Ramoth-Gilead. (One opinion holds that Judah also joined Israelite forces during the battle with Assyria at Karkar in 853 B.C.E. This would account for the high number of chariots of Ahab.)

Jehoshaphat devoted much attention to internal policy. He appears to have been the first king of Judah to establish firm foundations for the royal and administrative offices, which had been undermined since the division of the kingdoms, because of the frequent warfare of his predecessors. The account of Jehosaphat's building activities (II Chr. 17:12) may have archaeological support, but the description of his administrative innovations and teaching of the law is probably based of the midrash of his name – "Yahweh-has-Judged" – and reflects much later conditions (Japhet, 744–53). The cordial relations between Judah and Israel worsened during the short reign of *Ahaziah son of Ahab (852/1–851/0 B.C.E.), who wished to be included in Judah's commercial sea enterprises but was refused (I Kings 22:49–50). With the accession of his brother *Jehoram (851/0–842 B.C.E.) to Israel's throne, the friendly relations were resumed. Jehoshaphat even participated in an ill-fated campaign of Israel which was intended to reestablish Jehoram's authority over Mesha (II Kings 3:4–24).

According to II Chronicles 21:4, 13, the early part of the reign of Jehoshaphat's son *Jehoram (c. 851–843 B.C.E.) was marred by internal upheavals, including the murder of his brothers and certain high officials by Jehoram himself. His wife would later pursue a similar policy (II Kings 11:1). It may be that the defeats at the end of Jehoshaphat's reign were responsible for the agitation which became even greater by the loss of Edom and the economic benefits Edom had provided (II Kings 8:20ff.; II Chron. 21:8). Added to all of this was no doubt dissatisfaction with the activities of the king's wife, *Athaliah daughter of Ahab, who had been accustomed to Phoenician cultic practices in her home and worked at introducing into Judah these practices as well as the mode of life customary in the court of Israel. She may also have sought to increase Judah's dependence on Israel. Ahaziah, who reigned after his father's death (843–842 B.C.E.), was influenced by his mother Athaliah. He continued the policies set by his father, even joining Jehoram son of Ahab in a war against Aram at Ramoth-Gilead. During this period Ahab's son Jehoram reaped the fruits of dissatisfaction with the house of Omri. This opposition gathered strength as a result of Jehoram's failures on the field of battle. He was wounded during the renewal of the battle against Aram at Ramoth-Gilead. During his convalescence at Jezreel he was killed, when *Jehu called for reprisals against the house of Omri. On this same dramatic occasion Ahaziah of Judah was wounded and died. Additional light on these events may be shed by the ninth century Aramaic inscription discovered at Tel Dan (Halpern, Schniedewind, and see *Jehu).

The Dynasty of Jehu in Israel. Athaliah and Joash, Amaziah, Uzziah, and Jotham, Kings of Judah

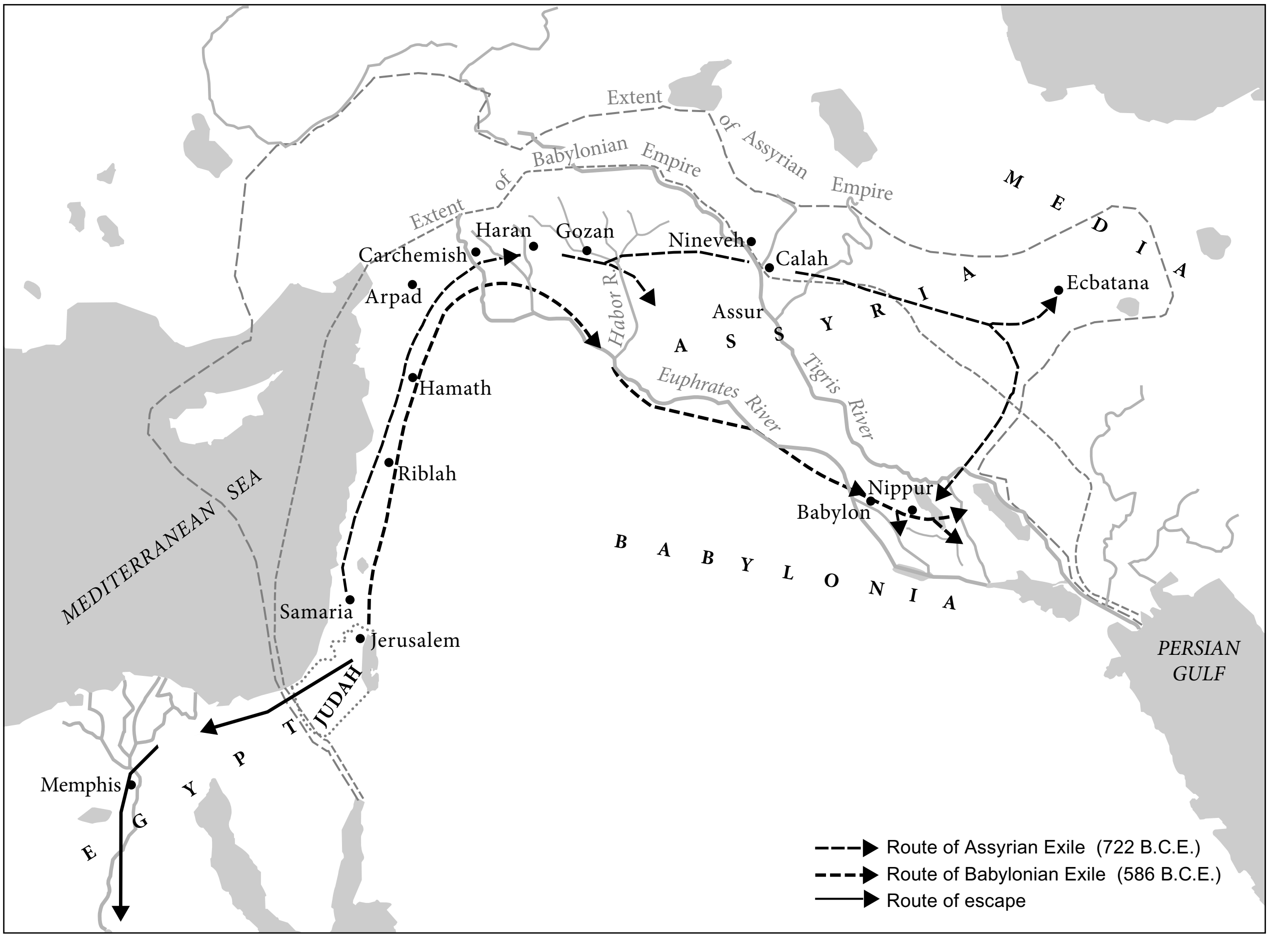
Jehu son of Jehoshaphat son of Nimshi (842–814 B.C.E.) was an army officer stationed in Gilead. He was swept aloft by the wave of popular rebellion, supported by the army, circles of prophets, and dissatisfied elements among the populace. With great cruelty, he killed the royal family and its courtiers, settling the long-standing debt against Jezebel. He decisively cut off every trace of the Baal worship, killing followers of the cult. Thus, he fulfilled the wishes of his supporters, but did not consider that in so doing he had also destroyed the political and economic bases of his kingdom by cutting, with one blow, the ties of Samaria with Phoenicia and Judah and upsetting the internal organization of his kingdom and its military capabilities. Jehu was thus open to the pressures of Aram-Damascus, which at this time was ruled by a new and powerful king, *Hazael. In an effort to insure his own rule, Jehu quickly made himself submissive to the Assyrian Shalmaneser III, who reached Damascus in 841. Thus, for a short period of time Israel enjoyed a relaxation of pressures from the Arameans, who were busy defending themselves against Assyria. At a later stage, after Shalmaneser had failed to subjugate the capital of Aram, Hazael conquered the Israelite territories in eastern Transjordan. Toward the end of his reign, Jehu suffered another defeat when the Aramean army marched through Israel and reached the borders of Judah.

When Ahaziah died, his mother *Athaliah grasped the reins of leadership in Judah by killing the royal family (II Kings 11:1; II Chron. 22:10). There is no doubt that the revolution of Jehu in Samaria had its reverberations in Jerusalem, where there was a temple to Baal. It is of little wonder that a coup took place in the Judahite capital, led by the Temple staff and supported by the army and leaders of the people. Athaliah paid with her life and *Joash son of Ahaziah (836–798 B.C.E.), the only one to have escaped death at the hands of his grandmother, was made king of Judah. His coronation was accompanied by a covenant made between God and the king and the nation, and between the king and the people. These covenants stressed loyalty to the God of Israel and the renewed continuity of the Davidic dynasty in Jerusalem. The Jerusalem priesthood gained significant influence in political affairs thanks to *Jehoiada the priest, who had been the instigator

of the rebellion. The Temple was restored to its former glory; it was repaired by means of contributions solicited from the nation. That same year Hazael, king of Aram, reached Judah after having defeated Jehu. Joash was forced to pay a heavy tribute, which was taken from the Temple treasury (II Kings 12:18–19; II Chron. 24:23) in order to put off the destruction threatening his country. It may be that this act was interpreted as a blow to the Temple, thereby opening a wedge for activities against the king. (By means of a midrash on II Kings 12:3, the writer of II Chronicles 24:2ff. tells us that Joash turned to evil ways after Jehoiada's death, providing a theological reason for the Aramean invasion, which he postpones until after the priest's death, as well as for the king's assassination.) The king was assassinated in a palace coup, but his son Amaziah ascended the throne. This lack of stability continued during the reign of Amaziah son of Joash. The new king sought to allay tensions by not touching the descendants of his father's murderers, though he did avenge himself against the murderers themselves. It appears that he was able to quiet the circles which had formed the conspiracy, because the biblical sources speak of the conscription and organization of the army in Judah (II Chron. 25:5) to fight in Edom. This would have been impossible during a period of internal disturbances. According to Chronicles, Amaziah initially engaged a troop of mercenaries from Israel, but, not wanting to arouse new internal resistance, then gave them up and fought Edom by his own means. It appears that he was unable to conquer the whole of Edom. At a later date, probably encouraged by his victory over Edom, and believing that Israel had been greatly weakened after years of struggle with the Arameans, he turned against Israel. Amaziah was defeated by Jehoash son of Jehoahaz, the king of Israel, who entered Jerusalem, destroyed parts of her walls, looted the Temple and palace treasures, imposed economic sanctions, and took hostages away with him (II Kings 14:8–14; II Chron. 25:17–24). Judah's weakened condition probably was a factor in the successful conspiracy against Amaziah that eventually led to his assassination.

The defeats of Jehu led to the loss of territory and power by the kingdom of Israel. The period of decline continued during the reign of *Jehoahaz son of Jehu (817–800 B.C.E.). Echoes of this appear in the cycle of narratives about Elisha (II Kings 5–7). At the same time, Aramean pressures reached their peak, as a result of which the kingdom of Israel was forced to contract into the nearby environs of Samaria. Some slight relief from Aramean bondage was provided when Adad-nirari III, king of Assyria, conducted a campaign into Syria against Aram and Damascus its capital, failing however to defeat her. He appears to be the *moshi'a*, "deliverer," who, according to the biblical sources, saved Israel from Aram (II Kings 13:5). It is possible that Jehoahaz was subjugated by the Assyrian king, paying him, like Jehu before him, a levy during the time he was in the vicinity of Damascus. An Assyrian inscription mentions "the land of Omri" (an appellation for the kingdom of Israel even after the end of the Omri dynasty), among the lands subject to Adad-nirari III. It appears that during the latter years of Jehoahaz, Israel began to break free of the firm hand of Damascus, which was busy defending itself against Assyria. A stele discovered at Tel Rimah (Cogan and Tadmor, 335) mentions Jehoash (Joash) of Samaria, the son of Jehoahaz, king of Israel (800–784 B.C.E.), among those subjugated by Adad-nirari III. It may be that this subjugation was a continuation of the tactics of his father (if indeed the sources mentioned above refer to the time of his father and not to Jehoash's period), or he may have surrendered after the campaign of the king of Assyria into the valley of Lebanon in 796 B.C.E. In any case Jehoash utilized the decline of Aram to recapture territories taken from Israel during the reigns of his predecessors (II Kings 13:9–14). This is yet another indication of Israel's renewed military capability, which also displayed itself in Jehoash's war against Amaziah, king of Judah, in which he defeated Amaziah's armies and reached Jerusalem.

A protracted period of nonintervention on the part of Assyria in Syrian affairs, which occurred after Jehoash's time, had a positive influence upon the policies of the region's countries, including Israel and Judah. Furthermore, these two countries began to assume prime importance in filling the political vacuum left in the wake of Aram's decline following her war with Assyria. Thus, the period of *Jeroboam son of Jehoash (789–748 B.C.E.) was one of ascendancy for Israel. Some of his political and military achievements are briefly described in II Kings 14:23–29. These sources indicate that Jeroboam held widespread territories, including Aram-Damascus and eastern Transjordan. His northern boundary reached the kingdom of Hamath. The political and military activities were accompanied by economic expansion and building and fortification work in Samaria and its environs. Hints in the Books of Chronicles and Amos lead one to believe that Jeroboam initiated and strove to establish broader settlement areas in Transjordan and gave large pieces of land to his officers and followers. These individuals eventually developed into large and wealthy owners of estates of commanding influence, playing substantial roles in the final days of the kingdom of Israel. There were good relations at this time between Israel and Judah, as evidenced by a mention of a joint census in Transjordan (I Chron. 5:16–17).



Judah, too, enjoyed a stability which stemmed from the convenient international situation. From the time of Joash the rule of Judah's kings was disturbed by incessant internal struggles and an inability to gather sufficient support to overcome the opposition to their rule. The reign of Jeroboam's contemporary, *Uzziah (Azariah) son of Amaziah (785–733 B.C.E.), was one of the most flourishing in the history of the kingdom of Judah. In the absence of external disturbances, Uzziah completed the conquest of Edom, including the important bay of Elath and its harbor (II Kings 14:22; II Chron. 26:2). He subjugated the Arabian tribes who lived at the borders of his kingdom and asserted his authority over Philistia, including Gath, Jabneh, and Ashdod (II Chron. 26:6–7). He strengthened his sovereignty over these areas by means of a far-flung building campaign and expanded agriculture and pasturing operations

in eastern Transjordan to meet the needs of the royal economy. A similar development was accomplished in the Negev and the Arabah, including operations to ensure water supply, settlements, and a chain of fortifications for communications and defense (26:10ff.). The army of Judah was reorganized and supplied with new weapons (26:11–15); special attention was given to the fortification of Jerusalem. These biblical data are probably connected with the anti-Assyrian war preparations which occupied the region due to the penetration of *Tiglath-Pileser III into Syria. It is possible that the "Azriau," mentioned in Assyrian inscriptions as the leader of a group of allies who fought the armies of Assyria in northern Syria and were defeated in 738, is in fact Uzziah, the king of Judah (Tadmor, 273–76 with references). But the question of how Uzziah became head of the alliance which fought in northern Syria is a difficult one. It is almost certain that Judah replaced Israel in importance in the area after Israel's precipitous decline following the death of Jeroboam son of Jehoash.

The Bible attributes Uzziah's severe skin disease to his attempts to secure special privileges for himself in the Temple service (II Chron. 26:16–21). The incident is not sufficiently explicit, but it is clear that the king's cultic activities were rejected by the priesthood. There may even be in the conflict between *Uzziah and the priests a continuation of the struggles that existed between the Temple staff and his father and grandfather. Biblical sources and chronological calculations (see also *Chronology) lead to the conclusion that as a result of Uzziah's infirmity his son *Jotham (758–743 B.C.E.) took part in the administration of the kingdom. Furthermore, Jotham's regency, though counted in the Bible as a separate rule, is included in the years attributed to Uzziah, who was still alive. It even appears that the years given as Uzziah's period of rule include a few years from the reign of Ahaz, his grandson. Jotham son of Uzziah acted according to the guidance and direction of his father. It is not unreasonable to assume that a good portion of the building and other activities ascribed to the father was actually accomplished by the son. In the light of what has been said above, it is difficult to distinguish between their reigns. In any case, he appears to have appeased the priesthood. He, too, is credited with the fortification of Jerusalem and cities of Judah and with the building of fortresses. In his time Ammon was brought under Judah's rule (II Chron. 27:5). It appears that as a result of this victory he was able to enlist the aid of Jeroboam son of Jehoash in the campaign into Transjordan (see above). After the defeat of 738, in which Judah was not directly affected, Jotham attempted accommodation with Assyria, thus arousing the ire of *Rezin, king of Damascus. The latter had restored independence to Aram with the help of his ally, the king of Israel. These two kings attempted to involve Judah in a new anti-Assyrian campaign.

The Last Days of Samaria. The Kingdom of Judah Until Its Destruction

With the death of Jeroboam son of Jehoash chaos broke out in Israel. Influential in the upheavals characteristic of this period were the great landowners and prominent parties from the eastern side of the Jordan. The short reign of *Zechariah son of Jeroboam (748/7 B.C.E.) ended in his assassination at the hands of *Shallum son of Jabesh (i.e., from Jabesh-Gilead). Shallum was deposed, before he could ascend the throne, by *Menahem son of Gadi (747/6–737/6 B.C.E.), who also appears to have been from Transjordan. He seems to have attempted to expand his territories and establish a firm rule (II Kings 15:16), but the iron hand of Tiglath-Pileser III prevented him from achieving his aims. There is no doubt that Menahem son of Gadi is "Menahem of Samaria," who is referred to in an Assyrian inscription of 738 B.C.E. as one of those who paid taxes to the king of Assyria. Menahem had little choice but to be counted among those loyal to Tiglath-Pileser III. Biblical sources describe Menahem as having been forced to pay a heavy tax to Pul (i.e., Tiglath-Pileser), the king of Assyria. This money was exacted from the wealthy landowners of Menahem's kingdom (II Kings 15:19–20). One theory based on the Samaria ostraca holds that the tax was collected in the form of agricultural products. After the death of Menahem, *Pekahiah, his son, lost control of affairs and soon fell in a conspiracy led by *Pekah son of Remaliah (735/4–733/2 B.C.E.), one of the nobles of Gilead. The cause of the conspiracy seems to have been dissatisfaction on the part of Transjordanian Israelites with Assyrian domination of Israel; these parties cultivated their own connections with Aram. Thus, when Pekah began his reign, he entered into a treaty with Rezin, king of Damascus, which was aimed against Tiglath-Pileser III. In order to create a secure flank these two attempted to compel Jotham, and later his son *Ahaz (743–727 B.C.E.), to abandon Judah's policy of submitting to Assyria. They attempted this by fomenting rebellion in Edom and inciting Philistia (II Kings 16:6; II Chron. 28:17–18), and by a military campaign toward Jerusalem which was intended to upset the Davidic dynasty. Ahaz therefore turned to Tiglath-Pileser III for aid, and, according to the biblical sources, submitted to the king of Assyria. The Bible blames him for practicing "abominations of the nations." The account that Ahaz ordered the construction of a Syrian style altar in the Jerusalem temple is not itself condemnatory but is now embedded in a hostile narrative. Nonetheless, it demonstrates the growing foreign influences upon Judah (II Kings 16:3–4, 10–18; II Chron. 28:3–4, 21–25). It is not clear whether the appearance of Tiglath-Pileser in Damascus resulted from Ahaz's request, since it is highly unlikely that the king of Assyria would have responded to such a call if he had not already decided to attack Damascus anyway. What appears more likely is that Ahaz turned to Tiglath-Pileser in 734, while the Assyrian army was already engaged in a campaign along the Phoenician coastline, reaching as far as the "brook of Egypt" (Wādi El-Arish). This Assyrian venture was intended to strengthen control over the Philistine coastal cities, and especially over Gaza. Thus Ahaz's request must have fallen upon receptive ears, since it suited Tiglath-Pileser's political-military plans. In 733–732 the Assyrians besieged Damascus and captured it, making it the center of an Assyrian province.

Map 1. The Assyrian and Babylonian exiles. From J. Shapiro (ed.), Historical Atlas of the Jewish People*, Tel Aviv, 1966.*

During the siege Tiglath-Pileser also conquered portions of eastern Transjordan and penetrated the Galilee and the Valley of Beth-Netuphah. As it appears from Assyrian sources and biblical references (II Kings 15:29), he may have reached as far as Ashkelon. Immediately following these events another revolt took place in Samaria. In place of the cruel and destructive Pekah son of Remaliah, who brought disaster to the kingdom, *Hoshea son of Elah (733/2–724/3 B.C.E.) became king, his position being confirmed by the Assyrian ruler.

Throughout this period Judah maintained its vassal status, thus being saved. Assyrian records refer to Ahaz (called Jehoahaz in the inscription; Cogan and Tadmor, 336) who paid a tax in 728 B.C.E.

With the death of Tiglath-Pileser III, widespread revolt broke out in Syria and Palestine. Even the kingdom of Israel, encouraged by Egypt (II Kings 17:4), joined in the revolt. The new Assyrian king, *Shalmaneser V, punished the rebels by means of a military campaign. Upon reaching Palestine, he besieged Samaria for three years, and the capital fell in 722 B.C.E. The exile of its inhabitants and the turning of Samaria into an Assyrian province was completed by the next Assyrian king, Sargon II (II Kings 17:6; cf. 18:9–11. The exact details are complicated because the Babylonian Chronicle attributes the fall of Samaria to Shalmaneser, while his successor Sargon II (722–705) takes the credit (see bibliography in *Exile, Assyrian and Map: Routes of the Exiles). He appears to have rushed his army westward in 720 to suppress rebellion in many parts of the area. Judah refrained from participation in this uprising. Assyrian inscriptions from Sargon's time mention Judah's submission. Still, there are hints about the involvement of *Hezekiah son of Ahaz (727–698 B.C.E.) in support of Ashdod, which was in rebellion against Assyria. As a result of this, sections of Judah's western border were attacked. In any case, Judah enjoyed a period of relative quiet, possibly because of its submission to Assyria. However, as soon as the Assyrian danger had passed, Hezekiah adopted a series of measures which may be interpreted as a shift in policy. The purification of the cult from foreign and popular native elements (II Chron. 28:24; 29:3) was intended to raise national morale and unite the people around the House of David and the Temple. Even the literary activity (Prov. 25:1) was an expression of a new nationalistic spirit which, like the purification of the cult, expressed aspirations of political independence. There were even attempts to bring closer to Judah

those residents of the former Israel living in nearby Assyrian provinces which had been established on the territories of the former kingdom of Israel. To this end, Hezekiah sent envoys to invite these people to participate in the Passover festival in Jerusalem, the date of which was made to conform to the calendar kept in the north (II Chron. 30:1–21). It is clear that these aspirations were bound to become involved with anti-Assyrian activities which were growing from Egypt to Babylonia. The mission of the Assyrian *Merodach-Baladan (II Kings 20:12; Isa. 39) to Jerusalem was intended to clarify Judah's stand in these activities. With the death of Sargon II the balance seems to have been tipped in favor of Hezekiah's participation in the anti-Assyrian front. Jerusalem prepared for revolt. The capital was fortified, and the *Siloam tunnel was built to bring the water of the Gihon within her walls in time of emergency. The army was reorganized in preparation for the revolt. It appears from Assyrian inscriptions that at this time the pro-Assyrian king of Ekron was imprisoned in Jerusalem, and Philistia was attacked (II Kings 18:8). This was done by Judah to create territorial continuity with Ashkelon, also a participant in the revolt.

*Sennacherib, who succeeded Sargon II, successfully fought Babylonia, and attempted to conquer the cities along the Phoenician coast, afterward making his way toward Palestine. During this campaign, according to the sources describing his acts in Palestine, the Assyrian king conquered Beth-Dagon, Jaffa, Bene-Berak, and cities of the kingdom of Ashkelon. At Eltekeh, at the approaches to Judah, he defeated the Egyptian relief force which had been sent to help Hezekiah. The Assyrian army entered Judah, destroyed its cities, distributing them among the Philistine kings, and exiled many of the people. (See Map: Routes of the Exiles). A siege was laid upon Jerusalem. Hezekiah, encouraged by *Isaiah the prophet who had high standing in the king's court, did not open the gates of the city to Sennacherib, though he did send him a heavy tribute. The subsequent activities of Sennacherib are not clear. He left Judah, though opinions are divided as to his reasons. He may have returned to Palestine at a later date. In any case, Hezekiah remained on his throne as an Assyrian vassal paying very high tribute.

This subjugation to Assyria continued during the reign of *Manasseh son of Hezekiah (698–642 B.C.E.), who reigned during the rule of the last great Assyrian kings. He introduced Baal worship and astral cults into Jerusalem and Judah (II Kings 21:1–9; II Chron. 33:2–9). He built altars to the astral deities in the Jerusalem temple. He also paid taxes to Assyria. A late source (II Chron. 33:11–13) relates that Manasseh was taken captive in chains to Babylonia, though he later returned to reign over Judah. It is said that, when he returned to Judah, he rooted out idolatrous practices and fortified Jerusalem and other cities (II Chron. 33:14–16). (For a discussion of this issue, see Japhet, 1000–4.) The reign of *Amon son of Manasseh was short-lived, ending in his assassination. *Josiah son of Amon (639–609 B.C.E.) was brought to the throne by forces loyal to the House of David. They had before them the example of Hezekiah who had tried to unite the nation and deepen its national and religious awareness by purifying the cult and repairing the Temple. As in former times, the usual political motivation behind these acts existed. In this case the motivation was the decline of Assyria during the time of Josiah. While in earlier times Assyrian declines may have been temporary, it was clear during Josiah's reign that the fall of Assyria was not just a passing phenomenon. The Books of Kings and II Chronicles are at odds over the order of events and their times. It has been argued that II Chronicles is the more dependable, since its chronology and time fit in with the stages of the decline of the Assyrian empire (II Chron. 34–35).

Josiah began by showing his faith in the God of David; he then cleansed his capital and cities and some of the former Israel territories of idolatry; and he finally arranged repairs of the Temple. This last deed is connected with other actions whose purpose was religious reform and the raising of national morale. These included the finding of a Torah scroll (see *Deuteronomy), the forming of a new covenant between the nation and its God, and the celebration of Passover in the capital. The biblical sources indicate that along with the national and spiritual activities of Josiah, there was also a territorial expansion into the former kingdom of Israel from which Assyria had retreated. In circumstances that are far from clear, Josiah met Pharaoh *Neco at Megiddo. According to II Chronicles 35:20–24, Josiah engaged Neco in battle. Scholars who accept the Chronicles account do so against the background that Neco had attempted to help the tottering Assyrian forces which had fortified themselves along the Euphrates against the advances of Nabopolassar, the Chaldean, who was the founder of the neo-Babylonian empire. Neco wanted to exploit the decline of Assyria to acquire its territories west of the Euphrates. In line with these facts it has been argued that Josiah went to Megiddo in order to block an Egypto-Assyrian coalition. In contrast, other scholars argue that II Kings 23:30 makes no mention of a battle and that Josiah had been summoned by Neco to a kind of court martial, or that he had walked into a trap (see Cogan and Tadmor, 300–3; Althann). In either event, Josiah was killed by Neco at Megiddo. With the death of Josiah, Judah's last period of national prosperity came to an end. After him came a period of decline, wars, bloodshed, and destruction. *Jehoahaz, his son, reigned in his stead, but was shortly removed by Neco, who made the areas west of the Euphrates his sphere of influence. Jehoahaz was replaced by *Jehoiakim (608–598 B.C.E.), Josiah's eldest son, who almost certainly must have displayed more loyalty to Egypt than his deposed brother. Judah became an Egyptian satellite and was forced to pay heavy tributes (II Kings 24:33).

Beginning with Jehoiakim, Judah was buffeted by the severe conflict between Babylonia and Egypt on the one hand, and the proliferation of conflicting political views among its own ruling classes and people on the other. With *Nebuchadnezzar's defeat of Neco (605 B.C.E.) and penetration into Philistia, it was clear that Babylonia was the dominant force in the Near East. As a result, Jehoiakim was subject to Babylonian

rule for a few years, though at the same time he tried to maintain his connections with Egypt, which encouraged him and promised aid. When Egypt enjoyed some temporary success in stopping Nebuchadnezzar, Jehoiakim's connections with Egypt turned into full-scale rebellion against Babylonia. Throughout this period, the prophet *Jeremiah counseled against a Judah-Egypt alliance, advising that the only way to save Judah from destruction was surrender to Babylonia. Promised Egyptian aid never reached Judah, when Nebuchadnezzar attacked, using his forces and soldiers from countries he had conquered (II Kings 24:2). Jerusalem was placed under siege at around that time. After Jehoiakim's death, his son *Jehoiachin held the throne for three months before being exiled to Babylonia (597), along with his court, army officers, and craftsmen. Babylonian documents make it clear that he was well treated in exile, even retaining his royal title.

Nebuchadnezzar appointed as king of Judah *Zedekiah son of Josiah (596–586 B.C.E.), who was at first loyal to Babylonia. At a later period he made connections with anti-Babylonian elements and joined a rebellion which encompassed Palestine, the Phoenician coast, and Transjordan. This revolt had the active support of Egypt, now ruled by Pharaoh Hophra. Zedekiah remained loyal to the rebellion even after some of the rebels surrendered to Nebuchadnezzar. He even resisted the pressures of prophets led by Jeremiah, as well as of some of his courtiers, who feared the fate Judah might suffer because of its rebellious activities against Babylonia. The *Lachish ostraca testify to the events of those days, when the Babylonian army stood at the gateway to the country. These ostraca reflect the internal confusion among the administrators, army, and courtiers, and illustrate the emergency situation within Judah. The Babylonian army penetrated the land and began to destroy its fortifications (589). It appears that an Egyptian force was rushed to Judah at that time, providing some temporary relief from the siege of Jerusalem, but the force was defeated. The capital then came under protracted siege until it was conquered and destroyed, along with the Temple. Zedekiah was captured while trying to escape and was severely punished. Judah was depopulated by the exile of her populace and by the flight of refugees to neighboring countries. Nor was she able to stop the Philistines, Edomites, and Arabian tribes from taking parts of her territories. The remnants of the population of Jerusalem and Judah concentrated themselves about Mizpeh. There *Gedaliah son of Ahikam was appointed by the Babylonians to govern the remaining inhabitants of Judah. He was murdered, however, by conspirators from among Judah's former officialdom, who were encouraged by outside forces. With his death, the end came for the last vestige of independence that yet remained. The territory of Judah became an administrative unit of Babylon, but its exact status is unclear. (See Map: Routes of the Exiles).

The destruction of Jerusalem and the termination of the kingdom of Judah brought to an end the long period of independence and sovereignty which the people of Israel had enjoyed. There remained only the deep impress of this period upon the history of the nation and the hopes it gave to future generations.

SOCIAL STRUCTURE OF ANCIENT ISRAEL

The Source

The only source of information on Israelite society in ancient times is the Bible. Archaeological excavations have so far produced no significant additional material on this subject; nor have the few epigraphical sources of that period which have been discovered in Palestine added to our knowledge in this field. The information gleaned from the Bible is fragmentary, discontinuous, and sketchy. Moreover, it is difficult to obtain a general picture on the basis of biblical material, since this material was mostly written at a much later date than the period it describes, even though it may have contained ancient traditions. The realistic aspects of society and social problems were of incidental interest to the authors and editors, who were preoccupied with questions of morality and social justice. Thus it is only indirectly that the Bible permits us to view the social structure and its component parts, the social concepts and customs, of the ancient era.

Methods

Owing to the nature of the unique source, the student of ancient Israelite society must rely chiefly upon typological comparisons with other societies bearing a chronological, ethnic, geographic, and linguistic relationship to ancient Israelite society, as well as with later societies having the same social structure. Such a study will range from the tribal organization of pre-Islamic Arabia to that of Bedouin tribes in the 19^{th} century. The analysis of ancient or recent parallels is guided by the fragmentary information provided in the Bible, which reflects a very well defined social system and way of life.

Hebrew Society Prior to the Rise of Israel in Canaan

The information derived from the Bible and by analogy from relevant examples (most particularly from the archive tablets found in the Mesopotamian city of *Mari, which contain important details about Western Semitic tribal organization) indicates that in the pre-Israelite period the structure of the Hebrew tribes was patriarchal. Tribal structure would have been made up of variously sized units which were related to one another by blood, claimed descent from the same patriarchal ancestor, and shared a religious-cultic tradition.

The Pre-Monarchic Period

Most of the evidence concerning the tribal structure of Israel relates to what the Bible refers to as the period of the settlement in the Promised Land and thereafter. There is no unequivocal material concerning the time and nature of the formation of the tribes. The 12 tribes, as we know them from the Bible, are merely a schematic device, a fixed number whose components apparently changed in the course of time, as may be concluded from certain sparse but unmistakable references. Some of these component parts probably dated from earliest times, while others arose later. According to one theory, the

duodecimal scheme was based upon an actual supra-tribal organization similar to the Greek and Etruscan amphictyonies. Another theory emphasises the "democratic" rather than ritualistic nature of the organization. Other scholars question the existence of any supra-tribal organization. It seems obvious, however, that whatever its nature, some super-tribal structure undoubtedly did exist.

Tribal and Sub-Tribal Units

The tribal framework contained two kinds of sub-tribal units (Josh. 7:13–14). This subdivision may also be schematic to some extent, as may be deduced from the variety of terms used to designate these subunits. It is, however, evident that the smallest unit was the household (*bet-ha-ʾav*), consisting of the sons of one father, with their wives and offspring. Several households made up a clan (*mishpaḥah*; Num. 2:34), which produced the military unit called "*elef*" (Judg. 6:15; I Sam. 17:18 and 22:7 et al.). The tribe consisted of several such clans. One tribe, Dan, supposedly consisted of a single clan. The "nuclear family," with which we are familiar nowadays, had no independent existence in those days, but was only a component of the larger household. The individual male enjoyed equality under the law and by tradition, but not within the family structure. The individual could participate in the large gatherings of his unit, which in turn gave him a voice in tribal and clan decisions, including the selection of tribal institution leaders.

Institutions

Tribal leadership and institutions arose from among the elders, as the heads of clans and households were known. They wielded political and judicial authority. This was a leadership elected by the units on the basis of lineage, experience, and wisdom, as well as the size of the bloc which supported the person in question. It is difficult to determine to what extent this representative and governing body known as the elders had a consistent nature and whether it had exclusive power in the spheres of its authority. It seems likely that it was not a rigidly consistent institution, in view of the variety of terms applied to various leaders who may or may not have been elders – *nagid* (I Sam. 9:16); *nadiv* (Num. 21:18; I Sam. 2:8 et al.); *ḥoqeq*, *meḥoqeq* (Judg. 5:9, 14); and *qaẓin* (Judg. 11:11). There was moreover a term which was applied to a more identifiable kind of leader – *shofeṭ moshiʿa*, literally, a "savior judge." These were temporary leaders who emerged in times of crisis to save the tribe from its enemies, and their authority was charismatic and outside the traditional leadership. It is, nonetheless, apparent that the term "judge" was frequently applied to important individuals whose authority derived from their lineage and property, and who were thus similar to the traditional elders. The so-called "minor judges" (Judg. 10:1–4 and 12:8–15) belonged to this category. It is not entirely clear what was the highest rank in the tribal hierarchy. Certain biblical texts suggest that the term *nasi* designated this highest authority. It seems likely that the *nasi* was elected from among the elders (Num. 1:44 and 2:7).

Social Changes

The tribal structure with its subunits was always adapting to new circumstances and needs, so that institutions and functions acquired new meanings. Time witnessed the rise in power of private property and enhanced proprietary awareness. The social distinctions between sub-tribal units also increased, as did the differences between the tribes, resulting from the varied geographic and geopolitical conditions they encountered in their settlements. All this in turn served to weaken the intertribal association and the supra-tribal organization. The economic basis of the clans and households also changed. Sheep and cattle raising, previously the exclusive resource of the tribe, was being replaced by the cultivation of fruit and grain crops. At the same time, crafts necessary to the settled way of life and to agriculture were also on the increase. One phenomenon known already in the second millennium (see *Habiru) was the appearance of a marginal society of unintegrated, nonproductive elements without property, who became mercenaries and followers of revolutionary leaders (Judg. 9:4, "worthless and reckless fellows"; and 11:3, "worthless fellows").

Urbanization

Urbanization accelerated social and economic processes. The qualitative changes which took place among the Israelites who became urbanized is clearly seen in various biblical texts. Such texts deal largely with the institutions of leadership, although there were no doubt corresponding changes in the personal and judicial spheres as well, as evidenced by the laws in Deuteronomy, which are clearly associated with an urban existence (Deut. 19, 21, etc.). Tribal traditions and customs began to weaken, although they did not entirely disappear. The elders, an institution with tribal-patriarchal roots, became the established authority in the Israelite city (I Sam. 11:3). At the same time, the congregation of all free citizens emerged as a broader-based institution (*ibid.* v. 1). It becomes evident that urban life produced new criteria for the selection of elders, economic power replacing hereditary status. Thus of the ancient tribal institution only the title and framework remained, while the content underwent complete change. Urban life also affected the status of the sub-tribal units – the clan and the household grew in importance while the status of the tribe declined. This must have been so, despite the biblical emphasis on the tribe as the chief organization of Israelite society.

Changes in the Tribal System

The most basic changes were those which affected the tribal system. This large entity did not disappear entirely during the period under discussion. The tribe and its leadership remained very powerful. The Bible gives us a picture of a tribal framework which did not disintegrate even while it changed from being a group related by blood to a typical territory-based unit. There have been theories that the tribe originated with the settlement. Be that as it may, the criteria which determine membership in a nomadic tribe, i.e., blood ties and a common patriarchal ancestor, were obviously unsuited to the new way

of life, in which geographic consideration took precedence over genealogy. In other words, membership in a tribe became predicated upon residence within its territory. In this way the tribes were able to absorb alien ethnic elements, as well as migrant groups from other tribes who either became absorbed in the tribe or retained a form of dual-tribal affiliation. Thus the city with its inhabitants became a new component of the tribal system, to which a person could be related in the same way that he was related to a clan or household, and which appeared in genealogical lists as a descendant of the ancient ancestor of the tribe. There are numerous examples of this concept in the early chapters of I Chronicles. The picture which emerges in this late source is, no doubt, highly simplified, but it must have had its basis in reality, since in many cases an entire clan must have settled together in one city and formed the bulk of its population.

This is not to suggest that the urban citizen was subject to the authority of the tribal elders, for the city was a fairly independent entity. Rather, the city as an autonomous whole participated in the overall tribal organization which, by then, had some of the characteristics of a political alliance, where previously it had been an association of clans. All these changes took place over a long period of time and in a complicated manner. The process of settlement varied in its phases from tribe to tribe and from clan to clan. The story of the migration of the tribe of Dan from the south to the north (Judg. 17, 18) illustrates this fact.

The Monarchy and the Tribal System

The monarchy in Israel emerged as an antithesis to the tribal system (see *King). By its very nature and in this specific instance, the monarchy acted as a catalyst upon certain social processes, of which some were ancient and others new. It is hardly surprising that the advent of the monarchy in Israel became the decisive factor in the disintegration of the tribal system. In the beginning the monarchy apparently attempted to coexist with the tribal authority, and probably strove to incorporate it into the administration of the kingdom. However, the growing strength of the centralized royal authority inevitably led to clashes with the separatist interests of the tribal leaders, who naturally struggled to preserve their autonomy, even though they had previously concurred with the creation of the monarchy in order to meet certain exigencies. The activities of the monarchy, especially the division of the land into administrative regions (I Kings 4), also served to weaken and restrict the traditional, tribal-rooted authority. Thus, in the course of the monarchical era, tribal membership became largely a traditional symbol lacking any real function. The monarchy also undermined the tribal leadership by creating a whole new class of functionaries – "royal employees" dependent on the king, from the highest ministers (I Sam. 8:18–26; I Chron. 18:15–17; II Sam. 20:23–26; etc.) to officials, professional soldiers (I Kings 9:22 et al.), managers, and laborers on the royal estates (I Sam. 8:12). Concurrently, the appointed priesthood and probably the Levite administration, as well as an emergent mercantile community, thrived under the influence of the monarchy. The monarchical economy encouraged the rapid development of specialized skills and enhanced crafts and the status of artisans. The elders were rapidly losing power in the urban centers, and authority became increasingly vested in the ministers who governed the affairs of the city. Nevertheless, these changes did not seriously affect the customs and way of life within the framework of the clan and the household, which continued to derive their inspiration from the patriarchal tradition and the ancient social institutions. The kings took care not to destroy the accepted way of life. In any event, the clan was still a vital and effective factor during the period of the Return to Zion (Ezra 2; Neh. 4:7).

National Class Structure

The decline of the tribal system and the reorganization of the population, first in terms of territory and then as a kingdom, led to the emergence and crystallization of a nationwide class structure. The main stratum consisted of landowners, large and small. A class of artisans arose beside it. Additional strata emerged in the course of the monarchical period: royal functionaries, merchants, and government officials. It remains, however, impossible to reconstruct a satisfactory picture of the overall social stratification of ancient Israel. The Bible refers to various social classes whenever the narrative requires it, and apparently recognizes the existence of social stratification, although it emphasizes chiefly the division between the free and the enslaved, the poor and the rich. It would, therefore, be a mistake to attempt to reconstruct a complete model of the stratification of that society. A broad outline which includes an upper, a middle, and a lower class, together with the marginal elements and the slaves, will have to suffice. The priesthood and the Levites are not included in the aforementioned division, because of their special status and ritualistic functions, although in part they may have been considered as officers of the government (II Sam. 8:17 et al.).

Landowning Class

The broad base of the kingdom – and later of the separate kingdoms of Israel and Judah – was the landowners and the peasantry, who together comprised the bulk of the population. The sources frequently mention the landowners ("the great men," II Sam. 19:33), both on account of their political activities and in connection with the bitter denunciations hurled at them by the prophets. Large estates had begun to appear even before the monarchy, as may be seen in the case of prominent individuals like Barzillai the Gileadite (II Sam. 19:32) and Nabal the Carmelite (I Sam. 25:2) in David's time. However, on the whole, great estates were a product of the political-economic policies of the kings, who rewarded their supporters and followers with land grants of conquered, annexed, or purchased territories (II Sam. 9:7–10; 19:30). There seems to have been a concentration of such *latifundia* in Transjordan. The economic power wielded by the estate owners soon turned into a massive political weapon in times of crisis

and royal weakness, such as toward the end of the Kingdom of Israel – a period during which the Transjordanian nobles apparently exercised a decisive influence in the affairs of the capital, Samaria. In the Kingdom of Judah the landowning class does not seem to have played such a major role, perhaps because it was a small class – in view of the territorial limitations and the topography of the kingdom – and perhaps also because the Davidic dynasty was a strong one. From about the middle of the ninth century B.C.E., a section of the population described as "the people of the land" (*am ha-areẓ*) became increasingly prominent. There has been a great deal of speculation and research concerning this group, whose nature is not entirely clear. "The people of the land" played an active role in events of the highest political significance, such as the crowning of a new king, especially following revolutions and regicides (II Kings 11:14; II Chron. 33:25, et al.). From these sparse references it may be deduced that "the people of the land" was a broadly representative class in Judah and that its power rested in its ownership of the land, although it seems unlikely that this class included the major landowners. Apparently "the people of the land" succeeded the ancient "democratic" concept of the "congregation," which had more or less vanished shortly after the establishment of the monarchy. It has been suggested that the Northern Kingdom's equivalent of "the people of the land" were the "mighty men of wealth" (*gibbore ha-ḥayil*) mentioned in II Kings 15:20 and Ruth 2:1, upon whom the Israelite king Menahem imposed a special levy in order to pay the tribute to King Tiglath Pileser III of Assyria. There were 60,000 of them at that time. Some scholars have suggested that the term designated a landowning warrior who supplied his own as well as his men's military equipment.

Lower on the social scale stood the class of the small landowners, the tenant farmers of the great estates and of the royal estates. The origins of this group may have been in peasantry which had lost its own land through poverty or expropriation (Isa. 5:8). Some may have been settled on the land by the kings who wanted to strengthen the border regions or prevent social unrest. Thus the kings were able to enjoy larger revenues from the land than if it had been cultivated by slave labor.

Merchant Class

The mercantile community was of great social and economic importance. As we have seen, this class emerged and grew thanks to the royal initiative in international commerce, which the Bible traces to King Solomon (I Kings 9:26–28; 10:14–15; II Chron. 20:35–36), and which reached its peak in the golden age of the two kingdoms, i.e., the ninth century B.C.E., under Ahab and probably somewhat later in Judah. While there is little data on this matter also, it would seem that there was a broad spectrum of mercantile activity, both on the international level and within the realm, both as part of the royal administration and as private enterprise. The Bible is not explicit in these matters, but it seems that the higher echelons of the merchant class exercised a considerable influence in the royal court, even in political affairs. There are indications that the Israelite merchants, like others in the Ancient Near East, invested in areas which did not have a direct bearing upon their main trade – finance, real estate, the slave trade, etc. (cf. Ex. 22:24; Lev. 25:36–37; Isa. 24:2; Jer. 15:10; et al.). It is not inconceivable that the merchants, through their commerce with neighboring and distant lands, served as the channel through which outside cultural and material influence penetrated Palestine. Moreover, it is likely that this class, together with the great landlords, intensified the class distinctions among the free population of Israel.

Artisan Class

The development of crafts was also accelerated by the advent of the monarchy. Archaeological finds in Israel have shown that the monarchical age brought about an expansion of crafts and increased productivity to sustain the economy and commerce of the realm (I Chron. 4:23). Throughout that age, crafts remained within the family and were not open to all comers. Skills were passed on from father to son (I Chron. 2:55 and 4:21). Though there may have been some pressure upon the artisans to widen their ranks in order to provide for the expanding economy of the kingdom, the familial pattern remained in effect. This is not to suggest that there were proper guilds, or guild-like organizations, as one scholar proposed. Craft guilds are based upon different principles and have a different organizational structure. Certain texts superficially seem to suggest the existence of guilds – the mention of streets devoted to a certain craft (Jer. 37:21), artisan quarters (Neh. 3:32), industrial centers (Neh. 11:35 and compare Isa. 44:13, et al.), as well as craft nomenclature for families (Neh. 3:8, 12, 15, 31). However, this conclusion is misleading; there were no commercial guilds in existence. It appears that only at a relatively late date did the artisans entirely sever their ties with the land and it may be assumed that in small communities artisans owned land. It is not possible to determine the exact relationship of the artisan class to the other strata of society, but it is most likely that it represented one of the chief components of the middle stratum and the marginal elements.

Marginal Elements

Lower still on the social scale were the laborers without property or skill, who were hired by the day or by the season (Lev. 19:13; Deut. 24:14–15; Isa. 16:14). They were employed on the great estates, by the craftsmen, and in the service of the king or private individuals. In addition to these, there were also the remnants of the autochthonous elements which for some reason had failed or been unable to assimilate among the Israelites (Deut. 29:10). They were called "aliens" or "resident aliens" (see *Strangers and Gentiles) and they existed on the fringes of Israelite society. Their status determined the nature of their relationship to society. Legally and socially their status fell between that of the wholly disfranchised slaves and the free populace (II Chron. 2:16). It is likely that later on other alien elements were added to the authochthonous group. Their

status apparently improved with time, and this may account for the apparent contradictions concerning their way of life and privileges in biblical texts. The aliens generally enjoyed the status of protected dependents (Deut. 1:16; 5:14; 29:10), and were more than once cited together with the poor and the helpless (Lev. 19:10 and 25:6), who were entitled to partake of a special tithe and other poor dues (Deut. 14:28–29 and 24:19, et al). Conversely, mention is also made of propertied aliens (Lev. 25:47; Deut. 28:43). A distinction must be made between the marginal, indigenous alien residents and a certain limited group of autochthonous families who allied themselves with royal families and the highest officialdom and kept their ancient exalted status. This was the outcome of moves made by the early kings, who had to establish a new administration at a time when there were no Israelites with the necessary qualifications.

Slaves

Lowliest of all were the slaves, who were deprived of all rights. They were of various origins – some had been captives taken in battle (cf. Deut. 21:10–14, II Chron. 28:8ff., et al.), and some were descendents of the aboriginal inhabitants of the land (I Kings 9:21; cf. Ezra 2:43–54; Neh. 7:46ff.). Finally, there were Israelites who were so improverished as to submit, voluntarily or under duress, to bondage to their creditors (II Kings 4:1–17; Isa. 50:1; Neh. 5:1–5). Biblical law endows the Israelite slave with certain rights (though these may fall within the bounds of a social-legal utopia), entitling them to their freedom after a limited time in bondage (Ex. 21:2–11; Lev. 25:40; Deut. 15:12–18). However, there is little evidence that slaves were in reality granted their freedom on a regular basis. There does appear to have been some distinction between the status of a purchased slave and one who was born in the household (Gen. 17:12; Lev. 25:41). Private persons as well as the king owned slaves (II Sam. 12:31). There are also some hints suggesting the existence of temple slaves, the "Nethinim" (Ezra 8:20, cf. Ezek. 44:7; Neh. 3:31 and 11:21), who were drawn from among the alien elements. There are no available data concerning the number and economic importance of slaves in ancient Israel. By analogy with other ancient societies in the Near East it may be assumed that during periods of territorial expansion and conquest they were numerous and of some economic importance.

[Hanoch Reviv / S. David Sperling (2nd ed.)]

FROM THE DESTRUCTION TO ALEXANDER

The Restoration

The destruction of the Temple constituted a double crisis. Not only were the people cast off the land but the Divine Presence departed from Jerusalem (Ezek. 10:19; 11:23). Once the city was bereft of the God of Israel, its Canaanite origins came to the fore (Ezek. 16). The process of restoration (see *Exile, Babylonian) would be a lengthy one that would carry the people along the same route traversed by their ancestors who emerged from Egypt. Like the Exodus from Egypt, the one from Babylonia was depicted in miraculous terms. The Sinaitic theophany was paralleled by the reconstruction of the Temple, which restored the Divine Presence to Jerusalem (cf. Ezra 6:12; 7:15), while the revelation of the laws to Moses had its counterpart in the reading of the Torah and the legislative activity of Ezra. The sanctity of the newly occupied land could only be preserved if the Sabbath was observed, if each member of the nation cared for his brother, and if the men did not take wives from among the pagan peoples. The Restoration was depicted in the terms outlined above in Deutero-Isaiah, Ezra, and Nehemiah. As the Lord revealed Himself by preparing a passage through the Red Sea, so would He reveal Himself by clearing a road through the desert separating Babylon from Jerusalem (Isa. 40:3ff.). Israel would be redeemed from its present as from its former bondage and gathered in from the four corners of the earth (Isa. 43:1ff.). As Israel took spoils from the Egyptians in its earlier Exodus (Ex. 3:21–22; 11:2–3; 12:35–36), so would it now receive the tribute of all the nations (Isa. 60). The miraculous and munificent return described by the prophet is echoed in the historical books. The neighbors of the repatriates from Babylonia "strengthened their hands" with silver and gold vessels, cattle and goods of all sorts (Ezra 1:6). The Persian king Darius contributed toward the construction and sacrificial cult of the Temple (Ezra 5:8ff.) and this policy of support was continued by Artaxerxes I, who together with his seven advisers, also sent contributions (Ezra 7:15ff.). Though nothing is told of the journey of the repatriates who returned shortly after Cyrus' decree, the return of Ezra and his small band was carried out under divine guidance. In his memoirs Ezra writes "I was ashamed to ask the king for a band of soldiers and horsemen to protect us against the enemy on our way; since we had told the king 'The hand of our God is for good upon all that seek Him'…" Fasting and prayer thus secured safe passage (Ezra 8:22ff.). Since the historical books of Ezra and Nehemiah are structured so as to base the account of the Restoration on the model of the early stages of Israel's nationhood there is no "complete" account of the history of the period. The source is silent on the 30 years of the reign of Darius after the dedication of the Temple (515–486). A single sentence states that "at the beginning of the reign" of King Ahasuerus (Xerxes) i.e., in his accession year, an accusation was written against the inhabitants of Judah and Jerusalem (Ezra 4:6). Egypt had rebelled against Persia on the eve of Darius' death and the rebellion was subdued by Xerxes. It had traditionally been the case that Judah could sustain her rebellion against an imperial power, be it Assyria (Isa. 30–31) or Babylon (Jer. 37:6ff.), only by reliance upon Egypt. Thus it may be that Judah was involved or suspected of being involved in the Egyptian rebellion. The historical source is silent for another period of almost 30 years. In the seventh year of Artaxerxes I (458) Ezra was officially authorized by the king to "investigate" the situation in Judah and in Jerusalem in accordance with the law of God which was in his possession. He was entitled to appoint judges for the Jews beyond the confines of Judah, that is, throughout the satrapy of the Trans-Euphrates

("Beyond the River"). Jews ignorant of the divine law were to be instructed, while those who violated either that law or the law of the king were to be suitably punished whether by death, banishment, fine, or imprisonment (Ezra 7:25–26).

Ezra

Who was this Ezra and why should Artaxerxes grant him such broad authority in the year 458? In a genealogically conscious era, Ezra's genealogy is one of the most elaborate. He is a priest who traces his line directly back to Aaron through the latter's son and grandson Phinehas son of Eleazar. His immediate ancestor is given as Seraiah whose name is identical with that of the chief priest slain by Nebuchadnezzar at Riblah (II Kings 25:18ff.). With the exception of two lacunae, the genealogy is identical with that in I Chronicles 5:29–40. As recorded in the Book of Ezra (7:1–5) it gives the appearance of schematic arrangement (seven names between Aaron and Azariah (absent in Chron.) and seven names between Azariah and Ezra (hypocoristic of Azariah). While the genealogy is silent, perhaps deliberately so, about Ezra's relationship to the executed Seraiah's grandson, Jeshua son of Jehozadak, its schematic selectivity suggests divine determination: "For Ezra had set his mind on investigating the Torah of the Lord in order to teach effectively its statutes and judgments in Israel" (Ezra 7:10). The Hebrew term for "set" is identical with that used to describe the erection of the altar (Ezra 3:3), indicating that Ezra was fulfilling the second major task in the complete restoration of Israel. What were his qualifications for this undertaking? He was a "scribe skilled in the Torah of Moses given by the Lord God of Israel" (Ezra 7:6; cf. 7:11). In its Aramaic formulation his title was "scribe of the Law of the God of Heaven" (Ezra 7:12, 21). The scribe was not only one versed in writing (cf. Ps. 45:2), he was also learned, "a wise man" who transmitted his wisdom (cf. Jer. 8:8; Ahikar, in: Pritchard, Texts, 427). The divine law in which Ezra was proficient was "the Wisdom of his God in his possession" (Ezra 7:25). In their wisdom, scribes were also called upon to advise kings (cf. Ahikar) and fill other governmental posts so that scribe, "secretary," also appears as an official title (II Sam. 8:17, et al.; Ezra 4:8 et al., Neh. 13:13). Whether in his capacity as scribe Ezra held a post in the Persian government, as some scholars have maintained, is uncertain.

Whatever his status in the Persian Empire, Ezra "the priest and scribe" (Ezra 7:11) claimed that divine favor was responsible for Artaxerxes' giving him everything he requested (Ezra 7:6). The historical reason for the fame Ezra enjoyed may have been the revolt which broke out in Egypt ca. 463/2. It was in the interest of the Persian king at just this juncture to strengthen his hold on the territory bordering on Egypt. The Jewish garrison at *Elephantine in Egypt having remained loyal to Artaxerxes throughout the decade of rebellion in lower Egypt, the king must have felt that he could rely on the Jews in the Trans-Euphrates as well. Their loyalty would be assured if the internal law which they observed received the same absolute sanction as did imperial law (Persian *dātā*; cf. Esth. 1:19; 8:8; Dan. 6:9) and if the enforcement of both laws was entrusted to a respected Jewish personality such as Ezra. It should be mentioned that scholars are not in agreement as to the date of Ezra's mission, some preferring to see it in the reign of Artaxerxes, the second king of that name, who reigned from 404–359. The seventh year of his reign would accordingly have been 398, and Ezra's mission would likewise have coincided with a rebellion in Egypt. This later revolt included all of Egypt and the garrison at Elephantine acknowledged the ruling Egyptian king Amyrtaeus by June 19, 400. The motive for the privileges granted Ezra are thus the same whether the king is hypothesized as Artaxerxes II or Artaxerxes I. Were the king in fact Artaxerxes II, Ezra would have followed Nehemiah, whose arrival in Jerusalem, because of a correlation with a date in the Elephantine papyrus (cf. Cowley, *Aramaic Papyri* 30:18, 30 with Neh. 12:22–23), is fixed to 444 (cf. Neh. 2:1). Some scholars, rather than shifting Ezra to the year seven of the reign of Artaxerxes II, maintain that the king was Artaxerxes I and emend the year date to 27, 32, (33), or 37, thus placing Ezra's arrival either in 438 (during Nehemiah's first mission), 432 (433) (after Nehemiah's first mission), or 428 (during Nehemiah's second mission). The arguments for the shifting of the king and the emendation of the date are numerous but most rest on specious considerations and dubious textual interpretation. The return under Ezra was a replica in miniature of that under Zerubbabel. Stress was laid on the unity of Israel. Ezra's caravan contained members of the major groups of society. Included were two priestly families, Hattush of the Davidic line and 12 lay families numbering together with Ezra, 1,500. Special efforts were taken to enlist Levites, of whom 38 were recruited, and Temple servants, who numbered 220 (Ezra 8:1–20). Concern for Temple cult and personnel played a primary role. Contributions of gold, silver, and vessels from the king and his advisers and from Jews remaining in Babylonia were duly recorded, carefully transported, and officially deposited in the Temple (Ezra 7:15–16; 8:24–34). All the Temple officials from priest to lowly servant were to be exempt from taxation by the Persian government (Ezra 7:24). Just as the Temple dedication was celebrated by the sacrifice of 12 he-goats as sin offerings, to atone for the whole house of Israel (Ezra 6:17), so the arrival of Ezra in Jerusalem was marked by the sacrifice of 12 bulls as burnt offerings and 12 he-goats as sin offerings (Ezra 8:35–36). The numbers of the other sacrifices were typological multiples – 96 rams, a multiple of 12 (cf. Num. 7:87–88), and 77 lambs, a multiple of seven, the number offered on all the festivals, the New Moon, the New Year, and the Day of Atonement (Num. 28–29).

DISSOLUTION OF MIXED MARRIAGES. Ezra set out from Babylon on the first of Nisan (Ezra 7:9), departed from a place called Ahava on the 12th of Nisan (Ezra 8:31), and arrived in Jerusalem on the first of Av some five months later (Ezra 7:8). On the 20th of Kislev, in the middle of the winter and in pouring rain, Ezra convened an assembly in Jerusalem (Ezra 10:9ff.) with the express purpose of dissolving the many

mixed marriages, prevalent in all levels of society, which were called to his attention shortly after his arrival.

Interestingly there is no mention of Jewish women married to foreign men. The whole situation revolves around foreign wives. There is not even any effort made to convert them to Judaism. Israel is the "holy seed" and must not become contaminated by the "abominations" of the Canaanites, Ammonites, Moabites, and Egyptians. Mixed marriages would be "sacrilege" against the holy. At the core of this view of the situation lies not only a midrashic interpretation of the various laws in the Torah regarding intermarriage (Ex. 34:11ff.; Deut. 7:1ff.; 23:4ff.) but the notion that the land, being resettled as in the days of the conquest, was once more susceptible to the taint of its aboriginal impurity (cf. Ezra 9–10 with Deut. 7–9). The procedure which culminated in that fateful assembly on 20 Kislev, 458, bore distinct resemblance to the ceremonies surrounding the condemnation of Achan, who committed sacrilege through misappropriation of the devoted things (cf. Ezra 9:1–10:8 with Josh. 7; Deut. 7:2, 26).

The mourning and confession of Ezra upon learning of the mixed marriages and the subsequent ceremony on that rainy day established the mood appropriate to the dissolution of the mixed marriages. However, the act itself was preceded by three months of work, from the first of Tevet to the first of Nisan, which consisted of investigating and recording the names, according to their families, of each male who had married a foreign wife. The list is headed by four members of the high-priestly family who agreed to put away their foreign wives and offered a ram as a guilt offering (Ezra 10:9–19), the sacrifice prescribed for one who unknowingly committed sacrilege against a sacred object (Lev. 5:14ff.). The number of lay families as recorded in the Masoretic Text was ten but a Septuagint reading in Ezra (10:38) yields the traditional 12. The latter figure indicates that, although the recorded instances (111 or 113) were few, relative to the size of the population, the desecration affected "all Israel." Strangely, the outcome of this enterprise is uncertain. The concluding verse to the whole account in the Masoretic Text is obscure and noncommittal, but the apocryphal Book of Esdras is decisive in asserting that the men all sent away their foreign wives together with their children (I Esd. 9:36).

FORTIFICATION OF JERUSALEM. Similarly uncertain are the circumstances surrounding the next step attempted in the Restoration of the people to its land. The source for the event is an Aramaic correspondence between officials in Samaria and Artaxerxes (Ezra 4:8–23). The letters are not dated and the account is incorporated into Ezra according to a topical arrangement – setbacks first (Ezra 4), successes, last (Ezra 5–6) – rather than a chronological one (i.e., Ezra 4:6–23 preceding Neh. 1). The Samarian officials were the chancellor Rehum and the scribe Shimshai. They write in the name of the local bureaucracy as well as of the settlers from Erech, Babylon, Susa, and elsewhere, introduced into the area by the Assyrian king Ashurbanipal (669–27), possibly around 642. The letter informs Artaxerxes I that the Jews who recently arrived (along with Ezra?) were busily fortifying Jerusalem. It goes on to say that the city was notoriously rebellious and that, if the fortifications were to be completed, the people would merely not pay royal taxes. The king reported back to his officials that he had duly investigated the reputation of Jerusalem and discovered that it had been a rebellious city as charged. He therefore ordered the Samarian officials to proceed to Jerusalem and put a halt to the fortifications. They acted with dispatch and by force of arms.

The desire of the Jews to refortify Jerusalem was natural. Jeremiah had prophesied that "the city would be rebuilt upon its mound" (Jer. 30:18), and, according to Deutero-Isaiah, Cyrus himself would carry out the task (Isa. 44:28). Cyrus apparently never issued such orders and hopes for an early Davidic restoration ceased with Zerubbabel's inexplicable disappearance from the scene. The broad powers given to Ezra may have encouraged the Jews to believe that the time was ripe to rebuild Jerusalem. Perhaps, too, the struggle for independence pursued by Egypt, now in alliance with Athens, spurred on Judah. Whatever the reason, the plan miscarried. The northern rival Samaria prevailed and Judah was put to shame. Word of the situation eventually reached Nehemiah, the king's cupbearer in Susa. His immediate reaction was similar to that of Ezra upon learning of the mixed marriages – fasting and confession of guilt (Neh. 1). However, Nehemiah was a decisive man of action. Praying to God for assistance, he sought an appropriate moment to ask leave of the king to travel to Judah and rebuild Jerusalem. Leave was granted, and preparations for the journey and the task to be undertaken were carefully laid. Nehemiah requested, and received, letters of safe conduct and a military escort – unlike Ezra, who relied on divine assistance alone – along with an authorization to the keeper of the king's forest for timber for a Temple citadel, his own residence, as well as for the wall of the city (Neh. 2:1–9).

Nehemiah

The account of Nehemiah's activity is reported in his own memoirs. Like Ezra, Nehemiah ascribed his success with the king to the hand of God (Neh. 2:8). Historically it is not clear what prompted Artaxerxes I to contradict himself in 445 and allow the reconstruction of the walls he had earlier ordered destroyed. Perhaps the high position and forceful personality of Nehemiah were responsible. Nehemiah noted that the queen was present when he put forth his request. Certainly he showed skill in formulating his petition. Like Haman who sought from Ahasuerus destruction of "a certain people" who "do not keep the king's laws" (Esth. 3:8), without mentioning the Jews by name, so Nehemiah sought permission from Artaxerxes to rebuild "the city of the graves of my fathers" (Neh. 2:5), not specifying Jerusalem. Even if the king were fully aware that the permission being granted Nehemiah reversed an earlier decision of his, he may have felt that, if his trusted servant were in charge of the project, fear of rebellion was minimal. Accordingly, Nehemiah was appointed governor of Judah, a

post he held from 445 until 433 (Neh. 5:14) and then again for an unspecified period after returning to the court at Susa (Neh. 13:6–7). This appointment may also have been an attempt to strengthen Persian control in the area in the wake of the recent rebellion of Megabyzus, satrap of the Trans-Euphrates.

REBUILDING OF THE WALL OF JERUSALEM. In his memoirs, Nehemiah described his task of building the wall as having gone through seven stages, each one punctuated by opposition on the part of Judah's neighbors. These were Sanballat (1) the Horonite, governor of Samaria (cf. Cowley, *Aramaic Papyri* 30:29), Tobiah of Transjordan, and Geshem (Gashmu) king of Kedar (cf. Tell el-Maskhuteh inscription). Both Sanballat and Tobiah were "Jewish," i.e., worshipers of the God of Israel, as attested either by their own names or those of their descendants (cf. Cowley, *Aramaic Papyri* 30:29; Aramaic papyri from Wadi Daliyeh), who inherited their official posts. Both were allied by marriage to prominent families in Judah (Neh. 6:17ff.; 13:28). For a time Tobiah enjoyed a chamber in the Jerusalem Temple (Neh. 13:4ff.). The factors that allowed the high priest Eliashib to join Nehemiah in reconstructing the wall in the teeth of Sanballat's opposition yet permitted Eliashib's grandson to marry a daughter of Sanballat to Nehemiah's great annoyance (Neh. 13:28) are unknown. Suffice it to say that all three foreigners viewed Nehemiah as a personal enemy. The feeling was reciprocated. He never referred to Sanballat as "governor," denigrated Tobiah by referring to him as the "Ammonite servant" (Neh. 2:10), and called Geshem simply "the Arabian."

The first stage of Nehemiah's activity was his journey to Jerusalem. His arrival greatly displeased Sanballat and Tobiah because "someone had come to seek the welfare of the Israelites" (Neh. 2:10). In stealth and with circumspection Nehemiah conducted a nocturnal inspection of the wall and then inspired the leaders to agree to reconstruction by informing them of the divine and royal favor he enjoyed. Sanballat, Tobiah, and Geshem mocked and derided the decision of this second stage of Nehemiah's activity, but he replied with an affirmation of divine assistance and told them decisively, and apparently not gratuitously, "you have no share, right, or memorial in Jerusalem" (Neh. 2:11–20). The policy of exclusion initiated by Zerubbabel (Ezra 4:2–3) and carried through by Ezra (Ezra 9–10) was now being vigorously pursued by Nehemiah.

The third stage in Nehemiah's activity constituted the actual building (Neh. 3). Jeremiah had prophesied, "Behold, the days are coming, says the Lord, when the city shall be rebuilt for the Lord from the Tower of Hananel … to the Horse Gate … sacred to the Lord" (Jer. 31:38ff.). The wall was divided into some 40 sections, and groups from all classes of the people were assigned to work on each section. The first section extended from the Sheep Gate to the Tower of Hananel and was restored by the high priest Eliashib (Neh. 3:1). One of the last sections constructed was the Horse Gate where, too, priests were at work (Neh. 3:28). In addition to providing a detailed description of the wall, the list is valuable for some of the random information it supplies, e.g., it indicates the presence of guilds in Jerusalem such as the goldsmiths', the ointment mixers', and the merchants' guild (Neh. 3:8, 31). When Sanballat and Tobiah learned that construction had begun in earnest they became angry and expressed themselves in mockery, "Can they revive the stones from the dust heap? From burned stones? Should a fox jump up, he would demolish their stone wall." Nehemiah cursed them for their taunts as the work proceeded apace until the wall reached half its intended height (Neh. 3:33–38). The reaction of Sanballat and Tobiah, the Arabs, Ammonites, and Ashdodites to this fourth stage of the reconstruction was to prepare armed intervention. Word of the plan reached Nehemiah through the Jews dwelling in those districts, and he not only placed guards at vulnerable spots along the wall but armed the builders. He encouraged the workers by assuring them that should an attack come, "our God will fight for us" (Neh. 4).

This fifth stage of activity almost brought the work to its completion. It was now threatened, however, by internal discontent. Jews were not behaving like "brothers." Short of food to eat and money for taxes, many were forced to take costly loans, mortgage their fields, and sell their children into slavery. Even Nehemiah and his servants were guilty of extorting heavy interest and taking pledges. Demanding interest from a brother in need was incompatible with fear of the Lord (Neh. 5:9; cf. Lev. 25:36) and would not be conducive to God's blessing on the newly occupied land (cf. Deut. 23:20–21). If the building of the wall were to be brought to successful completion, all debts had to be canceled and pledges returned. Nehemiah convened an assembly of the people and forced his reform through (Neh. 5).

Unable to thwart the building itself, Sanballat and Geshem sought to lure Nehemiah into a private conference where presumably his life would be threatened. They circulated the rumor that he was planning a rebellion and appointing prophets to acclaim him king of Judah. They themselves hired Noadiah the prophetess to frighten him and the prophet Shemaiah son of Delaiah to entice him into seeking refuge in the Temple. Tobiah's allies in Judah likewise spoke to Nehemiah on behalf of Tobiah. The reaction of Nehemiah's enemies to this stage availed as little as the earlier ones. After 52 days of strenuous labor, the wall was finished on 25 Elul, 445. Josephus maintained that the labor took two years and four months (Ant. 11:179). There remained nothing for the "enemies" to do but appear downcast and acknowledge God's contribution to the project (Neh. 6), and so the seventh and final stage of Nehemiah's building activity was brought to a successful conclusion. Guards of the city were appointed and Nehemiah's God-fearing brother, Hanani(ah), was put in charge of the citadel (Neh. 7:1–3).

RELIGIOUS INSTRUCTION AND DEDICATION OF THE TEMPLE. It was now the 14^{th} year since the arrival of Ezra in Jerusalem and nothing had yet been said of his having im-

plemented the instruction to teach the Torah (Ezra 7:25). No doubt he had been engaged in this project over the years, gathering around himself a band of teachers, primarily levites, able to expound the Torah and render it into the Aramaic vernacular. The timing was now right for a grand ceremony patterned on that of Zerubbabel and the first repatriates. To emphasize the imitation of the earlier period, the editor of the historical source (Ezra-Nehemiah) even reproduced verbatim the original list of repatriates (Ezra 2; Neh. 7:6–72). Although fortification of Jerusalem enhanced the status of Judah and removed its shame, Davidic kingship had not been restored. Foreign rulers still occupied the land. The gains already achieved could only be maintained if the people observed the Torah.

On the first of Tishri after their return, Zerubbabel and the Jews with him had reestablished the Temple altar to offer burnt offerings "as written in the Torah of Moses the man of God" (Ezra 3:1–7). Now on the first of Tishri after the completion of the wall the people called upon Ezra to publicly read from the "book of the Torah of Moses which the Lord prescribed for Israel" (Neh. 8:1). The description of the ceremony, which began at sunrise, makes it clear that Ezra was prepared for the occasion. A special wooden podium was prepared, and six men stood on his right and seven on his left, altogether 14. Upon opening the Torah, Ezra blessed God and the people responded with "Amen," and prostrated themselves. Ezra then read until noon and 13 levites expounded the significance of the text and perhaps translated it into Aramaic. The people interrupted the reading with crying, and Ezra and Nehemiah informed them that the day was holy, one of rejoicing, feasting, and giving gifts to the poor. Similarly, when the Temple foundations had been laid, the elders who remembered the original Temple broke out in tears, while others rejoiced (Ezra 3:12).

After the original repatriates had dedicated the altar on the first of Tishri, they celebrated the seven days of Sukkot by offering the sacrifices, "according to number and prescription." This would bring the number of bulls to 70 (Num. 29:12–32), suggesting the 70 members of Jacob's family (Gen. 46:27: Ex. 1:5) and indicating the unity of Israel. The Jews under Ezra and Nehemiah gathered on the second of Tishri to continue studying the Torah and they discovered "written in the Torah which the Lord prescribed through Moses that the Israelites should dwell in booths on the festival of the seventh month" (Neh. 8:14). And so "the whole congregation which had returned from the captivity" constructed booths on their roofs, in their courtyards, in the Temple courtyards, and in public squares. Such an observance had not been held since the days of Joshua, i.e., the time of the conquest. The Torah was read daily throughout the festival (Neh. 8:13–18). Is it coincidental that these Torah-reading ceremonies fell in the 14th year? (Ezra arrived in the seventh year of Artaxerxes I and Nehemiah in the 20th year.) Might this have been related to the Deuteronomic injunction to publicly read the Torah every seventh year, the year of release, at Sukkot time with the idea of instructing future generations "as long as they live in the land which you are about … to occupy" (Deut. 31:10ff.)?

The imagery of the booth (*sukkah*) recurs in the Bible with overtones of redemption and providence. The levitical injunction to dwell in booths is explained by the notion that God settled the Israelites in booths (*sukkot*: cf. also Ex. 12:37) when He delivered them from Egypt (Lev. 23:43). Subsequently God's own booth or dwelling was in Jerusalem. There He protected His people (Ps. 76). After God's judgment of the wicked city the purified remnant will again be protected by a booth (Isa. 4). The activity of Nehemiah in rebuilding Jerusalem's walls and repairing its breaches (cf. Neh. 1:3; 2:5, 17; 3:35) was doubtless believed to fulfill the prophecy of Amos that God would "raise up the fallen booth of David" (Amos 9:11). The final deliverance – complete independence – would be celebrated annually when the nations came to Jerusalem to worship the Lord on the occasion of Sukkot (Zech. 14:16).

To hasten that day, the Jews, now reconstituted on their soil, their Temple reconstructed, and the city fortified, concluded on the 24th of Tishri a solemn agreement to "follow the law of God which had been transmitted through Moses the servant of God." The covenant ceremony was preceded by purification, i.e., separation from the foreigners, fasting, sackcloth, and confession, and concluded with the signature of a written document by Nehemiah, 21 priestly families, 17 levites and 44 lay families (Neh. 9:1–10:30). In addition to having sworn to observe the written Torah, the people undertook to observe some 18 decrees not explicitly mentioned in the Torah but derived from it through the procedure of *midrash halakhah*, "legal interpretation," developed by Ezra and his associates. The earlier celebration of Sukkot, building booths out of the various species "as written" (Neh. 8:15; cf. Lev. 23:40) is an example of such interpretation and of one subsequently abandoned. The decrees, now recorded, centered on the prohibition of mixed marriage, the observance of the Sabbath and the seventh year, and provisions designed to show that the people would "not neglect the House of … God" (Neh. 10:31–40).

Nehemiah had raised up Jerusalem's stones from the dust (Neh. 3:34) in answer to the call of Deutero-Isaiah (Isa. 52:2). The agreement not to intermarry (Neh. 9:2, 10, 29, 31) was necessary for the fulfillment of the promise that "the uncircumcised and the unclean" shall no more come into the "holy city" (Isa. 52:1). Jeremiah had promised that once more people would proclaim, "the Lord bless you … O holy hill" and that "Judah and all its cities shall dwell there together" (Jer. 31:22–23). The penultimate task of Nehemiah was thus the populating of the now secure and spacious "holy city." The leaders already lived there and the rest of the people cast lots to bring 10% of Judah's population into the capital. The partial list of towns in which the rest of the people were settled indicates that the southernmost town was Beer-Sheba and the northernmost Bethel. The western border extended to Ono, while the list of the first repatriates and the list of builders indicated that to the east the province of Judah included Jericho (Ezra 2:34; Neh. 7:36, 3:2, 7:4; 11:1–36).

The final ceremony in which Nehemiah participated was the dedication of the walls. The people, the gates, and the wall were purified. Two musical processions were organized to march around the city in opposite directions on the top of the wall and meet in the Temple for the sacrificial service. The procession going to the right was led by Ezra; the one to the left included Nehemiah. The circumambulation is reminiscent of certain Psalms: "His holy mountain … is the joy of all the earth … walk about Zion; go round about her" (Ps. 48:2, 13).

Nehemiah remained in Jerusalem for another dozen years before returning to Susa. Virtually nothing is known of his rule during this period other than his own statement that he ruled with a lighter hand than his predecessors and did not claim the governor's food allowance from the local populace. This in spite of the fact that he supported a retinue of 150 and regularly entertained foreign visitors. The refrain in Nehemiah's memoirs runs "Remember to my credit, O my God, all that I did on behalf of this people" (Neh. 5:19; 13:14, 22, 31). God's attention is similarly drawn to his opponents (Ezra 6:14), and these did not disappear after his main task was completed. During Nehemiah's absence, Tobiah was assigned a chamber in the Temple by Eliashib the priest, and the people failed to pay the levites their allotments, so that they left Jerusalem and retired to their fields. Upon his return, Nehemiah expelled Tobiah and enforced payment of the tithe (Neh. 13:4–14).

Even more serious than neglect of the levitical dues were the outright violations of the first two decrees in the solemn agreement sworn to earlier – work and commerce on the Sabbath and marriage to Ashdodite, Ammonite, and Moabite women. Nehemiah rebuked the leaders for the Sabbath desecration in terms reminiscent of Jeremiah who had said, "If … you keep the Sabbath day holy … this city shall be inhabited forever …. If you did not listen … fire … shall devour … Jerusalem" (Jer. 17:24–27). He then ordained that the gates of the city be shut for the Sabbath and the levites stand guard against local and foreign traders. The fate of Solomon's kingdom was cited against the men who took foreign wives, and Nehemiah cursed all, struck some and pulled out their hair. The grandson of the high priest Eliashib, who was married to a daughter of Sanballat, was "chased away." Successful implementation of the other cultic decrees was assured (Neh. 13:14–31).

Since kingship was not to be restored until the advent of the Hasmoneans 300 years later, Judah continued to exist as a theocracy – a province ruled by God's law with a civil head in the person of the governor appointed by the Persian king and a religious head in the person of the high priest of the line of Zadok. In the fourth century there appear coins and seal impressions bearing the Aramaic inscription *YHD Yahud* = Judea. With one or two notable exceptions, our information for the remaining 100 years of Persian rule dries up. It is possible that Nehemiah's brother Hananiah succeeded him as governor (cf. Cowley, *Aramaic Papyri* 21). In the last decade of the fifth century the governor was one who bore the Persian name Bagohi (Cowley, 30/31). The high priest Johanan was challenged by his brother Jeshua and Johanan murdered him. A stiff penalty was thereupon placed on the community by the strategos of Artaxerxes II who also bore the name Bagohi (Jos., Ant., 11:298–301). One incident that has come down through the Aramaic papyri relates that Bagohi joined the sons of Sanballat, Delaiah, and Shelemiah, in responding favorably to the request of the Elephantine Jewish community for intercession with the Persian ruler in Egypt for help in the reconstruction of their temple (Cowley, *Aramaic Papyri* 30–32). The attraction-repulsion between Samaria and Judah of the days of Nehemiah repeated itself on the eve of Alexander's conquest. Nikaso, daughter of Sanballat III, was married to Manasseh, brother of the high priest Jaddua. Jerusalem authorities objected to the marriage and asked Manasseh to choose between his wife and the priesthood. He thereupon accepted the offer of Sanballat to be high priest in the temple to be erected on Mt. Gerizim and "governor of all the places" under Sanballat's control. Many Jewish priests followed him to Samaria (Jos., Ant., 11:306–12). The Samaritan schism thereupon became final.

[Bezalel Porten]

EREẒ ISRAEL – SECOND TEMPLE (THE HELLENISTIC-ROMAN PERIOD)

In the last third of the fourth century B.C.E. decisive changes and developments took place in Ereẓ Israel. Prior to that time the country had been under the rule and influence of the great Oriental powers and civilizations. Thereafter, and until the Arab conquests in the seventh century C.E., Ereẓ Israel and all its neighbors fell under the influence of kingdoms and cultures whose main source of inspiration derived from the Greek and later also from the Roman world (see *Hellenism). *Alexander the Great's subjection of Ereẓ Israel in 332 B.C.E. encountered no serious opposition; only in Gaza did the Persian garrison defend itself heroically against the conqueror. Jerusalem and Judea reached a settlement with Alexander according to which they continued to enjoy the rights granted to them under Persian rule. However, relations between the Samaritans and the Macedonian conquerors soon deteriorated. Alexander the Great did not remain long in Ereẓ Israel, and its conquest was completed by his commanders who laid the foundations of the Hellenistic regime in the country.

Ptolemaic Rule

After Alexander's death (323) Ereẓ Israel was caught up in the vortex of wars fought among themselves by his successors, the Diadochi, among whom control of the country changed hands several times, in consequence of which the population suffered greatly. In 301 the country was finally conquered by *Ptolemy I, the ruler of Egypt, and was included in the Ptolemaic kingdom until 200, its history during this period being bound up with that of the Ptolemaic state. In the third century Ptolemaic rule in Ereẓ Israel was on the defensive against the *Seleucid kingdom which governed Syria and which also laid claim to Ereẓ Israel. For most of that century the Ptolemies generally had the upper hand and only with the accession of

*Antiochus III (223–187) to the throne of the Seleucid kingdom did the initiative pass to the rival dynasty. Already at the beginning of his reign Antiochus succeeded in conquering the greater part of Ereẓ Israel but was defeated by the Ptolemaic army at Rafa in 217. After an interval he renewed the war and in 200 his forces gained a notable victory near the sources of the Jordan, as a result of which, despite repeated efforts by the Ptolemies to regain control of Ereẓ Israel by war or political means, its rule passed to the Seleucid dynasty. Nevertheless, in terms of duration, the Ptolemaic sway over Ereẓ Israel lasted longer than that of any other foreign power in the period between the downfall of Persia and the rise of Rome. Moreover, the administrative patterns as well as the social and economic institutions and influences which appeared under the Ptolemies persisted in the country until the Roman period. In the days of Ptolemaic rule, Ereẓ Israel did not constitute a distinct administrative region, its territory being an inseparable part of the region known officially as Syria and Phoenicia. The borders of this district were not permanent but liable to changes resulting from the ascendancy now of the Ptolemaic, now of the Seleucid kingdom. In any event, it is clear that Ptolemaic Syria and Phoenicia included the whole of Ereẓ Israel and Transjordan. Among the most conspicuous results of Greek rule in Ereẓ Israel was the transformation that took place in the ethnic composition and organizational forms of its population. An extensive Greek settlement developed, Greek military colonies were established, and the character of the ancient cities underwent a change. In fact the vast majority of the Hellenistic cities were ancient ones which were now organized according to the politico-social pattern of the Greek cities. Within a short time the members of the upper classes among the local population joined the ranks of the settlers who had come from Greece, particularly prominent in this respect being the Phoenicians who became the standard bearers in Ereẓ Israel of Hellenism. Among its most notable centers were Gaza and Ashkelon on the southern coast and Ptolemais (Acre) to the north. Cities bearing a Hellenistic stamp were also established in the vicinity of the Sea of Galilee and in Transjordan. The process of Hellenization was extremely slow in the interior of Ereẓ Israel. There the original Semitic character was preserved – except for Samaria, where Macedonians settled already at the beginning of the period. Hellenism also made deep inroads in the Idumean city of Marisa, the Ptolemaic administrative center in southern Ereẓ Israel. Under the Ptolemies and later under the Seleucids, Judea was one of their many administrative units. The Hellenistic period witnessed the continuation of the state of *Yahud* which dated from the days of Persian rule. To the Hellenistic rulers Judea represented a nation – an ethnos – whose center was in Jerusalem and whose autonomous leadership was entrusted to the high priest and the Gerousia, the council of elders. In this way there were preserved in Hellenistic Judea the patterns of Jewish administration in the form it had assumed under Persian rule. The high priests belonged to the house of Zadok and the division of Jedaiah, and were descendants of Joshua son of Jehozadak, the high priest at the time of the Return. The high priesthood passed by inheritance from father to son. To the Jews and non-Jews alike the high priest was the head of the nation, its religious as well as its political leader. He presided over the council of elders and was charged with the supreme supervision of the Temple, with the security of Jerusalem and the provision of its regular water supply. Supporting the high priest was the Gerousia, which was, it seems, officially even superior to him. The Hellenistic kingdom confirmed the Jewish "ancestral laws" as the constitution binding on the entire territory of semiautonomous Judea. This constitution was identical with the Pentateuch as interpreted and shaped by Jewish tradition throughout the generations. Recognized as they were by the ruling kingdom, the Jewish authorities were permitted to impose the commandments of the Torah on all the inhabitants of Judea and to eradicate idolatry from its soil.

Judea's religious and social life centered round the Temple. The Greek historian Polybius even described the Jews as a nation that dwells around its famed Temple in Jerusalem. Associated with the Temple were the priests who represented the aristocratic class in Judea which included not only the high priest, the recognized head of the nation, but also many members of the Gerousia and those in leading positions. To the non-Jews, Judea was a land governed by a hierarchy. In addition to the dynasty of the high priests there were several notable priestly houses who fulfilled important functions in Jewish society and in its political life. Among these were, for example, the sons of Hakkoz (Accos). Johanan son of Hakkoz conducted negotiations with Antiochus III in order to obtain privileges for Jerusalem after its conquest by the Seleucids; his son Eupolemus led the delegation to Rome on behalf of Judah Maccabee. Conspicuous among the lay houses which attained positions of great influence in Judea in the third century B.C.E. was that of the *Tobiads, whose roots went back to First Temple times and the basis of whose power was in southern Gilead where the family estates, famous as "the land of Tobiah," were situated. The influence of the Tobiads increased under Persian rule. The Tobiah who lived in the days of Nehemiah was connected by marriage with important personages in Jerusalem and was among those who organized the opposition to the policy and decrees of Ezra and Nehemiah. One of his descendants, Tobiah who lived in the days of Ptolemy Philadelphus, was the head of the military colony in the "province of Ammon" which was composed both of Jews and non-Jews. Joseph b. Tobiah, following in the ways of his father, established close ties with the royal court and transferred the center of his activities from Transjordan to Ereẓ Israel. A temporary deterioration in the relations between the high priest and the Ptolemaic kingdom presented Joseph with new opportunities. Appointed tax-collector by that kingdom, he collected the taxes on an unprecedented scale and felt at home in Samaria no less than in Judea, to which his operations brought great wealth. With him there entered into Jewish life ways and customs alien to the Jewish tradition. His path was followed by his sons, and the Tobiads and their circle became the chief disseminators of

Hellenism in Jewish Ereẓ Israel. In their way of life the upper Jewish classes, both priestly and lay, drew increasingly closer to the non-Jewish sections of the population, and there was a revival of tendencies which had not entirely ceased even in earlier generations: opposition to the emphasis on the uniqueness of the Jews and a desire to merge with the upper strata of the general society of Ereẓ Israel. Hellenistic influence in Judea was chiefly evident in the sphere of material civilization. As early as in the Persian period the coins of *Yahud* had imitated those of Athens, and the Hellenistic financial system gradually conquered Jerusalem too. In the spheres of building and of art, the influence of Hellenism also made itself felt. A notable outward indication of the Hellenization of Judea was the widespread use of Greek names, for which Jews, and not only those estranged from Jewish tradition, felt a need. Yet it must be emphasized that shortly before 200 B.C.E. Greek culture had in general not succeeded in striking deep roots in Judea. Due to the practical requirements of life, Jews learnt to speak Greek, but it is doubtful whether there were as yet many Jews in Ereẓ Israel who learnt the language in order to study Greek classical works and thought.

Seleucid Rule

Antiochus III's conquest of the country did not greatly change the pattern of the administration and the habits prevalent in Ptolemaic Judea. The Seleucid king confirmed the existing regime there and even gave its inhabitants additional privileges: the Judean population was exempted from all taxation for three years and thereafter granted a reduction of a third in its taxes. The priests, the freedmen, and the members of the Gerousia were given complete exemption from taxes. Similar relations continued also under Antiochus' son, Seleucus IV (187–175). However, the political and financial crisis which came upon the Seleucid kingdom led to changed relations between it and the Jews. As a result of Antiochus III's defeat by the Romans and the peace treaty of Apamea (188), a heavy financial burden was imposed on the Seleucid kingdom which was obliged to pay an indemnity to the victorious Roman republic. The kings of the Seleucid dynasty now found themselves compelled to raise money from every source. Nor did they overlook the treasures kept in the wealthy temples throughout their kingdom. This explains the attempt of Seleucus IV to plunder the Temple treasuries, an act which, though not directly aimed at the Jewish religion, must be regarded as the first stage in the conflict between the Jews and the Seleucid kingdom.

The reign of his brother *Antiochus IV Epiphanes (175–164) proved to be a turning point in the history of the Jewish nation. During the first seven years after his accession his military and political activities centered on his kingdom's southern border – on Ptolemaic Egypt – and hence the importance he attached to Judea. Already at the beginning of his reign he intervened in the internal affairs of Jerusalem, deposed the high priest *Onias III and replaced him by the latter's brother *Jason who had Hellenizing tendencies and had promised the king to raise more taxes than his predecessor. With the Seleucid kingdom's approval, Jason introduced far-reaching changes in the administration of Jerusalem, whose purpose was to transform that city into a *polis*, named Antiochia, by establishing in it institutions characteristic of the Hellenistic *polis*. Notable among these was the gymnasium, which soon superseded the Temple as the focus of social life, to the deep dismay of those loyal to the Jewish tradition. After a few years Antiochus also deposed Jason and appointed *Menelaus in his stead (171). Henceforward a new chapter opened in the relations between the Seleucid kingdom and Judea. Against the background of Antiochus' Egyptian wars, significant events took place in Judea. Already in 169 B.C.E., on his return from his first invasion of Egypt, the king with the help of Menelaus plundered the Temple treasuries, and, a year later, during his last expedition to the Nile Valley, rumors of Antiochus' death spread in Judea. Returning to Jerusalem, Jason seized power in the city. But when Antiochus was on his way back from Egypt after Roman intervention against him, he captured the city and punished its inhabitants. To ensure his future control of Jerusalem he stationed in its citadel, the Acra, non-Jewish settlers who were joined by extreme Hellenists from Menelaus' party. Through their domination of the capital of Judea, the Jewish character of the city became obscured. Antiochus went a step further. He totally prohibited the fulfillment of the *mitzvot* of the Jewish religion and any Jew found observing the Sabbath or circumcising his son was put to death. He likewise forced upon the Jewish population idolatrous rites and prohibited food, chiefly the eating of swine's flesh. The Temple was desecrated and henceforward called after Olympian Zeus (167). Contrary to Antiochus' expectations, the majority of the nation remained faithful to its religion and members of its various classes showed a readiness to undergo martyrdom. The unlimited devotion of the Jewish masses to their religion was in any event deep-rooted but on this occasion there unfolded, for the first time in the history of mankind, an epic chapter of martyrdom on a large scale that served, in the resistance of the martyrs and the *Hassideans during the religious persecutions, as a symbol and an example throughout all succeeding generations to both Jews and non-Jews. Associated with this martyrdom was an eschatological expectation. There was a growing belief that a period of unprecedented suffering was approaching, heralding the downfall of the evil kingdom and the fulfillment of the visions of the "end of days" (see *Eschatology).

The Hasmonean Revolt

Against Antiochus' policy there arose a large movement of rebellion which was speedily forged into a powerful fighting force by the Hasmonean dynasty, a priestly house from Modi'in in the district of Lydda. Henceforward, for a period of about 130 years, the Hasmonean dynasty was at the center of Jewish life. The revolt was led first by *Mattathias. Under him the rebels refrained from fighting pitched battles against the Seleucid army, contenting themselves with guerrilla war-

fare, Mattathias' activities being directed at consolidating the organization of the rebel groups and at ending Seleucid rule in the villages and country towns of Judea. His strategy gradually reduced the area in Judea under Seleucid control and in effect isolated Jerusalem from the other military bases of the enemy. After Mattathias' death the leadership passed to his sons, of whom *Judah, known as Maccabee, was distinguished for his military talents. Gaining four decisive victories over the Seleucid armies, Judah used his military superiority to liberate Jerusalem, except for the Acra, in Kislev 164. The Temple was purified of idolatry and the sacred service in it entrusted to priests from among the ranks of the rebels. To commemorate the purification of the Temple a festival, that of *Ḥanukkah, was instituted to be observed for all generations. The Seleucid kingdom could not long remain indifferent to the operations of the Hasmoneans. There was also a growing fear that Judah would take the Acra. *Lysias, who acted as regent on behalf of the youthful king Antiochus v, attempted once more to invade Judea and subdue the rebels. The invasion ended in a peace settlement. The Seleucid kingdom unequivocally revoked Antiochus Epiphanes' policy of religious persecution, and, with the aim of appeasing the Jews, Menelaus, now made the scapegoat for the failure of that policy, was executed, and Alcimus, a moderate Hellenist, appointed high priest. The Seleucid kingdom did not recognize Judah Maccabee as the head of the Jewish nation, although he continued to be the leader of troops of Jewish fighters loyal to him. The principal achievement of the Jews was the Seleucid kingdom's recognition of their complete religious freedom, although militarily and politically the treaty bore the character of an armistice only. Tension increased in Judea with the appearance in Syria of a new king, *Demetrius I (162), who supported Alcimus and sought to put an end to Hasmonean supremacy in Judea. In the encounter between Judah Maccabee and the Seleucid commander *Nicanor, the former gained his last victory (the Day of Nicanor, Adar 13, 161). Henceforward political independence became Judah's ardent purpose, and to this end, ties with Rome seemed an important step. The treaty concluded between them marked the Roman republic's official recognition of Judea. While it is not clear whether the treaty had any immediate results, since it did not deter Demetrius from again sending his forces against the Jews, the Hasmoneans nevertheless set great store by it since it admitted Judea into the ambit of international relations. Judah Maccabee did not long enjoy the results of his victory over Nicanor, for Demetrius' defeat of his enemies in the east enabled him to send large forces to Judea, and Judah fell in battle (160 B.C.E.) *Jonathan and *Simeon, Judah's brothers, gathered around themselves the remnants of the fighters but failed to regain Jerusalem, and were compelled to adopt the earlier tactics of guerrilla warfare. Rallying after several years, the Hasmoneans took up their residence at *Michmas (Mukhmās). When a rival to Demetrius I arose in the person of *Alexander Balas, new opportunities presented themselves to Jonathan the Hasmonean. Appointed high priest by Alexander, he first served in that capacity on Tabernacles 152, and during the next 115 years the high priesthood continued to be held by the Hasmonean dynasty. Jonathan went from strength to strength and was able to take advantage of the Seleucid kingdom's internal difficulties for the advancement of Judea. The country now filled a role of prime importance throughout southern Syria. Among the territorial achievements under Jonathan was the annexation of southern Samaria and the region of Ekron; the southern coastal cities, too, came under Jewish influence.

Independent Judea

Jonathan was treacherously murdered by *Tryphon, the Syrian commander. His successor and brother, Simeon, followed in his footsteps and even obtained recognition of the freedom of Judea from the Seleucid king *Demetrius II who agreed to exempt the country from paying taxes to the kingdom (142 B.C.E). This official recognition was regarded by the Jews as the beginning of the freedom of Ereẓ Israel ("Then the people of Israel began to write in their instruments and contracts: 'In the first year of Simeon the high priest, the commander and leader of the Jews'" – I Macc. 13:42). Simeon continued in various ways the work of Jonathan. In foreign affairs he adopted a hostile attitude toward those forces in the Seleucid kingdom that were inimical to the independence of Judea. To make Judea militarily secure he eradicated the last cells of opposition from its soil, and obtained for it access to the sea. As early as the beginning of his rule he dispatched an armed force to Jaffa, and, driving out the non-Jews, secured the harbor for Judea. He also took Gezer, which dominated the road leading from Judea to the coastal plain and captured the Acra, the conquest of these places having been made possible by the speedy progress of the Jewish army in the technique of subjugating cities. The inhabitants of Gezer were expelled, the city was cleansed of idolatry, and Jews loyal to their religion were settled in it. There Simeon built a palace for himself, and the city, of which Simeon's son, John *Hyrcanus was appointed governor, became one of Judea's administrative centers. The capture of the Acra (Iyyar 23, 141) made an even greater impression on that generation, for as long as it was occupied by the Hellenists the independence of Judea did not seem assured. The day on which the Acra was taken was appointed a festival. During Simeon's final years, relations deteriorated between him and *Antiochus VII Sidetes, the last great king of the Seleucid dynasty, who sought to curtail the influence of Simeon and bring him once more under the yoke of the Seleucid kingdom. Demanding in particular the return of Jaffa, Gezer, and the citadel of Jerusalem, Antiochus ordered his governor of the coastal plain to launch an attack on Judea from the base at Jabneh. A large Jewish force under the command of Simeon's sons set out against the king's army and put it to flight, pursuing it beyond Ashdod. Never again in the days of Simeon was there any open Seleucid intervention in Judea.

Hasmonean Rule

Simeon was anxious to obtain Jewish sanction for his rule and to secure for his house the status of a hereditary dynasty in

Judea. In 140 B.C.E. a great assembly took place in Jerusalem which confirmed both Simeon and his sons after him "until there should arise a faithful prophet" as ethnarch, high priest, and commander-in-chief of the Jewish nation. This decision of the Great Assembly became the cornerstone of the Hasmonean regime and correctly reflected the union, in the hands of that dynasty's representatives, of the functions of the high priesthood, the civil rule, and the military command, a union of functions which was characteristic of the Jewish state's entire development under Hasmonean rule. Simeon endeavored to attract to himself circles that were at first opposed to the policy of the Hasmoneans, among these being men of local influence in various parts of the country, such as Ptolemy, Simeon's son-in-law, whom he appointed governor of Jericho. Resolved apparently, with the support of Antiochus Sidetes, to supplant Simeon in Judea, Ptolemy murdered him and two of his sons. But the murder (134 B.C.E.) failed in its political purpose. Affection for the Hasmonean dynasty was deep-seated in the nation and Simeon's surviving son, John Hyrcanus, succeeded him as the ruler of Judea. The growth and expansion of the Hasmonean state of Judea were influenced by the processes which led to the increasing disintegration of the Seleucid kingdom. At the beginning of his rule, after he had overcome his internal enemies, John Hyrcanus was still faced with a threat from the central Seleucid government in the person of Antiochus Sidetes. The fighting was protracted (134–132 B.C.E.) and several of the king's advisors even tried to give it the character of a new religious war. After a drawn-out siege of Jerusalem, the sides came to terms. Antiochus accorded official recognition to John Hyrcanus' rule of Judea, while the latter undertook to pay him an indemnity for the cities which his predecessors had taken outside the confines of Judea. He also undertook to assist Antiochus in his campaign against the Parthians, thus renewing for a time the relations between Judea and the Seleucid kingdom. But after Antiochus VII's death during his expedition against the Parthians (129 B.C.E.), the entire structure of the Seleucid kingdom collapsed, whereupon John Hyrcanus, having succeeded in regaining the complete political independence of Judea, initiated a policy of expansion in Ereẓ Israel. His conquests were in effect a continuation of the war upon which his Hasmonean predecessors had embarked, his basic approach being that the country as a whole was the ancestral heritage of the Jewish nation. Under him the expansion, which took place in various directions – southward, northward, and eastward – had decisive consequences for the country's future.

Already in the 20s of the second century B.C.E. John Hyrcanus succeeded in annexing to Judea most of the territory of Ereẓ Israel and especially what was outside the limits of Hellenistic cities. In terms of its results for subsequent generations, particular importance attached to the expansion southward to Idumea (see *Edom), which, together with its two principal centers, Adora and Marisa, was annexed to Judea. Its inhabitants were converted to Judaism. The proselytization of the Idumeans was the first of its kind in that it was one of an entire race and not merely of a single or more individuals. The Idumeans soon became an inseparable part of the Jewish nation and their upper classes began to occupy important positions in the government and society of the Hasmonean kingdom. Henceforward the proselytization of the whole of Ereẓ Israel assumed the character of a fixed aim of Jewish policy.

John Hyrcanus also undertook military operations in Transjordan and captured Madaba and Samoga; he attacked the Samaritans, took their capital Shechem, and destroyed their temple on Mount Gerizim. During his last years, his conquests reached their zenith in the capture of the large Hellenistic cities of Samaria and Scythopolis (Beth-Shean), thereby opening to the Hasmoneans the way to Galilee, parts of which were, it seems, annexed to Judea already in his days.

His son and successor, *Aristobulus I (104–103), completed the conquest of Galilee and defeated the Itureans who apparently ruled over part of Upper Galilee. As a result of the conquests of John Hyrcanus and Aristobulus, the area of Judea was enlarged several fold. Almost all the population outside the confines of some Hellenistic cities now fell under Jewish rule and became part of the Jewish nation, and even some Hellenistic cities were captured.

This expansionist policy was continued chiefly by Alexander *Yannai (103–76 B.C.E.) under whom all the foreign cities of Ereẓ Israel, except Ashkelon, were taken. The Jews also made an onslaught on the cities of the Decapolis, and, among other places, took Gadara.

The Hasmonean conquests eradicated the main political impact of Hellenism from the territory of Ereẓ Israel and transformed most of the country's non-Jewish inhabitants into an integral part of the Jewish nation. Judea now became the accepted designation of the country as a whole and continued as its official name until the days of the emperor Hadrian, thereby reflecting the ethnic and power changes engendered at the time of the Hasmonean rulers' conquests. Facts of great significance were established, and, even after the downfall of the Hasmonean dynasty, Ereẓ Israel remained for centuries a country with a Jewish majority, a fact that had many implications for the future.

At the basis of the constitutional development of Hasmonean Judea lay the decision of the Great Assembly of 140 B.C.E. which sanctioned the position of the Hasmoneans as the rulers of the Jewish state and established the connection between the Hasmonean dynasty and the high priesthood. The status of the Hasmonean ruler as regards the outside world was at first expressed in the title of ethnarch, but a decisive change occurred in the days of Aristobulus I, who assumed the title of king in order to enhance the prestige of the Hasmonean ruler, since that of ethnarch no longer reflected his status as compared to that of other rulers in the region.

Judea's transformation into a monarchy enlarged the importance of the Hasmonean king as far as the traditional institutions that directed the nation during the preceding period were concerned. Yet, despite the enhanced status of the rulers of the Hasmonean dynasty, they did not officially regard

themselves as absolute rulers, with the possible exception of Alexander Yannai at a certain period during his reign. At least internally they emphasized that, in the state, the entire nation was sovereign alongside the ruler, as clearly indicated in Hebrew inscriptions on Judean coins.

At the outset of its career, the Hasmonean dynasty was borne along on a tide of religious-national enthusiasm. For the Jewish masses it was the dynasty to which the deliverance of Israel had been entrusted. But, already at an early stage of the accession of the Hasmonean dynasty, it was evident that its supporters were not all of one complexion. Only with difficulty was a common language found between the leaders of the priestly aristocracy that joined the Hasmonean dynasty and the Hassideans. At first the Hasmoneans were the natural leaders of the circles which were under the influence of the *Pharisees, but, during John Hyrcanus' rule, a breach occurred between the Hasmoneans and the Pharisees which widened in the days of his sons. Several of the factors that marred the relations between the Hasmonean dynasty and the Pharisees may be conjectured. The atmosphere prevailing in the royal court and its external Hellenization, as also that of the kingdom, were incompatible with the outlook of the Pharisees. The gradual basing, too, of the Hasmonean dynasty on various social elements throughout the country which in part had nothing in common with the ideals of the holy war increased the tension. Some rejected the transformation of Judea into a monarchy. Among the opponents of the Hasmonean dynasty were also those who wanted to leave it in the possession only of the secular government, on condition that the high priesthood was given to others. There were circles, too, that repudiated especially the assumption of the royal crown by the Hasmoneans, grounding their opposition on the outlook that this crown was reserved for the House of David only (see also *Sadducees; *Essenes).

Nonetheless, the nation greatly honored the Hasmonean dynasty and even its leading opponents showed a willingness for an accommodation. The gravest crisis in relations took place during the reign of Alexander Yannai, who came, however, to realize that a compromise had to be reached at least with a section of the hostile elements among the Jews. His last victories in his wars against the enemies of Judea in Transjordan likewise earned him great popularity among the masses of the nation.

The reign of his widow *Salome Alexandra (76–67) was a period of close cooperation between the Pharisees and the throne. In her days the leaders of the Pharisees were given the direction of the state, and their traditions and ordinances, abolished under John Hyrcanus, became once more obligatory.

Alexandra's death (67 B.C.E.) left Judea in a state of civil war. Her elder son *Hyrcanus, deposed by his brother *Aristobulus from the kingship and the high priesthood, tried after a short time to realize his legitimate claims to them, and through one of his supporters, *Antipater II, conspired with *Aretas III king of the *Nabateans. Their combined armies defeated Aristobulus and besieged him in Jerusalem. Meanwhile the Romans, having arrived in Syria, compelled the Nabateans to withdraw from Judea. The decision with regard to the succession to the Hasmonean throne was left to *Pompey, the Roman commander, who was disposed to entrust the rule to Hyrcanus. After some hesitation Aristobulus surrendered to Pompey, and the Roman army advanced against Jerusalem, whereupon Hyrcanus' adherents opened the gates of the city to it. It was only on the Temple Mount that the Romans encountered any strong opposition. After a three-month siege the Temple Mount, too, was taken and thousands of its defenders were killed (63). An end had come to the independence of Hasmonean Judea, which had lasted for some 80 years and had achieved the political consolidation of Ereẓ Israel under Jewish rule.

THE ROMAN PROVINCE. The Roman conquest led to decisive political changes in the country. Syria became a Roman province, while Judea, reduced in area, was granted limited autonomy and made dependent on the Roman governor of Syria. Judea was deprived of the whole coastal plain and of access to the sea. Part of Idumea (Marisa) and of Samaria was severed from Judea. In this manner the territorial continuity of Jewish settlement in western Ereẓ Israel was destroyed, the only road linking Galilee and Jerusalem being now by way of the Jordan Valley. Pompey naturally freed from Jewish rule the large Hellenistic cities in Transjordan as well as Scythopolis, which were joined to the Decapolis and recovered their autonomous city life. The Greek cities on the coast also regained their freedom. The territory remaining under Hyrcanus II's rule thus comprised Judea and southern Samaria, most of Idumea, the areas of Jewish settlement on the eastern bank of the Jordan, and Galilee. Hyrcanus was divested of his royal title, and the obligation to pay taxes to the foreign government reimposed. The Jews in the country did not willingly accept the new regime and the following years witnessed frequent insurrections usually led by men who represented Aristobulus' branch of the Hasmoneans.

A notable change for the better took place under *Julius Caesar who was well disposed to the Jews and even regarded them as allies. After his victory over Pompey, Hyrcanus and Antipater went over to his side and helped him when he was in danger in Alexandria. The fact that Hyrcanus had joined Caesar's camp influenced the attitude of the Jews of Egypt, who dominated key positions at the gateways to the country. When the danger threatening him had passed, Caesar took several decisions in favor of Hyrcanus II and the Jews in Ereẓ Israel. Hyrcanus and his sons after him were confirmed as high priests and as ethnarchs of Judea, the walls of Jerusalem demolished in the days of Pompey were rebuilt, and the harbor of Jaffa was restored to the Jews. Under the new arrangements instituted by Caesar, Antipater rose to greater power, and his sons were given influential positions in the government, *Phasael, the elder, being appointed governor of Jerusalem and *Herod governor of Galilee.

The assassination of Caesar (44 B.C.E.) drew Judea, too, into the vortex of the Roman civil war. Cassius, one of the leaders of the pro-republican forces, went to the east and gained control of Syria and Ereẓ Israel. Antipater and his sons now sided with Cassius who tried to extort as much money as possible from the population of Judea. While Antipater fell victim in the internal struggle then taking place in Judea, his sons extended their influence.

Following the Parthian invasion in 40 B.C.E. of Rome's eastern provinces, momentous changes occurred. Mattathias Antigonus (*Antigonus II), Aristobulus' younger son, now considered the time opportune for entering into a compact with the Parthians and in this way regaining his ancestral throne. As the Parthian forces advanced along the coast, the Jews in the neighborhood of Carmel and in the vicinity of Apollonia (Arsuf) flocked to join Antigonus. Hyrcanus and Phasael, who went out to negotiate with the Parthians, were taken prisoner by them, while Herod escaped from Jerusalem and made his way to Rome to obtain military and political assistance.

With the aid of the Parthians, Antigonus now became king of Judea, thus reestablishing the Hasmonean kingdom brought to an end 23 years earlier by Pompey. In the meantime Herod, the sole ally of the Romans in Ereẓ Israel, was received with great honors in Rome by its rulers Antony and Octavian. To raise Herod's prestige above that of Antigonus, he was given the title of king. Returning to Ereẓ Israel, he succeeded with the help of the Roman legions in capturing Idumea, Samaria, and Galilee. After the defeat of the Parthian armies in the east, large Roman forces became available for the war in Judea and the fate of Antigonus was in effect sealed. Following a siege of five months Jerusalem fell to the Roman army (37 B.C.E.) and Antigonus, the last king of the Hasmonean dynasty, was executed, ushering in Herod's rule in Judea.

Herod's Rule

Herod's reign was chiefly the creation of Rome's eastern policy. The Romans supported him as the ruler of Judea, seeing in him a powerful personality capable of preserving the existing order in the country and one whose loyalty to them was not in doubt. Since the Jews constituted the overwhelming majority of the population of Ereẓ Israel, it also seemed proper from the Roman viewpoint that its king should be a Jew. However, in order to include within the borders of Judea a large non-Jewish population, it was necessary that the character of the regime should not be theocratic, as had been the case with the Hasmoneans when the ruler combined the functions both of king and high priest. Herod thus fulfilled the demands of Roman policy in Ereẓ Israel, and was a commander and politician who throughout his life cooperated fully with Rome's representatives in the east.

Herod's foreign policy faithfully mirrored that of Rome. He loyally carried out Antony's policy when the latter still enjoyed great power, and, against the background of the policy of Antony and Cleopatra, he became involved in a military struggle with the Nabatean kingdom (31 B.C.E.). After the fortunes of war had gone first to Herod and then to the Arabs, his considerable military talents enabled him to gain a decisive victory over the Nabateans, thus proving to Rome's rulers his value as a leader capable of sustaining security and order in the region.

After Octavian's victory over Antony (30 B.C.E.), the former confirmed Herod as king of Judea and even extended the area under his rule. In the days of *Augustus' principate in the 20s of the first century B.C.E., Herod's kingdom comprised almost the whole of Ereẓ Israel, except for the enclave of Ashkelon and the coastal strip north of Carmel which were at no time during the Second Temple period incorporated within the Jewish state. In 23 B.C.E. Herod's kingdom was considerably enlarged when Trachonitis, Batanea (Bashan), and Auranitis (Hauran) were included under his rule. Further areas near the sources of the Jordan were annexed to his kingdom in 20 B.C.E. Rather than being based on official arrangements, Herod's political status in the Roman Empire was grounded on personal relations which he had prudently cultivated with the leaders of the Roman state and on the ties he had established with Augustus himself and with Agrippa, the greatest contemporary Roman commander and the princeps' right hand.

Herod's great influence with the Roman politicians enabled him to help Jewish communities in the Diaspora. When a serious dispute broke out about the rights of the Jews in the cities of Asia Minor, Agrippa, to whom the decision was entrusted, decided in favor of the Jews. Over his subjects in Ereẓ Israel itself Herod exercised unlimited sway. Generally he succeeded in maintaining peace within the borders of his kingdom, nor did embitterment against him lead during his reign to open rebellion. With an iron hand and timely concessions, with rigorous police supervision and the promotion of social elements dependent on him for their status, he succeeded in sustaining his regime until the day of his death.

Herod's conquest of Jerusalem spelled the end of the institutions of the old Hasmonean regime. He established a royal council which was not rooted in the Hasmonean past and which dealt with all important matters. The traditional Jewish *Sanhedrin was divested of political power. Another notable Jewish institution whose prestige was curtailed was the high priesthood. Since Herod himself did not belong to the priestly class and was accordingly unable to serve as the high priest, he was constrained to appoint others to that office but took care that they should be his loyal supporters and not too deeply involved in the Hasmonean past. He also abolished the custom whereby the high priest was appointed for life.

The external splendor of Herod's reign found expression in his court, which was in every respect identical with those of other Hellenistic kings in the east. Many of his important ministers were Greeks and among his intimate friends were several luminaries of contemporary Greek literature. The tutors of his sons as well as his bodyguard were non-Jews. Herod's fame and extensive international ties attracted to his court visitors from various places in the Greek world who even played a cer-

tain part in the events that took place in the royal court. Herod married many wives who bore him sons and daughters. By his first wife he had a son, *Antipater; by his second, *Mariamne the Hasmonean, he had *Alexander and *Aristobulus. After he executed Mariamne he married various women, among whom were an Alexandrian Jewess, a Samaritan woman, and a native of Jerusalem. The presence of different wives' sons, all of whom entertained the ambition to succeed their father, vitiated the royal court. Herod executed three of his sons, the two born to his Hasmonean wife and his eldest son Antipater, on the charge of conspiring against him. These deeds, the outcome of an atmosphere of suspicion, clouded the success generally enjoyed by Herod during most of his reign.

More than all Jewish rulers during the period of the Second Temple, Herod devoted himself to building new cities and erecting magnificent edifices, as was customary among the rulers of *Rome. In this sphere his most important achievements were the establishment of Caesarea (on the site of Strato's Tower) and Sebaste (on the site of Samaria). At Caesarea he also built the largest harbor in Ereẓ Israel which soon played a very significant part in the country's economic life. In Sebaste he settled many of his demobilized soldiers to whom he gave fertile allotments, and beautified the city. These two cities he organized on the pattern of the Hellenistic cities in the east and their establishment to some extent upset the balance of power that had existed in Ereẓ Israel between the Jewish and the non-Jewish populations. He also built the fortress of Herodium to the southeast of the capital, as well as Phasaelis in the Valley of Jericho, and Antipatris, improved and embellished Masada, and built the fortress of Machaerus. As a result of Herod's activities Jerusalem became one of the most resplendent capitals in the entire east. In it he erected a palace, rebuilt the Temple, and constructed the impressive towers of the Upper City, the fortifications of the stronghold of Antonia, as well as a theater and an amphitheater. He also built magnificent palaces in Jericho and in other places.

Under the Procurators

Herod's kingdom did not survive his death (4 B.C.E.). In his last will, subsequently confirmed by Augustus, he bequeathed Judea, Idumea, and Samaria to his son *Archelaus; Galilee and Perea to another son Herod *Antipas; and the northeastern parts of the kingdom to a third son *Philip. For the nation, Herod's death was the signal to demand an alleviation of the burden of taxation and a change in the nature of the regime. When their demands were not met, a dangerous rebellion broke out which was only suppressed by the vigorous intervention of Varus, the governor of Syria. Augustus did not bestow the title of king on Archelaus who had to be content with that of ethnarch. He failed to win the support of his Jewish and Samaritan subjects, and they complained of him to the emperor, who ordered that he be deposed and that his inheritance, Judea, be organized as a Roman province (6 C.E.). Believing that there was no need to send Roman legions to Judea and that an *auxilium* would be enough to maintain order and security and to suppress disturbances, Augustus laid down that the governors of the province of Judea were to be of equestrian rank. At first the governors of Judea bore the title of *praefectus* and only after Agrippa I's death were they officially referred to as *procurators.

Something is known of the origin of several procurators of Judea. One of them, Julius Alexander *Tiberius, of Jewish parentage, was an apostate. Felix was a Greek and a freedman. The last procurator, Florus, came from a city in Asia Minor. Procurators of eastern-Hellenistic origin were naturally more disposed toward the Hellenized urban population than to the Jews.

The governors of Syria intervened in the affairs of Judea. In several instances this intervention may be explained as resulting from the special authority granted by the emperor to the governor of Syria. At any rate, it is clear that the auxiliary forces stationed in Judea were not enough to suppress serious revolts, and the procurator of Judea was in effect dependent on the help given to him by the governor of Syria, who was not merely governor of an ordinary province but the most distinguished of the Roman Empire's governors, the supreme commander of the Roman east, and responsible for the Parthian border. Accordingly, he regarded himself as responsible, to some extent, for the security of the province of Judea as well, even though he was assigned no special authority over that territory.

As a rule the Roman administration granted a large measure of autonomy to the local Jewish institutions, which were charged with preserving peace and order and which assisted the Romans in collecting the direct taxes. Foremost among the Jewish institutions was the Sanhedrin in Jerusalem, the Great Bet Din, which met in the Chamber of Hewn Stone. Whereas administratively its jurisdiction was restricted to the limits of Judea, its authority in the sphere of religion and as regards its enactments extended beyond these circumscribed territorial borders. Its functions were varied. It was the supreme institution of the Jewish nation in matters of religion and worship, issued regulations in the religious and juridical spheres, and supervised religious life both in Ereẓ Israel and beyond its borders.

Under the earlier procurators relations between the Jewish nation and the Roman Empire had not yet become acute. Before the time of *Pontius Pilate (26–36 C.E.) there is no mention of bloodshed in Judea. But from his days and onward there are increasing references to a messianic ferment, to disturbances, and to a gradual disappointment in the Roman administration, which had at first tried to find a suitable way of preserving order in Judea by respecting the religious feelings of the Jews, for example, by prohibiting the entry into Jerusalem of representations and images. But it was not often that the two sides reached agreement. The stationing in Jerusalem of part of the auxiliary army, usually inimical to the Jewish population, in itself led to clashes. There were also the heavy taxes and the inflexibility of several procurators which

contributed to increasing the tension between the Roman administration and the Jews.

The first open breach between the Jews and the Roman Empire occurred during the reign of Gaius *Caligula (37–41 C.E.). After the emperor's death, peace was indeed outwardly restored but there nevertheless remained murky sediment that clouded the relations between the two sides. It had suddenly become clear to the Jews what evil lay in store from the rule of an omnipotent ruler. The renewal of Antiochus Epiphanes' decrees had become a present reality. Taking advantage of the dangerous mood of Caligula who, sincerely believing in his own divinity, demanded divine honors from his subjects, the non-Jewish inhabitants of Ereẓ Israel erected in Jabneh an altar which the Jews demolished, thereby arousing the anger of the emperor, who ordered that a massive golden image be set up in the Temple in Jerusalem, and delegated the task to Petronius, the governor of Syria. The implacable opposition of the entire Jewish nation and *Agrippa I's intervention with the emperor prevented the execution of the order and only Caligula's death averted a yet graver situation.

The death of Caligula and the accession of *Claudius (41 C.E.) ushered in great prospects for the advancement of Agrippa I, the grandson of Herod and of Mariamne the Hasmonean, who was appointed king of the whole of Ereẓ Israel. For three years (41–44) the status of Judea as a province was annulled. Nor did Agrippa conform to the traditional policy of the Herodian kings who were always Rome's faithful servants. His personal ties with the emperor encouraged in him the hope that he would be permitted to do what others had not succeeded in doing. Of all the leaders of the Herodian dynasty, he alone in all his strivings gave primacy to the Jewish nation and its future, and became the most illustrious Jewish politician of his generation. The last years of his life were marked by a complete identification with the Jewish nation and with its needs as he saw them, and to this end he cooperated with the greater majority of the Jews of Ereẓ Israel who regarded him as in every respect a Jewish king and the heir to the Hasmonean rather than the Herodian dynasty. The non-Jews in Ereẓ Israel, however, looked upon him as their enemy.

The death of Agrippa (44 C.E.) led to the reimposition of direct Roman rule in Judea. But the last 20 years of existence of the Second Temple were marked by a complete deterioration of the Roman administration, by a growing tension between the procurators and those under their rule, and by a breakdown of order and security throughout Judea. Typical in this respect was the procuratorship of Felix (52–60 C.E.). At first his rule was animated by a conciliatory attitude toward the Jews – whose leaders and especially the former high priest Jonathan b. Anan even strove for his appointment as procurator – but it eventually ended in an open crisis between the Roman regime and the Jews. In his days there was an increase in the activities of the extremist freedom fighters, now a permanent feature of life in Judea. At the outset of his procuratorship Felix tried to arrest the spread of the movement and acted energetically against those who inspired messianic hopes among the Jews. He suppressed, among others, a movement which arose under the inspiration of an Egyptian Jew's prophecies who promised to overthrow the walls of Jerusalem with the breath of his mouth. Outside the limits of Judea, too, the procuratorship of Felix was distinguished by disturbances and bloody clashes. The main focus of tension was at Caesarea, where the cause of the conflict was the struggle for civic rights between the Syrian-Greek majority and the large Jewish minority. While the latter enjoyed superiority in wealth and power, their opponents relied on the garrison whose soldiers were drawn from Sebaste and from Caesarea itself and naturally disposed to help their brethren. In the days of Florus (64–66 C.E.), the last procurator before the revolt, there was a decisive breach between the Roman administration and the Jewish nation. Neither the Roman authorities nor the Jewish autonomous institutions were able to preserve their influence and power. There was growing anarchy alike in the streets of Jerusalem and in the rural areas of Judea.

The Revolt (The First Roman War)

The great revolt which broke out in 66 C.E. was the result of a combination of several factors. In the realm of theory there was a conspicuous discrepancy between the Jewish belief in the divine choice of the Jewish nation and in its glorious future on the one hand, and on the other the present reality of the Roman Empire's omnipotent rule. This discrepancy found vent in increasing messianic hopes and in expectations that the eternal kingdom of the Jewish nation would be established. The contrast was sharpened by the very essence and character of the Roman Empire with its tyrannical rule and its idolatry which extended even to political manifestations, such as emperor worship (see also *Zealots, *Dead Sea Sect).

In addition to these feelings there were also several tangible features of the Roman regime which gravely offended the Jews. The presence of a Roman army in Jerusalem, the supervision by the authorities of divine worship and of the Temple, the heavy burden of taxes and customs duties – these, but perhaps most of all the Roman administration's support of the non-Jewish population in Ereẓ Israel, caused the Jews to hate the rule of Rome.

The revolt also bore the character of a social revolution, its revolutionary social character being particularly prominent in those extremist groups in which messianic leaders, such as *Menahem the Galilean and *Simeon Bar Giora, were active. To them the revolt was not only a war against Rome. It was also a struggle against the upper classes of Judea who for many years had cooperated with the Roman regime.

The immediate events that led to the great revolt were associated with the tension in Caesarea and with the procurator Florus' conduct in Jerusalem which provoked a clash between the Jews and the Roman army. On the initiative of Eleazar b. Hanania, sacrifices were no longer offered for the welfare of the Roman people and the emperor. The Roman garrison in Jerusalem was destroyed, and the Roman army in Syria under the command of Cestius Gallus, the governor of

Syria, was defeated at the ascent of Beth-horon. A provisional government was set up which united under its rule the whole of Jewish Ereẓ Israel.

The emperor *Nero could not remain indifferent to events in Judea and dispatched a huge Roman army under the command of *Vespasian to suppress the revolt. Vespasian invaded Galilee and, after overcoming stubborn resistance, crushed Jewish opposition there (67) and in Transjordan. The significant events that took place in the heart of the Roman Empire after the death of Nero (June 9, 68) greatly delayed the continuation of military operations by Vespasian who at the beginning of July 69 proclaimed himself emperor of Rome. In the spring of 70 C.E. his son *Titus laid siege to Jerusalem.

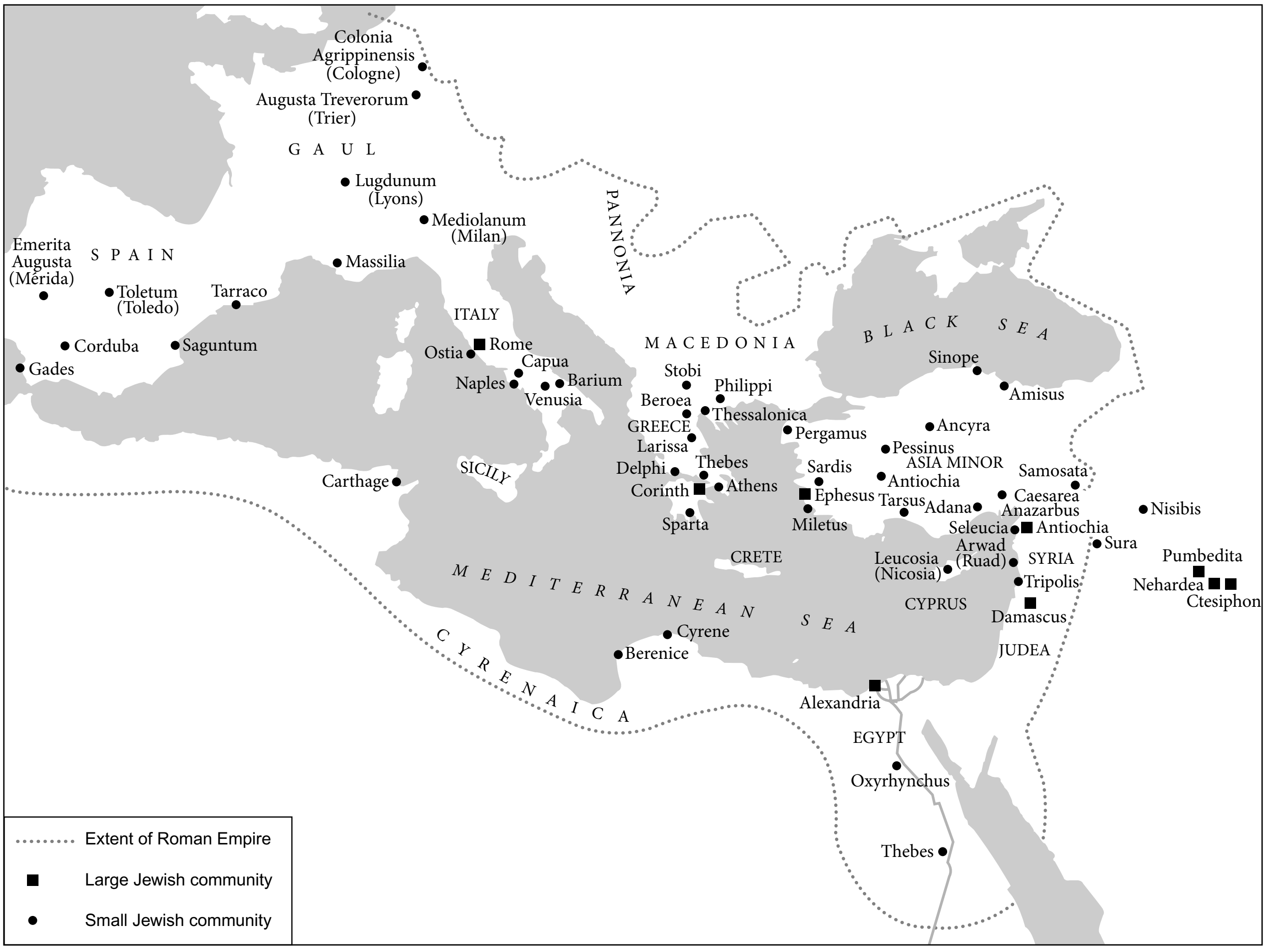
After a brave stand, Jerusalem was taken by Titus' armies, who burnt the Temple and so in effect terminated the war. Not long afterward Masada, the last fortress of the Jews, fell into the hands of the Romans (73).

[Menahem Stern]

DIASPORA – SECOND TEMPLE PERIOD

During the period of the Second Temple, Jewish history was mainly concentrated in Ereẓ Israel. Whatever may or may not have been the relative population figures inside and outside the country, the main currents which were subsequently to shape the Jewish destiny were within that country. These included the development of the elaborate Temple ceremonial as the sentimental focus of the life of the Jew everywhere; the establishment of the biblical canon; the beginnings of regular instruction in the Torah; the development of the *Oral Law and of the activities of the rabbis; the first elements of the liturgy; the national resurgence centering on the Hasmonean revolt; the development, if not the origin, of the *synagogue; and the evolution of Jewish sects and the triumph among these of the Pharisees. In comparison with all this, Jewish life outside Ereẓ Israel was anemic and unimportant. Indeed, we do not know at this period of any contribution to Judaism in its fundamental sense which was not a product of Ereẓ Israel.

On the other hand, it would be erroneous to imagine that the Jewish people were at this time concentrated in Ereẓ Israel. From the period of the Babylonian captivity there had been a considerable center in Mesopotamia (Babylonia), not all of whom by any means had returned to Ereẓ Israel in the Persian period. Of their history during the Second Temple period there is only sporadic information, but enough to make it certain that there remained in this area a solid Jewish nucleus, closely attached to Ereẓ Israel sentimentally and sometimes displaying an independent political cohesion and activity as evidenced in the first century. Whether deriving from Mesopotamia or from Ereẓ Israel, Jewish settlements were thick in *Asia Minor. There had been a Jewish settlement in Egypt from the days of the last pharaohs, which left its vestiges in the Jewish military colony in *Elephantine in the fifth century B.C.E. After the Greek occupation of Egypt in 333 B.C.E. there was a considerable Jewish colony, ultimately Greek-speaking and with Hellenic aspirations, settled in the Delta and especially in *Alexandria, which produced its finest flower in the philosopher *Philo: this extended along the coast westward, so that at least from the second century B.C.E. there was an important outpost in *Cyrene. Inscriptions show that there was a Jewish settlement in *Greece from the second century B.C.E. and the Acts of the Apostles demonstrate its importance in the generation before the fall of Jerusalem in 70. In *Italy, particularly in Rome, there was some infiltration as early as the second century B.C.E., which thereafter knew no interruption: and there is evidence too of the presence of Jews shortly after this period in *Spain, Gaul, (see *France), and other Roman provinces. That these settlements were profoundly influenced by the vicissitudes and experiences of the Jewish nucleus in Ereẓ Israel is obvious. There is some slight evidence of Jewish propaganda in Rome in the wake of the Hasmonean revolt, and the war of 66–70 had dramatic repercussions in Egypt and Cyrene at least. But it is only after the fall of Jerusalem in 70 that it is possible to think of Jewish history outside Ereẓ Israel in terms of the Diaspora communities.



[Cecil Roth]

THE AFTERMATH OF THE FIRST ROMAN WAR

Introduction

The destruction of the Temple of Jerusalem and the abolition of Jewish statehood caused of necessity the revision of some of the basic tenets of Judaism. The infrastructure of the nation had not indeed suffered badly, even in Ereẓ Israel, apart from the Holy City and some areas (Gamala, Jotapata, Taricheae) where the fighting had been exceptionally severe. The Diaspora had not suffered at all, apart from some anti-Jewish riots in a few big cities. Ereẓ Israel had indeed suffered a loss of population, both through death and enslavement, but the enslaved at least could be redeemed, and went on to increase the Jewish Diaspora, especially in Italy and Egypt. There were also many fugitives; many of them were *Zealots, who stirred up revolts in Alexandria and Cyrene (Jos., Wars, 7, 409–419, 436–446). The lands in Judea were confiscated and became part of the imperial estate; but they had to be leased back to the farmers willing to till them. Likewise the local administration in Judea at village and town level remained Jewish. The classes most affected by the lost war were the Herodian aristocracy and the upper priesthood. Many of the former assimilated with the Roman nobles; the priests merged with the rest of the nation. The reestablishment of a national authority (the Sanhedrin) at *Jabneh affected the Diaspora also. There, under the presidency of R. *Johanan b. Zakkai, and afterward of *Gamaliel II of the House of Hillel, certain measures were taken to strengthen Judaism after the catastrophe. The sacrifices were declared replaceable by charity and repentance, the Bible canon fixed and the infiltration of heretics (**minim* – often Judeo-Christians) was barred by the **Birkat ha-Minim*, an addition to the *Amidah* prayer.

One effect of the lost war was the imposition on all the Jews of the Roman Empire of a tax of two drachmas in lieu of the half-shekel paid to the Temple. This tax was in theory

Map 2. The Diaspora in the Roman Empire in the Mishnaic and Talmudic periods. Based on H.H. Ben-Sasson (ed.), Toledot Am Yisrael*, vol. 1, Tel Aviv, 1969.*

payable to the Capitoline Jupiter, but in fact was earmarked for a special department of the imperial treasury, the *fiscus Judaicus (Dio Cassius, *Historia Romana* 6:7, 2), administered by a *procurator ad capitularia Judaeorum* (CIL, 6:2, no. 8604). Although decreed only in the third year of Vespasian, it was levied also for his second year, thus mulcting the Jews and enriching the imperial treasury twice over. The tax was enforced with great harshness under *Domitian (Suetonius, *Domitian*, 12:2) but its administration was made less severe under *Nerva (as witnessed by a coin struck on the occasion). It soon lost its importance owing to the depreciation of Roman coinage.

During the Flavian dynasty, Jews continued to enjoy their privileges, and their influence grew even among the Roman aristocracy. A close relation of the emperor, the ex-consul Flavius Clemens, was executed and his wife banished, because of "Judaic practices." The visit to Rome of the patriarch Rabban Gamaliel II, accompanied by Joshua b. Hananiah, Eleazar b. Azariah, and Akiva, was possibly connected with this event; in any case, it had a beneficial effect on the Diaspora. The closing of the Temple of Onias in *Leontopolis (73 C.E.) was regretted by few.

The Revolts Against Trajan

Part of the strength of Judaism was the fact that a considerable portion of the nation lived in Babylonia outside Roman rule. The campaigns of the emperor *Trajan in Mesopotamia (114–117 C.E.), which threatened this remnant, brought about a renewal of hostility between Jews and Romans – especially because a new generation had by now grown up, which had not lived through the horrors of the year 70. When a revolt broke out in conquered Mesopotamia, in which Jews took an active part, the emperor ordered his general *Lusius Quietus to expel them and, if necessary, to exterminate them. While this was happening, a serious revolt of the Jews broke out in Cyrene, inspired by a messianic movement and led by *Lucuas (called Andreas in Greek). The rebels overran Cyrene, destroying its temples and baths and cutting off the road to its harbor. Then they moved on to Alexandria. There the revolt was suppressed with force, the Romans mobilizing the native Egyptians and the Greeks. The famous synagogue of Alexandria was destroyed on that occasion. From Alexandria the fighting spread from the Delta to Upper Egypt. The Romans had to reinforce the troops in Egypt with two legions, commanded by

Marcius Turbo. The struggle took on the character of a war of annihilation and by its end in 117 there were hardly any Jews left in Egypt, except at Alexandria. The same result awaited the Jews of *Cyprus, who had also rebelled and who were subdued only after great slaughter. Talmudic sources mention a "*polemos shel Kitos*" ("War of Quietus") but it is not clear whether they refer to the acts of Quietus in Mesopotamia, or to some struggle during his governorship in Judea. Although the revolts against Trajan ended in failure, they played their part in bringing about the Roman retreat from Mesopotamia, thus saving Babylonian Jewry.

The Bar Kokhba War

Trajan's successor, *Hadrian, made peace with the Parthians but became involved in a war with the Jews. This struggle, known as the War of *Bar Kokhba, was provoked by the decision of the emperor to establish a Roman colony on the ruins of Jerusalem (see *Aelia Capitolina). Among the leaders of the incipient revolt was R. *Akiva, the greatest scholar of the age. A short time before the outbreak of the revolt he went on an extensive tour of the Diaspora (except Egypt, where Judaism was at an ebb after 117). R. Akiva visited Gaul, Africa, Athens, *Antioch, Mazaca-Caesarea in Cappadocia, and – crossing the border into Parthia – Ctesiphon and Ecbatana. He was not the only one active – two sages, *Pappus and Julianus, were executed at Laodicea in Syria because they were collecting money on behalf of the rebels.

The War of Bar Kokhba lasted three years, and strained the military resources of the empire to the utmost. When it ended after the capture of Bethar near Jerusalem and the destruction of the last rebels in the caves of the Judean desert, the Jewish population of Judea was either dead, enslaved, or in flight. The whole area round Jerusalem was settled with non-Jews. Only Galilee remained a bastion of Judaism in Ereẓ Israel. In order to strike at the root of Jewish resistance, Hadrian prohibited the practice of the Jewish religion – an order which was for some time strictly enforced in Galilee but which seems to have remained a dead letter elsewhere. In other ways the disasters of the Bar Kokhba War strengthened Judaism in the Diaspora – first there were the fugitives who crammed all the ports of the Mediterranean, then the slaves, who were sold in such vast numbers that the prices in the Roman slave markets fell. Among those going to the Diaspora were many scholars; some, like R. Meir, R. Yose b. Ḥalafta or R. Johanan ha-Sandelar returning to Ereẓ Israel, others remaining abroad. The communities of Asia Minor were now the most prosperous, as is witnessed by their synagogues, of which that of *Sardis was the most splendid. Greece was by now in decline, and the Jewries of Egypt and Cyrene, as well as that of Cyprus, were in shambles. Rome, with the cities in its vicinity, now received many more of the Jewish refugees, and there was a marked movement of the Diaspora westward – into Gaul, Spain and up the Rhine. Being mostly merchants or craftsmen, the Jews settled in the great commercial centers, provincial capitals, or near legionary camps. In the larger cities they were organized into several communities each with its own synagogue, which served also as a school. Besides the elected heads of the community (the *archisynagogus and his deputies) there was a permanent scribe or teacher, the *grammateus*. The communities were recognized legally, with the right to hold property and even with a kind of internal jurisdiction. To judge from the inscriptions in their burial places (especially the *catacombs of Rome) they clung to the Greek language, with only gradual Latinization; Hebrew was known but not much used.

The Bar Kokhba War marks the final separation of Judaism and *Christianity; henceforward both communities were in competition in their missionary activity. The disasters of the Bar Kokhba War handicapped Jewish *proselytism (although it was not quite extinct) while Christian missionaries flourished. The result was a bitter struggle, which has left its mark in the centuries in which the church was victorious. The rest of the gentile world changed its attitude to the Jews, but in another sense. While in the first century the Jews were a subject for contempt because of their "queer" observances, their poverty, and their low social status, there was a period of acute hatred after the revolts, but hatred mixed with fear and akin to respect. Later on, the decline of the official Olympian religion benefited the position of Judaism together with all Oriental religions.

The Roman Empire – Antoninus Pius to Constantine

*Antoninus Pius (138–161) abolished the decree of Hadrian, except for the prohibition against proselytism. His reign marks the reconstitution of the central national authority in Ereẓ Israel and the beginning of a compromise between the Roman government and the Jews. At an assembly at *Usha near Haifa the surviving scholars reconstituted the Patriarchate and the Sanhedrin, the authority of which was soon recognized throughout the Diaspora. The first patriarch after Usha was Rabban *Simeon b. Gamaliel. It was under his successor, R. *Judah ha-Nasi, that the patriarchate reached its apogee. R. Judah gave final shape to the *Mishnah, the codification of the Oral Law elaborated in the previous four centuries. He imposed his authority on the Sanhedrin and obtained the right to nominate *rabbis and teachers throughout Jewry. His messengers, the *apostoloi*, inspected Jewish communities and were empowered to depose their functionaries. They also collected the voluntary tax, the *apostole*, which the Diaspora continued to contribute for the maintenance of the Patriarchate. As the head of the central institutions of Judaism, the patriarch dominated his lesser brethren, the "little patriarchs" each in his province. By keeping in his hands the right to fix the dates of the holidays, the patriarch controlled in effect Jewish religious life everywhere. He was also able to revive – under the guise of courts of arbitration – the civil (and sometimes even the criminal) jurisdiction of the rabbinical courts. In the third century the Palestinian *amoraim* of the first to the third generation laid the foundations of the "Jerusalem" (Palestinian) *Talmud. The Patriarchate was supported by the Roman gov-

ernment as part of the unwritten agreement by which the Jewish authorities undertook to prevent Zealot outbreaks, while the Romans restored the status of Judaism as a lawful religion with all that this implied, as well as the privileges enjoyed by individual Jews, such as exemption from military service, the right not to appear in the lawcourts on a Sabbath and on holidays, etc. Only on two points did the Romans refuse to mollify their stand; they did not allow proselytism and they refused Jews the right to settle in or even visit Jerusalem. On both points, reality did, however, modify the legal position; proselytism continued and around the communities there gathered groups of "God-fearing" people ("proselytes of the gate" as they were called in Jewish sources) who sympathized with Judaism without fully adopting it. Also access to Jerusalem was rendered de facto much easier, although the prohibition to settle there was still enforced. (According to G. Alon, there was a Jewish community in the Holy City in the third century.) The status of the Jews was more and more equalized with other citizens of the empire under the Severan dynasty (193–225), although the motives of the emperors in granting equality were fiscal. Septimius *Severus allowed Jews to hold municipal office, exempting them from practices contrary to their beliefs (Justinian, *Digest*, 27:1, 15, 6; 50:2, 3, 3); his son *Caracalla granted them (together with most of the other inhabitants of the empire) Roman citizenship in 212. In general, the Severan dynasty, which started from a Libyan-Punic soldier and his Syrian consort, did not follow the hard Roman line of the Antonines. It seems even that Caracalla is identical with the mythical "Antoninus," the friend of the patriarch Judah I (see *Antoninus and *Marcus Aurelius). The successors of the Severan emperors continued the friendly policy of the dynasty: Severus Alexander was even called "*archisynagogus*" by his enemies. In the two generations between 225 and 284 Roman Jewry suffered with the rest of the empire from the severe political, economic, and social crisis which shook the Roman world. Barbarian invasions and civil wars between pretenders to the imperial throne led to a disruption of economic life, increased taxation, inflation and all the other ills connected with a deep crisis and which were especially serious for communities dependent on commerce and craft. The eastern part of the empire was overrun first by the Parthians (who killed 12,000 Jews at Mazaca) and then by the Palmyrenes, whose relations with the Jews were cool. When the emperor *Diocletian finally restored order, he continued the Jewish privileges; they were exempted from pagan sacrifices at a time when Christians were forced to perform them. Soon after his death, Constantine, the first Christian emperor, ascended the throne and thus began a new chapter in the history of Judaism.

The Babylonian Diaspora

Babylonian Jewry, the oldest mass-settled group of Jews outside Ereẓ Israel, had maintained its strength throughout the period of the Second Temple. Living since 129 B.C.E. under Parthian rule in the context of a loosely knit semi-feudal state, it was able to develop its autonomous institutions with little interference from the royal government. The Parthians, who had always feared Roman intervention, welcomed Jewish opposition to Rome, at least until the time of Hadrian, when peace reigned on the border. They left a free hand to the *exilarch (*resh galuta*) who headed Babylonian Jewry. Descended allegedly from the House of David, proud of their genealogical purity, the exilarchs wore the *kamara*, the sash of office of the Parthian court, and disputed precedence with high Parthian officials. The community which they headed was both numerous (estimates of its number vary from 800,000 to 1,200,000, i.e., 10–12% of the total population of Babylonia) and well-based economically, comprising a fair number of farmers and many traders who grew rich as intermediaries in the profitable silk trade between China and the Roman Empire passing through Babylonia. The Jews enjoyed not only freedom of worship, autonomous jurisdiction, but even the right to have their own markets and appoint market supervisors (*agoranomoi*). These favorable conditions continued after the replacement of the weak Parthian kings by the much stronger Sasanids, beginning with Ardashir I in 226. The Sasanids were devout followers of the religion of Zoroaster, and its priests, the magi, exercised much influence at the court. After a period of troubles and disagreement at the beginning of the reign of *Shapur I (241–272), better relations were gradually established with the king; one of the reasons for this understanding was Shapur's plans of conquest in the Roman Empire. Jewish help could be of great value in his campaigns, and the Jews of Babylonia had proved their staunch opposition to Rome in the revolt against Trajan. At Mazaca in Cappadocia Jews did indeed oppose Shapur with the rest of the population and suffered accordingly, but in Ereẓ Israel the popular opinion was pro-Parthian and anti-Palmyrene to a large extent. Indeed one of the strongholds of Babylonian Judaism, *Nehardea, was destroyed by a Palmyrene raid under Papa b. Nazer in 259. The good relations with the court continued under Shapur's successors, including Shapur II (309–379).

Apart from its political and economic status, which was apparently much higher than that of the Jews in the Roman Empire, the main interest of Babylonian Jewry was its relations with the national centers in Ereẓ Israel and its spiritual development, which led up to the creation of the Babylonian *Talmud. The relations of the Babylonian Diaspora with Ereẓ Israel were characterized by ambivalence from the beginning. Hillel the Elder, a Babylonian who imposed his personality on the scholars of Jerusalem, was an exception; but a small center of learning existed at Nisibis led by the Benei Bathyra family. About 100 C.E. *Hananiah, the nephew of R. Joshua, had to leave for Babylonia; his attempts to render Babylonia independent of the authorities in Ereẓ Israel ended in failure. During the Hadrianic persecution several scholars of standing, R. Johanan ha-Sandelar, R. Eleazar b. Shamua and other pupils of R. Akiva settled temporarily in Babylonia and thus enhanced its prestige. However, the masterful personality of the patriarch R. Judah I dominated even this far country. There

were at least five Babylonians at his court, and he claimed and was accorded the right to ordain judges for Babylonia also. R. Judah did indeed admit the genealogical superiority of the exilarch, R. Huna, but only at a safe distance.

Conditions in Babylonia changed with the arrival in 219 at Nehardea of Abba Arikha (*Rav), one of the pupils of R. Judah. He found at Nehardea *Samuel, the son of Abba b. Abba, a rich silk merchant. Samuel had established excellent relations with King Shapur I; it was due to him that the rule *dina de-malkhuta dina*, i.e., civil law has the force of religious law, became the guiding light for the Diaspora. When Rav gave up his candidacy for *resh sidra* (head of the school) at Nehardea to Samuel, he moved first to *Huzal and then to *Sura, where he established a school which continued the traditions of Ereẓ Israel as taught by Rabbi. Rav died there in 247. In the meantime the school of Nehardea was dispersed after the Palmyrene raid of 259 and reassembled at *Pumbedita, which became the rival of Sura among the Babylonian schools. The leaders of Pumbedita (R. *Hamnuna, R. *Huna – who remained head of the school for 40 years, dying in 297 and his successor R. *Ḥisda) established the special "Babylonian" trend of talmudic learning, marked by a sharpness of logical dissection.

The great crisis of the Roman Empire in the third century changed the relations of Babylonia and Ereẓ Israel. Although there were still communities of Babylonians settled at Jaffa, Sepphoris, and Tiberias, after the death of R. Johanan more and more students went from Tiberias to Sura and Pumbedita. This exodus took such proportions that the old rule that a *ḥaver* (member of the rabbinical association) lost his rights on emigration had to be rescinded (TJ, Dem. 2:3, 23a). The Babylonians, who were always proud of their descent, now began to insist also on their priority in learning. Thus, for example, R. Judah b. Hezekiah even forbade his student R. Zeira to go to Ereẓ Israel (R. Zeira went nevertheless). In the third generation of the **amoraim* it was the Babylonians R. *Ammi and R. *Assi who ruled in Tiberias; if after them this state of affairs did not continue, it was because the Babylonian scholars had lost interest in teaching a declining community. When under Constantine the patriarch *Hillel II made the rules of the *calendar public, he cut the one remaining tie of Babylonia with the Jewish homeland. Henceforward Babylonia was on its own and girded itself for its great spiritual task, the Babylonian *Gemara*.

[Michael Avi-Yonah]

FOURTH TO SEVENTH CENTURIES

Reshaping of Forces and Circumstances

At the beginning of the fourth century the vast majority of the Jewish people were dispersed in Mediterranean countries, a distribution which continued for many centuries afterward. Throughout their dispersion Jews were not only attached spiritually and emotionally to Ereẓ Israel, but this country still harbored an important concentration of Jewish population; the Patriarchate was to continue in more than a century of active and prestigious leadership of Jews almost everywhere (see **nasi*). The great concentration of Jews in the "Persian" empire (Babylonia (בבל) in Jewish historical-geographical nomenclature) flourished under the leadership of the exilarch, increasing in numbers and with a prosperous economy which had a broad agricultural stratum and some involvement in commerce and *crafts. In the Roman Empire the vast Jewish Diaspora was concentrated in great numbers in important cities, occupied as traders and craftsmen. The centers of the empire, Alexandria, Antioch, and Rome, were also essential to Jewish life as they were central to the empire. The so-called edict of Milan, issued in June 313, was couched in terms expressing general tolerance and coexistence of religions; in reality it was the first step toward establishing the dominance of Christianity. Its declared intention was to grant *et Christianis et omnibus* freedom of religion, to each person according to his choice. The definitions there of divinity fit monotheistic religions as well as an enlightened paganism. Deity is described as *Summa Divinitas* or *Divinitas in sede caelesti*. The decree declares expressly that it was not designed to injure any person either in status or in religion. The sentiments to a large extent express a diplomatic softening for pagans and, for Jews, a sweetened coating of the bitter pill of the beginning of Christian domination. However, they also reflect an existing mood in the relationship between the religions at that time that could augur a future of real coexistence but in the event was destroyed by the pact between the Christian *Church and the Roman Empire.

The interpenetration of modes of existence and conceptual patterns of the environment is evident in Jewish life in the fourth to sixth centuries. The decoration of synagogues, both in Ereẓ Israel as well as in the Diaspora, shows a readiness to use pictorial art, and even representation of human and animal figures, for synagogue murals and mosaics. It also demonstrates that pagan symbols had lost their idolatrous implications for the Jews, who took them over almost without change to adorn their own houses of worship. Thus a trend, evident notably at the synagogue of *Dura Europos, developed and became increasingly reflected in Jewish life at this time. The symbolic pictography and inscriptions on Jewish funerary reliefs also show, in both Ereẓ Israel and the Diaspora, the same assimilation of pagan elements. The other side of this process, and parallel to it, was a still continuing movement of proselytes to Judaism, the presence of Jewish elements in pagan magic papyri, and above all, the entry of many central Jewish elements into the pagan world, which enabled its Christianization.

This interpenetration, however, was not destined to become the framework of a social and political coexistence. The intense hatred generated during centuries of missionary propaganda and the fierce persecution to which it had been subjected caused the victorious Church in turn to adopt toward paganism the Jewish monotheistic stance at its harshest, and to employ in regard to Jews and Judaism the old popular pagan anti-Jewish animus, which developed into a tenet of dogmatic

absolutism at its cruelest. The *tertium gens* formed by Christianity declined to confront Judaism on a basis of equality and, once achieving dominance, took over all the potentialities and actualities of power with which to intensify division and persecution. This challenge, although the cause of much suffering, elicited a vital Jewish response in a concentration on inner values and a refusal to continue the process of interpenetration. From the sixth century on, pagan decorative motifs are no longer to be found in synagogues, while the painting of live figures for synagogue murals was abandoned for many centuries after that time.

CHRISTIAN POLITICAL PRESSURE AND PROPAGANDA. During the fourth and fifth centuries the Jews in the Roman Empire both recognized and felt the effects of a sustained Christian effort to redefine their legal status, to blacken their image in the eyes of gentiles, and to reduce their standing in society. This policy was pursued with a curious combination of acute love-hatred toward the Jewish people and its history, and an even more acute fearfulness of Jewish competition for the spiritual allegiance of the disintegrating pagan world. Internal Christian dissensions in the fourth century added fuel to hatred of the Jews in a Church that was already divided on its conception of the Trinity, quarreling about theological definitions, even to the extent of hairsplitting, and hitherto unaccustomed to the use of force to impose its authority. It now began to turn to imperial powers of coercion on the one hand and to interference in state affairs on the other, that, in the church's eyes, provided it with the combined means and formula for working out the divine will in history. Striving to retain its newly acquired power, it regarded Arianism and other heresies that emerged in this early period as a Judaizing attempt to undermine its precarious position.

Already under Constantine I (306–337) laws were published forbidding the persecution of Jewish *apostates to Christianity. In 339 Constantius II prohibited marriage between Jews and Christians, and the possession of Christian slaves by Jews. This last prohibition went far to undermine the economic structure of Jewish society, in *agriculture in particular. In this period it was inconceivable to maintain any fair-sized agricultural unit without employing slaves, who were rapidly becoming Christianized.

A flicker of the old-type coexistence, this time with an anti-Christian emphasis and a pro-Jewish tendency, reemerged under Emperor *Julian (361–363), regarded by Christians as "the apostate." His attempt to rebuild the Temple in Jerusalem, his respectful language in reference to Jews, and the rights he granted them were not only motivated by a wish to disprove the Christian contention that Judea had been obliterated with the rejection of Jesus, they were also actuated by esteem for a great Jewish past and for steadfastness in adhering to a religious historical course.

The Church and the Christian empire, alarmed but not sobered by the reemergence of paganism and its bid for an alliance with the Jews, crystallized a policy of obtaining laws against Jews and heretics. These were subsequently promulgated: "… in order that these dangerous sects which are unmindful of our times may not spread into life the more freely, in indiscriminate confusion, as it were, we ordain by this law to be valid for all time …" (*Novella* 3 of Theodosius II, Jan. 31, 438). On this basis Jews were denied all civic offices and dignities because "we believe it is wrong that the enemies of the heavenly Majesty and of the Roman laws should become the executors of our laws, and that they, fortified by the authority of the acquired rank, should have the power to judge or sentence Christians, … as if they insult our faith … For the same reason we prohibit that any synagogue should rise as a new building" (*ibid.*).

Hence, at this early stage, the foundations were laid for the conception that the holding of public office by a Jew constituted both an insult to Christianity and a danger to Christians. Of the two reasons cited, the first was prompted by the competition between religions that continued into the fifth century and by the pride of victory. The second stemmed from suspicion of the character of the Jew and the view that he was perhaps activated by base motives in dealing with other people. Thus motivation was advanced for the principle that only if the Jews were humiliated and rendered powerless would Christianity and Christians be safe; on this principle Jews were barred from honors and public office in Christian states (and later in Muslim states) from the fifth until the 18th centuries. Although there were to be many exceptions to, and breaches of, this rule, these only proved its wide acceptance, as amply evidenced down the centuries in the bitter opposition to Jews holding positions of authority by the Church leadership and the consensus of popular opinion in Christian and Muslim societies.

The change in legal status gained popular acceptance because of the consistency and virulence with which Church leaders preached hatred of the Jew. The eight anti-Jewish sermons delivered by John Chrysostom (see *Church Fathers) in Antioch in 387 both reveal the existence of a continuing good relationship at this time between parts of the general population and the Jews and instance the type of propaganda used by the Church fathers to disrupt it. The sermons vilify the Jews, their synagogues, their way of life, and their motives of behavior at length and in scathing terms. *Augustine of Hippo had a deep historic sense of the vital force displayed by the Jewish people. Several times in his writings he returns to the mystery presented by the non-assimilation of a small people, separated from the rest of the population not only by its specific beliefs, but also by a detailed way of life and its development of an individual culture, in an empire that was moving to increasing uniformity in all these respects. His conception of what the Jewish people might have been, and what under Christian dispensation it had become, emerges from his musings about the likely destiny of the Jews had they not constantly revolted against God and finally rejected Jesus, and about the reason for their continued existence in the world:

> And if they had not sinned against Him, led astray by unholy curiosity as by some magic arts, falling away to worship idols and finally murdering the Christ, *they would have remained in the same kingdom, and if it did not grow in size, it would have grown in happiness.* As for their present dispersion through almost all the lands and peoples, it is by the providence of the true God, to the end that when the images, altars, groves, and temples of the false gods are everywhere overthrown, and the sacrifices forbidden, it may be demonstrated by the Jewish scriptures how this was prophesied long ago. Thus the possibility is avoided that, if read only in our books, the prophecy might be taken for our invention (*City of God*, ed. and tr. by W.C. Greene, Book 4, 34 (1963), 129).

Augustine's assertion that a redeemed Jewish people would have remained happy and a separate nation in Ereẓ Israel was later remembered by few Christians. Both of his assumptions, that the Jewish dispersion proves the truth of Christianity through the Holy Writ that is in Jewish possession, and that it was necessary to provide proof of the correctness of the biblical passages quoted by Christians from the text in Jewish hands to doubting infidels – neither Jewish nor Christian, but pagan – clearly indicate a situation, at least within living memory, of a triangle in which Judaism, Christianity, and paganism are confronted. Later on, his premises provided the theoretical formulation for Christian readiness to suffer Jews in their midst. Augustine's understanding of Psalms 59:12 (Vulgate 58:12) as relating to sufferance of the Jews, on the condition that they be visibly dispersed and humiliated, was widely quoted and applied in the Middle Ages.

INTERNAL CULTURAL AND SOCIAL ACTIVITIES. At the same time that the church was preaching to its converted the dictum that the Jews continue to exist for the sake of Christianity, as despiritualized guardians of a spiritual "Old Testament," the Jewish people were developing a great and fruitful new life of intellectual and social creativity. In about 359 a constant calendar was determined and formulated, thus basing archaic sacred attitudes to time, its division, and purpose, on mathematical principles, and bringing to completion a long process of Hellenistic cultural influence. The leadership provided by the patriarchate and the patriarchs (see **Nasi*) through these difficult times, although frequently criticized, was on the whole successful and helped create a productive period in both the Jewish and general cultural spheres. The *nasi* Gamaliel b. Hillel maintained a regular correspondence with the great Antiochian rhetor Libanius over the last four decades of the fourth century, showing points of contact between the great Jewish jurists and those of the Roman world.

Jewish creative and cultural activity was continuing at a time when a mob led by monks in 388 burned down the synagogue at Callinicum in Mesopotamia. Bishop *Ambrose of Milan thereupon asserted the authority of the Church and overruled Emperor *Theodosius I by insisting that the culprits should go unpunished. Also in this period Emperor Theodosius II and his ecclesiastical advisers attempted to deter Jews from worship by forbidding the erection of new synagogues (see above). Jews reacted to this situation by recourse to both traditional and new solutions. The Patriarchate was extinguished by imperial decree in 429. However, Jewish leadership of the communities in the Roman empire continued in a less centralized but more successful form.

In Ereẓ Israel the Jewish population held on to its soil and maintained its spirit of resistance by every means available, from the revolt in Galilee against Gallus in 351 up to the revolt in the reign of Emperor *Heraclius and its alliance with the invading Persian armies in 614 (see below). In Babylonia the exilarchs were able to exercise their hegemony under more relaxed and stable conditions than those prevailing in the Roman and Christian spheres. But when a series of persecutions overtook the community in the second half of the fifth and the sixth centuries the exilarchs had the foresight to withdraw with their institutions to inaccessible regions and there to continue cultural activities and social leadership. In 495–502 the exilarch Mar *Zutra II led a revolt, created a small Jewish state, and paid with his life for this attempt.

YEMEN. Semitic tribes in the region of present-day *Yemen became converted to Judaism and maintained a Jewish principality in *Ḥimyar that had close ties with the *nasi* at Tiberias. It was crushed by a coalition of Christian *Byzantium and *Ethiopia after a battle to preserve Judaism and with the death of the king *Yūsuf dhu Nuwās in 525.

REDACTION OF THE JERUSALEM AND BABYLONIAN TALMUDS. At the time of these events Jewish intellectual activity added a new dimension and prototype to the national literature. The academies of Ereẓ Israel and Babylonia constituted a living forum for discussion of the tenets and implications of Jewish morals and Jewish law, continuing despite external humiliations and harassments. The redaction of the so-called Jerusalem Talmud took place in the second half of the fourth century. During the second half of the fourth century and throughout the fifth – from the days of Rav *Ashi (371–427) until *Ravina (499) – the redaction of the so-called Babylonian Talmud was completed. Both Talmuds represent whole libraries of legal discussion and formulation – *halakhah* – and record fragments of moral and exegetical sermons – *aggadah*. The thoughts and efforts of numerous scholars are reticulated in them to form a protocol of the discussions, thus setting down a rich legacy for posterity and providing an exemplar for a specific mode of learning, of living, and of moral decision. The Talmuds became canonized in Jewish esteem alongside the Bible and the Mishnah – theoretically in a diminishing scale of sanctity. In practice, interpretation of the Talmud and the talmudic mode of discussion eventually dominated Jewish scholarship and set the pattern for Jewish modes of thought until modern times. After a short transitional period of creative activity by the **savora'im*, the Talmuds were regarded as closed and canonized entities. Beside the Talmuds, there also remain from this period the amoraic midrashim (see *Midrash). These in technique bear close

affinity to the writings of the Church Fathers, while in content and aims they represent a system of Jewish culture, its values and aspirations, and its defense against Christian attacks.

APPEARANCE OF ISLAM. The degree and scale of Jewish influence on *Muhammad and early *Islam is much in dispute, but there is no denial of its existence and considerable significance. From early attempts at alliance with Jewish groups in Arabia – the so-called Jewish "tribes" – Muhammad turned against them, and, in a series of wars and battles in the years 624 to 628, succeeded in either extirpating them or expelling them from Arabia. Awareness of these influences and of the alliances and wars of the past was important later in determining the attitude of Islam toward Jews.

TRENDS IN CHRISTIAN POLICY TOWARD THE JEWS. By the end of the sixth century, two approaches toward the Jews were tried in the Christian sphere. Emperor *Justinian attempted to influence Judaism in a missionary spirit, to interfere in the conduct of Jewish worship, and to direct the Jews as to what they should retain or relinquish in their scriptures and beliefs. In the preamble to his Novella 146 (Feb. 8, 553) he states expressly: "Necessity dictates that when the Hebrews listen to their sacred texts they should not confine themselves to the meaning of the letter, but should also devote their attention to those sacred prophecies which are hidden from them, and which announce the mighty Lord and Savior Jesus Christ." The post-biblical strata of Jewish literature are to be excised: "The Mishnah, or as they call it the second tradition [Deuterosis], we prohibit entirely … it is … but the handiwork of man, speaking only of earthly things, and having nothing of the divine in it. But let them read the holy words themselves, rejecting the commentaries" (as translated by J. Parkes, *The Conflict of the Church and the Synagogue* (1961), 392–3). Justinian's argumentation against Deuterosis has a fundamentalist ring, but the stress is on negation instead of a positive evaluation of the Bible. The emperor failed in his object, not only as many of his other strong-armed attempts had failed because of the weakness of the empire in the late sixth century, but essentially because the Jews remained consistently attached to the whole of their corpus of scriptures and refused to become Jews according to Christian concepts. Not until the 13th century was a similar approach again attempted, when a campaign was launched against the Talmud, which also failed (see below: The Middle Ages).

At the end of the sixth century another attempt to eradicate the Jews in a Christian country was begun in Visigothic Spain. With the changeover from Arianism and the attempt to unite the country under Catholicism by King Reccared I, compulsory conversion of Jews to Christianity became an integral part of the policy of the Visigothic state. However, barehanded force essentially proved no more successful than Justinian's attempt at dictation (see below).

Pope *Gregory I at the end of the sixth century developed a different and more enduring line of approach. In his many letters concerning Jews he proposed to tempt them to Christianity by offering fiscal alleviations in the belief that if the first generation did not become fully fledged Christians the second would become so. He thus authorized the use of economic pressure and reward to bring about Jewish apostasy. However, while insisting on strict maintenance of the status quo in respect of Jewish existence, he was vigilant in ensuring that Jews should not acquire any new rights or opportunities. He thus developed a practice which was in part based on application of the theory of Augustine and in part on a dogmatization of the various anti-Jewish laws of the later Roman emperors as incorporated in the Codes of Theodosius and Justinian. In his theoretical writings, in particular in his *Moralia* on Job, and in his commentaries on Kings and Ezekiel, Gregory views the Jewish way of life and Jewish identity as the arch-enemy of Christianity. Jacob here represents the gentiles, and Esau the Jews.

SETTLEMENT IN WESTERN EUROPE. The sixth century also saw the reemergence of Jews in Western Europe north of the Pyrenees. The existence of a Jewish community at *Cologne in 321 is already attested in an edict of Emperor Constantine. Discoveries of coins, and, in the opinion of some scholars, also terra cotta figurines found at *Treves (Trier), prove the presence of Jews – or at least of passing merchants – in several places in Western and Central Europe in the fourth century. However, there is no evidence of the continuance of these Jewish groups, or of the movement of individual Jewish merchants, in the disordered times of the barbarian invasions and the creation of the Germanic states in the late fourth and fifth centuries. South of the Pyrenees, in Arian Visigothic Spain and in the kingdom of Theodoric in Italy, Jews were to be found, living in relatively favorable conditions. The Arians did not simply adopt the attitude of the Catholic Church toward Jews; since individuals in these Arian Germanic states were regarded as subject either to the existing Roman law or the Germanic law of the conquerors, Jews were classified, under this definition, with the Romans. Procopius recounts (*De Bello Gothico*, 1, 5, 10.25) that the Jews of *Naples courageously and stubbornly defended this city for Theodoric against the Byzantines in 536.

Though migration from a warmer southern climate to a colder northern one, and from an ancient and familiar cultural milieu to a new and uncivilized region, is not usual, this is the direction taken by relatively many Jews during the sixth century when they appeared in the Catholic kingdom of the Franks in what is now *France. They were attracted by the rare opportunities for enterprising merchants in the newly developing countries. Seen through the writings of Bishop *Gregory of Tours, Jews were able to tempt bishops and princes with the spices and costly cloths they brought with them. In the second half of the sixth century there is mention of sizable communities, as at *Clermont-Ferrand, *Paris, and *Marseilles, which had their own synagogue buildings – certainly not constructed in accordance with the requirements imposed

by the Church – and stubbornly defended, sometimes to the death, their right to live as professing Jews. The figure of the Jew *Priscus exemplifies the best in these groups: learned in the Bible, he is shown disputing as an equal, and unafraid, with Bishop Gregory in the presence of King Chilperic about Judaism and Christianity. He died a martyr's death at Paris, having dispatched his son to safety in Marseilles.

THE JEWISH REVOLT IN EREẒ ISRAEL. On the eve of the appearance of Islam as a world power and third great monotheistic religion – the last throes of the disappearance of the old order of the classical world – Jews in Ereẓ Israel again raised the standard of revolt in an attempt to reestablish Jewish rule in Ereẓ Israel. Desperate through persecutions under Emperor Heraclius they rebelled in 614, joined the Persian armies then invading the country, and between 614 and 617 established Jewish rule in Jerusalem. Their failure and cruel suppression (see also *Benjamin of Tiberias) add to the character of this event in Jewish history, which represents a last gleam of the classical constellations and one of the many harbingers of the new medieval situation.

[Haim Hillel Ben-Sasson]

THE MIDDLE AGES

Formative Times (7^{th} to 11^{th} Centuries)

The conquest of the Persian empire by Muslim forces obliterated polytheism as a political force over the entire horizon of Jewish existence. Jews had to accustom themselves to the situation that throughout "the whole world" monotheistic religions claiming the mantle of the Jewish faith were pursuing a consistent policy of derogation and humiliation toward the Jews. To the Christian clergy as a carrier of the inculcation of hatred of the Jews in the masses was now added the Muslim clergy. On the other hand, the conquests of Islam reunified the vast majority of the Jewish people. By 712 Islam ruled from the borders of India to south of the Pyrenees, thus uniting under its sway more than 90% of the existing Jewish population. The success of the Muslims was seen by Jews as divine retribution for the evil and perfidy of Byzantium and Persia. The sudden change in the political order revived hopes for even greater changes that would bring about Redemption and the Messiah. It was not by accident that several militant Jewish *messianic movements followed shortly on Islamic successes. Jerusalem was taken by the Arabs in 638. The Christian prohibitions on the entry of Jews to the Holy City were soon lifted. The attitude of the Muslims to the "People of the Book" was more favorable toward the Jews than that of the Christian rulers (see below). The Muslims had much to learn from the Christian and Jewish infidels, while the existence of many shades of faith other than Islam in the Muslim realm saved Jews living within its borders from the onus of being the main, frequently even the sole, representatives of nonconformists there as they became in Christendom.

UNDER ISLAM. The Muslim conquest had far-reaching consequences for Jewish economic and social structures. The first generation of Arab rulers knew little about agriculture, nor cared about it. They imposed a heavy burden on infidel farmers, not being concerned with the disastrous results. On the other hand, they respected trade and regarded the city as a favorable milieu for leading the good Muslim life. The military camps of the conquerors soon developed into cities. All this combined to draw Jews away from the villages and agriculture toward the developing towns and an appreciated occupation in trade. Their links with other Jews along the commercial routes in the vast empire worked in the same direction, as also the opportunities offered by the connections of Jews in Muslim countries for trading with their brethren in the Christian countries. In the lands taken from Byzantium, the new circumstances only completed a process of squeezing out Jews from agriculture that had been begun by the Christian denial of slave manpower to Jewish agricultural undertakings. In the former lands of the Persian Empire this was a relatively new process. By the end of the eighth century it had been more or less accomplished everywhere in the Muslim empire: although some Jewish individuals and groups remained attached to the soil despite unfavorable circumstances, the vast majority of the Jews became townspeople, and retained this structure until the present.

Wherever a new city arose or an old one developed, Jews formed large and enterprising merchant and craftsmen communities, as in *Kufa, *Basra, and *Baghdad (almost from its foundation by the *Abassids) in *Iraq; in *Cairo-Fostat and *Alexandria, in *Egypt; in *Kairouan and *Fez in the Maghreb; and in *Cordoba and *Toledo in Muslim *Spain. Their occupations covered all the varieties found in the towns. Thus the foundation was laid for the variegated structure of Jewish economy and society in the Muslim city, which existed – with spatial and temporal modifications – up to the almost total liquidation of the Jewish communities in Muslim lands after the creation of the State of Israel.

In various regions of the Muslim Empire the lower strata of Jewish society were occupied in every kind of craft. An anti-Jewish writer in the ninth century, in what was certainly a tendentious one-sided view, could even regard certain of the coarser crafts as the main occupation of the Jews in Egypt. The upper stratum of Jewish society in the caliphate engaged in large-scale trade and in money-lending, sometimes even supplying organized and regular loans to the state. In the tenth century certain rich Jewish families were known as the court financiers, their security of tenure deriving to a large degree from the fact, well known to the caliph and his officials, that the huge loans advanced came not only out of the personal fortune of the Jewish banker, but out of amounts lent him by Jewish merchants of lesser means.

In Muslim Spain, as early as the united *Umayad caliphate, the position achieved by *Ḥisdai ibn Shaprut demonstrates the rise of a Jewish official and merchant to political eminence mainly on the basis of his personal abilities and culture. This is even more strikingly exhibited in the 11^{th} century, during the period of the divided Taifa kingdoms, in the

person, culture, and career of *Samuel ha-Nagid (Ibn Nagrela), a commander of Muslim armies, vizier of a Muslim king, a great Hebrew poet, eminent talmudist, master of a fine Arabic style, mathematician, philosopher, and statesman – both as a theoretician and in practice – in an absolute state. Muslim Spain gave rise to many similar personalities and families, wholeheartedly Jewish, blending both Jewish and Greek-Arabic culture, and aristocratic in behavior and feeling. Grouped around them and relying heavily on their munificence, were galaxies of poor poets and scholars devoted to their art and the pursuit of philosophy, often highly creative, like Solomon ibn *Gabirol (known by the Latins as the philosopher Avicebron, the author of the *Fons Vitae*). In Kairouan, Africa, there flourished also under *Fatimid rule a circle of physicians and scholars influential at court and leaders of their communities. In the Mediterranean seaports in the 10th to 12th centuries there was a well organized Jewish trade, relying basically on written communications between merchants as well as on the maintenance of well ordered books of trade and accounts and a well regulated merchant organization that based itself on Jewish law.

The successes of these high dignitaries and influential courtiers naturally ran counter to the basic Islamic attitude toward the Jews, to the legal status it was ready to grant them, and, above all, to popular sentiment. Even the career of the legendary *Paltiel met with intrigue and opposition from Muslim circles. The reality was much harsher. Samuel ha-Nagid was not only bitterly attacked by his political enemies – as he testifies abundantly in his poems – and vilified by scurrilous popular songwriters, but was also sharply assailed by the eminent Muslim philosopher and poet Ibn Ḥazm (Samuel's son *Jehoseph fell victim (1066) to the pent-up hatred of the mob).

The basic Muslim attitude to infidels is set out in the so-called Covenant of *Omar, formally ascribed to the year 637 but almost certainly formulated much later. In regard to the *ahl al-dhimma*, "the people of protection" (see **Dhimma*, *Dhimmi*) – which comprised both Jews and Christians as deserving of the right to exist under Muslim rule as the **ahl al-kitāb*, the "People of the Book" – it provides for security of person and property, and permission to pursue religious worship and codes of behavior according to the law of the faith concerned, on condition of payment of fixed taxes to the caliph's treasury (the *jizya* and the **kharāj*; the *kharāj*, taken automatically from the field area, did much to drive out Jews from agriculture; and see above) and under a set of rules ensuring the constant humiliation and isolation of the infidels by believers. Many of its humiliating conditions are taken from old anti-Jewish laws of Christian origin, but they also contain certain detailed provisions stemming from conceptions and symbols of social prestige found in Muslim society. Sunni rulers usually tended to apply these rules strictly to the majority of the Jews (and Christians). Shiʿite rulers tended to be more capricious and offensive in their attitude. The Fatimid caliph of Egypt, al-Ḥākim bi-Amr Allah (996–1021), embarked on a systematic policy of humiliation of the Jews and Christians in the second half of his reign. Among his inventions can be included the principle of the badge of shame, later taken over by the Church, for he compelled Jews to wear only black robes in public and to carry the wooden image of a calf (in memory of the calf which the Jews had worshiped in the desert; see Jewish *badge). The constancy of the Muslim system of humiliation, coupled with freedom to exercise *autonomy and opportunity to engage in most economic activities in the cities, is illustrated by both the relatively few exceptions made in favor of gifted infidels as well as by the relatively few sharp outbreaks of extreme governmental persecution or mob fury.

INTENSIFICATION OF CHRISTIAN ATTITUDES. Christian society continued to develop, under the guidance of the Church, its pernicious hatred of the Jews. Though the upper ranks of the Church hierarchy accepted, both in theory and in practice, the relatively "mild" attitude toward the Jews of Augustine and Gregory I, the lower ranks tended to be more consistent than their superiors and inclined to question in their sermons the compromise implicit in the Jewish denial of Christianity under Christian rule, thus veering toward the attitude suggested by the legislation of Justinian and Reccared I. Various factors – both general and relating in particular to Jews – helped to shape attitudes toward the Jews in different Christian countries in various times and circumstances. The unifying and directing overall Christian influence was the divided attitude displayed by the Church – less hostile at the top, and increasingly hostile as one proceeded downward. Royalty, the nobility, and the townspeople added elements colored by their own interests to the prevailing temper but always merging with one or the other of the two aspects of the Church attitude.

Seventh-century Visigothic Spain waged a continuous struggle against Jewish existence. A series of laws was promulgated throughout the century to punish Jews for adhering to their faith, to ensure supervision of their behavior as good Christians by local Christian priests, and to take away their children from them in order to educate them in true Christian homes as good Christians. Cruel punishments were threatened to those who would not obey; "the Jews" alluded to in these enactments were evidently forced converts to Christianity who persisted in adhering to the faith of their fathers. The enactment of these measures over the course of a century graphically shows the strength of the devotion to Judaism of communities of Jewish merchants who have left no trace in Jewish literature and culture other than the testimony of persecutory laws to their steadfastness in the face of danger. It was a tragic prelude to the tragedy of the **anusim* of Spain in the 15th and 16th centuries. Both in the seventh and the 15th centuries, the Jewish tragedy was the result of a Catholic drive for the unification and uniformization of belief and thought in Spain.

In the Carolingian Empire of the eighth and ninth centuries, trade and mercantile connections were viewed as having a much higher premium than in the declining Visigothic king-

dom; hence the treatment of Jews was much better, though always within the framework of the general attitude set by the Church. Emperor *Louis the Pious and his advisers were in particular favorably disposed to Jewish trade, and under him court society treated the Jews well. This incurred the opposition of Archbishop *Agobard of Lyons who bitterly criticized Jewish influence, Jewish culture at Lyons, and the anti-Christian disputations in which the Jews engaged. In particular Agobard opposed the protection accorded to Jewish *slave trading (see also *slaves). The south Italian 11th-century chronicle of Ahimaaz registers the impression made by persecutions instigated by Emperor *Basil I (see *Ahimaaz b. *Paltiel).

During the 10th and 11th centuries the Christianization of the minds, and in particular the emotions and the imaginations, of the peoples in Western Europe proceeded. The importance of Jews as international merchants, and gradually as local merchants too, continued to be appreciated. Jews were also valued as a colonizing element in the reemerging town life in these countries, as the charter of Bishop Ruediger of *Speyer (1084) offering them attractive concessions clearly shows. In 1190, only six years before the First *Crusade, Emperor Henry IV granted the Jews of Speyer and *Worms charters giving them extensive rights of trade and self-government.

THE FIRST CRUSADE. By this time social and religious ferment in Western Europe was nearing its peak. Jews were expelled from *Mainz in 1012. The investiture conflict between the papacy and the emperor, and the propaganda for a Crusade in the 11th century, resulted from the intensification of Christian political theory and the inflamed emotions to a high pitch, leading many Christians to believe it their sacred duty to take revenge for Jesus' passion and death. With the growth of the influence of the monks, the feelings of the lower clergy found a potent and articulate vehicle of expression. All this combined to bring about widespread massacres of the Jews during the First Crusade (1096), in particular of the communities of the Rhine, as well as the Jewish response to this challenge by the acts and the ideology of **kiddush ha-Shem*.

REDISPOSITION OF JEWISH LEADERSHIP STRUCTURE. The seventh to eleventh centuries were a formative period for a redisposition of Jewish leadership and its social ratification. In the pattern of leadership formed by the institutions of the exilarchate, the *geonim* and their academies, there emerged an aristocratic hereditary hierarchy consisting of many families of scholars, traditionally devoted to study and assuming leadership in a fixed system of precedence and gradation; another more limited circle was constituted of families of *geonim*, entitled to succeed to the autocratic leadership of the academies; finally there was the leadership exercised by the Davidic dynasty of the exilarchic house. Over the course of centuries this system tried to combine the principles and practice of intellectual attainment, sanctity of life, hereditary succession, and hierarchic promotion. Despite the tensions and contradictions inherent in this combination, it worked successfully for a remarkably long time. The system was based on centralization, and by example from above induced throughout Jewish society appreciation of aristocratic descent combined with learning and leadership. This structure and set of social values began to break up, not under the attacks of the tenth-century *Karaites, although these were directed expressly and sharply against it, but through the disintegration of the supporting framework of the caliphate, and the appearance of local Jewish leadership which, while remaining aristocratic in attitude and values, was no longer connected with the center at Baghdad and with the hierarchy of the academies. Individualistic tendencies were also at work in this process (see also below).

This structure, with its extreme claims to authority, sanctity, and aristocracy, has remained an isolated chapter in the pattern of Jewish institutions of scholarship and leadership. In the 8th to 11th centuries, and in decline up to the 13th century, it represented for Jewish history a singular experiment of centralistic leadership based on aristocratic stratification and individualist intellectual values. The concept "yeshivah" still remains, but, beyond the borders of the caliphate and after the 13th century, there was no attempt to organize it on the lines of family units and as an hierarchic ladder. The term *Gaon* became understood in Europe to designate "genius," and its original hierarchical meaning was lost, to be rediscovered by modern research. The system was gradually replaced by local leadership, such as that of the **nagid*. Alongside there began to emerge, even in Muslim countries, the local community unit, based on cohesion of its members and the needs specific to Jews living together and feeling a common responsibility in a certain locality.

North of the Pyrenees, Jewish community leadership around the beginning of the 11th century shows the influence of the individual predominating, based on personal charisma and learning alone. It is exemplified in the figure of *Gershom b. Judah, "the Light of the Exile," and in the ideals set out by *Simeon b. Isaac of Mainz, reaching its consummation in the personality and leadership of *Rashi and the figures who by their personal qualities and example led their communities to sacrifice themselves in the spirit of *kiddush ha-Shem* during the persecutions of the First Crusade. The regular organs of local community leadership and the *synods of local community leaders, which convened at fairs and in central commercial towns like Cologne, served in this milieu to support leadership by the individual or by the isolated community or as an alternative to it.

The Jewish leadership used various methods of influence and systems of instruction to exercise authority. The Babylonian *geonim* and their academies have assumed a somewhat distorted image in the view of later generations because the main source of information on them and their activities derives from the *responsa they sent, on the authority of the academy, to legal questions submitted to them by communities or individuals. In reality, they achieved their goal of establishing the Talmud as the criterion for normative Jewish way of life and thought, not only, and not even mainly, through this legal and exegetical correspondence. Although the responsa

literature of the *geonim* is highly diversified, and has been regarded with high esteem down through the generations, it was only part, and in their estimation only a substitute, for direct methods of exercising centralistic moral and social control of Jewish society, both orally and in writing. Wherever and whenever possible, they preferred direct instruction given to assemblies of scholars either by the *gaon* and the collegium of his academy (which served both as a supreme judicial court as well as a high academy of learning) in the **kallah* months or by sending out an emissary or a representative of the *gaon* to the communities. The *geonim* also sent out letters of moral instruction to the Jewish people when assuming office, called by *Saadiah Gaon the "letter on assuming lordship" (*Iggeret Tesurah*). Several letters of such purport of the 10th and 11th centuries (of Saadiah Gaon in: *Dvir*, 1 (1923), 183–8; and in: *Ginzei Kedem*, 2 (1923), 34–35; of Nehemiah Gaon, in: Mann, Texts, 1 (1931), 78–83; of Israel, son of Samuel b. Ḥophni, *ibid.*, 167–77; of Sherira Gaon, *ibid.*, 95–105; of Hai Gaon, in: *Ginzei Kedem*, 4 (1930), 51–56) evidence an aim to impart instruction to the people in simple and rational language, appealing to their emotions and needs. In his letter Saadiah Gaon repeatedly stresses that it is the duty of his office to teach Jews and to lead and admonish them. He invites questions and appeals. This high conception of geonic office justifies the assumption that many more such pastoral letters were sent out but have been lost in later centuries and places where geonic institutional and moral authority was no longer binding. The *geonim* extended their influence also by instilling in the people a deeply mystical conception of the sacredness of the academies and their heads. They especially emphasized the value of their blessing and the danger of incurring their **ḥerem*.

CULTURAL AND SPIRITUAL LIFE. The productive Jewish cultural and religious life which continued in these centuries was frequently stormy. Almost at the outset of the geonic campaign to establish the Talmud as the book of life for the Jewish people it encountered the revolt of *Anan b. David, and the early *Karaites. These represent in the eighth to ninth centuries an archaistic and rigoristic trend, turning away from talmudic and geonic "modernization" toward a biblical primitive conception of the Jewish way of life, ideals, and duties. The concept of all-pervading holiness, a demand for the reinstatement of harsh old prescriptions, an insistence on adherence to detailed local custom, and a program of self-isolation for the camp of true believers made this movement a throwback to various ancient sectarian tendencies of the Second Temple period. Even in this opposition the strength of talmudic modes of thought is evident, for Anan employs talmudic dialectics frequently and with skill in his writings; what he opposed was reliance on law based on talmudic collective discussion and the alleviations it introduced.

The change in cultural temper and religious mood among the Jews in Muslim countries in these centuries – to a large degree due to the influence of Islamic society and culture, and to the penetration of Greek philosophical ideas to both Muslims and Jews – is evident in the development of Karaism as well as in the fight against it. Whereas Anan was authoritarian to the core and the *geonim* who opposed him at first rejected his views in the name of the sanctity of tradition and on the basis of the authority of their academies, both Karaite and *Rabbanite conceptions and argumentations had changed very much in the same direction by the tenth century. Both sides were now mainly contending within the framework of religious rationalism, which worked a transformation in the conception of their own stand and that of their opponents. The Karaites of the tenth century (see *Avelei Zion; *Daniel b. Moses al-Qūmisī; *Levi b. Japheth; *Sahl b. Maẓli'aḥ ha-Kohen; *Salmon b. Jeruham; Jacob al-*Kirkisānī) based their strict adherence to the Bible on their conception of individual responsibility, which should not rely on any external authority but only on the individual's reasoning powers. This they considered the sole legitimate means by which to understand properly – i.e., individually – the sacred Scriptures, the Jewish way of life, and the world order.

The writings of the *geonim* of the 10th and early 11th centuries show a similar application of rationalism. Saadiah Gaon wrote his "Book of Beliefs and Opinions" in the early tenth century to explain Jewish Rabbanite theory and practice on systematic rationalistic philosophical grounds and to defend it against opponents through rationalist argumentation. He opposed the Karaites in the name of religious rationalism, which demands that men should rely on accumulated tradition and binds them to obey the guidance of national collective leadership. Rationalism afforded Saadiah – and, in an even more extreme approach, the *Gaon* *Samuel b. Hophni – the incentive and the means to combat anthropomorphic interpretations and uphold radical rationalist exegesis of the Bible. On the other hand, to Karaites it furnished weapons for destructive criticism of the Talmud. Although the theoretical and practical consequences were to be widely divergent, they stemmed from a common point of departure based on a rationalist approach.

The divergences and conflicts often divided the Rabbanite and Karaite camps more deeply among themselves than the controversy between the two sides. By its nature Karaite individualist rationalism gave rise to innumerable divisions. The much larger Rabbanite section, united formally, became increasingly diversified with the development of local custom and local culture, which became more important as the centralizing framework of the caliphate and the authority of the exilarchate and Babylonian academies began to decline. Even more decisive was the difference between communities within the Muslim environment and influence and those in the Christian sphere.

The difference is thrown into sharp relief when the world of thought and religion of the Babylonian academies is confronted with that of the Jews of southern Italy. This Jewry was important in its time and for later generations from many aspects. The Jewry of *Ashkenaz was conscious of its cultural roots in southern Italy. The Ashkenazi rite of prayer origi-

nated there. In the 12th century Jacob b. Meir *Tam formulated the cultural debt of Ashkenaz to southern Italy by his paraphrase of Isaiah 11:13; "For out of Bari shall go forth the Law and the word of the Lord from Otranto." Mystic circles of the *Ḥasidei Ashkenaz traced nebulous origins of their traditions to semilegendary figures active in southern Italy. The wealth of Jewish traditions and culture there is revealed in the *Josippon chronicle, completed in 953. The *piyyutim* composed by Jews of this region during the period are the products of a considerable Hebrew liturgic and poetic activity. In the Ahimaaz chronicle, completed in 1054, the traditions, the venerated figures, and the ideals of the upper circles of this important Jewry emerge in striking contrast to the rationalist world of Babylonian Jewry. The chronicle abounds with miraculous elements. Use of the Divine Name frequently appears, as a formula for keeping the dead alive, for supplying miraculous defense, and as a device for speedy transportation. Vampire-like women are reported to snatch, in the dark of night, children who in turn are snatched away and kept alive by holy sages. In religious outlook this world reveals all the elements that *Hai Gaon despised and warns against in the 11th century (see: *Oẓar ha-Geonim* ed. by B.M. Levin, 4 (1931), 6, 10–12, 13–27, nos. 7, 16, 20–21 (responsa to Ḥagigah).

In Muslim Spain, at the courts of Jewish grandees, a different cultural trend developed in the 10th and 11th centuries. The clash that occurred between Ḥisdai Ibn Shaprut and his court poet and grammarian, *Menahem b. Jacob ibn Saruq, demonstrates on the one hand the lordly attitude of the maecenas and on the other the proud individuality of the poor intellectual. In the 11th century Samuel ha-Nagid and his son Jehoseph lived in ostentatious luxury and prided themselves on it. According to many opinions, they were among the main builders of the Alhambra palace in Granada. The writings of Samuel ha-Nagid display a rational, highly individualistic and somewhat sensual temper. The responsa of Isaac b. Jacob *Alfasi provide evidence of the trends in Torah learning and communal culture characterizing the middle strata in Jewish society in Muslim Spain.

Archbishop Agobard describes the culture of the Jewish community at Lyons and the literature it possessed as both mystic and talmudic in its conceptions. The Jews in the lands of the Franks in the 10th to 11th centuries are also known from their own works and expressions of opinion. The Jews of Provence described themselves to Ḥisdai Ibn Shaprut in the tenth century as "Your servants, the communities of France." They were in close contact with the Muslim Spanish Jewish courtier and tried to persuade him to influence the authorities at Toulouse to stop the practice of a local custom harming and insulting to the Jews. Their letter is written in flowery Hebrew (Mann, Texts, 1 (1931), 27–30). The community of *Arles had specific ordinances for trade regulation about this time. The *Anjou community recorded, in rich Hebrew, an event that proves Jewish contact with and influence in the Christian environment in the south. It relates to a woman proselyte who "has left her father's house, great riches, in a far land, and has come for the sake of the name of our God to nestle under the wings of the *Shekhinah*. She has left her brethren and the grandees of her family; she settled in Narbonne. The late rabbi David married her … as he heard that they were looking for her he fled with her to our place." A new place of refuge was now being sought for the noble proselyte widow and her baby child (*ibid.*, 32–33). This type of Jewish culture flourishing in close contact with its environment was to continue in Provence and bear many fruits (see below).

A distinct and productive Jewish culture developed in the 10th and 11th centuries in northern France and on the eastern bank of the Rhine. The mystic traditions of southern Italy were not forgotten here but toned down. This culture flourished in a patrician merchant society regulated according to *halakhah*, and was based on Torah study and on the conception of the whole of the Jewish heritage as a living integrated force. In the *piyyutim* of Simeon b. Isaac ideals are set forth and behavior described which were to be typical of the early Jewry of Ashkenaz for many generations. This culture produced the first almost complete commentary on the Bible and the Babylonian Talmud, the work of Rashi, which has remained the basis of traditional Jewish Bible and Talmud study. Through this it also influenced to a considerable extent Christian understanding of the Bible, in particular through the impact on *Nicholas of Lyre.

It was in this northern, Christian environment that Jewish *family structure underwent a revolutionary reformulation. *Monogamy became the pattern of the *Ashkenazi Jewish family by force of the so-called "*Takkanot* of Rabbenu Gershom b. Judah, the Light of the Exile." This change was reinforced by a complementary one: a *ḥerem* ascribed to the same authority invalidated a bill of divorce of a woman without her prior consent.

THE KHAZAR KINGDOM. These formative centuries also saw the conversion of a Mongol society to Judaism. The *Khazars – the royal family and court, and their warrior class in particular – accepted Judaism in the eighth century. This created a state ruled by a Jewish aristocracy in the strategically important region between the Volga and the Caspian Sea in the eighth to tenth centuries. The report of this conversion had great influence on contemporary Jews (see *Ḥisdai ibn Shaprut) and on Jewish thought in later generations (see *Judah Halevi). In modern times its memory was to play a certain role in discussions about the origins of the Jews in Poland–Lithuania and Russia. The Khazar state practiced full tolerance toward merchants of various denominations, both those living in it as well as those passing through. It controlled important trade routes and fulfilled a critical function in the history of Christianity in Eastern Europe as it served as a buffer state between a dynamic Islam and the Slav peoples in what is now Russia – by which the Khazar state was later destroyed.

DIVERSIFICATION IN LEADERSHIP STRUCTURE AND CULTURAL TRENDS. On the threshold of the 12th century Jewish

history stood at the end of the successful period of the experiment to combine a hierarchical and hereditary social structure with individualist criteria of learning and intellectual attainment; the former experience in leadership and economic development had shown both the importance and dangers in the existence of a gigantic political framework like the caliphate and its breakup; the Jewish sphere was characterized by cultural diversification and the emergence of various systems of leadership. Rationalism was the dominating influence – at least among the upper circles and intellectuals – in the Jewish communities of the Muslim countries. Mystical and even magical leanings were found among the Jews in Christian countries. Great individual leaders were emerging; individualism and local particularism began to assert themselves in the leadership. In regions of cultural and social contacts and transit, like North Africa, southern Italy and Provence, Jewish cultural creativity was due in no small part to these circumstances. The latecomer to the Jewish scene, the budding culture of Ashkenaz, produced great achievements almost at the start and a capacity for expressing revolutionary halakhic and social changes. The upper circles of Jewish society had a fluent command of Hebrew though in everyday life they used the languages of the countries they lived in; in Muslim countries Arabic was used for literary expression, in particular for legal decisions and philosophic deliberations. Rashi found it necessary to intersperse his commentaries with many Old-French terms in order to be understood by his readers. Jews continued along the path that was to lead them from the use of Greek and Latin, as a cultural medium, through adaptation of alien languages to the development of *Yiddish and, later, *Ladino. Hence a trend apparently leading to assimilation became a valuable means of attaining an individual culture and cohesion. Judaism was still attracting individuals in the west of Europe, like the deacon *Bodo, while in the east of Europe it attracted the leading sector of a Mongol nation, ruling its state for over two centuries. The hatred and massacres engendered by the Crusades produced in response the spirit of *kiddush ha-Shem*, which was described and taught in the early 12th century as representing the Jewish holy war against the enemies of the Lord.

The Crystallization of Jewish Medieval Culture (12th–15th Centuries)

EFFECTS OF THE CRUSADES. The 12th century continued the series of shocks for Jewish society in Europe and for the Jewish spirit everywhere initiated by the movement and spirit of the Crusades. The Second Crusade (1146–47) and the Third (1189–90) brought massacre, plunder, and terror in their wake to Jews in Western Europe. *Bernard of Clairvaux gave strong popular expression to the old-established conception of the higher Church echelons of combining a policy toward the Jews of humiliation and isolation with defense of their life and property. In his letter to "the English People" sent also to "the Archbishops, Bishops, and all the clergy of eastern France and Bavaria," he states:

> The Jews are not to be persecuted, killed, or even put to flight … The Jews are for us the living words of Scripture, for they remind us always of what our Lord suffered. They are dispersed all over the world so that by expiating their crime they may be everywhere the living witness of our redemption … Under Christian princes they endure a hard captivity, but "they only wait for the time of their deliverance"… I will not mention those Christian money-lenders, if they can be called Christian, who, where there are no Jews, act, I grieve to say, in a manner worse than any Jew ….

That his missionary hopes and expectations serve as a main argument in his defense of the Jews is even more evident in another letter to the archbishop of Mainz opposing the incitement to massacre preached by the monk, Raoul. Bernard argues:

> Is it not a far better triumph for the Church to convince and convert the Jews than to put them all to the sword? Has that prayer which the Church offers for the Jews, from the rising up of the sun to the going down thereof, that the veil may be taken from their hearts so that they may be led from the darkness of error into the light of truth, been instituted in vain?… (The Letters of St. Bernard of Clairvaux, transl. by Bruno Scott James (1953), nos. 391, 393).

This was the most that a great Christian mystic and ascetic could say against shedding the blood of Jews to the Western European populace in 1146. These letters were reprinted by anti-Nazi Church circles in Germany immediately after the Holocaust!

Left to their own resources the Jews protected themselves by leaving the towns and moving to castles of the nobility – paying money for the Christians to leave the castle so as to defend it themselves. This policy, successful in most cases, had tragic consequences for the community of *York, England (1190). True to the ideal of *kiddush ha-Shem*, when the Jews were surrounded in the tower they killed themselves.

Jewish steadfastness to the faith in itself served to forestall some attacks. Those who adopted Christianity when threatened with death in 1096 were permitted by Emperor Henry IV to return to Judaism despite a sharp protest by the pope. Though the religious-fanatical motive for Jew-killing remained among Christians throughout the Middle Ages, it was now becoming interwoven with economic, social, and emotional elements. Bernard of Clairvaux had hinted at hatred for the Jewish usurer as a motive for attacking Jews. The *blood libel from the 12th century onward and the libel of desecration of the *Host from the 13th century created a vicious circle around the Jew. Each accusation presupposed the Jew as treacherous, blood-lusting, sadistic, God-hating, and devil-worshiping. Each libel added darker shades to this conception of the Jew. Dramas on the passion of Christ combined with imagery in Romanesque and Gothic church sculpture, stained glass, and paintings to imbue deep in the thought and imagination of the Christian populace, through the greatest expression of Christian art, the image of the Jew as a horrible and horrifying fiend.

As Christianity encompassed the mental horizon of all Western Europeans in this era, the Jew remained the main – often the only – representative of nonconformity in a conforming society. As in the fourth century, so in the 12th and early 13th century, as well as in the early 15th, an upsurge of heretical movements and social tensions within Christianity (e.g., the *Hussites) intensified the fear of the Jew and hatred of him. In the struggle between papacy and empire, the leaders of the Church became used to demagogic formulas and the deployment of popular forces and violence to serve their own purposes. The attitude and legislation of Pope *Innocent III express clearly this interpenetration of policy and vulgar enmity of the Church's attitude toward the Jews, even in papal formulations. Mercilessness in enforcing servitude of the Jews, extreme hostility, and debased rhetoric and menaces appear there in a potent and vicious combination. The Augustinian-Gregorian conception of sufferance of the Jews amid Christian society – restated in a missionary vein by Bernard of Clairvaux in the middle of the 12th century – assumes, with Innocent III in a letter to the king of France of Jan. 16, 1205, the following shape:

> Though it does not displease God, but is even acceptable to Him that the Jewish Dispersion should live and serve under Catholic Kings and Christian princes until such time as their remnant shall be saved … nevertheless such [princes] are exceedingly offensive to the sight of the Divine Majesty who prefer the sons of the crucifiers, against whom to this day the blood cries to the Father's ears, to the heirs of the Crucified Christ, and who prefer the Jewish slavery to the freedom of those whom the Son freed, as though the son of a servant could and ought to be an heir along with the son of the free woman … (S. Grayzel, *Church and the Jews in the 13th Century* (1933), 104–106, no. 14).

This great lawyer relies on and quotes the information that "it has recently been reported that a certain poor scholar had been found murdered in their [the Jews'] latrine" (*ibid.*, 110). He does not hesitate to quote at the beginning of a detailed anti-Jewish letter that the Jews are to be considered "in accordance with the common proverb: 'like the mouse in a pocket, like the snake around one's loins, like the fire in one's bosom'" (*ibid.*, 115, no. 18).

Innocent III tried to deflect to the Jews his anti-imperialist policy of exploiting popular force and sentiment. In 1198, at the very beginning of his pontificate, he wrote:

> To the Archbishop of Narbonne and to his suffragans, and also to the Abbots, Priors, and other prelates of the Church, as well as to the Counts and Barons, and all the people of the Province of Narbonne … We order that the Jews shall be forced by you, my sons the princes, and by the secular powers, to remit the usury to them; and until they remit it, we order that all intercourse with faithful Christians, whether through commerce or other ways, shall be denied the Jews by means of a sentence of excommunication … (*ibid.,* 87, no. 1).

Consistent in his attitude, he carried through this policy as the program of the Church in the Fourth Lateran Council of 1215 (see *Church Councils). There the representatives of the Catholic Church ordered

> by a decree of this Synod, that when in the future a Jew, under any pretext, extorts heavy and immoderate usury from a Christian, all relationship with Christians shall therefore be denied him until he shall have made sufficient amends for his exorbitant exactions. The Christians, moreover, if need be, shall be compelled by ecclesiastical punishment without appeal, to abstain from such commerce. We also impose this upon the princes, not to be aroused against the Christians because of this, but rather to try to keep the Jews from this practice (ibid., 307).

These measures failed, mainly thanks to the opposition of the secular rulers, yet they encouraged anti-Jewish propaganda by the mendicant orders against Jewish usury, in particular by the *Franciscans, especially in Italy of the 15th century (and see *Monte di Pietà).

IN CHRISTIAN SPAIN. The Jews in Muslim Spain were profoundly shaken in the 12th century by the successful Christian *Reconquista* from the north and by the Muslim response in the waves of the *Almohads erupting from North Africa to infuse a new fighting spirit into the Muslim ranks. Many communities were dispersed; many Jews fled, like the family of *Maimonides, to the south, to other Muslim countries. Many Jews, both in North Africa and in the territories in Spain under Muslim rule, were forced to adopt Islam. Others fled northward to the Christian principalities of Spain. At first the Jews experienced a general feeling of crisis and loss, forcefully expressed by the chronicler Abraham *Ibn Daud. Gradually – and relatively soon, in time to be noticed by the same late 12th-century chronicler – Jewish refugees in the Christian principalities found new functions and a new importance within the general society, in the colonizing and economic spheres as well as in the cultural and scientific ones. The Jewish element was entrusted with the colonization of fortified parts of the towns taken by the Christians; they were given many administrative posts especially in the financial field.

Papal protests against the honors and powers conferred on Jews did not prevail in Spain during the 12th to 14th centuries against the needs of the state for the expertise and initiative of the Jews. Jews also became the transmitters of Muslim-Greek philosophy and science to Christians – a role entrusted to them, and to apostates from Judaism, in many other Christian courts and Church circles of the 12th and 13th centuries, as translators of Arabic and Greek texts into Latin (see Jacob *Anatoli; Ibn *Tibbon). Many Jews served as mathematicians, astrologers, field surveyors, and, above all, physicians at the Christian courts. They thus created the courtier circles of Jewish society in the kingdoms of Christian Spain. This paradox of crusading Christian states granting to Jews a major role in colonization, administration, the economy, and science was the basis of the normal Jewish town economy and society there, Jews being found in almost every walk of urban social life and economic activity. This situation continued up to the

expulsion from Spain at the end of the 15th century, though it deteriorated from 1391 onward.

ECONOMIC AND SOCIAL PATTERNS NORTH OF THE PYRENEES. In countries north of the Pyrenees, there developed gradually, after the massacres of the First Crusade, a specific Jewish economic and social pattern, more and more Jews being forced by circumstances to engage in one occupation only, mainly *usury. This trend never penetrated Jewish life in Christian Spain or Muslim countries where moneylending was one of many Jewish livelihoods. It was also not continued as the main Jewish occupation in Poland-Lithuania from the 16th century onward. With the 15th century, Jews began to turn increasingly to other occupations in the countries where moneylending had been formerly predominant in Jewish life. In the Middle Ages this function of the Jews was mainly the supply of consumption loans (for commercial loans were supplied by Christian moneylenders despite Church prohibition). It was necessary for the needs of the town population and nobility (a necessity proved by the fact that when Jews were expelled from German towns, as happened in the 14th and 15th centuries, they were returned quickly because the need for loans was felt). However, the high rate of interest stemming from the scarcity of ready money and precious metals in the Middle Ages and the method of taking pawns to ensure repayment – as well as the fact that taking interest was considered immoral and unreasonable in medieval Christian moral and economic theory – added Jewish usury to the score of other evil Jewish practices and trades. The image of the cruel Jewish extortionist and crafty financial trickster was merged with that of the Christ killer and child murderer. Shakespeare created the figure of Shylock, on the basis of Italian influences, more than 300 years after the last Jew had been expelled from England. To the present day, antisemites and apologetic Jews are obsessed by the notion that the "usurious spirit" of the Jews is a trait to be reprehended or explained.

The attitude of Jews toward moneylending on interest in the Middle Ages was governed by the rationale of merchants and townspeople who were out of tune with the agrarian spirit of biblical, mishnaic, talmudic, and Church prohibitions. There do not appear in the writings of Jewish commentators on the Bible and decisors of the Middle Ages the philosophic argumentation as to the barrenness of money and the insensibility to the concept of economic enjoyment from the passage of time which constantly recurs among Christian writers. Except for the few influenced by Christian attitudes, Jewish lawyers and moralists consider the biblical prohibition on lending on interest as "a decree of divine majesty" to be carried out according to the letter, even if not understood in spirit. The Bible forbade lending to "your brother," and the Jews in the medieval cities, who certainly could not perceive any demonstration of a brotherly attitude toward them by their Christian neighbors, interpreted the prohibition at this minimum and saw no reason, either logical or moral, to extend this unreasonable decree toward non-Jews. In fact, Jewish legal authorities tried to find legal formulas allowing the taking of interest by a Jew from a Jew – as Christians did also, despite their theoretical moralistic objections, with regard to the taking of interest by a Christian from a Christian. Among Jews this was formally achieved in 1607 by the *Councils of the Lands of Poland-Lithuania. In 1500 Abraham *Farissol expressed the attitude toward the taking of interest through a theory which assumed the existence of a different social and conceptual order in biblical times and which was in accord with the Greek philosophers who justified the prohibition on the taking of interest. However, as of now, human society was structured on other principles:

> A new nature, different obligation, and another order pertains, inherently different from the first. This is: to help your fellow for payment coming from the one who is in need of something. Nothing should be given to another free of charge if he is not a charity case deserving pity.

He lists payment for work, rent for accommodation, and hire of work-animals as cases to prove this point. He considers it a logical consequence to pay for the use of the capital of another man,

> for a money loan is sometimes much more important than the loaning of an animal or a house, hence it is natural, logical and legal to give some payment to the owner of the money who gives a loan in the same way as people pay rent for houses and cattle, which come to one through money … the first natural order has been abolished and no one helps another person for nothing, but everything is done for payment (from his Magen Avraham, in: *Ha-Ẓofeh le-Ḥokhmat Yisrael*, 12 (1928), 292–3).

This foreshadowing of modern theorists about capital and gain is the end result of the Jewish attitude toward money and interest throughout the Middle Ages.

EXPULSIONS AND THE BLACK DEATH. The catastrophe of the *Black Death persecutions and massacres of 1348–49 was both the culmination of the suspicion and distrust of the Jew which made it conceivable to see him as the natural perpetrator of the crime of well-poisoning, and, in Germany, the culmination of over 50 years of almost uninterrupted anti-Jewish attacks, libels, and massacres. Yet Jewish society showed its great resilience in reconstructing its communities and rebuilding its economic activity and ties only a few after these persecutions in the very places where they had been killed as dangerous beasts. Even in Christian Spain and Poland-Lithuania this catastrophe had its impact, though it was not to be so destructive as in Central Europe.

The Jews were expelled from *England in 1290 – 16,000 persons approximately – to return there only in the 17th century. They were expelled almost totally from most of France in 1306. After these expulsions, in 1348, there remained the shocked and reorganized cluster of Jewish communities in the German lands; the Jewish center in Christian Spain was still intact, though signs of danger were not lacking. In Muslim lands, the Mongolian incursions brought the devastation

of population and cultural difficulties for Muslims and Jews alike, but the status, *economy, and *demography of the Jews remained relatively the same as before, for better or worse. The new Jewish center in Poland recovered speedily after 1348, and continued to develop economically, moving out of moneylending activity toward trade and crafts; demographically and socially, there were already signs of the future dynamism and expansion of this Jewish center.

SERFS OF THE CHAMBER. The legal status of the Jews and their security remained unstable as the result of the First Crusade. The old system of granting charters and imperial episcopal protection and defense was found totally wanting in the face of popular incitement and attack. The state, as well as the Jews, was searching for a new formula and new guarantees for safety. This search went on in a situation in which even the would-be protectors were liable to be the deadly enemies of the Jews, as for example, *Louis IX of France, who considered that the right way to speak to a Jew was with a sword in his belly. The Holy Roman Empire tried at first to include Jews in the *Landfrieden* protection (1103) along with other defenseless Christian people. This did not work out well because of the very nature of the concept *Treuga Dei* ("Truce of God"), which was intended as a Christian measure for the protection of Christian folk. Gradually, there began to crystallize, during the 12th and 13th centuries, a new conception of the status of the Jew. The complex of ideas underlying this new attitude toward the Jew in the Christian body politic came from two different, though parallel, sources – from imperial legalistic conceptions of the rights of ownership of the sovereign over certain elements of the population and his obligations toward such chattels on the one hand, and, on the other, out of papal and ecclesiastical conceptions of the sovereignty of the vicar of Christ over those who crucified him and the right and duty of the pontiff to instruct Christian rulers how to behave in a Christian way. Legendary influences, legal notions, and fiscal hopes of the chance to exact maximum extortion in taxes and contributions from Jews merged with old imperial conceptions of the duty to protect and safeguard all the inhabitants of the realm. From early formulations that the Jews "belong to our chamber" (*attineant ad cameram nostram*, Emperor Frederick Barbarossa, in 1182), through the final legal conception of Emperor Frederick II expressed in 1237, that "imperial authority has from ancient times condemned the Jews to eternal servitude for their sins" (*cum imperialis auctoritas a priscis temporibus ad perpetrati iudaici sceleris ultionem eisdem Iudeis indixerit perpetuam servitutem*) in his charter granted to the city of *Vienna, emerged the term given currency by the same emperor that the Jews were "**servi camerae nostrae, sub imperiali protectione*" – "serfs of our chamber, under imperial protection." King Henry III of England formulated with Christian candor in 1253, "that no Jew remain in England unless he do the King service, and that from the hour of birth every Jew, whether male or female, serve Us in some way" (in his *Mandatum Regis; Select Pleas, Starrs … of the Exchequer of the Jews*, edited by J.M. Rigg (1902), xlviii). This legal conception served in many cases as a license for the capricious extortion of money from Jews. Duke Albert Achill of Brandenburg declared in 1463 that each new Holy Roman emperor had the right to burn the Jews on his accession, to expel them, or to take a third of their property; the last he was actually going to do as the emissary of the emperor.

"The servitude of the Jews" did not always work to their detriment. Considered as royal chattel, they usually enjoyed royal protection. Neither the emperor nor other rulers drew from this concept of Jewish servitude the consequence of taking away from Jews their right of free movement, nor were they barred from inheriting the property of their fathers. Jews expressly appreciated the implications of these positive and negative aspects to their servitude. On the basis of this concept of servitude, very different legal structures and practices could be and were sanctioned. Up to 1391 Christian Spain drew very few consequences that operated to the detriment of the Jews. But, on the pattern of an Austrian charter issued in 1244 (see *Frederick II of Babenberg, duke of Austria), a system that gave rise to many such consequences was constructed in Central and Eastern Europe.

Jews in the Middle Ages often expressed their attitude to the legal and political framework in which they were living in their discussions of the conception that "the law of the government is law" (**dina de-malkhuta dina*), as applying to Jews. Their deliberations on these themes show their estimate of and preference for differing political systems and legal structures. On the whole they were pro-royalist and against disruptive forces. They were for "the old," "the customary and hallowed law," and against arbitrary innovation.

THE DETERIORATION IN CHRISTIAN SPAIN. At the end of the 14th century, as the *Reconquista* was almost accomplished, when Christian society in Spain no longer felt the need for Jewish tutelage in colonization, administration, or culture, the paradox of a favorable Jewish existence within a fanatical Christian society began to disintegrate. Preceded by inimical propaganda, in 1391, many communities there were attacked. Thousands of Jews accepted Christianity under compulsion, thus creating in Christian Spain, as well as in Jewish society, the phenomenon and problem of the *Marranos, the *anusim*, and later on, the creation of the Spanish *Inquisition (1480). A century of pressure exercised by forcing the Jews to listen to missionary *sermons, the holding of religious *disputations (and see disputation of *Tortosa), and constant social and mental stress followed. In the end, the Jews were expelled from Spain in 1492. They were again cruelly forced into *apostasy, their children being taken away from them, in *Portugal in 1497. As the Jews in large tracts of southern Italy were forced into apostasy or expelled by 1292, and were expelled from *Sicily in 1492–93, there were almost no Jews left in Western Europe by 1500, from the north of the British Isles to the tip of Sicily, except for isolated communities in France and for the remnant of the Jews in central and northern Italy.

At the time that *Columbus discovered a new continent and made the Atlantic a highway for transport and trade, the Jews were not permitted to cross the Atlantic, though not for long. Many of those expelled from Spain went directly to the Muslim countries of northern Africa or to the territories of the *Ottoman Empire, which received them favorably; others arrived in these lands via Portugal and Italy, and many remained in Italy. There also began a movement away from Spain into the Spanish *Netherlands, which formed the nucleus of the later Jewish return to the shores of the Atlantic.

DISAPPEARANCE OF GEONIC HIERARCHY. The leadership of Jewish autonomy and communal life had been developing during these centuries toward the complete disappearance of the old geonic hierarchy, which vanished by the end of the 13th century. Maimonides and *Samuel b. Ali Gaon clashed sharply about this in the late 12th century. Samuel was sure that the *Gaon* and his academy were the only feasible leaders for the Jewish people and the custodians of Orthodoxy. Maimonides considered that the system of a publicly supported hierarchic structure of scholars was wrongful and sinful; he asserted that the hereditary office of the *gaon* was corrupting by its very nature. This was a confrontation between the claim to leadership by the nascent individualist charisma and old-established hierarchy and institution. Maimonides did not oppose the exilarchate; his descendants, and possibly he himself, carried the title and office of *nagid* in Egypt. His "Letter to Yemen" as well as many of his responsa are in the great tradition of the epistles of instruction and legal leadership of the *geonim*. There were signs of a resurgence of local communal leadership among Jews throughout the Muslim lands during these centuries.

COMMUNAL LIFE IN CHRISTIAN SPAIN. In the kingdoms of Christian Spain, communal life was much more involved, tense, and diverse than in the countries to the north and south. Tension between the various social classes to which the variegated economic structure and relatively large numbers in these communities gave rise was aggravated by disputes over the mode of election to, and composition of, the community institutions as well as by acute differences of opinion over the mode of tax assessment, the composition of the assessory bodies of the community, and actual justice or injustice in distribution of the tax burden. These causes of social friction operated with particular intensity in the 13th and 14th centuries, as in the community of *Barcelona. They sometimes gave rise to "political parties" along the lines of division between the rich and poor members of the Jewish community, like those in *Saragossa about 1264. Such divisions and parties became intertwined with, and often focused on, ideological and social controversies; the latter mainly reflected the disparities between the leanings of the well-to-do and courtiers in Jewish society toward rationalism – and, as their enemies accused them, often also toward hedonism – and the inclinations of the lower middle classes, the poor, and a minority of the upper classes toward *Kabbalah mysticism, and moral reform of an ascetic type. These elements were central in particular during the great storms aroused in Jewry by the *Maimonidean controversy (in the 1230s and around the end of the 13th and beginning of the 14th century). These theoretical and practical conflicts also related to questions of the study of general culture and of the correct attitude toward mixing in gentile society. The vortices of social, economic, political, and religious problems complicated as well as enriched the social and communal life and thought of the Jewry of Christian Spain. The phenomenon of the *anusim* further aggravated as well as deepened the problems of division and unity among Jews and influenced their fate and nation.

The actual leadership of Jewish society and the communities was generally in the hands of the great courtier aristocratic families which claimed it as their birthright – like the families of *Benveniste; Perfet; *Alconstantini; *Ibn Ezra; *Ibn Waqar; and *Ibn Shoshan. From the end of the 12th century their claims were challenged frequently and vigorously, and often with success, by the supporters and leaders of anti-aristocratic and anti-rationalist trends. These leaders often came from the great families and were a product of their type of culture, such as Naḥmanides, Solomon b. Abraham *Adret, Joseph Abu Omar *Ibn Shoshan, *Isaac b. Sheshet Perfet, and Ḥasdai *Crecas. The Jewish leadership in Christian Spain defended the communities they represented and the legal and social status of the Jews not only through their contacts and influence at court, but also through their intimate acquaintance with the cultural and legal complex of Christian social and judicial attitudes toward the Jews – both of the Church as well as of the state rulers – as the ideas expressed by the general council of the Aragon communities held in Barcelona in 1354 show (Baer, Urkunden, 1 (1929), 348–58, no. 253). Despite its political sagacity, this council failed in its attempt to create a central body for the Jewry of Aragon where local particularism was strong. Castile Jewry, on the other hand, had a centralizing institution in the office of the **rab de la corte*, which helped to promote cohesion among the Jewish communities in the kingdom. This enabled the Castile communities to hold the great synod of *Valladolid in 1432 with its comprehensive program of reform and restoration (*ibid.*, 2 (1936), 280–97, no. 217).

LEADERSHIP NORTH OF THE PYRENEES. The personal charisma of the individual scholar, in conjunction with local particularized community organization, continued to dominate Jewish leadership north of the Pyrenees, and, with the emigration of Jews to western Slavic countries, was transplanted to Poland-Lithuania. Attempts to achieve a centralized leadership by synods in the first part of this period (up to 1348) in the West were essentially linked either with the great figures of revered scholars, like Jacob b. Meir Tam for the area of present-day France, in the 12th century, or with the authority of old and important communities like Rome in Italy or *Troyes in Champagne. These councils exerted authority

through a system whereby their original decisions were sent for approval and support to the main communities and important scholars and leaders who did not attend the synod. The center of gravity of Jewish leadership would thus tend to move from place to place or from scholar to scholar, though for most of the time Rome held a central position, in a curious parallel to its position in the Catholic world. Individual leaders and single communities, as well as the synods and their written missives, dealt with variegated problems arising out of Jewish religious, economic, and social life, and the opposition by the outside world. An extreme example of the devotion of the leader to his people attained in those tense centuries is that of *Meir b. Baruch of Rothenburg in Germany at the end of the 13th century who refused to permit the Jewish communities to ransom him from the dungeon to which he had been arbitrarily confined, in case this set a precedent for exacting similar extortion through the persons of other leaders. The trend to elevate the position of the woman in Jewish society, expressed in these regions by the imposition of monogamy, continued. *Pereẓ b. Elijah of Corbeil at the end of the 13th century writes:

> Who has given a husband the authority to beat his wife? Is he not rather forbidden to strike any person in Israel? Moreover R. I[saac] has written in a responsum that he has it on the authority of three great sages, namely, R. Samuel, R. Jacob Tam, and R. I[saac], the sons of R. Meir, that one who beats his wife is in the same category as one who beats a stranger … We have therefore decreed that any Jew may be compelled, on application of his wife or one of her near relatives, by a ḥerem to undertake not to beat his wife in anger or cruelty or so as to disgrace her … If they, our masters, the great sages of the land agree to this ordinance it shall be established (Finkelstein, Middle Ages, 216–7; and G.G. Coulton, *Medieval Panorama* (1955), 614–5).

This is also an example of how an individual scholar would turn his personal decision into synodal *takkanah*.

From a legal demand for unanimity in communal decisions voiced in France in the 12th century, Jewish leadership in these countries came to accept the binding force of the vote of the majority against the minority, as formulated in the 13th century in Germany. This marks a changeover from Germanic and primitive notions of decision-making to Roman and more developed systems, again parallel to developments in gentile society. Thus, for the first time elements of democratic decision-making entered Jewish social leadership. In its **takkanot* and institutions, such as **ḥerem bet din* or **ḥerem ha-yishuv* (*ḥezkat ha-yishuv*), Jewish society expressed its share in the general trend prevailing in the cities where they were living to regard the city within its walls as an independent separate entity taking everything it could under its own authority; on the other hand, dissatisfaction caused by these innovations, and the opposition of many prominent rabbis to this self-sufficiency of the town community expressed an opposing trend of regarding the Jewish community as a cell in a living and united, though dispersed, body politic and nation. These aspects of Jewish social policy found their clear-cut expression in the community of Ashkenaz owing to the absence of the other diversifying problems and causes of tension encountered in the communities of Christian Spain.

After the catastrophe of the Black Death persecutions, the need for a single guiding and comforting hand made the position of the influential scholar in the Ashkenaz community much more formalized and institutionalized than previously or as it continued in the communities of Spain. Concomitantly with the local community organs and the sporadic councils and synods, there is evidence in the regions of Ashkenaz, in particular in the southeast, of the emergence of a salaried and officially accepted single rabbi of the community. In *Austria there is first clear mention of the conception of **semikhah* as a rabbinical diploma. Such accepted rabbis constantly used the title *manhig* ("leader") which fell in disuse in the 16th century. Demands were made, and are still being put forward to the present day, claiming the exclusive right of the "*mara de-atra*" ("the lord of the locality") to the jurisdiction and control of religious functions in his locality. Both the growing authority of the institutionalized rabbi and the wish of the secular powers to exploit this authority for fiscal purposes led to the appointment (from the 13th century) of a *Hochmeister* or *Judenmeister* for the whole of the German empire, or for large parts of it. This practice was transposed at the end of the 15th and beginning of the 16th century to Poland-Lithuania, in the appointment of *seniores* and chief rabbis to lead the Jews and help in the collection of taxes.

CULTURAL CREATIVITY. The 12th century was a very creative period in the history of Jewish culture. A series of great personalities and literary works expressed and countered the trauma of the Crusades and Almohad disturbances. They responded to this challenge of suffering and deterioration by adding new spiritual layers, by shaping new patterns of culture, by forming new theories about the nature of the Jewish people, the meaning of its history and fate, and its place in the divine purpose and general history, and by framing different legal and moral formulations to meet the social and religious needs of the suffering people. The chronicles of the First Crusade and instances of *kiddush ha-Shem* (A.M. Habermann (ed.), *Gezerot Ashkenaz ve-Ẓarefat* (1946), 19–104), as well as the general chronicles of Abraham ibn Daud in Spain of the 12th century, affirm – though expressed in different ways and on different subjects – a basic conviction envisaging the Jewish people as God's militia on earth that has to carry His banner proudly, courageously, and defiantly, whether in open knightly encounter, or in the bitter choice of suicide rather than surrender of its principles. This merges with the Maimonidean depiction of the history of the Jewish people as that of the beleaguered camp of truth, which withstands all the attacks and stratagems of its enemies (see his *Iggeret Teiman*). This was the opinion of the majority of Jewish thinkers at the time. Judah Halevi gave expression to the different view that humiliation and suffering are the direct road to fulfilling the Divine Will; that all that was lacking in Jewish humiliation and suf-

fering was the full and willing acceptance of this position by Jews, though they have accepted it "midway between compulsion and willing submission," for they could join Christianity or Islam by making a verbal declaration of faith. Opinions also differed in the nature of the election of the Jewish people. Judah Halevi considered this an election of the natural Israel continuing lineally through the generations. Blood will tell; even if a Jew is bad in one generation, the good is still latent in him and will come out in his descendants: "Israel amongst the nations is like the heart amongst the members of the body." As the central life-giving force, it therefore suffers from and is contaminated by everything that is found in the subsidiary members. Gentiles may join the Jewish faith but proselytes will never attain to the prophecy reserved for deserving pure-blooded Jews (see, e.g., *Kuzari* 1:95). Maimonides represents a diametrically opposed school on these matters. For him the criterion for Jewish election rests on joining the Jewish faith and on acceptance of Jewish cohesion out of conviction. In a letter to a Norman proselyte he summed up his view, which is inherent in many of his other writings. To the proselyte's question if he might pray in the first person plural when speaking about the fate of the Jewish people and the miracles performed for it, Maimonides gave a categorical "yes":

> The core of this matter is that it was our father Abraham who taught the whole people, educated them, and let them know true faith and divine unity. He rebelled against idolatry and made away with its worship; he brought in many under the wings of the Shekhinah; he taught and instructed them and he commanded his children and his family after him to follow the Divine path … therefore, everyone who becomes a proselyte to the end of all generations and everyone who worships the name of God only according to what is written in the Torah is a pupil of Abraham, they all are members of his family … hence Abraham is the father of the righteous ones of his descendants who follow his ways and a father to his pupils and to each and every one of the proselytes … There is no difference at all between you and us in any aspect …. Know, that the majority of our fathers who left Egypt were idolators in Egypt, they mixed with the gentiles and were influenced by their deeds, until God sent Moses … separated us from the gentiles and brought us under the wings of the Shekhinah – for us and for all proselytes – and gave us all one law. Do not make light of your descent. If we relate ourselves to Abraham, Isaac, and Jacob, you are related to the Creator of the world … Abraham is your father and ours and of all the righteous who follow his ways (Responsa, ed. J. Blau (1960), 548–50, no. 293).

Maimonides thus considers that all Israel are elected twice as "a nation of proselytes," once through Abraham, and secondly, through Moses. This is in tune with his theory that Christianity and Islam are devices to educate the gentiles toward eventually accepting Jewish law. They now occupy themselves with the law – as either a figurative pattern, according to Christianity, or an earlier dispensation only, according to Islam – and will be acquainted with it and ready to accept it fully when the truth dawns on them with the coming of the Messiah (*Yad ha-Ḥazakah, Hilkhot Melakhim*, Constantinople version, chapter 11).

The 12th century also produced a flowering of biblical exegesis both in France (see Joseph *Kara; *Menahem b. Ḥelbo; *Eliezer of Beaugency; *Samuel b. Meir (Rashbam); this school influenced the Christian St. Victorine school of Bible exegesis in France), and in Christian Spain (see Abraham *Ibn Ezra; Joseph *Kimḥi). The 12th century also inaugurated the school of the *tosafists in France, which continued its activity well into the 14th century and whose influence spread first to Germany and later to Jewish scholarship everywhere. Their system of incisive analysis and subtle dialectics make the work of this long line of scholars in reality a new "Talmud of France."

Maimonides attempted in the 12th century to codify talmudic law and views in a systematic presentation according to Greek principles of structure and division, leaving out all talmudic dialectics and discussion (in his *Yad ha-Ḥazakah*). He also attempted the synthesis of Jewish revealed faith and creed with Aristotelian Arabic philosophy (in his *Guide of the Perplexed*). These attempts, as well as his opposition to institutionalized leadership, were at the heart of the Maimonidean controversy which raged at varying pitch throughout this period.

The Jewry of Christian Spain continued both the tradition of biblical exegesis (for example, David *Kimḥi), of philosophic thought (for example, Shem-Tov *Falaquera; Abraham *Bibago), and of talmudic learning, expressed in novellae, in responsa, and in codification (for example, Solomon b. Abraham Adret; Naḥmanides; *Asher b. Jehiel (originally from Germany); Jacob b. Asher; Isaac b. Sheshet Perfet). Valuable poetry based on Arabic models was written in most of these centuries there (see Abraham *Ibn Ezra; Moses *Ibn Ezra; *Judah Halevi; Meshullam *Da Piera).

Provence formed a separate Jewish cultural province up to the expulsions of 1306. Its great communities were most active in the Maimonidean controversy. The writings of the Ibn *Tibbon family, of Jacob *Anatoli, of Menahem *Meiri, and of Abraham of Béziers, show throughout the high level of Jewish culture, much creativity in many fields, as well as a high level of general culture. Provence was to a certain degree a meeting place, and therefore also a battleground, for the influences of Jewish culture in Spain from the south and of Ashkenazi culture in France from the north, though many specific ingredients gave it an additional individual tinge of its own.

It was in Provence and Christian Spain that the influential circles of the *Kabbalah and its variegated literature gave a new lease of life to mysticism and had a growing influence in this direction among Jews and on Judaism. The 13th-century *Zohar literature, as well as the 14th-century Sefer ha-Kanah (first printed 1784; see *Kanah, Book of), express much social criticism and opposition to rationalism and the aristocratic circles. In particular the "*Ra'aya Meheimna*" part of the Zohar literature contains many images and ideas related in symbolism, tendency, and character to those of the Franciscan Fraticelli. The 14th-century works contain skillful satirical

sketches of situations, modes of behavior, and types of leaders and leadership, which had incurred the odium of the extreme mystic opposition.

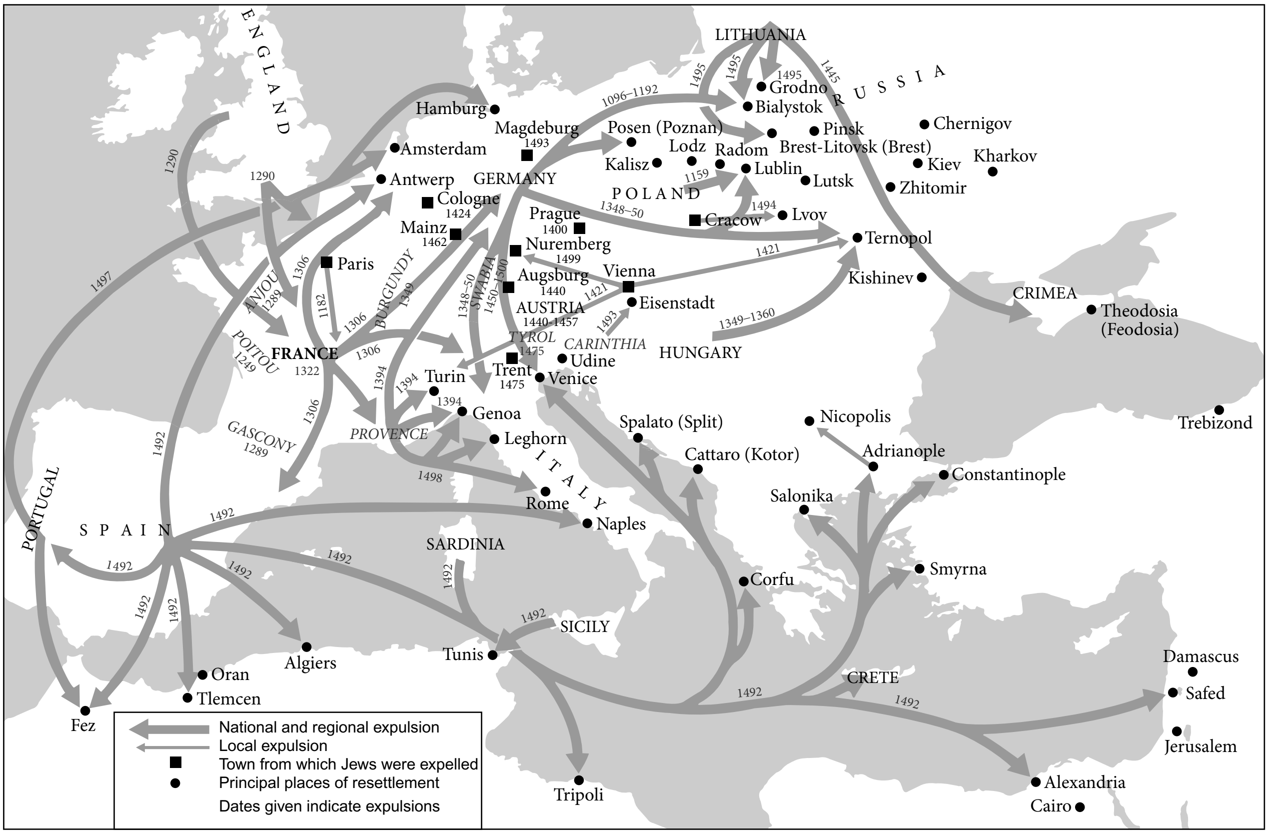
In Germany – around Regensburg and Worms – there arose the élite *Ḥasidei Ashkenaz movement of the 12th and 13th centuries. It demanded total sincerity and moral behavior beyond and above the "Torah law" given to ordinary men according to their conventions, and compliance with "the law of Heaven" (*Din Shamayim*) which binds people who have willingly taken this law upon themselves. This ideal made its adherents and their literature both vehicles of Jewish solidarity and Orthodox devotion as well as the carriers of extreme social and moral criticism and the cause of much tension in the communities. Some of the later tosafists joined their circles; some opposed their extreme ideas. From the end of the 13th century they were highly esteemed and looked at as an example but had ceased to be a living force.

IN POLAND-LITHUANIA. In Poland-Lithuania there are many indications that the 15th and early 16th century saw not only the transposition of the characteristic Ashkenazi culture there but also the expression of considerable rationalist elements that were in the main suppressed by the end of the 16th century. There also appeared popular elements reflecting the life of the masses and expressing a more vulgar trend with less respect for learning. This reached quite extreme proportions, in particular in the southeastern districts of this realm, and developed and spread among later generations.

IDEALS IN EDUCATION AND SCHOLARSHIP. The level of general *education was relatively high in all the communities of this period. It was typical of Jewish life in 12th-century Egypt that a woman on her deathbed should write to her sister:

> My lady, if God, exalted be He, ordains my death, my greatest last wish to you is that you should take care of my little daughter and make an effort that she should learn. I am very well aware that I am putting a heavy burden on you, for we have not even what is necessary for her upkeep, let alone for the expenses of teaching, but we have before us the example of our mother, the servant of God (S.D. Goitein, *Sidrei Ḥinnukh* … (1962), 66).

Blind teachers were at a premium in those regions, for girls could sit before them without problems. A responsum of Maimonides (ed. J. Blau (1960), 71–73, no. 45) mentions a female teacher of boys in 12th-century Egypt, who made her living from this profession. Various references show the widespread extent of learning and knowledge among almost all Jewish men and many Jewish women in Europe. A late-12th-century monk contrasts the education usual among the Jews with the ignorance among the Christians of his own acquaintance:



> But the Jews, out of zeal for God and love of the law, put as many sons as they have to letters, that each may understand God's law … A Jew, however poor, if he had ten sons would put them all to letters, not for gain, as the Christians do, but for the understanding of God's law, and not only his sons, but his daughters (in B. Smalley, *Study of the Bible in the Middle Ages* (1952), 78).

Certainly, times of trouble, expulsions, and the difficulties of colonialization in distant regions and places must have led to some diminution of knowledge and education among Jews, but in the main, this testimony is a reliable indicator of the general level of Jewish culture everywhere in this period.

Throughout the Jewish Diaspora of this time the scholar and student was the ideal of individual perfection, and learning the greatest social asset among Jews. Freed from the fetters of the hereditary family structure of the gaonate, while based on the same conception of the supreme sacredness and values attached to it, the position and image of the student and sage again attained the stature they had in late Second Temple days and talmudic times. In Spain as in Germany, in Persia as in Poland, the more learned a Jew, the higher the esteem in which he was held. This attitude emerges sharply in the critical disquisition of the leader of the Ḥasidei Ashkenaz, *Eleazar b. Judah of Worms, on the subject of learning and merits:

> For in life there may exist one who is not God-fearing but is more proficient in dialectics, more keen-witted and more skillful to explain problems than one who is God-fearing. For in this world it is customary to honor one man above his fellow; like one who is rich and has everything that he wants, but he does not do the will of God in accordance with his riches, for it has been decreed that he should enjoy this world through the honor of his riches so that the grandchildren of the great scholars shall intermarry with him. So is it the same with Torah study – one who does not deserve it is honored with it because they so desire in heaven. And as riches were given to the one who does not deserve it, in order to cast him into hell, so the same applies to a scholar who is not deserving, who causes others to sin, who judges falsely, despising the good ones, enjoying and hating them; and he has superiority over them – for the righteous one falls before the evil-doer; and he is successful, for his pronouncements are obeyed, and he has pupils who help him; time is favorable to him and he is victorious over his enemies who are superior to him. But in the world of the souls, the righteous one shall be given abundant wisdom. As he [the righteous one] is profound and God-fearing, in the same measure in that world of the souls, they will give the righteous one abundant wisdom to be victorious, and also ability in dialectics to ask and answer, and his pronouncements shall give law to this world (*Ḥokhmat ha-Nefesh*, 1876, folio 20a, repr. 1968).

Both social tension and a cultural tradition are expressed here through appreciation of intellectual achievement as the supreme ideal of human attainment, while, at the same time, perceiving its mundane aspects as an economic and social asset given by God to undeserving men to serve as a temporary reward and a pitfall. The elements in Jewish society of social preferment of the rich as well as of the learned, the custom of intermarrying, and the social authority they enjoyed are stressed. In bitter opposition, R. Eleazar envisages an otherworldly, spiritualized, image of the sage and Torah study. Dialectics in argument and victorious achievement are part of his spiritual attributes too. The sage is the ideal for all, for the established leadership as well as for its determined critics, whether accepted as he is in life or viewed as an embodiment of supreme virtues.

Map 3. Some of the expulsions of Jews between 1000 and 1500 C.E.

CHRISTIAN ATTACKS ON THE TALMUD. The Church, during the 13th century, made a sustained effort to belittle and, ultimately, to eliminate, the main Jewish intellectual preoccupation of that time, the Talmud. Pope Gregory IX was suddenly amazed, at the quite late date in Jewish-Christian relations of June 9, 1239, at what had come to his attention. He wrote:

> to the archbishops throughout the Kingdom of France, whom these letters may reach: … If what is said about the Jews of France and of the other lands is true, no punishment would be sufficiently great or sufficiently worthy of their crime. For they, so we have heard, are not content with the old Law which God gave to Moses in writing: they even ignore it completely, and affirm that God gave another law which is called 'Talmud' … (in S. Grayzel, *Church and the Jews in the 13th Century* (1933), 241, no. 96).

He therefore initiated the confiscation and burning of the Talmud. This policy was continued at first – though successful initially only in some of the Christian countries – by Pope Innocent IV, who discovered on May 9, 1244, that Jews "rear and nurture their children" on the Talmud, which "is a big book among them, exceeding in size the texts of the Bible. In it are found blasphemies against God and His Christ, and obviously entangled fables about the Blessed Virgin, and abusive errors, and unheard of follies …" (*ibid.*, 251, no. 104). All these endeavors had no effect. Jewish learning continued to flourish. The Talmud remained its basic book. Pope Innocent IV himself was convinced in the end that the Jews would not live as Jews without the Talmud. Thus this attempt to change for Jews the content of their own culture failed in the 13th century as it had failed in the sixth. In Christian Spain, where the meeting of culture and minds was much closer, the main attempt against the Talmud aimed on the one hand to discredit it, and on the other to use its aggadic elements for christological purposes. This trend is expressed in the *Pugio Fidei Adversus Mauros Et Judaeos*, completed c. 1280 by the Dominican Raymond *Martini, as well as by the efforts of the apostate Pablo *Christiani in his disputation with Naḥmanides in 1263 at Barcelona, where he tried to prove from the *aggadah* that Jesus was the Messiah (see *Barcelona, Disputation of). These, as well as subsequent polemical works and disputations, did not eliminate the Talmud from Jewish education, and influenced only certain Jews in Christian Spain in the late 14th and 15th century who were already driven toward Christianity by the combined pressures of terror and the sight of Christian successes in life.

WAVE OF EXPULSIONS. The end of the 15th century appeared a time of final liquidation of Jewry not only in Christian Spain and Portugal but also throughout Europe. The blood libel of *Trent, Italy, in 1475; subsequent libels, litigations, and expulsions in and from German cities and principalities that began then and continued well into the 16th century; and the expulsion of Jews from *Cracow in 1495, as well as from Lithuania,

seemed to presage that sooner or later all Christian principalities would follow in the steps of Spain. Yet the expulsions in Germany remained piecemeal because of the fragmentation of the empire. In many cases Jews attained through the expulsions a wider dispersion around or near the cities from which they had been expelled, and new and better means of livelihood. In Poland-Lithuania the trend to expulsion was reversed.

RECIPROCAL SEPHARDI AND ASHKENAZI INFLUENCES. By the time of the great expulsions the Ashkenazi culture of the communities of France, Germany, Bohemia-Moravia, and Poland-Lithuania on the one hand, and the *Sephardi culture of those of Spain – to be developed and diversified in the new places of settlement – on the other had already crystallized in an individual form of prayer rite, in customs, in content of education and culture, in social composition, and in differing modes of contact with, and attitudes to, the gentile environment. There were meetings of minds and persons, and cross-currents of cultural influence and exchange between the Jews of Ashkenaz and Sefarad before the expulsions. Naḥmanides esteemed Ashkenazi Jewish culture and prayed that it would strike roots in Spain. Asher b. Jehiel and his sons brought this influence with them there. The works of Rashi and the tosafists were diligently studied in Spain. *Moses b. Jacob of Coucy in France went to preach in Spain and according to his own testimony was influential there. On the other hand, the influence of Maimonides, of the rationalist biblical exegesis typical of Abraham ibn Ezra's work, and the influence of Kabbalah were strongly felt in Ashkenaz. Yet, in sum, these remained random encounters and influences at book level only. When the link with Provence was broken in 1306, contacts between Ashkenaz and Sefarad became even fewer. The exodus of about 300,000 Spanish Jews to the Mediterranean lands in North Africa and Asia, but also to Italy, to the Balkans, and gradually to the Netherlands (still under Spanish rule), and from thence to northwestern Germany, brought the gradual, and, in some cases even swift, breakdown of the old partitions. Ashkenazim and Sephardim met in the context of actual social and cultural life. They did not always like what they saw. But the result strengthened mutual acquaintance and influence, while creating much more clearly defined and specific contours in Ashkenazi and Sephardi culture. The Sephardi Jews considered that they had been uprooted by expulsion from their beloved fatherland in Spain and from a culture which they considered superior to all other gentile cultures. They were also wholeheartedly devoted to their specific form of Jewish culture. This was the reason for the remarkable cultural takeover by the Sephardi refugees of many of the communities they came to.

Transition to Modern Times (16th–17th Centuries)

Five main processes may be considered as causing the breakup of medieval configurations and bringing about the changeover to modern ones.

The expulsion from Spain ultimately created a much larger and better equipped, economically and culturally, Jewish society in the cities of the Ottoman Empire. It renovated and invigorated the Jewish settlement in Ereẓ Israel and Jewish messianic hopes. By making possible the emergence of a community of openly professing Jews in the Protestant Netherlands, as well as generating movement to northwestern Germany and to England, it gave rise to a whole network of Jewish "capitalist" occupations and activities, in close and fruitful contact with the new Christian churches and sects, and with the colonial activity of the Dutch and the English. It sent Jews across the oceans: the first Jewish settlements in the New World came under Dutch rule as did the first settlement in present-day *New York (then New Amsterdam) in 1654.

The second main process took place in Poland-Lithuania. The colonizing and economic activities of Jews there until the *Chmielnicki massacres of 1648 created a Jewry that formed, to all intents and purposes, the predominating element of "the third estate" in this kingdom. Demographically and ecologically this community underwent a great expansion that created the nucleus of the mass Ashkenazi Jewish population of modern times. Close touch with village life and economy improved the conditions of Jewish life and changed habits. In the cities owned by the Polish nobles the predominantly Jewish townships of Eastern Europe grew up which later produced the *shtetl of the *Pale of Settlement in czarist Russia and of *Galicia in Austria. As a result of these population movements, by the end of the 17th century, out of approximately a million Jews in the world, about half were Sephardi and half Ashkenazi, mainly concentrated in the Ottoman Empire and Poland-Lithuania, respectively.

The *Reformation in Christianity from 1517 broke up the unitary and constricted frame of Catholic uniformity surrounding the Jew in most of Europe. He was now no longer the only nonconformist in a culture of total agreement. The failure of both the Reformation camp and the Catholic Church to achieve decisive victory in their common bid to reestablish Christian uniformity created the first hesitant appearance of tolerance. Jews were as yet not thought of in this connection, but the very notion was to create, later on, modern conditions for their existence. On the other hand, the Reformation – in particular, in the style set by the German Martin *Luther – unleashed popular furies and made mass passion and violence the main instrument of religious innovation. This raised the problem of the status of the Jews, not only for change toward betterment of their lot, as Luther intended in his missionary zeal and hopes in 1523; it also opened roads toward exacerbating the lot of Jews and radical vulgar propaganda to extirpate their existence, as the disappointed rancorous ex-monk proposed in 1543:

> What then shall we Christians do with this damned, rejected race of Jews? Since they live among us and we know about their lying and blasphemy and cursing, we cannot tolerate them if we do not wish to share in their lies, curses, and blasphemy …

> We must prayerfully and reverentially practice a merciful severity … Let me give you my honest advice …

There follows a detailed seven-point program of arson, expropriation, abject humiliation of, and hard physical labor for, the Jews.

> If, however, we are afraid that they might harm us personally … then let us apply … [expulsion] … and settle with them for that which they have extorted usurously from us, and after having divided it up fairly, let us drive them out of the country for all time (from his *Von den Juden und Iren Luegen*, 1543).

Short of the Auschwitz oven and extermination, the whole Nazi Holocaust is pre-outlined here. The Reformation had unleashed situations and attitudes with regard to the Jews as well as many other matters, open in all directions and for all comers, toward human relations with and better treatment of the Jews, as well as toward increased enmity and destruction. This openness and this struggle between extremes were to become later one of the hallmarks of the "Jewish question" in modern history.

In Jewry, the great messianic movement of 1665–66, like the Reformation, was medieval in aspect while pointing toward ultra-modernism at the same time. *Shabbetai Ẓevi and his enthusiastic followers put to test the belief in a miraculous redeemer, although arriving in the end at apostasy to Islam. They felt during this great upsurge of faith and ecstasy inwardly liberated and on the threshold of political glory. Within the space of three years, all of them lost any hope of soon reaching the splendor and most of them lost the last shreds of any sense of liberation. The movement reflected the unconscious crisis of medievalism, which burned out in the flame of miraculously borne messianism. Its prophet, *Nathan of Gaza, deemed that God was now free from exile but His people was not. From this it was but a step – even if a gigantic and revolutionary one – toward a program of secularization: the people must seek its freedom and redemption through its own, human, powers, employing the ways and means of the world.

The last, but not least, of these processes occurred in the great community of *anusim* origin at *Amsterdam. People who had been brought up in the traditions of the Jewish underground in Spain found that the Jewish community with which they now came in contact, its strict regulations and exacting authorities, were not at all the antithesis of the Church and its dogmatics that they had been formerly taught to see in Judaism. The atmosphere of sectarianism and religious discussion in the Netherlands, of comfortable burgher life and its easy theology, of friendly contact between cultured gentiles and individual Jews added to the disappointment which the *anusim* experienced with actual Jewish society and led to revolt and revulsion against it. From this aspect, Baruch *Spinoza is both the end result of a line of development of Maimonidean trends in Sephardi Jewry as well as the first representative of a type of modern non-Orthodox Jew. The life and tragedy of Uriel da *Costa expressed this in a different way. The activities of Hamburg Sephardi Jews, who helped to engineer a revolt in Portugal in the 17th century, and served as consuls and financial representatives of the country in which they were not allowed to set foot on pain of death, represented yet another component in the same mosaic of modernization. Figures like Leone *Modena and Simone *Luzzatto in Italy, each in his own way, were an articulate expression of the unformulated change toward modernization and alleviation of the Orthodox way of life. The historiography and historiosophy of Azariah dei *Rossi express, in a less extreme but more thorough way, the readiness for questioning and change that began to appear at this time.

Most of the results of the last three processes described above still lay in the near or distant future by the end of the 17th century, while the first two were at work and wielding an influence throughout the 16th and 17th centuries.

REORGANIZATION OF SEPHARDI JEWRY. The refugees from Spain organized themselves almost everywhere they arrived, and as soon as they could, into separate "synagogue-communities," mainly formed by groups coming from the same community, district, or domain. In this way they broke up the framework of the existing local community, rejecting the cohesion it represented through settlement in the same place. Such a situation was a reversion to a time in the 10th to 12th centuries when many places in the Near East had both a synagogue "of Ereẓ Israelites" and one "of the Babylonians." They set a pattern for similar organizational behavior in other Jewish immigrant groups, sentimentally attached to each other and to the memory of their place of origin, and as yet without ties to their new place of settlement. It was to emerge in modern times in the behavior and organization of the *Landsmannschaften and of synagogues named after places of origin in the United States and other countries.

ECONOMIC ACTIVITIES. Within a relatively short time the Spanish refugees achieved the feat of becoming the tone-setters and social leaders of the native Jews in territories embracing the Balkans and large parts of the Ottoman Empire and North Africa. Economically, too, the refugees achieved great progress. In the Ottoman Empire some of them became courtiers of the sultan, physicians (Joseph and Moses *Hamon, his son; Baroda, Abraham ibn Megas), bankers, and diplomats (Don Joseph *Nasi; Solomon *Abenaes). In these surroundings, where the harem played an influental role, Jewish women also became prominent (like Dona Gracia *Nasi). Sometimes there arose a combination of Jewish physician and diplomat (Solomon *Ashkenazi). All these Jews were active in the customary Spanish manner in their new and strange settings. The mass of the refugees turned to commerce and crafts with considerable success. The economy of *Safed in the 16th century was based on a broad and stable occupational structure of clothweaving, shopkeeping, and peddling. Many engaged in international trade. Some used the land routes, through the southeastern parts of Poland-Lithuania to the center and

west of Europe; some traded by sea routes, in the Mediterranean and on the European shores of the Atlantic, linking up in this way with the northeastern wing of the Sephardi dispersion in the Netherlands and northwest Germany, and toward the end of the period, with Jews in England too. In this manner, economic activity brought association and cooperation to the three great dynamic centers of Jewish social and economic life – the Ottoman Empire, Poland-Lithuania, and the northwest of Europe. The Jews of Poland-Lithuania, for their part, carried on a large-scale export and import trade both with Central and northwestern Europe, and with the Ottoman Empire, in particular, its Black Sea shore and Balkan districts. Jews in the *Netherlands and northwestern Germany dealt on a considerable scale, frequently in colonial goods and diamonds, with Central European Jews (who bought these luxury goods mainly for the local upper nobility or for export to the east). They similarly traded with the Jews of Poland-Lithuania, buying colonial produce on a large scale and selling them luxury goods, cloths, and printed books. Thus this vast configuration of Jewish economic activity created a multiple network of commercial traffic on the threshold of modern times.

The Jews of Central Europe were the weakest link, demographically and economically, in this chain of Jewish activity. Yet they were to profit greatly from it. The combination of connections and supplies created by the export trade of luxury goods and diamonds from northwest Europe and the Ottoman east, and the import of vast quantities of agricultural produce, cattle fodder, cattle, and horses from Poland-Lithuania, enabled the Jews of the German Empire, few and weak at this time and therefore pliable and reliable tools of the princes, to become, at the end of the 17th century in increasing numbers, the agents (*Hoffaktoren*) and *Hofjuden* to royal courts and royal armies (see also *Court Jews).

COMMUNAL ORGANIZATIONS IN EUROPE. Apart from the fragmentation of local cohesion through synagogue membership, the whole trend of communal organization outside the Ottoman Empire lay toward centralization and strong leadership. This was the time when the Councils of the Lands of Poland-Lithuania and of *Bohemia-*Moravia showed their greatest achievements. An attempt was made, unsuccessfully, to set up a similar organization in fragmented Germany at *Frankfurt on the Main in 1603. Numerous similar attempts were made among the Italian Jewish communities. The *Mahamad of northwestern Sephardi Jewry aroused opposition by its strict Orthodoxy and authoritarianism. An attempt in 1538 to reinstitute the ancient sacred authority of *semikhah* as a preparation and precondition for the creation of a Sanhedrin was another expression of the tendency toward overall leadership and centralization. The great and successful codification activity of Joseph *Caro in Safed, and Mordecai *Jaffe, Solomon *Luria, and above all Moses *Isserles in Poland, again expresses – by literary extension of the possibilities inherent in *semikhah* – the trend toward central and authoritative instruction and leadership.

SAFED MYSTICISM. Jewish cultural and religious life showed considerable activity in these centuries. Safed became a short-lived but very important center of Jewish mysticism and learning in the 16th and early 17th centuries. It became a dynamic community of great mystics (Isaac *Luria; Moses *Cordovero; Ḥayyim *Vital; and a galaxy of others), of talmudic scholars (Jacob *Berab; Joseph Caro), and of lesser visionaries (such as *Abraham b. Eliezer ha-Levi Berukhim). Their societies and groups developed customs that later were to be widely accepted in Jewish communities. Kabbalah spread from Safed throughout the Jewish world; the moral teachings of the Safed school were formulated and propagated in the writings of Elijah de *Vidas; the poetry of Solomon *Alkabeẓ and the sermons and visions of Solomon *Molcho express and teach the trend it represented. This was not only mystic and esthetic in mood, but also bore the stamp of highly developed, proud, and self-conscious individal personalities. The movement of Shabbetai Ẓevi expresses both the power and the fragility of this mood and of such individuals. Safed also witnessed the birth, in the 16th century, of the *Shulḥan Arukh code, and of halakhic activity of many other types.

APPROACHES TO EDUCATION. In this period there emerged also the first sharp and systematic criticism of Ashkenazi Jewish education. *Judah Loew b. Bezalel of Prague, and the circle around him, which had adherents not only in Bohemia-Moravia, but in Germany and Poland-Lithuania as well, strongly criticized the lack of didactic methods, the exaggeration in the teaching and use of dialectics, in particular with young students, and the unsystematic and unequal teaching of various components of Jewish traditional culture. They demanded a return to plain logic, to the Mishnah as the core for talmudic study, to proper attention to Torah, and to didactic progression from the easy to the difficult portions and subjects. With some of them, like Jacob *Horowitz, this criticism demanded a return to the Bible. The criticism was heard but failed to achieve its aim. Jewish society in Central and Eastern Europe was unwilling to take up either the new curriculum or the new methods. These pedagogues and critics had to wait for modern times to achieve a positive appreciation.

Traditional Torah study and the central position of the student in Jewish society continued throughout this period. Although encountering tensions and dangers in the materially successful societies of the Ottoman Empire, Poland-Lithuania, and northwestern Europe, the importance of learning remained undiminished in Jewish life. Jewish communities everywhere had numerous yeshivot and scholars, naturally of unequal stature. The *takkanot* issued by communities and synods provide instruction and advice on the spread of learning. Even if much of this reflects more of the ideal than the reality, it still expresses the scale of values of Jewish society of the 16th and 17th centuries.

POLITICAL AND IDEOLOGICAL THOUGHT. Political and ideological thought was alive in particular in the 16th century.

Chronicle writing (see also *Historiography) received a new impetus under the impact of the expulsion from Spain and the needs for reappraisal in the constantly changing situation (resettlement in the Ottoman Empire and other countries) and developed in light of the changes in Jewish outlook brought about by the Reformation. Solomon *Ibn Verga in his *Shevet Yehudah* refers to the problems of relations between Jews and gentiles, and of the Jewish fate, out of a feeling of danger and weakness. In his chronicle the Christian view of the problem, as Ibn Verga understood it, is given prominence alongside the Jewish view. The weakness of the Jews in history is explained by the Christian "Thomas" to the Spanish king as:

> That originally while the Jews found favor in the eyes of God, he would fight their wars, as it is known to all …. Therefore they did not learn the ways of war for they did not need them … and when they sinned God turned away his face from them and they thus remained losers on all counts – they were ignorant of weapons of war and its invention, and the will of God was not with them; they remained naked and fell like sheep without a shepherd (*Shevet Yehudah*, ed. by A. Schochet (1947), 44).

Samuel *Usque in his *Consolaçam* … ((1952); Eng.: *Consolation for the Tribulations of Israel* (1965)) regards the tribulations and hopes of the exiles within a broad view of world history and divine providence. *Joseph ha-Kohen not only describes Jewish history and fate in his various volumes but also gives separately the history of the Ottoman Empire and of the French. His stand is consistently pro-Reformation, vehemently anti-papal, and throughout imbued with the spirit of the late Renaissance world-view and appreciation of history. He hopes that the wars of religion will result in the birth of toleration for all. David *Gans provides in his *Ẓemaḥ David* (1592) a separate treatment of Jewish and general history, quoting *in extenso* from German chronicles and citing the name of author and page, thus revealing an assumption that his Jewish readers might refer back to his sources. Throughout he is revealed as a patriot of Bohemia, an admirer of Prague and of Bohemian achievements in the past. This is the first systematic expression of attachment by Ashkenazi Jews to the land in which they are living and to the past of their environment. Many lesser chroniclers, mainly in Italy, relate themselves to Jewish troubles in the 16th century generally, taking into account the views of the host society. Elijah *Capsali in his extensive chronicles (the greater part at present in Ms.) shows an absorption with the ways of governments and the ideas of the reigning circles both in the Ottoman Empire and in Venice. His description of the fate of the exiles from Spain and their welcome in the Ottoman Empire has additional value as an expression of the attitude of the native Jewish communities where the exiles were received and as evidence of the spell that Sephardi culture rapidly cast over them.

Political and historiosophic thought finds deep if sometimes involved expression in the ideas of Judah Loew b. Bezalel of Prague. In his *Be'er ha-Golah*, in the part entitled the "seventh well," he antedates by 50 years at least the protest of John Milton against the censorship of printed books. Most of the arguments of these two thinkers run in parallel, of course each expressing the writer's own mood. The rabbi of Prague, unlike the poet of England, also stresses the knightly concept that one has to regard discussion in printed books as a kind of duel where an honorable opponent must ensure that his adversary is armed in the best way possible, so that victory will be an act of valor and not an overwhelming triumph achieved by brute force. Throughout his many works, didactics and the methodology of preaching and learning are a main concern of Judah Loew. He devoted much thought to the problems of the organismic character of national cohesion, seeing a divine guarantee, through the nature of nationality, that Jewish exile and humiliation cannot be eternal:

> From blackness one can know whiteness which is the opposite, … exile in itself is clear evidence and proof of redemption for there can be no doubt that exile is a change and a break in the order whereby God set every nation in the place fitting for it, and he settled Israel in the place fitting for it, which is Ereẓ Israel …. Now everything that leaves its natural place and is outside of it cannot establish a hold in a place unnatural to it. They return to their natural place. For if they had remained in the place which is unnatural to them, then the unnatural would become natural, and this is impossible …. The place fitting for them [the Jews] according to the order of reality is to be in Ereẓ Israel, to be under their own rule, not under the rule of others, for every thing of the natural entities, each one of them, has a place for itself … as everything returns to its place, so do the separated and dispersed parts return to become one generality …. Therefore every dispersion tends to join up again. Hence the dispersion of Israel among the nations is unnatural, for as they are one nation it is fitting that they should be together and be a unity, as you will find that all natural entities are not divided into two … What is more, according to the law of reality it is not fitting that one nation shall rule over another nation, to subdue it, for God has created each nation unto itself …. If this state should remain for ever? … this would not be according to the order of reality and would be a permanent change in the world order. This is impossible. Therefore, we can know of redemption through exile (*Neẓaḥ Yisrael* (Prague, 1599), 2a).

SOCIAL CONFRONTATIONS. His writings, like the writings of many other scholars of Poland-Lithuania, Bohemia-Moravia, and Germany in this period, contain many allusions to and proposed solutions for social problems. The tension that existed between the lay leaders of the communities and the rabbis arose largely because both came from the same families, were usually related by marriage, and, above all, received the same education in yeshivot. Hence, there was an inclination among community leaders to assume rabbinical authority and functions and among rabbis to see themselves as leaders. The claims were not mutually exclusive. In most communities and periods an unstable harmony was worked out, but the tension was part of the arrangement.

In prospering Poland-Lithuania much thought was also given to the economic effort, to the correct attitude of rich to poor, and to the proper structure for Jewish society. At one ex-

treme the great decisor Moses *Isserles asserted that riches and material success are generally the just reward given by God to the deserving Jew. Poverty proves either that the poor man is undeserving, or, if his merits are evident, that there is some hidden blemish in his character which would have been revealed with riches: he is not given riches so that he may remain unblemished. At the other extreme stood the great preacher *Ephraim Solomon b. Aaron of Luntschitz (Łęczyce). In his ideology riches are usually evil. Drawing a kind of dual comparison he tells rich Jews that they cannot prove their merits from their worldly state for then they would also have to admit the righteousness of the gentiles from their success. Similarly, he considers that the gentiles cannot bring arguments against the Jews from their worldly success, for they would also then have to admit the righteousness of patently evil persons among Christians who have been materially successful. Riches in his metaphor are spoiled meat desired unwisely by the foolish child but thrown by a prudent father to the dogs. This preacher was also much concerned about religious and moral sincerity in a society which admired devotion, study, and charity and thus made these moral values also preeminently social assets. In his opinion social reward for and recognition of good deeds endangered the foundations of spiritual worship and Torah study in what seemed to him a society that tended to materialism, in particular among the upper strata.

In the emerging great centers of Jewish life, considerable tension resulted from the meeting of divergent traditions and the confrontation of the old-established society and ways of life with the force and vitality of new and inviting circumstances. The type of thought and hegemony provided by men like Elijah and Moses *Capsali, Elijah *Mizraḥi, and other representatives of the leadership structure of the old communities of the Ottoman Empire and North Africa, and the attitudes and aims of new leaders of the Sephardi type, like Gracia and Joseph Nasi, or the great Sephardi rabbis of the Balkan peninsula, such as Joseph *Taitaẓak, clashed, penetrated, and fructified each side in the 16th and 17th centuries. This process of confrontation and mutual influence took place in a Jewish culture and society which combined the old Romaniot customs and ways of life of the Byzantine environment in the Balkans and Asia Minor, and the Muslim environment, elements of the old Babylonian Jewish culture, and the social and cultural traditions of the great centers of Jewish life in Egypt, Kairouan, Fez, and other communities in North Africa. It encountered representatives of the Sephardi Jewish culture which had developed in close contact with Christian culture in Spain who were conscious of the value in and greatness of their historical experience and mode of leadership. Within a relatively short space of time, both the Romaniot and North African were either put aside or submerged by the Sephardi influence. To a scholar of the stature of Samuel b. Moses de *Medina, it was self-evident that the Sephardi prayer rites and order of worship should be preferred in Balkan communities because of their intrinsic superiority.

ATTEMPTS AT POLITICAL ACTION. On occasion the travail of readjustment took the shape of a clear-cut issue of Jewish foreign policy. A dispute over this arose within Jewry in the 16th century, when an attempt was made to use Jewish economic activity as a defensive punitive weapon in extreme cases of insult and injury to Jews. It was opposed by considerations of caution and the hope that part of the aims could be achieved by less dangerous means. The same dilemma was to return much later, in deliberations over initiating a boycott of Nazi Germany. When Pope *Paul IV ordered that a number of *anusim* who had escaped to *Ancona from Spain should be burned at the stake, the circle around Dona Gracia Nasi and other Sephardi groups in the Ottoman Empire attempted to use Jewish commercial power in the Mediterranean both to put pressure on the pope and to reward the duke of Pesaro, who had given asylum to those who had escaped from Ancona. As Joseph ibn Lev, a contemporary Sephardi rabbi, described it:

> Several people arose who wanted a great revenge for the holocaust of these just men … they demanded from the sages and the holy [Jewish] communities that they should assent to and put in force a valid agreement that no Jew among those living in the Ottoman Empire shall be permitted to trade in Ancona, since the Divine Name has been defiled by this pope, the lord of this place. Moreover, some of those who lived in Ancona have escaped the mortal danger of this destruction, and have come to the city of Pesaro where they have been welcomed by the duke, the ruler of this land, who thought that the Jews of the Ottoman Empire would come to trade there and would boycott the city of the pope who did evil to their brethren as well as actions that have never been done previously to burn the Talmud in contempt. The above-mentioned duke will also spend much money to improve the seaport of this city, so that ships may lie there in safety. Now, if he sees that the Jews will pay him evil for good, it is almost certain that he will extradite the men, women and children who escaped from Ancona … to the pope, who demands them in order to put them to death (*Responsa*, 1 (Constantinople, 1556, 1959^2) 140a).

This closely reasoned argumentation, which combined feelings of national pride, perception of the political use of trade opportunities, and an open-eyed appreciation of the motives of the Christian rulers, was opposed by what may be called the Italian Jewish party. These did not deny the strength and possibilities attaching to Jewish trade in the Mediterranean in the 16th century but argued against the boycott because it would endanger the Jews living in the Papal States. They also considered that "even if this agreement is not made, the duke of Urbino will not cause any harm to those he has accepted; for he is a considerate and sagacious man who knows that this miserable people cannot compel all the Jews. Moreover, he is overjoyed at their settling in his land because they, of necessity, cannot trade in Ancona, and will trade in his city." The Italian party also put forward the argument that the *anusim* from Spain could have been more careful and should have avoided settling under the rule of the head of the Catholic Church (Joshua *Soncino, *Naḥalah li-Yhoshu'a*, no. 39).

In Poland-Lithuania also there arose a question of overall Jewish policy with economic implications. The question of Jews contracting for customs duties and customs stations was differently decided in the late 16th and early 17th centuries by the councils of Poland and Lithuania. The first decided to direct Jews to avoid these lucrative posts because of the enmity they provoked in the Polish middle and lesser nobility; the Lithuanian council expressly decided later to assist Jews to lease and retain them out of a clearly stated policy that, despite the dangers to the community they involved, if the customs were managed by Jews, this would benefit the whole of Jewish trade and improve the Jewish position in general (see *Councils of the Lands).

FORMULATION OF POLICIES AND AIMS. Jewish policy and aims were being put forward after the invention of printing and the spread of printed books, not only in memoranda to rulers and Church leaders, but also in works published to bring Jewish views before the Christian public. Simone Luzzatto published his *Discorso circa il stato degl' Hebrei* … in Italian in 1638. This work of a rabbi and leader of a Jewish community is addressed to the Venetians as an apologetical argument for the existence of the Jews in Venice (see also *Apologetics). In it Luzzatto stresses the economic and social usefulness to the civic society of Venice of a commercially and financially active minority which had no other focus for its loyalty, or a better place to look to, than the city of its residence. He even explains at some length that there are "Catholic" trends in the Jewish faith and behavior, which are inherently opposed to "Protestant" ones. Luzzatto emphasizes the basic honesty of the Jews and their obedience to law. After listing some of the faults which are to be found among Jews, he enumerates traits:

> worthy of some consideration: steadfastness, and unimaginable consistency in their faith and in the keeping of their law; unity in the dogmas of their faith although they have been dispersed throughout the world for 1,550 years; admirable courage, if not in going to meet dangers, then at least, in the strength to suffer troubles; a unique knowledge of their holy Scriptures and of their commentaries; charity and good will toward all, as well as help to each and every one of their nation, even if he is a stranger and an alien. A Persian Jew cares about the problems of an Italian Jew and tries to help him; distance of place does not cause separation among them, for their religion is one. In matters of sexual passion, they behave with considerable abstinence; they are loyal and careful about the purity of the race, that it should be without admixture; many of them show considerable sagacity and know how to carry through the most complicated business; they behave with submission and respect toward any man who is not of their religion; their transgressions and sins have in them almost always more of the lowly and ugly than of cruelty and evil (*ibid.*, Consideration 11).

This work was to have much influence in mercantilist centers and among Christians who were beginning to advocate better behavior toward Jews. *Manasseh Ben Israel continued this line of argument, though in a very different and more upstanding manner, in his various writings and, in particular, in his efforts to obtain the readmission of Jews into England. He stressed the advantages that had accrued to the Netherlands by the admission of Jews into that country and by their active participation in colonial trade there, and compared this position with the decline of Spain and the disadvantages it had encountered after the expulsion of the Jews. He formulated a petition for the readmission of the Jews to England. In common with many English sectarians who supported his case, he regarded the settlement of Jews at "the end of the earth" [i.e., Angleterre] as a necessary precondition to the coming of the Messiah.

STIRRINGS OF RELIGIOUS TOLERATION. The 16th and 17th centuries brought the first stirrings of a change in attitudes toward the Jews. The Jewish chronicler Joseph ha-Kohen discerned in the wars of religion in France a hope for an emerging permissiveness enabling each man to live according to his own religion. In the Calvinist Netherlands an attitude of toleration of Jews, and even respect for them and their way of life, developed without granting them political rights or formulating a fully expressed theory for their toleration. This came about not only through day-to-day peaceful contacts with the highly cultured Jewish circles in Amsterdam and other cities of this country, but also through the respect of the Calvinists for the Law and their efforts to create a Christian society based partly on biblical foundations. Some sectarians expressed "the desire … to raise the Old Testament to the position of natural law" which Hugo *Grotius opposed in his *De Jure Belli ac Pacis* (1735, Prolegomena, para. 48). Against this position, he stresses that many of the laws of the Old Testament had been abolished by the New, but he does so in a respectful tone. When asked about the proper behavior to adopt toward the Jews, he advised in his *Remonstrantie* (of 1615), that the canon law relating to Jews should be kept in principle, but that in practical economic terms they should be allowed "liberty to trade, do business and manufacture, and enjoy in freedom exemptions and privileges in the same way as the other burghers and citizens." In France, Jean *Bodin, in his *Heptaplomeres*, was so emphatic in affirming the superiority of the Judaic trend of religion over the Christian that it is arguable whether he was Jewish or Christian at heart. Extreme sects and leaders of the Reformation, like Andreas *Osiander and Sebastian Franck in Germany, through the spiritualization of the Christian teaching and their almost anarchistic attitude to authority, arrived at an individualistic approach to each man which was favorable even to the toleration of Jews and Muslims.

Gradually there began to emerge the conception of separation of Church and State, which was to be the main road to toleration, even of Jews. Roger Williams, of New England, advocated this attitude from a Christian point of departure in *The Bloudy Tenet of Persecution for Cause of Conscience Disgust* (1644). He asserted that "true civility and Christianity may both flourish in a state or kingdom, notwithstanding the permission of the diverse and contrary conscience either of Jew or

of Gentile" (*ibid.*, 2). John Locke was to make this conception the mainspring of change and revolution in his *Letter Concerning Toleration* (1689), published in Latin, and immediately translated into Dutch, French, and English. Locke differentiates sharply between Church and State, considering that civil rights should be granted to all. Limitations and humiliations do not change either the character or the standing of a religion. He wrote concerning the Jews: "is their doctrine more false, their worship more abominable, or is the civil peace more endangered by their meeting in public than in their private houses[?]" (J. Locke, *A Letter Concerning Toleration*, ed. by M. Montuori (1963), 103). Various lawyers – the foremost being John *Selden in England and Johannes *Buxtorf in Germany – developed interest in Jewish law as a basic element in the European legal system. A man like Johann Christoph *Wagenseil, though drawing attention to Jewish attacks on Christianity in his *Tela Ignea Satanae* (1681), still supported a limited toleration of the Jews, mainly out of missionary zeal. In this atmosphere, even a man like the English economist, Sir William Petty, showed considerable interest in various trades of the Jews and their characteristics. His opposition to them, and the even sharper opposition of Johann Becher in Germany, was largely based on a different interpretation of the data given by Luzzatto and Manasseh Ben Israel.

By the end of the 17th century much of the old medieval structure had gone. The distribution of the Jews in the world was totally different from that at the end of the 15th century. Spain had vanished from the Jewish horizon, as well as its dependencies overseas. France was also almost in the same category. On the other hand, England again had a flourishing and well connected Jewish community from 1655. The Jews of the Netherlands were already an integral and respected element of the economic life of this country in the cities; to some extent also they were attached to it socially, though they did not enter its political structure. The Jews of Poland-Lithuania, despite the sufferings and deprivations they underwent between approximately 1648 and 1660, had become economically, and to a considerable degree socially, an integral and predominant part of the third estate in this realm. In the Ottoman Empire members of an invigorated Jewish society occupied important positions in economic and social life, though the old conceptions of political and social humiliation of the Jew still predominated.

[Haim Hillel Ben-Sasson]

MODERN TIMES – TO 1880

Introduction

Several changes in political and social theories in Christian society, as well in the political structure of Europe, combined to usher in modern times for the Jews, though they were not concerned primarily with these developments. The centralization of the state that began in the France of Richelieu and Mazarin spread gradually, both in fact and in theory, to most of the states in Europe. In its progress the new disposition of relations between the state and those living on its territory caused many changes, for both good and evil, in the position of the Jews and their legal status. The centralist state created, by its very nature, an aversion to particularism in any shape, whether organizational, legal, or cultural. It opposed, above all, the corporations as the essence of the old feudal, uncentralized, state. Everything standing between the sovereign and the individual was now considered not only a barrier, but a sin. Whereas, in medieval kingdoms, the Jewish community was but one in a network of autonomous and semi-autonomous bodies, which were then considered the skeleton of the body politic, it now appeared one of the most obnoxious, because persistent, manifestations of egoistic group-will against the all-inclusive rights of the state. As the centralist state also opposed local dialects and customs, the Jewish community was doubly obnoxious, for it was a corporation devoted to a separate culture, way of life, language, and religion. Many of the clashes between the state and the Jews in modern times, many of the misunderstandings between Jews and some of their best friends, were the result of this basic antagonism between iron centralism and the unflinching Jewish will for autonomy.

Centralization demanded one law for all in the state and by its very nature opposed the existence of different legal statuses for different groups living in one state. When centralization was later combined with egalitarian trends, this added a *raison d'état* to political philosophy, and thus made legal equality for the Jews a logical as well as a political necessity for a centralist, egalitarian state.

The disfavor into which corporations had fallen and their rapid disintegration were also hastened by economic developments. That meant, for the Jews in the cities, the weakening and disappearance of social and economic bodies fundamentally inimical to Jews because of their Christian foundations and their long tradition of excluding Jews from trade and crafts and of hatred toward them. The forces working against the corporations also opposed on the ethical and conceptual level the corporative medieval spirit that abhorred competition and innovation. The break-up of the corporations unstopped the dam that had long held up individual energies; Jews benefited from this moral revolution as did other restricted individuals.

As with many other changes to be encountered in modern times, the change in status of the corporation had ambivalent effects for Jews. It bettered their economic and social opportunities and weakened the social elements that were the main carriers of hostility toward them. On the other hand, it made Jewish national semi-independence, and social and cultural creativity, antiquated and offensive. Centralization meant, on the whole, abolition of inequalities, but it also meant suppression of particularities. Jewish society found itself in the new modern state facing the break-up of its national, religious, and social cohesion in exchange for the benefit of material and individual gains. At this time it seemed – to those Christians who, because of general social trends, interested themselves in the lot of the Jews – that the dissolution of a separate Jewish framework and absorption into the general

body of the state were a matter of time, and of a short time only. In countries where the centralist trends were strongest, in continental Western and Central Europe (apart from the Netherlands and England), the Jews numbered several thousand at the most in one state. As general cultural and spiritual currents were moving in the same direction, only "people fighting the trend of history" seemed to be making the foolish attempt to oppose them.

Dawn of the Enlightenment

The 18th century also witnessed the dawn of the great ahistorical school of the Enlightenment. This saw men in the abstract, as disembodied individuals only; national culture and religious separateness were so many "coats of paint." The past had no compelling force; only the present mattered, and this could be improved and perfected by the use of reason. In the application of this theory, writers and ideologists of the cast of *Voltaire did not dream of abandoning French as a vehicle of expression or the basic French values of life. They were more anti-Christian than anti-national. Many of them developed a hatred of Judaism as the matrix of Christianity. Though extremely individualistic in theory, many of them searched for another parentage or anchorage than the Jewish for their culture. This prompted the 18th-century flirtation with the Far East, and the latter-day anti-Jewish tinge to their admiration for the Greek past. Many criticized the Old Testament with the old anti-Jewish odium to which was now added the goal of discrediting Christianity. In the Enlightenment, as in the trend toward centralization and against the corporations, Jewish society met an attitude that was favorably inclined toward the individual Jew while inimical toward his traditions and social cohesion. The demand for disavowal of nationality on rationalist grounds meant in practice for the Jew acceptance of French or German or some other national culture instead of his own. This groping between extreme individualism in theory and national assimilation in practice had already become, by the end of the 18th century, the source of some of the greatest individual successes as well as of the most distressing tragedies in Jewish existence in modern times.

Influence of Mercantilist Absolutism on Jewish Status

New economic views, in particular mercantilism, combined with an even greater and more radical expression of the centralist state – first absolutism and, later on in the 18th century, enlightened absolutism – to create differing approaches to Jewish legal status and Jewish economic activity. The mercantilist and absolutist ruler of the early 18th century looked at every increase in population as desirable, so long as and on the condition that it served economic progress. This progress was no longer measured by agrarian standards. The growth of industry and trade, the increment of precious metals, and coin circulation in the state were now valuable goals.

The type of economic activity practiced by Jews had thus, by the 18th century and even earlier, begun to exert an influence in social economic theory and practice. At the same time political theory with regard to Jews had not yet changed in ruling circles, where they were hated and despised as before. As this combination of economic innovation and political conservatism with regard to Jews existed mainly in the countries of Central and Western Europe, where the Jewish population was relatively small, it created a new approach for the treatment of the Jews.

This approach aimed mainly at having as many "useful" Jews in the state as possible – "useful" in this connotation meaning a rich Jew who could help the industrial and commercial development of the country through his activity. Such a Jew must be made to contribute the maximum possible to the state treasury; this extortion sometimes took curious turns of invention, as in the case of the *Judenporzellan* in *Prussia, so called because Jews were obliged to buy a certain quantity of porcelain wares on the occasion of their weddings in order to promote directly the development of this industry.

At the same time it was the policy of the absolutist ruler to ensure that the economic opportunities and well-being afforded to the useful Jew for the sake of the state should not result in the calamity of an increasing Jewish population. Jews therefore had to register officially, and their weddings were supervised (see, e.g., *Familiants Laws). A "protected" or "privileged" Jew on these principles could not transfer his rights to all his children but only to one of them. The others had to apply for rights for themselves, granted for a proper payment only if they were considered useful in their own right. Otherwise they were demoted to the status of the unprivileged, unprotected Jew who always faced the threat of expulsion and had usually to pay piecemeal for continuing his existence in the state. The 1750 Prussian regulation for Jews embodies systematically and in detail the execution of these principles.

This situation contributed to accelerate the fragmentation of Jewish society. The privileged Jew became richer, the unprivileged one, poorer. The first went into trade and finance operations on a large scale, with the state's blessing. The unprivileged Jew had either to earn his livelihood as an official or servant of a privileged Jew or to eke out his living precariously as a peddler or a moneylender on pawn in the old style. As this situation became a rule in many principalities of Germany in particular, it put for the Jew a premium on enrichment and economic initiative as the only means of bettering his lot and obtaining some type of broader acceptance by the state. Combined with the former structure of the Court Jews, it led during the 18th century to unprecedented variegation in economic Jewish activity, in particular among the richer strata, hand in hand with an unprecedented social and cultural differentiation in Jewish society. As most of the communities thus affected lacked strong continuous traditions, this being the result of the multiple expulsions in the German Empire from the 16th century onward, disintegration proceeded unchecked by cultural strength. With the development of the **Landjudenschaften* type of communal leadership, the influence of the Court Jew and of the rich Jew grew, while estrangement between him and poorer Jews also became proportionately greater.

In the Netherlands and southern France (*Bordeaux, *Nantes) there was another line of cleavage – between the more prosperous Sephardi Jew, who was more acculturated to the host society, and the less well-to-do and less acculturated Ashkenazi Jews in these countries, in particular in France, where the line of division had also a regional character, most of the Ashkenazi Jews being concentrated in *Alsace and *Lorraine.

Enlightened Absolutism and the "Betterment of the Jews"

Enlightened absolutism added another element to the former attitude of mercantilist absolutism toward Jews. This aimed at the "betterment of the Jews" so as to make them less "harmful" to general society – for whose weal the enlightened absolutist ruler felt himself responsible – as well as to prepare them gradually for increased rights and better conditions if and when they might deserve them. The tolerance edict of Emperor *Joseph II issued in Austria in 1782 embodies the most systematic attempt to carry out this policy in relation to Jews. It continued the attempts to hold down their numbers, though granting them a few alleviations in the field of economic activity, while setting out a whole system of measures aimed at their "education" through their linguistic and social *assimilation and curtailment of their unproductive economy.

Arguments for Toleration

At the same time, several circles of intellectuals and sectarian divines of the 16th to 18th centuries developed more intensely and more consequentially the approach to real toleration and a different appreciation of the Jew and his status. Jewish apologetics of this period found a more appreciative reception in these circles. Typical and most systematic of such innovators was John *Toland of England. In his *Reasons for Naturalizing the Jews in Great Britain and Ireland, On the same foot with all other Nations, Containing also, A Defence of the Jews against All Vulgar Prejudices in all Countries* (1714), he relies expressly on the work of Simone Luzzatto, which he promises to translate into English. He uses many mercantilist arguments in favor of the Jews. Toland is ironic toward the anti-Jewish Christian hierarchy, applying a new twist to an old Reformation accusation against the Christian hierarchy that it derived its hieratic and hierarchical spirit from the precedents of Jewish priesthood. In the spirit of upholding the "betterment of the Jews" he promises that they will achieve productivization after they had been granted rights. Even Toland was not ready to permit them to hold state office, though he was prepared to see them as officials in the municipality and the bourse. He adduces

> Those whole streets of magnificent buildings that the Jews have erected at Amsterdam and The Hague: but there are other Jews now in the World to adorn London or Bristol with the like, the fifth part of the People in Poland (to name no other country) being of this Nation … (*ibid.*, 17)

as an argument for encouraging Jewish settlement, in which mercantilist considerations are combined with a novel appreciation of the masses of the Jewish population, not only a few of them.

Presaging a different attitude toward Jewish culture and the Jewish fate, his words express a new attitude:

> Tis true, that in Turky they enjoy immoveable property, and exercise mechanic arts: they have likewise numerous Academies in Poland, where they study in the Civil and Canon Laws of their nation, being privileg'd to determine even certain criminal Causes among themselves: yet they are treated little better than Dogs in the first place, and often expos'd in the last to unspeakable Calamities (*ibid.*, 43).

This acceptance of Jewish learning and a Jewish autonomous judiciary as positive factors still had long to wait before they were appreciated even among friends of the Jews in the 19th century. Toland was representative in this connection of the positive religious attitudes held by small Christian sects in Western Europe toward Jews and Judaism and which are often overlooked in the general picture of the change of attitude to Jews. Typical of this approach and its innovatory, almost prophetic, view of Jewish potentialities are his words in a letter to a friend in 1709:

> Now if you'll suppose with me this pre-eminence and immortality of the MOSAIC REPUBLIC in its original purity, it will follow; that, as the Jews known at this day, and who are dispers'd over Europe, Asia, and Africa, with some few in America, are found by good calculation to be more numerous than either the Spaniards (for example) or the French: So if they ever happen to be resettl'd in Palestine upon their original foundation, which is not at all impossible; they will then, by reason of their excellent constitution, be much more populous, rich, and powerful than any other nation now in the world. I would have you consider, whether it be not both the interest and duty of Christians to assist them in regaining their country … (Appendix 1, to his *Nazarenus* (1718), 8).

Pro-Jewish argumentation proceeded along the main line of enlightenment reasoning in Germany. Its principal and most influential spokesmen were Christian Wilhelm von *Dohm and Gotthold Ephraim *Lessing. In a series of literary works – his drama *Die Juden*, his *Die Erziehung des Menschengeschlechts*, and most influential and celebrated of all, his *Nathan der Weise* – Lessing put the case for treatment of Jews as equals in humanity on the basis of deistic conceptions of religion and enlightenment conceptions of nationality and mankind. His parable of the "Three Rings" became famous as expressing the basic similarity of all monotheistic religions. Lessing did not defend Jewish separate existence, he defended the right of the individual Jew to be treated like a human being, despite his religion and outward appearance. Lessing was influenced in this, like Dohm later, by the personality and views of Moses *Mendelssohn. Dohm in his work proposed achieving the betterment of the Jews with a clearly defined aim toward improvement of their condition.

Moses Mendelssohn

The impact of Moses Mendelssohn represented an old-new

type of Jewish encounter with the host society, unfamiliar in Germany. As a scholar in the employment of a rich Jew, his position was very similar to that of the scholars in the retinue of the Jewish courtiers in Spain. Mendelssohn met intellectuals as an intellectual, men of enlightenment as a leader in the enlightenment philosophy. He put the case not of the material "usefulness" of a Jew but of his cultural usefulness. Defending the separation of Church and State, and defining Torah as a social constitution or Jewish national law, he presented a Jewish approach toward *enlightenment. There were several families in his Berlin circle who were more radical in their efforts to achieve practical assimilation. Some of them despised the Jewish faith and culture. The readiness of Christians of high social and cultural standing to meet individual Jews as equals, and the refusal of the enlightened absolutist state to grant rights even to "enlightened" Jews, created conditions of social temptation and psychological pressure to leave the faith and become apostates. This was the beginning of the considerable trend toward apostasy, which at the end of the 18th century and during the 19th was to take away more than 200,000 Jews from Judaism in Europe.

Egalitarianism and Emancipation in the U.S.
The *United States of America opened a totally different line of approach to the Jews. In the new land, uncontaminated by traditions of oppressive practice toward Jews, where many sectarians appreciated the model of the "Mosaic republic" for their own society, *emancipation of the Jews came as part of the independence and liberation of the American states. Despite former partial limitations included in the constitutions of the former colonies, the new states accepted equality of peoples of all religions as a matter of principle and of fact. The views of the founder of Rhode Island, Roger Williams, in the 17th century were thus fulfilled. Some social discrimination and several remaining legal disabilities were quickly removed during the end of the 18th and beginning of the 19th century. Thus 1776 is a date not only in United States history but also in Jewish history marking the first emancipation as a matter of general policy.

The French Revolution
With the growth of revolutionary sentiment after the American Revolution, many people were prepared to regard the equality of the Jews as a test case for the application of egalitarianism as a guideline for political and social life. Yet the *French Revolution did not grant immediately, or as a self-understood matter, equality of rights to Jews. Despite the preparatory work accomplished by the historiography of Jacques *Basnage and the works of Abbé *Grégoire, the hostile tradition of public opinion toward Jews was still very strong in France. In the long and complicated discussions and legal enactments that took place between 1789 and 1791 an important role was played by the fact that many in France were ready to grant – and indeed granted – rights to the "good" Sephardi Jews of the south, while they were reluctant to grant similar grants to the "uncivilized" Jews of Alsace-Lorraine. Jewish emancipation met here – not for the first time in history, but for the first time in the course of emancipation in modern times – with the fact that the egalitarian principle is dependent upon popular sentiment, and often these do not coincide in regard to the attitude toward Jews.

Final emancipation was carried through in the end as a matter of revolutionary logic by Robespierre and his followers in 1791. The same logic demanded that emancipation be granted only to Jews as individuals – which, spelled out in practice, meant only to Jews ready and willing to leave their own culture and identify and to assimilate into the French – and not to Jews as members of a separate nation.

Napoleon Bonaparte and the French Sanhedrin
The tensions and complexities underlying emancipation in a country with an old anti-Jewish tradition were brought into sharp relief under Emperor *Napoleon Bonaparte. On the one hand, he carried on the tradition of the French republican revolutionary armies, which had brought equality to Jews in the Netherlands, in Italy, and in German cities and principalities. On the other hand, Napoleon sensed the historic unity and character of the Jews and disliked their independent spirit. He was also sensitive to the disturbing problem of Jewish moneylending as it had emerged in Alsace-Lorraine. He therefore turned to ancient notions of creating a semi-representative type of leadership for Jews as an instrument for carrying out his objectives concerning them. In 1806 he convened an *Assembly of Jewish Notables and later on created a *Sanhedrin to give religious sanction to the answers of the Assembly to the questions put to it by his emissaries. The two institutions, constituted of Ashkenazi and Sephardi Jews from France, Italy, and Germany, accepted the main demands of the centralist empire while striving to keep as far as possible within the framework of Jewish law and tradition. The Sanhedrin's decisions of 1807 to a large extent provide an explanation of Jewish customs and morals in terms understandable to French Bonapartist society. They cover much legal ground, and, without explicitly departing from the basis of messianic hope and Jewish national cohesion, make patriotism to the present-day state "the religious duty of all Jews who were born or who settled in a state, or who are so considered according to the laws and conditions of the state to regard this state as their fatherland" (["… *de regarder le dit Etat comme sa patrie*]" from *Décisions Doctrinales du Grand Sanhédrin qui s'est tenu à Paris au mois d'Adar Premier, l'an de la Création 5567 (Fevrier 1807), Sous les Auspices de Napoléon-Le-Grand, Avec la traduction littérale du texte Français en Hébreu* (1812), 42).

While exacting this declaration of French patriotism from Jewish notables and rabbis, Napoleon prepared a series of laws which in practice limited the equality of Jews before the law. Demanding from the Jews the full consequence of emancipation, he denied them part of its content. It is a historical irony that Napoleon's decrees against the Jews lapsed through their non-renewal by the Restoration Bourbon regime.

In the west of Europe Jewish status did not deteriorate after the downfall of Napoleon: the struggle for the full emancipation of the Jews in England went on in a relatively tranquil atmosphere, while the Netherlands, and *Belgium which separated from it in 1830, retained Jewish emancipation. In France, after the lapse of the Napoleonic decrees in 1818, the condition of the Jews continued to improve. In 1831 the state began to pay salaries to rabbis; in 1846 the last minor legal disabilities for Jews were abolished through the influence of Adolphe *Crémieux, a French Jewish statesman who obtained in 1870 a decree conferring equality on the Jews of Algeria.

The Congress of Vienna and Romantic Reaction in Germany

In Germany there were different developments. The Romantic reaction against revolutionary rationalism reasserted in modern terms the validity of old Christian assumptions against the equality of the Jews. The Congress of *Vienna refused to ratify the rights of the Jews acquired under the Napoleonic conquest: the implications of the proposal concerning their rights "in" German cities and states were changed by substituting ratification of laws granted "by" German cities and states. Even worse was the reaction of public sentiment. Respectable philosophers deliberated on the impossibility of Jews being citizens of a historic Christian state. Vulgar publicists like Hartwig *Hundt-Radowsky advised expulsion of the Jews, vilified their character, and hinted that their murder would be no more than a minor transgression. The so-called *Hep! Hep! disturbances against Jews that occurred in Germany in 1819 were but a violent expression of this reactionary movement. The equality of Jews in German society was actually hindered by deep-rooted popular prejudice against them. Their legal equality was much delayed and complicated by the fact that even their friends were divided into those who demanded, as in the 18th century, their assimilation and "betterment of character" as a precondition to the equality of individual Jews, and those who saw emancipation as a precondition to assimilation and "betterment of character."

Typical of modern German society was the attitude of German radicals to "*Die Judenfrage*" ("the Jewish question"). Feuerbach and his disciples carried over the 18th-century enmity to Jews on the grounds of their religion and prejudices. Bruno *Bauer actually demanded their Christianization before any acceptance of Jews into society. Karl *Marx considered Judaism evil, and Mammon the Jewish God. He differs from Bauer in considering that Jews could be emancipated legally while remaining as themselves in society because, as he formulated it, capitalist society is becoming "Judaized." Social emancipation would come only in a revolutionary society where there is neither Judaism nor Christianity and the historical trend of "capitalist Judaization" is stopped and reversed. Until then Marx considered it axiomatic that the Jewish religion include contempt of theory, of art, of history, and of man as a goal in itself: "The social emancipation of the Jew means the emancipation of society from Judaism." This scion of the Jewish people thus despised past Jewish creativity and tradition, declaiming in a prophetic tone against the culture of the Jews.

Emancipation in Germany and England

Jewish emancipation was achieved in German states as a result of various legal enactments, their retraction, and their reenactment throughout most of the 19th century (see *Bavaria, *Prussia), while German society, in particular its higher echelons, did not accept Jews during this period. In England Jewish emancipation was completed through a struggle for the abolition of Christian formulas in the oath upon taking a seat in parliament or entering public office. Radical opinion in England was much more prepared for the granting of full religious equality than in France. The Welsh philosopher Richard Price criticized paragraph 10 of the French "Declaration of the Rights of Man and of the Citizen" of 1789 because of its rider to religious equality – "provided his avowal of them does not disturb the public order established by the law." In his view this was mistaken: "For it is obvious that in Turkey, writing against Mahomet; in Spain, against the Inquisition; and in every country, against its established doctrines, is a disturbance of public order established by law; and therefore, according to this article, punishable." He would have enacted the right of man "also to discuss freely by speaking, writing, and publishing all speculative points, provided he does not by any overt act or direct invasion of the rights of others …" (from his appendix to "A Discourse on the Love of Our Country," 1789). This historical tradition of the recognition of separate entities as equal, and not of individuals only, was to find expression in the whole approach to the "Jewish Question" in England as well as in the United States. When the historian *Macaulay in 1833 supported the proposal to abolish Jewish disabilities, he based his case not only on actual situations and abstract principles, but also to a large degree on the glorious Jewish past which guarantees a great future for the Jews as emancipated citizens in any state (see also *Apologetics). He did not demand of Jews that they should give up their messianic belief. He equated it with the Christian millennarian belief in the coming redemption. When at last Lionel Nathan *Rothschild was enabled to take his seat in Parliament in 1858 as a professing Jew, the struggle for Jewish emancipation in England closed in accordance with principles laid down long ago by sectarian forces and ideals.

Period of the Polish Partitions

The changes in Jewish life, culture, and status in Western and Central Europe that had resulted through the impact of economic and cultural processes at work in general society with implications for the Jews, and the entry of Jews supported by the interests and aims of the host societies into various economic and social functions, influenced relatively small numbers of Jews. In Eastern Europe the changes resulted from political and social upheavals that influenced masses of Jews, mainly in the direction of evolving new systems and develop-

ments of their old culture and society. The partitions of Poland-Lithuania (1772, 1793, 1795) between Austria, Russia, and Prussia broke up the greatest Jewish concentration of Europe into three parts, disconnecting old lines of communication and severing long-established relations between communities in towns and regions. The political and spiritual turmoil into which Polish society was thrown preceding the partitions, and the revolt led by Kościuszko against the partitions and its failure, raised, among a host of other problems, the Jewish question too.

The growing importance of the Christian third estate at the time of the death throes of Poland-Lithuania was an adverse factor for the Jews. On the other hand the economic importance of the Jews there and the egalitarian principles penetrating from the West began to work for Jewish equality. How to achieve the "betterment" of the Jews and their "productivization" became themes of some importance about this time in some circles of both Polish and Jewish society. Their effects on relations between Jews and Poles for the time being were doomed to remain theoretical considerations only. The status of the Jewish masses of former Poland-Lithuania was to be determined from now on by powers influenced by totally alien traditions of treatment and attitude toward Jews.

Incorporation into Russia

Russia, which obtained the lion's share of the Jewish population, had had no Jews under its rule since the 15th century, when the "Judaizing" movement caused such a scare that Jews had been totally excluded from the country. In campaigns before 1772 the Russian armies would drown Jews or kill them in other ways in cities they had taken. This could not be done with the vast masses of Jews she now acquired. Of the other powers, both Prussia and Austria were already dedicated to the mercantilist-absolutist system of discriminating between individual Jews and controlling their population. Both were now confronted by large numbers of Jews, the majority of whom were poor and whose demographic growth could not be stopped.

Empress *Catherine II was prepared to see the Jews as an integral part of the town population in the newly acquired districts, and she defined their legal status as such, granting them even the right to vote for municipalities. This almost immediately created difficulties: the Russian autocratic government did not permit townsmen to settle in villages; yet, many Jews were living in them. To this was added the aim of the now politically dispossessed Polish nobility to take over the place the Jews had filled in the economy of the villages. The Russian government, on its side, was troubled by the situation, in which it found itself socially allied to the Polish Catholic nobility, while from a religious and national point of view it felt obliged to promote the interests of the Belorussian and west Ukrainian Greek-Orthodox peasantry. Jewish merchants began to enter eastern, originally Russian, districts, and to compete with local merchants. The government therefore began to consider ways and means of dealing with this new Jewish aggregate and the problems it raised.

Czar *Alexander I met, in the committee he created for clarifying this problem, with two opposed opinions similar to those currently debating this question in the West. Some members of the commission considered that Jews had first to be granted rights so as to improve them and "make them harmless." Others considered that the Jews had first to be rendered harmless and to be "improved" before they could be granted new rights. The statute for the Jews promulgated in Russia in 1804 was largely based on the second view. One of the main measures to prevent their causing harm to the peasants, by inducing them to buy alcoholic drinks and damaging them in other ways, was the demand that Jews should leave all the villages within four years. Another result of this trend was the unique invention of drawing a second borderline within the border of the state: Jews were not permitted to settle or live in the territory east of this line. The permitted area included regions taken over from Poland with an addition of several more in the southeast of the state. Thus the *Pale of Settlement of the Jews was created in Russia (in a process of line drawing and area redistributions that went on well into the 1830s), to remain in existence until the Revolution of 1917.

The Pale of Settlement, from its creation, was doubly constricting. Jews could not go beyond its borders, while within them they were driven from the villages to the townships and cities. As the Jews were an integral part of the village economy, and village occupations constituted the livelihood of a considerable number of Jews, their expulsion from the villages was not easy to implement; many decrees and counter-decrees were issued through the greater part of the 19th century, and still it was not accomplished in full. Jews also left the villages because of other reasons. The Polish uprisings of 1830 and 1863 caused much impoverishment among the Polish nobility; many of its most enterprising members emigrated from the country, and the Jewish village economy was thus much impaired. In the 1840s Jews tried to carry on their former business in alcoholic beverages through leasing the vodka monopoly from the government. From the 1860s, however, they even left this branch.

Economic and Social Developments in Western and Central Europe after Emancipation

Economic and social developments in West and Central Europe were different from those in Eastern Europe. The upper strata of Jews in Central and Western Europe became wealthier with emancipation or semi-emancipation. The banking house of the *Rothschilds developed from its relatively modest origins at Frankfurt on the Main to become the arbiter of international loans and monetary transactions in Europe in the first decades of the 19th century. Byron could exclaim:

> Who hold the balance of the world? Who reign / O'er congress, whether royalist or liberal? / Who rouse the shirtless patriots of Spain? / (That make old Europe's journals squeak and gibber all). / Who keep the world, both old and new, in pain / Or plea-

> sure? Who make politics run glibber all? / Jew Rothschild, and his fellow-Christian, Baring … (*Don Juan*, Canto 12, v).

In France, the brothers Pereire dealt in international *banking on a smaller scale. Gerson von *Bleichroeder was not only a banker of first magnitude in the third quarter of the 19th century, but also the financial adviser of *Bismarck. These banking houses participated to a large degree in the financing of *railroad construction too, as did also Baron Maurice de *Hirsch. The importance and function of these international rival banks was already declining by the 1880s, when national banks and limited liability share banks took over much of the finance and financial activity in many countries. Many of these Jewish bankers and largescale contractors and merchants were ennobled, and thus moved even farther away from common Jews.

In Western and Central Europe, Jews also entered the "free professions." In *medicine, they continued a long and much respected Jewish tradition. In other professions they were newcomers. In the legal profession they were new (see *Law) in the sense that Jews did not participate in general, state-regulated law practice until the emancipation, but they brought with them an old tradition of Jewish legal deliberation and practice. Jews entered newspaper publishing, editing, writing, and reporting (see *Journalism). The great news agencies of *Reuter in England and Bernhard *Wolff in Germany were founded and directed by Jews. Though university chairs were still withheld from Jews, they entered many of the lower ranks of the academic world. Many Jews contributed to literature; some apostates like Heinrich *Heine and Ludwig *Boerne were notable. Among apostates who gained prominence in *politics and social thought were Benjamin *Disraeli, Julius *Stahl, and Karl Marx. Jews also entered politics, some gaining prominence, like Lionel Nathan Rothschild and David *Salomons in England, Adolphe Crémieux in France, and Gabriel *Riesser in Germany. Jews were active in the leadership of revolutionary movements, as Hermann *Jellinek and Adolf *Fischhof in the 1848 revolution of Austria. Many Jewish intellectuals were active in the 1848 revolution in Germany. The names of Ferdinand *Lassalle and Moses *Hess were prominent among revolutionary leaders. Many Jewesses of the upper circles were famous for their *salons and cultivated mode of life, both in Berlin and in Vienna at the time of the Vienna Congress. Later on, Jewish patrician social life became well known in Central and West European cities. At the same time, small merchants and peddlers, horse and cattle dealers, smallscale moneylenders, and representatives of other lesser occupations were common among Jews in Bavaria, Alsace-Lorraine, and above all, among immigrants coming from the eastern districts of Germany and Austria to the central districts.

Migration Trends from the End of the 18th Century

Jewish migration in Europe had changed direction by the end of the 18th century – or even somewhat earlier – and up to the 1890s. It now went from east to west, but occurred mainly within the borders of states. In Russia, it moved from the densely populated parts of Lithuania and *Belorussia to the more thinly populated districts of the *Ukraine. In Germany, it moved from the Posen (*Poznan) districts to the center and west of the country, filling gaps created by the apostasy of the Jewish upper strata and veteran families. In Austria, it went from Galicia to the regions of Vienna and Hungary; in France, from Alsace-Lorraine to the center and west of the country. Jews from Bavaria, as well as other districts of Germany, in particular up to the unification of Germany in 1870, emigrated to the United States and some to England. All these immigrants in their new places of settlement met with the manifestations and results of the industrial and commercial revolution in Europe. They also gradually absorbed, in layer after layer of immigration, the new trends of cultural adaptation and assimilation already at work among the older communities there. The Sephardi communities of England and the United States were pioneering in this process. Their members became the upper layer of Jewish society in these countries.

The East European Shtetl

In Eastern Europe, Jewish occupations remained at the end of the 18th and beginning of the 19th century within their former framework. The shtetl not only developed an economic structure of its own during the first half of the 19th century under the impact of the expulsions from the villages, and through the development of a new chain of economic and social relations with the villages from the shtetl centers, but also created an ecological pattern of its own. The shtetl economy of small shopkeepers, craftsmen, peddlers, and peddling craftsmen established itself to become the typical economic set-up for the majority of Jews in the Pale of Settlement. In its midst, and at the heart of shtetl life, was the central market place, around which there stood the main shops and taverns for tea and alcoholic beverages. Market day was the time of earning and activity, when the villagers arrived to buy and sell. For many shtetl Jews their township was actually their home from Friday through Sunday only, since the rest of the week they spent peddling or working as itinerant craftsmen – cobblers, tailors, smiths – in the villages. Social differentiation was much slower in developing, and up to the 1840s only a sprinkling of Jews had entered the newly opened free professions. A few Jews enriched themselves in Russia as large-scale traders and bankers, or somewhat later, as railroad-building contractors, such as Samuel *Poliakoff or the *Guenzburg family. By the 1880s, master craftsmen and journeymen in the Pale together numbered approximately half a million. In the incipient industries, such as cloth manufacture in *Lodz, a Jewish proletariat was beginning to emerge.

Divergences in Jewish Society in the West and East of Europe

In West and Central Europe developments in Jewish society took their direction from the upper circles connected with the centralist state structure. Jews contributed to its economy in loans and banking, industrial enterprise, and largescale inter-

national trading, in particular in the extreme west and northwest of Europe, at the end of the 18th and beginning of the 19th century. Up to the 1880s there was a progression toward banking and commercial undertakings on an increasingly greater scale, toward entry in considerable numbers into the free professions and general society, and toward political and social leadership. In the East, while the typical shtetl economy and society was developing, the social distance was widening between the increasingly impoverished strata of shopkeepers, peddlers, and craftsmen, and toward the end of this period, some industrial proletariat, and the relatively narrow group of wealthy bankers, builders, and largescale merchants.

Despite these differences between East and West, which gradually became even greater in Europe, and were at their most prominent between the Jews of the West and those of the Ottoman Empire and Islamic countries who had suffered from the general cultural and economic backwardness of their host society, the consciousness of unity and contacts between different elements of the Jewish populations did not diminish. Even where demographic and economic developments differed, cultural forces and traditions common to all were strong unifying factors.

Population Growth

This is evinced in the process of the remarkable population growth among Jews during most of the 19th century, accelerated in the 1890s. At the beginning of the 19th century there were approximately 3.25 million Jews in the world, of whom 2.75 million were in Europe, mostly Ashkenazim, and about half a million outside Europe, mostly Sephardim. At the beginning of the 1880s there were 7.5 million Jews, of whom about seven million were in Europe, mostly Ashkenazim (see *Demography; *Vital Statistics). The rate of growth of the Jewish population was almost everywhere twice that of the general population, even in backward countries. This was at a time of a great growth of *population everywhere. The Jewish population naturally benefited from its concentration in Europe, where the gains of medicine and preventive hygiene first made their mark, as well as from their concentration in towns, where again these cultural advances first had their effects. However, the specifically high Jewish rate of growth was mainly due to two factors: to a much lower infant mortality and to the good care taken of the ill and aged. Here old cultural-religious traditions gave an advantage to the Jewish population. As a result of the developments in population growth and migration the distribution of Jews in the world at the beginning of the 1880s was approximately four million in czarist Russia, 1.5 million in Austria-Hungary, 550,000 in united Germany, approximately 300,000 in the Ottoman Empire, and approximately 200,000 in the United States.

Radical Trends in Eastern Europe

Several developments in Eastern Europe between the 1860s and 1880s led to a considerable radicalization in the ideology of the youth and a marked cleavage within Jewish society; on the other hand, through the selfsame developments, the social structure and the problems of Eastern Jewry began to closely resemble those of the Western Jewish communities. The demand of the Russian government (1827) requiring the Jewish community in most of the Pale of Settlement to supply youngsters as *Cantonists for prolonged Russian army service gave rise to much bitterness within the communities between the leading circles, who were responsible for mustering the quota, and the lower strata, who suspected the former of evading this onerous duty in the case of their own children and putting it on the children of the poor. Jewish society as a whole was embittered toward the tyrannical government of Russia that used army service as a means of bringing about the assimilation of young boys.

The government of Czar *Nicholas I again put forward a constitution for the Jews in 1835. Apart from exclusion of the paragraph concerning expulsion from the villages, this constitution was a summary of former disabilities, including a prohibition on Jewish residence within 50 versts (33 miles) of the western border. The constitution promised various alleviations for Jews turning to Russian culture, again a continuation of former policies. Thousands of Jewish families applied for agricultural settlement, and many were settled in the south. In 1840 a new commission for research into the Jewish legal status and existence was set up. Both the premises it worked on and the decisions arrived at had a markedly anti-Jewish bias. Czar Nicholas I also attempted to enforce changes in Jewish education and dress; he abolished Jewish *kahal* autonomy in 1844, and planned to classify the Jewish population into five classes, according to their "usefulness." This project, as well as his cruel policy toward the Jews, was abandoned after his death in 1855.

Czar *Alexander II attempted the solution of the Jewish problem, again on the basis of discrimination between Jews but in this case through showing favor toward small professionally educated groups of Jews, with the aim of bringing, by their example, the general Jewish population – to which no alleviation was granted – to the main road of general culture and productivization. During the 1860s various groups of such Jews were granted various exemptions from anti-Jewish discriminatory legislation, the main prize being the permission to live outside the Pale of Settlement. This right was granted to Jewish merchants who paid the highest scale of tax, to Jews who had academic diplomas, and, in 1865, to Jewish craftsmen. This trend was not continued in the 1870s, while public opinion as well as state policy turned against minorities in Russia in general, and Jews in particular. Only in *Romania was the Jewish status and Jewish existence even worse than in czarist Russia. The intervention of the Congress of *Berlin in 1878 in favor of Jews in the Balkan states, and chiefly of those in Romania, helped them only formally, but not in actual practice.

Communal Organization

Jewish autonomy all this time was being attacked, both from without and from within, not only in its form as a corpora-

tion, but also as a bastion of religious and social separatism. The early Jewish enlightenment circles regarded the community establishment as an institution for enforcement of Orthodoxy and meddling in their personal lives which they did not intend to suffer. To intellectual dilettantes of means, of the type of Isaac *D'Israeli, the father of Benjamin, community service was a nuisance. As he declared in 1813 to those who had elected him *parnas* of the community,

> A person who has always lived out of the sphere of your observation, of retired habits of life, who can never unite in your public worship, because as now conducted it disturbs instead of exciting religious emotions, a circumstance of general acknowledgment, who has only tolerated some part of your ritual, willing to concede all he can in those matters which he holds to be indifferent; such as a man, with but a moderate portion of honour and understanding, never can accept the solemn functions of an Elder in your congregation, and involve his life and distract his business pursuits not in temporary but permanent duties always repulsive to his feelings (in: C. Roth, *Anglo-Jewish Letters* (1938), 238, no. 115).

This is an expression not only of D'Israeli's personal taste and indolence, but also of the trend toward assimilation and a renunciation of Jewish social cohesion and cultural tradition. With increased assimilation, such tendencies against autonomy became sharper and more meaningful. For people who appreciated the way of life and habits of the society of their environment, the forms of Jewish prayer, burial and marriage customs even looked ludicrous.

Despite these forces undermining the organized Jewish community, it not only continued to exist in the West but even gained new strength and an articulate structure there through the system of *consistories imposed by Napoleon, who was interested in utilizing the community organs as functionaries of the state. This situation continued with some changes in most of continental Western Europe. In England the *Board of Deputies of British Jews began to act on behalf of the whole of the British Empire from the time of the chairmanship of Moses *Montefiore (1838). The Jewish organizational framework in England – and, patterned on it, in many of the dominions – acquired an even more authoritative position in the second half of the 19th century with the establishment of the authority of the chief rabbi and with the organization of the rigid *United Synagogue.

Communal organization in the United States proceeded along different lines. Divisions between the first layer of Jewish immigration there, the Sephardi, the second, mainly German Jews, and the beginnings of the third, of Eastern European Jews, in conjunction with the size of the country and the huge size of the cities in which the Jews tended to concentrate, combined to create the type of synagogue community established by the exiles from Spain (see above). This was later to develop, with the mass immigration of Eastern European Jews after 1881, into the *Landsmannschaften* form of community, which still retained many of the religious aspects of community leadership and life. The same factors also led to the creation of secular ideological associations, such as the Arbeter Farband and *Workmen's Circle. By the mid-19th century attempts toward centralization were made in the United States also, though in the main ephemeral. About this time there also developed a type of organization suited to the upper-middle-class elements of U.S. Jewry, introducing orders on the Masonic pattern devoted to Jewish problems. One of the first, and still the most influential, was the *B'nai B'rith order, founded in 1843.

In Central Europe, religious and social fragmentation led to many breaches within the Jewish community, mainly brought about by the Orthodox wing which felt itself threatened by the growing predomination of *Reform elements in Jewish society. By the 1880s the Orthodox sector achieved in both Hungary and Germany – ironically with the help of liberals in Parliament – the right for every individual Jew to leave his local community. It resulted in the institution and ideology of the *Austrittsgemeinde* (see also Samson Raphael *Hirsch; Isaac Dov *Bamberger). These religious and cultural orientations led to new forms of linkage within the state of the Reform and Orthodox sectors, and, in Hungary, also of the *neolog trends. They convened their own conferences and synods of rabbis (see below).

In Eastern Europe Jews in general retained a strong attachment to the ancient community structure. *Ḥasidism on the one hand and the emergence of secular Jewish political and social organizations on the other produced new elements of leadership, which mostly cooperated with the community organization, while trying to use it for their own purposes and according to the ideals guiding them. Thus in regions where Ḥasidism predominated the local rabbi became very much subordinated to the authority of the ḥasidic *ẓaddik, whose follower he was, or to the authority of the *ẓaddik* who had the largest following in the community.

From about the beginning of the 1880s the aims and weight of secular political parties began to influence the policies and composition of the community leadership. The abolition of the *kahal* by the Russian government in 1844 did not greatly restrict actual community work. The Jews continued with their own leadership structure even if having to use different names for it in reference to the state authorities.

The adherence of Jews to their own conception of the personality and type of education required for religious leaders was strongly in evidence in their reaction to the requirement of the czarist government that rabbis be educated in Russian culture and enlightenment trends. Seminaries for such rabbis were opened by the state at Jewish centers such as *Vilna and *Zhitomir but were boycotted by traditional scholars, and the graduates were considered ipso facto unfit for the rabbinate. The government therefore deputed its own state-appointed rabbis in many places, the so-called **kazyonny ravvin*; however, the Jews continued to acknowledge their own rabbis, generally looking upon the *kazyonny ravvin* as an insult or joke.

Religious and Cultural Differentiation

Religious and cultural life between approximately the middle of the 18th century and the 1880s underwent a continuous process of differentiation, enrichment, and involuntary pluralism. Ḥasidism introduced the charismatic personality as a regular element of leadership, which was later on institutionalized in the dynasties of ḥasidic *ẓaddikim*. At first Ḥasidism was bitterly opposed both for its tenets and the temper and way of life of ḥasidic groups, in particular at the courts of the *ẓaddikim*. The opposition failed, although it was led by the greatest rabbinical authorities who made lavish use of their powers of excommunication (see *Elijah b. Solomon Zalman, the Gaon of Vilna) and by the lay community leadership which strongly attacked it. As a result the opposition itself created a new school of Lithuanian yeshivot expressive of its own ideals and attitudes, and gradually formed a new *Mitnaggedic-Lithuanian pattern of Jewish subculture. Due to the basic conservatism of Ḥasidism, despite the suspicions cast on it by its opponents, and since the main attention of its opponents was concentrated on giving direction to their own pattern of culture, there emerged (more or less by the 1830s) an uneasy coexistence between these two groups.

As the *Haskalah movement and the *maskilim* also remained within the framework of Jewish society, despite the sharp disagreement and suspicion between them and the conservative elements, Jews began, by about this time too, to accustom themselves to the existence of various trends within Jewry. Both the tension between them and the reluctant partial recognition reciprocally accorded by each side now resulted, for the first time since the period of the Second Temple, in the existence of clearly defined groups – differing in many aspects, cultural, religious, and social – but all regarding each other as within Jewry and partaking of Judaism, and each considering its own brand of Jewishness to be superior. Even Reform and assimilated Jews were defined publicly as Jews. This situation led to a heightening of intolerance on the formal level but to mutual toleration in practice. Jewish life was much enriched by the competing cultural streams, variety in modes of life, and diverse types of leadership existing within Judaism side by side in disharmony but with a tacit agreement to disagree.

The great personalities of the founders of these trends became the ideal prototypes for future generations – both through the history of their own lives and by means of the legends and semi-legends woven around them. In Ḥasidism, *Israel b. Eliezer Ba'al Shem Tov and the circle of his pupils, among the *Mitnaggedim*, Elijah Gaon of Vilna and his circle of pupils, and, in Haskalah, Moses Mendelssohn and his disciples, served both to fructify and influence cultural trends and individual behavior, as well as to accentuate differences.

Elements in Ḥasidism such as the ḥasidic *dance and song, the camaraderie of ḥasidic groups and courts, ḥasidic tales and accounts of wonders, not only colored the culture of the majority of East European Jewry but later, in the 20th century, influenced semi-secular and secular teachings and movements, like those of Martin *Buber and *Ha-Shomer ha-Ẓa'ir in its early stages, as well as the patterns of behavior of many other Jewish youth groups in the late 19th and the first half of the 20th century, and much of secular Hebrew and Yiddish literature.

The Mitnaggedic Jewish culture both created representatives of a scholarly lay elite in the Lithuanian towns and townships, and did much to give new stature and dimensions to the **talmid ḥakham*. The influence of *Mitnaggedim* ideals and attitudes is reflected in the teachings of men like Simon *Dubnow and in much of the secular and non-ecstatic trends of Jewish life in Ereẓ Israel, the United States, and *South Africa.

Haskalah led in many cases to extreme assimilation, but on the other hand it continued, in particular in Eastern Europe, its original cultivation of Hebrew and its creation of a secular Jewish literature, in philosophy, historiography, and above all, in belles lettres. In Central and Western Europe its influence bifurcated in the often convergent directions of the *Wissenschaft des Judentums on the one hand, and of Reform Judaism on the other (see also Abraham *Geiger; Leopold *Zunz; Samuel *Holdheim; Aaron *Chorin). In Eastern Europe Haskalah often provoked the opposition of the Jewish masses through the collaboration of its enthusiasts with oppressive governments in attempts to impose on them secular education and changes of language, *dress, and custom. Yet it was mainly on the foundations laid by Haskalah thinking, methods, and achievements that secular Hebrew culture and literature could develop within the framework of Zionism in the 20th century.

Organization of Mutual Assistance on an International Scale

Western and Central European Jews were thoroughly emancipated by the end of the 1860s. While increasingly involved with the culture and society of their environment, they could not remain unmoved by the plight of their unemancipated brethren in Eastern Europe, in the Balkan states, and in the Ottoman Empire. The rebuffs met with by many of the assimilationists in gentile society, and their own emotional and intellectual inability to adhere strictly to the rationalist (ahistorical) dogmas of the enlightenment, caused Jewish assimilation to remain paradoxically a specific phenomenon, in both Jewish and Christian societies. Cumulatively, these factors led in 1860 to the creation of the *Alliance Israélite Universelle, an international organization of assimilated Jews. These united their efforts, for the sake of religious brotherhood, to help their oppressed and inarticulate coreligionists, despite national differences. The activities of this organization included diplomatic action and the establishment of schools and welfare institutions in the countries of "backward" Jews, thus subconsciously expressing Jewish solidarity. Its many successes in part provided a challenge that led antisemites to readapt ancient libels about Jewish strivings for world domination into a malignant and influential myth through the forgery of the Protocols of the Learned *Elders of Zion. In a relatively short time the international structure of the Alliance began to weaken under

the strain of national solidarities. Anglo-Jewry created its own *Anglo-Jewish Association, and German Jews eventually established their own *Hilfsverein der deutschen Juden.

Trends in Religious Reform

Cultural differentiation also led to many innovations and changes in Jewish life. Exponents of the Reform trend admitted explicitly that it was proposed to break down halakhic barriers – which were considered latter-day increments on the core of pure Jewish faith – between Jew and gentile. These included *kashrut*, the prohibition on *mixed marriages, and many of the Sabbath laws; there was also a move to abolish mention of the hope for a Messiah and for the return to Zion, and the use of the Hebrew language in prayer. On the last points Zacharias *Frankel seceded from the radical majority of the Reform movement and demanded a more conservative and historical approach (see *Conservative Judaism). This created yet a new facet of Jewish religious and cultural activity in Central Europe and later in the United States.

With the aim of throwing light on, as well as learning about, their own past, in order to present the case for emancipation and proposals for assimilation on a more respectful and firmer basis, the leading scholars of the *Wissenschaft des Judentums gradually developed a broader and increasingly secularized approach to their research into the Jewish past. The historical work of I.M. *Jost is the first sustained modern attempt of this type by a Jew.

Jewish ideals underwent a reformation with the aim of serving and reorientating Jewish religious consciousness. Reform circles tended to regard the Messiah not as a person who would come to redeem Israel but as a universalist process to redeem humanity. On the basis of this conception Leopold Zunz called the European revolution of 1848 "the Messiah." A later development of this conception was the theory of Jewish "mission": Israel had to see itself as the guardians and carriers of pure monotheism for all mankind; in modern circumstances assimilation would only help to fulfill this duty. Pointing to the social, religious, and political failings of Christianity, such theorists considered their "purified" Judaism the destined vehicle for making monotheism paramount. "The spring of nations" of the 1848 revolution introduced a new complication and an added tinge to the trends of assimilation and acculturation. Jews in Prague for example found themselves caught between the crosscurrents of German and Czech nationalism. In *Budapest they were caught in the triangle of German, Magyar, and Slav national demands, and in Galicia in the triangle of German, Polish, and, later on, Ukrainian demands. The upsurge of national consciousness gave rise to animosity against Jews. The Czechs resented the assimilation of Jews into the German sector, while many Slav nationalities opposed their assimilation into the Magyar group. Hence from now on the question whether to assimilate or not to assimilate was joined with the problem into which nationality to assimilate.

Modern Manifestations of Anti-Jewish Prejudice

With the growing democratization of political processes in various European states to the west of the Russian border, and the emergence into political influence of the mass of elementary school graduates, Jews were to encounter in most of the countries of their emancipation mounting popular prejudice and a new phenomenon in the influence of the stereotype, whereby the press, and popular art and literature destined for the masses, presented various social manifestations through the medium of clichés and images. The stereotype image of the Jew in modern times was based on and bore the imprint of the baneful image of the Middle Ages, but its representation by various groups was fashioned by their own fears. To conservative and right-wing groups the Jew had become by the 1860s the prototype of the wicked arch-innovator, and Jews were stigmatized as the destructive bacteria of the social web. To the left-wing radical he appeared the evil representative of the capitalist spirit, the arch-schemer and arch-exploiter. The common bond of the medieval anti-Jewish legacy let these opposed stereotypes coexist and even complement each other.

The blood libel case in Damascus (the *Damascus Affair) in 1840 shocked Jews everywhere, not only because of the cruelties inflicted on the victims and absurdity of the charge but also and mainly because they saw a recrudescence of an extreme medieval-type expression of Jew hatred. It led Moses *Hess in his *Rom und Jerusalem* (1862) to reject his own assimilationist and revolutionary past. His sense of isolation and humiliation caused by the anti-Jewish attitude of the left-wing Marxist radicals brought him back to a deep feeling of the historic continuity of the Jewish nation and to place great hopes for its future in its own homeland. Hess had a much greater impact than commonly accorded him: his response fitted the challenge felt by many Jews in West and Central Europe.

The historian Heinrich *Graetz was deeply moved and influenced by this work. In 1863 he wrote to Hess: "I am now in a state to let you know something that will interest you. The plan of settlement in Ereẓ Israel – or *Yemot ha-Mashi'aḥ* [Hebrew in the original] – is beginning to crystallize." In 1870 he communicated to Hess an idea of "a very cultured Englishman, a Christian"; Graetz was not permitted to communicate the whole idea, but could only ask "whether in France, in which Jews already have military training, and there are men of courage among them, there may be found about 50 that could become a kind of gendarmerie. They will find excellent employment but they must bring with them a certain measure of Jewish patriotism …. Please look into this matter and tell me your opinion" (published in: Ẓevi (Heinrich) Graetz, *Darkhei ha-Historyah ha-Yehudit*, ed. by S. Ettinger (1969), 268, 272).

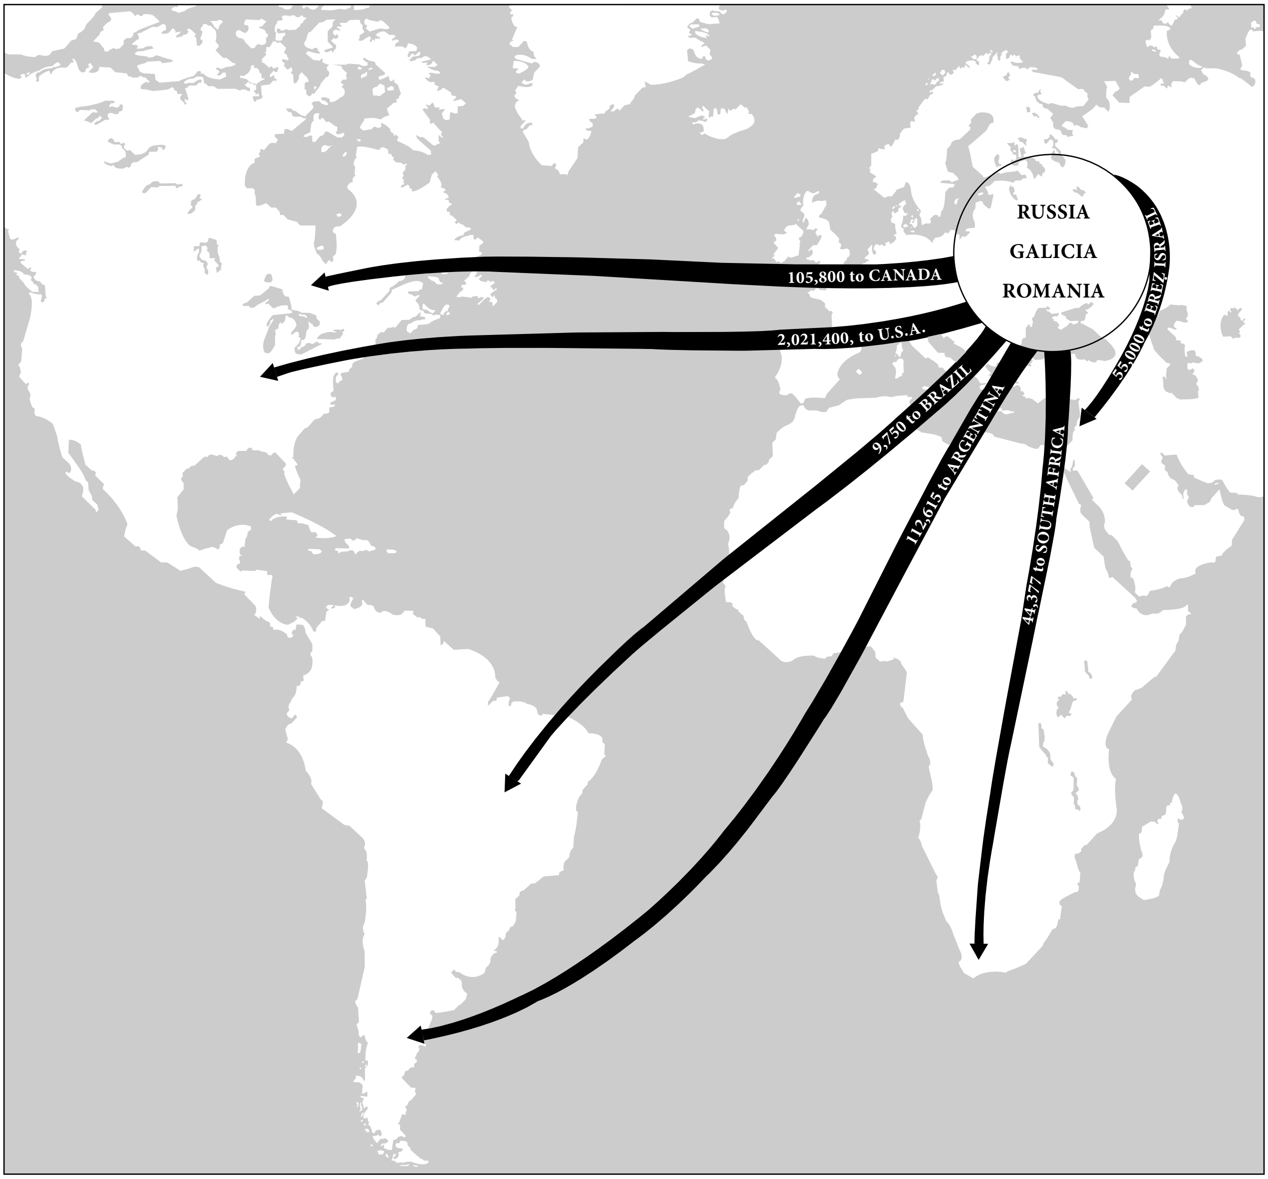
Awakening Nationalism

The state of mind of Jews, in particular those who from alienation returned wholly or partially to Judaism, was influenced in the 1860s to 1890s both by their hostile reception in Christian society and the spectacle of awakening nationalism

among suppressed peoples. When Italy united in the 1860s a geographical term became a political reality. Germany united to become a mighty empire through its victory of 1870–71. Slav peoples were demanding independence and fighting for their cultural identity against German or Magyar demands for their assimilation. Other Slav nations had revolted against the Ottoman Empire and established their independence. Ancient Greece had been resurrected relatively long ago (at the end of the 1820s), and Philhellenism had become a long-enduring fashion and ideological trend among cultured people in Europe. The whole meaning of Jewish assimilation was questioned in the light of these developments. Was Jewish continuity and culture less cogent and valuable than that of Serbs? Were Jews better received by the dominant nations than the Slavs and the Magyars? Inevitably the question was asked, "Why give up?"

From the 1840s gentile circles in England expressed hopes and formulated plans for "Jewish restoration to the Holy Land." These projects were supported not only by sectarians without political power but also by political leaders like the Earl of Shaftesbury. Pamphlets were published. Some activists like Laurence *Oliphant went to Ereẓ Israel to try to work them out. These projects and ideas were in a large degree prompted by the rapid and visible weakening of the Ottoman Empire and the anarchy within it. The Ottoman Empire was considered at that time "the sick man of Europe." The Crimean War was fought in the 1850s over the settlement of its fate. Though subsequently kept alive, this empire appeared to offer good opportunities for obtaining concessions and charters, in particular as the system of *capitulations made interference in its affairs possible and even easy.

This combination of external circumstances and the examples of national struggle and national resurrection was noted inside Jewish society by people who were either disappointed in their contacts with the environment or who, rooted in Jewish culture and society, reacted to the ravages brought about by assimilation. It was no accident that the pioneers of the idea of combining the reawakening of Jewish national consciousness with the return to Ereẓ Israel came either from the cultural borderline of assimilation like Moses Hess and his followers, or from the social borderline of the eastern districts of Germany where Jews living their own traditional life saw destructive influences advancing upon them; such were Elijah *Gutmacher and Ẓevi Hirsch *Kalischer, or Judah *Alkalai from the heartland of the Slav struggle for independence against the Ottoman Empire in Serbia (*Yugoslavia). In the United States of America Mordecai Manuel *Noah proposed (1825) the creation of the Jewish state "Ararat," first in the United States, although later his attention shifted to Ereẓ Israel.



Jewish Life in Ereẓ Israel

Jewish society and settlement in Ereẓ Israel was then in a stagnant phase, following earlier development. A certain renaissance of Jewish life in the land began with the groups who went there under the leadership of *Judah Ḥasid (1700) from Europe and Ḥayyim b. Moses *Attar from the Maghreb (1742). Social and religious activity in Eastern Europe brought over groups of both Ḥasidim (1777) and *Mitnaggedim* (1808–10). By the mid-19th century all these groups, and additional immigrants, mostly of a mature age, had coalesced into a fixed pattern of settlement and society. Jerusalem, Hebron, Tiberias, and Safed were "the four lands of holiness" in which Jews customarily settled. The income of over half of them, according to some estimates even up to 80% of the community, came from **ḥalukkah*. At this time *ḥalukkah* was a much respected institution for rendering financial assistance and homage by those remaining in the Diaspora, with its comforts and opportunities, to those who went to Ereẓ Israel to represent the nation in prayer and Torah study at the holy places.

Jewish culture reached high standards in this society. Most Jews there devoted their lives to divine worship in one way or another. The *ḥalukkah* distribution also imposed a pattern of social organization since the **kolel* unit was formed according to the source of *ḥalukkah* income and perpetuated the settlers' ties with their towns and regions of origin. The Sephardi element in this society tended to engage more frequently in ordinary business and crafts than the Ashkenazi. That element was thus more congenial to the first Ḥovevei Zion and Zionist pioneers who arrived in Ereẓ Israel in the 19th and early 20th centuries. This was also the background for the choice of the Sephardi pronunciation for modern Hebrew by its pioneer Eliezer *Ben-Yehuda. The capitulation system helped to keep the settlers in touch with the consuls of their lands of origin. While abroad the *meshullaḥim* (emissaries) not only collected money for the *ḥalukkah* but also brought the message of Ereẓ Israel to the Diaspora, and kept Jews everywhere in living contact with Ereẓ Israel through the sermons they delivered and accounts of conditions there. One of the main grounds of division between the Orthodox and Reform sectors in Jewry derived from differences in attitude toward messianic hopes, Ereẓ Israel, and the use of the Hebrew language in prayer, thus emphasizing in minds and emotions the centrality of these factors to Jewish life and thought.

Summary

The position of the Jews at the end of the foregoing period can be briefly summarized. By the end of the 1870s the Jewish population was in the process of constant and unprecedented growth, due largely to the persistence of old traditions of family cohesion and philanthropy. In the West both economic and social developments were moving in an upward direction, the old Sephardi families leading the way in these achievements, whereas in Eastern Europe conditions were growing worse, with a greater proportion of Jews deriving their livelihood from small businesses and workshops, and some growth of a working proletariat. The shtetl economy and society had crystallized. Migration was still largely taking place within the borders of states, in the general direction of east to west. Apostasy and assimilation, and to a certain extent also mixed marriages,

Map 4. Intercontinental migrations, 1881–1914. Based on data from H. Lestschinsky, "Jewish Migrations, 1840–1946," in L. Finkelstein (ed.), The Jews, *New York, 1960.*

had made considerable inroads into the upper strata of Jewish society in the great cities of Central and Western Europe, which were largely filled by the human and cultural reservoir of East European Jewry. In Central and Western Europe Jews had entered almost all professions, though their appointment to state and university posts was very slow. Although Jewish emancipation was complete almost everywhere in Europe except for czarist Russia, the equality granted to Jews in Romania and other Balkan states by the intervention of the powers and international conferences, like the Berlin Congress in 1878, remained on paper only. Growing achievements, acculturation, and emancipation had taught that the attainment of equality was as much a social and psychological problem as one of legal status. The first two aspects could not be legislated. The stereotype of public expression and propaganda, and the attainment of the masses to political and social power, did not permit the slow and delicate processes of social and cultural adjustment to equality to develop naturally. Jews were active and had achieved positions in science, in law, in the press and journalism, in medicine, in the arts, and in trade and banking. Some occupied important places in politics, yet their Jewish origin always remained recognizable to others as well as to themselves, even in the case of apostates like Benjamin Disraeli or Karl Marx. Their reactions to this situation differed from denigration of the Jewish character and culture (Marx) to pride in Jewish descent and even a claim to racial superiority (Disraeli). Most Jews active in public life preferred not to help fellow Jews or to become involved in Jewish matters.

In this attitude there was little difference between the conservative Achille *Fould in France and the liberals Eduard *Lasker and Ludwig *Bamberger in the German parliament or the revolutionaries Ferdinand *Lassalle and Johann *Jacoby. Jewry had become much diversified as a result of over a century of intense differences in opinion and changes in mood. Yet it remained united in consciousness though divided emotionally and in ways of life. Toward the end of this time the example as well as the antagonism of awakening nationalism had combined with the beginnings of a renaissance of Jewish national and cultural consciousness and creativity to influence in various ways – some starting originally as paths to assimilation like the Wissenschaft des Judentums – in the renewed striving for cohesion, internalized cultural creation, and direction of a vaguely felt need for independence in the land of their fathers.

[Haim Hillel Ben-Sasson]

MODERN TIMES – FROM THE 1880S TO THE EARLY 21ST CENTURY

Introduction

The absolute growth of the Jewish population was constant and impressive up to the *Holocaust. There were approximately 14 million Jews in the world around 1918 and 16 million Jews around 1937. Even the terrible loss of about six million Jews through the horrors of the Holocaust still left at the end of World War II a nation of approximately 11 to 12 million. According to estimates, the number of Jews in the world by 1970 was higher than immediately after World War I.

The rate of growth slowed down continuously from the 1880s onwards. The use of contraceptives and the ideal of a one-child or two-child family, which became increasingly prevalent among town populations in general, were felt among Jews in most of Europe and other continents, in particular from the middle of the 1920s. The effects – social as well as emotional – of the Holocaust caused, according to some estimates, a slight reversal of this trend and of the diminution in the Jewish birth rate. Mixed marriages up to the rise of Hitler to power became a continuous drain on the Jewish population. Their proportion in some countries and cities grew to more than one quarter of the total of Jewish marriages. Over three-quarters of the children of such marriages were brought up as non-Jews. The above-mentioned phenomena were evident in the European Jewish family; communities in the Mediterranean lands and particularly in Muslim countries were almost not affected by them until quite recently. In Europe again racist antisemitism and the revulsion felt by Jews at its appearance led to both a decrease in the number of mixed marriages from the late 1930s and a much higher proportion of affiliation among the offspring of such marriages to Jewish identity.

From the end of World War II mixed marriages multiplied, in particular in Western Europe and the United States, while the degree of attachment of such couples and their children to the Jewish nation remained very much in the balance. As a result of the combination of these phenomena the rate of growth of the Jewish population decreased from 2% annually before World War I to 1.1% in the 1920s, and to 0.8% in the 1930s. Although East European Jewry (except in Soviet Russia) was relatively little affected by the phenomena of the small family and mixed marriages, other factors, such as persecutions, the years of hunger and of massacres between 1918 and 1923, the economic crisis of 1929, and the anti-Jewish economic and social policies in most of the "successor states" to Austria-Hungary and Russia between the two world wars, combined to produce the same effects on the Jewish population as in the West.

Two processes changed the dispersion and ecology of the Jews in the world throughout this period. Emigration, from 1881, transferred masses of Jews from Eastern Europe overseas (largely to the United States), and shifted the center of gravity for Jews in terms of environment and cultural influence. (See Map: Intercontinental Migrations 1). Societies and cultures which had been molded predominantly by English tradition, and by the pluralist pattern created by the "melting pot" of multinational immigration, increasingly became the hosts for Jews. These were now the matrix of the challenge and response of Diaspora life, instead of the Germanic or Slav environment and the homogeneous, predominantly intolerant, cultures by which the Jews had been surrounded before the great wave of emigration. In its own macabre way the Holocaust led in the same direction, for extermination overwhelmingly affected the communities of Central and Eastern Europe.

Secondly, in the whole of this period the Jews in the world underwent a constant and accelerating process of urbanization and even megalopolitization. Even while the shtetl society and economy were still almost intact in Eastern Europe, though much changed by the effects of emigration and economic and social factors, in 1914 there were already over 100,000 Jews living in each of 11 cities in the world. In the old area of Jewish settlement *Warsaw numbered approximately 350,000 Jews, *Lodz more than 150,000, Budapest approximately a quarter of a million, and Vienna more than 150,000. In the new area of Jewish settlement created by the pace of emigration (see below) *London numbered more than 150,000 Jews, *Philadelphia in the United States more than 175,000, *Chicago about 350,000, and New York 1,350,000. The trend has continued, both in absolute numbers as well as in the proportion of Jews in metropolitan cities relative to the general Jewish population in a country. On the eve of World War II over one-third of the Jews in the world were concentrated in 19 cities, each of which had more than 100,000 Jewish residents. New York alone had a population of about two million Jews, somewhat less than half of the total of Jews in the United States. After Jewish emancipation in Russia in 1917 and the abolition of the Pale of Settlement (see below), and in particular after the industrialization of Soviet Russia from the 1930s, Russian Jewry also tended to become increasingly concentrated in the big industrial and administrative centers. This development is in line with the general trend in the world toward urbanization, but far outpaces it. In 1970, Jews

outside the State of *Israel were concentrated in the largest and most complex urban settlements in the world, New York having the largest single concentration of Jews in any place and at any time. The mass exodus of Jews from Arab states under pressure after the creation of the State of Israel again assisted this trend. Many of the small Jewish communities in backward towns were liquidated and their members resettled in large urban concentrations, mostly in the State of Israel or in France. The dispersion of the 16 million Jews in the world and their proportion among the general population by 1937 can be seen in the Table: Distribution of Jews. (See Map: Intercontinental Migrations 2).

Table 1. Distribution of Jews by country, 1937

Country	Number	Percentage of Jews in General Population
Ereẓ Israel	384,000[1]	over 20
Poland	3,000,000[1]	10.4[1]
Lithuania	160,000	7.6
Romania	1,130,000	6.2
Hungary	485,000	5.9
Latvia	94,388	5.0
Turkey (Europe)	58,000	4.7
Austria	285,000	4.6
The Maghreb (present Libya, Algeria, Morocco and Tunis)	310,000	from 5.6 to 1.3
U.S.	4,350,000	3.6
Iraq	100,000	3.1
Czechoslovakia	375,000	2.6
Soviet Russia (Europe)	2,700,000	1.9
Greece	120,000	2.2
The Netherlands	120,000	1.7
Argentine	250,000	1.4
Canada	170,000	1.4
England	300,000	0.7
France	250,000	0.7

1 Estimate.

After the Holocaust about 50% of the Jews were living on the American continent, while only one-third remained in Europe and the Soviet Union. From 1945 Ereẓ Israel became the main haven of refuge; France also absorbed many Jews from North Africa. Among approximately 14 million Jews in the world in 1970, about 6 million were living in North America, predominantly in the United States. About 2½ million were living in the State of Israel. There were about three-quarters of a million in Southern and Central America, and about 200,000 in South Africa and *Australia. The majority of Jews living in France in 1970 arrived there through very recent emigration, mainly from North Africa, and the majority of Jews in England and *Switzerland were the result of immigrations from 1880. The distribution and concentration of Jews in various parts of the Soviet Union was the result both of movements toward the east after 1917 and of movements even farther east during World War II.

The emerging pattern therefore reveals that the vast majority of Jews live in new surroundings, though for a considerable number this change was ardently wished by them (in the State of Israel for historical and ideological reasons, and in the United States because of its attitude toward them). Western Europe in 1970 numbered more than one million Jews, of whom about half a million were living in France and about 450,000 in Great Britain. The Soviet Union numbered approximately three million Jews; the number of Jews in other communist countries was contracting steadily; they had reached a vanishing point in Poland, because of its virulent antisemitism. Jews had also left most of the Arab and Muslim states. The history of the Jewish population between 1880 and 1970 shows great vitality in movement, in adjustment to new environments and patterns of living, and in the creation of a state. Its present ecology makes the problems of Western urban civilization paramount in Jewish life. The location and numbers of the Jews have changed through their own dynamics as well as through the forces of human cruelty, of racism, and *antisemitism.

Effects of Anti-Jewish Discrimination in Russia

The evil of stereotypes and vulgarization increasingly made itself felt in its impact on Jewish life from the 1880s. The ruling circles of the czarist state and society adopted a policy of open antisemitism in order to divert the resentment of the masses to the Jews. These circles were considerably disturbed and angered by a phenomenon of their own creation that had appeared in Jewish society. In the 1860s and 1870s Jews had been promised alleviations and rewards as a prize for acquiring secular education and skills in line with the government policy of remolding them into satisfactory citizens. The Russian government, however, had no conception of the strength of the cultural traditions of veneration of study and respect for the student among Jews. Jewish society in Russia, by the criteria of its own culture, was considerably more educated and intellectualized than Russian society. When the aspirations of Jewish youths now turned toward secular learning and Russian culture, the ruling circles were dismayed by the "flood" of Jews that threatened their high schools, universities, and consequently, the composition of the Russian intelligentsia. They turned increasingly to the policy of severely restricting the numbers of Jewish students by imposition of the *numerus clausus. They also applied higher standards to Jewish pupils in Russian high schools and made more exacting demands on them.

Frustration and anger swept the youth who were eager to learn outside the sphere of their own traditions, who had been ready at first for assimilation in and service to the Russian state, and who were now being punished for revealing the high cultural level of their society and their own individual abilities. The trend toward academic education and free entry to the professions could not be halted among the Jews of the Pale of Settlement. Thousands who were not accepted at Russian universities went westward for their educa-

tion, mainly to Germany and Switzerland. In university cities in these countries Jews formed a large part of the "Russian student colonies." They knew that, having obtained a degree, back in Russia they would still be discriminated against because of their Jewishness.

The state thus fostered radicalization among Jewish students and a Jewish intelligentsia, who identified themselves with the revolutionary struggle for freedom and a better society in Russia. Hence the proportion of Jewish intellectuals among the leading cadres of the various Russian revolutionary parties grew increasingly larger, and was much greater than their proportion in the general population and at total variance with the social background of their homes. The czarist authorities and their supporters were quick to clutch at the stereotype of the "Jewish subversive spirit" in opposing the Jews, and pointed out to them – by discriminatory measures as well as by massacres-that the western border was open to Jews wanting to emigrate (while the eastern border of the Pale of Settlement remained closed). The government thus hoped both to solve "the Jewish question" and to weaken the revolutionary movement at one stroke.

Pogroms and Mass Emigration

In 1881 one wave of massacres broke over southern Russia that hit about 100 communities. From then on massacres as well as arson in the Jewish townships, whose structures were built of wood, became endemic in czarist Russia. In 1891 the expulsion of Jews from *Moscow was effected, an event that alarmed Jews throughout the country, for they saw it as a reaffirmation of the Pale of Settlement policy. In 1903 there occurred a massacre in *Kishinev that set off a wave of anti-Jewish violence. The ruling circles also made great efforts to involve the Poles in these outbreaks. They were successful at *Bialystok. In 1912 an anti-Jewish *boycott was organized in Warsaw. Thus Russian Jews were faced by the menace of *pogroms, i.e., constant physical assault and robbery; these were certainly abetted by the authorities, and – as the official archives showed, when opened after the revolution of 1917 – in many cases organized by police functionaries and financed by societies close to the government. Jews reacted against this situation by the creation of *self-defense organizations, a pattern of behavior which continued until the period of the pogroms under *Petlyura, Makhno, and *Denikin during the civil war after the Revolution of 1917.

The Jews of the Pale of Settlement and Galicia and Austria reacted to the straitened economic circumstances even more strongly than to the wave of unprecedented hatred and violence in Russia, by mass emigration. (See Map: Intercontinental Migrations 1). Between 1881 and 1914 over 2½ million emigrated from Eastern Europe (c. 80,000 annually), over two million of them to the United States, creating the great Jewish center there. Over 350,000 settled in Western Europe; centers of Jewish tailoring and trade in England and in other countries were created by this emigration, since a large proportion of the Jews were tailors and many who formerly had no profession joined their ranks. Many others turned to peddling. The "greenhorns" were unacquainted with the language and culture of the new country and were dependent to a large degree on economic and spiritual help from earlier arrivals. They clustered together, thus creating "ghettos" in the great cities of the east coast of the United States and in Western Europe. These were at first islands of the Eastern European Jewish culture and way of life, where Yiddish was spoken and *Yiddish literature, newspapers, theaters, and journalism burgeoned amidst the surrounding cultures.

For the second generation, the traditions of learning and respect for intellectual activities and the free professions pointed to intensive study and the acquirement of a profession as the way to social betterment. This naturally entailed deep acculturation. The dynamics of traditional Jewish culture in an open and more or less tolerant society created the present broad strata in Jewry of those occupied in the free professions of the intelligentsia, including writers, artists, and newspapermen, in the United States and other Western countries. The children and grandchildren of the poor and hard-working immigrant parents, who at first labored in the grueling atmosphere of the "sweatshops" "pulled themselves up by their own boot straps" thanks to a tradition that took the road of learning and social leadership and service wherever and whenever permitted.

The present situation, where the vast majority of Jewish youth enters the universities and other academic institutions, can be interpreted as being no less the result of an acceleration of immanent Jewish trends than a part of the present general trend toward academic education. The vestiges of occupations such as tailoring and peddling are rapidly disappearing. Productivization has taken a different and unexpected turn in modern Jewish society in the West.

German Jewry

Up to 1932 German Jewry was in the forefront of intellectual achievement and the acquirement of free professions, though it never achieved the type of social acceptance found in other Western societies. In Germany too the development was away from the crafts and petty trade to academic professions, medium and largescale business enterprises, and public service. German Jewish society experienced during this period a certain undercurrent of tension between its acculturated strata and the "*Ostjuden*," who, whether as immigrants or as transients, caused some offense by their culture and way of life, in particular through fear of the "bad impression" they could make on good, cultured Germans.

However, at the end of World War I there was a rise in antisemitism. The defeat of Germany in war was explained by the myth, propagated by extreme right-wing elements, that circulated after 1918 of the "stab in the back" that the victorious German army had received from revolutionaries, pacifists, and intellectuals under the influence of the cowardly "Jewish spirit," as opposed to the heroic and creative "German spirit"; such accusations, combined with resentment at

Jewish commercial and financial activity in Germany during the great inflation of the early 1920s there, reinforced the old stereotype evil image of the Jews. Fuel was added to the old hatred by the preeminence of Jews in many scientific fields, and, especially, their activity on the liberal and left-wing side of German politics (Walther *Rathenau, minister for foreign affairs of the German republic, was assassinated in 1922; Kurt *Eisner, head of the socialist republic of Bavaria in 1918, and Rosa *Luxemburg, as the symbol of left-wing socialism, were murdered).

Racism and Antisemitism

Racism was threatening to become from the second half of the 19th century the new buttress of quasi-scientific rationalizations of the hatred of the Jews when its older religious props were disintegrating. These ideas were influenced by successes in the organization and development of agriculture and cattle breeding along racial lines, by the stimulus of racist and semi-racist policies toward blacks everywhere, and toward "natives" in many parts of the British Empire, and by the penetration of Darwinian biologistic concepts of the "war for survival" and "survival of the fittest," which led to a sociological Darwinism that was first used in conflicts between social circles in Christian society and in republican France.

There gradually emerged in Europe a racist theory (see *Race, Theory of) which postulated the division of mankind into "higher" and "lower" races and into "good" and "bad" breeds. Carried over from the disciplines of nature and economics, where functionalism and teleology could flexibly suggest the breeding of a race for a specific purpose, this theory acquired cruelty and absurdity when applied to humanity and to the area of absolute imponderable values and goals (see also J.A. de *Gobineau; H.S. *Chamberlain). When combined with the stereotypes of the Jew and his character, it acquired the ultimate horror of a racial scale, where the "Aryan," which stood in Nazi race parlance for Germanic, represented the best type of man, while the "Semite," which in the same parlance was actually intended to designate the Jew, came to represent an irreparably evil and harmful blood and race.

The growing influence of Adolf *Hitler and the Nazis, the medieval-type poison disseminated by newspapers like *Der *Stuermer*, and the theories propounded by A. *Rosenberg and expounded by J. *Goebbels, created a dangerous situation and an oppressive attitude toward Jews even before the seizure of power in Germany by Hitler in 1933. The public vote, adherence of the youth, and the growing "respectability" of the Nazis and Nazi ideas among the right wing of German society, pointed the way to the Holocaust. The influence of this development in the heartland of Europe, in a country and nation famous for their culture, became threatening for Jews everywhere.

*Antisemitic political parties and organizations had begun to appear in Germany and Austria-Hungary in the 1870s (see A. *Stoecker; K. *Lueger; G. *Istóczy). These had from the first made in clear tones "socialist" claims against Jewish exploiters and "Christian" aims against subversive Judaism, and expressed overt hatred of the blood and the irradicably evil character of the Jew. In 1882 a first international congress of antisemites convened in Dresden, marking the conception of an all-European war against the Jewish "international conspiracy." The anti-Jewish agitation of Edouard *Drumont in France reached its peak and was defeated in the *Dreyfus affair in the 1890s (see also Emile *Zola). Right-wing sentiment against the Jews lingered on actively in France after the decisive defeat of the anti-Dreyfusards, however: it attracted many embittered intellectuals, Catholic and radical.

Another type and tradition of antisemitism was active and virulent in the "successor states" of Russia and Austria-Hungary. These faced wide-scale Jewish participation in the "third estate" (Poland, Lithuania) and in the intellectual elite of the country (Hungary). Memories of the war against Russia, when Jews were suspected of Russian leanings in the east of Poland (leading to the massacre in *Pinsk), and memories of the communist revolt in Hungary led by the Jew Béla *Kun intensified enmity against the Jews. Obliged by the minority treaties (see *Minority Rights) and by their internal economic and political situation to refrain from open action against Jews in the 1920s and early 1930s, these states developed, in particular Poland, Romania, and Hungary, a systematic policy of anti-Jewish measures camouflaged as measures intended for the improvement of trade or crafts, or for stricter sanitation. Taxation also served as a weapon against the Jews. Public opinion and semi-official economic organizations, such as the *Rozwoj organization and cooperatives in Poland, served the same purpose. Numerus clausus was introduced openly or clandestinely. Jews did not obtain state employment, while the "general" measures mentioned above enabled the closing down of Jewish shops and workshops and made economic activity difficult for the Jews. Public opinion encouraged this policy and was in turn officially encouraged to display hostility to Jews. Attacks against Jews by students and youths were endemic in Romania, where they were scarcely punished, and became more and more frequent in Poland.

Following the rise of the Nazis to power between 1933 and 1939 all these various brands of antisemitism on the continent of Europe tended to merge, accepting to a greater or lesser degree the racist theory and cruel methods of the Nazis. On the other hand, this provoked growing revulsion from antisemitism in some conservative and Church circles, though expressed hesitatingly and not generally leading to much activity against antisemitism.

The Nazis set the tone in introducing racism as a basic concept in law with the *Nuremberg Laws (1935). They gradually tried out on European public opinion as well as "educated" German society the steps of open boycott, of violence against, and harsh isolation of the Jews and expropriation of their property, culminating in the **Kristallnacht* action of November 9–10, 1938. The badge of a yellow "*magen David*" served to mark the Jew outwardly. Jews were given a spurious autonomy appointed by and closely supervised by specially trained

"experts" of the *SS and *Gestapo. By the eve of World War II not only the non-communist states of Eastern Europe but also fascist Italy under *Mussolini and pro-Nazi political parties in the West, like that of Oswald Mosley in England and the Croix de Feu in France, had accepted – some enthusiastically, some reluctantly – the Nazi line toward Jews, though not always all the forms of Nazi behavior toward them. The civil war in Spain (1936–39), where thousands of left-wing Jews fought and died in the ranks of the international brigades of the republic against the armies of the Caudillo Franco, served in the case of the Jews to rally the extreme right wing of Europe closer to Hitler and make his victims its enemies.

The Economic Crisis of the Early 1930s

Jews everywhere were hard hit economically by the crisis of 1929, as were almost all sectors of the public in Europe and the United States. The New Deal of Franklin D. *Roosevelt did much to help them in the United States, where they were again in the mainstream of development of the whole country. Yet the early 1930s were a difficult time not only economically but also socially for Jews there. The odium incurred by Roosevelt and his measures were often directed against Jews too. Public agitators like Father Coughlin used the new medium of radio to preach hatred against the Jews.

In Soviet Russia after 1917

In the Soviet Union there continued, up to 1928 approximately, a long period characterized by the break-up of the shtetl economy and the penalization of many Jews as "bourgeois elements" in the legal, economic, and social aspects of existence. This policy was followed, even if they had been petty shopkeepers or smallscale artisans under the czarist regime, without taking into account the restrictions that had forced them into their petty bourgeois status. In this case also a "general line of policy" turned out to be destructive and unfair to Jewish society in particular. During the economic crisis the Soviet government was favorable to Jewish autonomy (there were many preponderantly Jewish municipalities and even several such regional administrative units even after the end of the 1920s). The setting in of industrialization around 1928 gave new opportunities to Jews and began to compensate many of them for the former social havoc.

In the 1920s the Soviet state encouraged a change in Jewish economy and society through agriculture and settlement in compact groups, first in the *Crimea and the south of the *Ukraine – which had been traditional areas for Jewish agricultural settlement with governmental encouragement from the first half of the 19th century – and later in what was proclaimed to be the autonomous Jewish region of *Birobidzhan. The projects proceeded rapidly with the help of Jews from abroad. In 1926, 150,400 Jews gained their livelihood from agriculture, approximately 6% of the total. By 1928 they numbered 220,000 (8.5%). A peak was reached in 1930 with 10.1% of Russian Jews in agriculture. Subsequently a steady decline, both in absolute numbers and even more proportionally, set in. During the collectivization of Soviet agriculture most Jewish settlements were practically de-Judaized by an "internationalization" process, i.e., the introduction of non-Jewish peasants. The Jewish settlements were finally obliterated during the Nazi occupation of World War II.

In *Argentina, where the funds provided by Baron de Hirsch and vast tracts of available land seemed at the end of the 19th century to ensure prosperous Jewish settlement, this prospect withered away in the 20th century through the lure of the cities and lack of idealistic and national motivation. The failures of these attempts – state-supported in Communist Russia and supported lavishly by private means in the open economy of Argentina – proved, no less than the success of similar attempts in Ereẓ Israel (see below), that only ideals could reverse the trend in Jewish society toward urbanization manifest from the eighth century.

New Types of Social Organization

The years between 1880 and the creation of the State of Israel in 1948 were also ones of creativity in Jewish social organization and forms. Where the old community structure continued to exist it was destined to acquire importance through the activities of Zionists, autonomists, and other Jewish political party representatives, to revive and use it as an instrument for national, secular, social, and educational policy. It was further strengthened when the community organization became, under the minority treaties, a recognized cell of Jewish self-government representing the Jews as a minority in various states. International Jewish organizations patterned after the Alliance Israélite Universelle continued to appear with specific goals for diplomatic or philanthropic activity. To combat antisemitic propaganda the B'nai B'rith order set up its Anti-Defamation League in 1913, while in Germany the *Central-Verein deutscher Staatsbuerger juedischen Glaubens carried on such activity until its prohibition by the Nazis. Various organizations for the aid and direction of emigration arose in this period, the most prominent being the *HIAS and later the *Palestine offices of the Zionist Organization; *ORT, *OSE, and above all the *American Jewish Joint Distribution Committee (from World War I) served to provide training for professional skills, health needs, and massive charity wherever required. The Jews of the United States who were emotionally attached to "*di alte heym*" and still retained memories of the hardships they underwent while taking root in the "New Country," made charity not only a duty and function but also a social bond and an ideal in life, a factor of cohesion in itself, and in forging links with other Jews; this proceeded from the time of World War I, in particular in relation to Palestine and later on the State of Israel.

The year 1897 saw both the convention of the first *Zionist Congress and the creation of the first all-state Jewish socialist party, the *Bund of Russia. The calling of the Zionist Congress and the method of ensuring its permanence through elected institutions acting in the interim between congresses, and, above all, through the institution of the *shekel, created an international Jewish framework that saw itself the repre-

sentative of its "voluntary citizens," and "a state in preparation." The Zionist Organization created the instruments of the *Jewish National Fund and *Keren Hayesod, which served as financial agencies of this extra-territorial state. Even Orthodox Jewry found itself compelled at the beginning of the 20th century to organize in this novel form of a political party, establishing the *Agudat Israel. This form took root: the *Folkspartei, the *Jewish Socialist Workers' Party (Sejmists), and other Jewish groups organized as political parties to advance their aims, sometimes on a territorial and sometimes on an international basis.

In the Soviet Union the ruling Communist Party created its "Jewish section," the *Yevsektsiya, in 1918, which served as an instrument of agitation and propaganda in opposing the Jewish religion and Hebrew national culture. In the Soviet Union there also emerged Jewish units of local municipal and regional autonomy (see above). The search for forms continued in the attempt to create a *Jewish Agency to unite Zionists and non-Zionists in work for Ereẓ Israel, and later in the method of raising *bonds for Israel to assist an independent Jewish state. Cultural activity was also organized in democratic countries through separate organizational frameworks, like the Central Yiddish School Organization (CYSHO; see *Education) for Yiddish schools and culture, and *Tarbut for Hebrew secular schools and culture. The various trends of Jewish religious thought and life developed organizations of their own, in particular flourishing in the pluralist United States, in the shape of the three main groupings of Reform, Conservative, and Orthodox, with several splinter groups (see, e.g., *Reconstructionism). Many organizations tended to link themselves in one way or another to the State of Israel, though there is also in the United States the *American Council for Judaism, active mainly as an anti-Zionist and anti-Israel body. In the camp of the *New Left, stirrings were felt toward expression and organizational articulation on specific Jewish matters and issues, though in the main it was inimical toward and destructive of Jewish cohesion.

Contribution to General Culture

Jewish involvement in general culture and service to it became greater and more creative in this period. Henri *Bergson, Hermann *Cohen (who expressed himself not only as a general philosopher but also as a Jewish one), and Edmund *Husserl are but a few of those who contributed to *philosophy. *Mathematics and *physics increasingly attracted Jews who were very creative in these fields, like George Cantor, Albert *Einstein, Hermann *Minkowski, Robert *Oppenheimer, Edward *Teller, and Lev *Landau. The work of Georg *Simmel, Emile *Durkheim, and later that of Claude *Lévi-Strauss is central to *sociology and *anthropology. Many Jews have contributed to the literatures of various countries; most of them cannot avoid the Jewish problem, even when consumed by *Selbsthass* ("self-hate"). In art, the creations of Amedeo *Modigliani, Chaim *Soutine, and others are important in the modernist trend. Through the work of Marc *Chagall the shtetl life and mythology, and motifs and images from the world of Midrash and Jewish legend have gloriously and colorfully entered European art. By granting the 1966 Nobel Prize for literature to Shemuel Yosef *Agnon, European society recognized the place of modern *Hebrew literature and creativity in world literature, acknowledging at the same time the Jewish acculturated contribution to European literature by granting it also to Nelly *Sachs. In the State of Israel, which continued schools and trends of artistic creativity from mainly Eastern Europe and Germany, are found many varieties, forms, and schools of literary and artistic expression, increasingly rooted in the life of the state.

The Jewish specificity of this entrance to the humanities and literature was expressed by the German historian Ernst Troeltsch, who combined appreciation of the Jewish contribution with recognition that it was new to European culture and somewhat alien. He states that for Hermann Cohen:

> history is concerned rather exclusively with the ideal future, and this is a systematics consisting purely of thought and ethics of the organized will of humanity. Through this the ideal Jewish approach to history finds its expression among the various approaches possible within the circle of our culture, for, since 1848, new conditions and new assumptions have been created through the entry of Judaism into literature and spiritual activity, first and foremost in the field of history …. This is given its most energetic expression by Cohen … (*Der Historismus und seine Probleme* (1922), 542).

André Gide reacted in a hostile fashion in 1914 to Jewish intrusion into French literature:

> Why should I speak here of shortcomings? It is enough for me that the virtues of the Jewish race are not French virtues; and even if the French were less intelligent, less long-suffering, less virtuous in all regards than Jews, it is still true that what they have to say can be said only by them, and that the contribution of Jewish qualities to literature (where nothing matters but what is personal) is less likely to provide new elements (that is, an enrichment) than it is to interrupt the slow explanation of a race and to falsify seriously, intolerably even, its meaning. It is absurd, it is even dangerous to attempt to deny the good points of Jewish literature; but it is important to recognize that there is today in France a Jewish literature that is not French literature, that has its own virtues, its own meanings, and its own tendencies (*Journals of André Gide*, transl. by J. O'Brien, 2 (1948), 4).

This reflection on the essential difference between Jewish and French creativity is preceded here by the reaction of Gide, who later became for a while a left-winger and Communist fellow traveler, to the character of the young Léon *Blum, the future Socialist premier of France, leader of the Front Populaire before World War II: "I cannot fail to recognize nobility, generosity, and chivalry, even though when applied to him these words must be considerably distorted from their usual meaning." Gide considered that these traits could not be applied in their usual meaning to Blum because of "his apparent resolve always to show a preference for the Jew, and to be interested always in him, that predisposition … comes first of

all from the fact that a Jew is particularly sensitive to Jewish virtues." He suspects too that this completely assimilated young man "considers the Jewish race as superior, as called upon to dominate after having been long dominated, and thinks it his duty to work toward its triumph with all his strength … He always talks to you as a protector. At a dress rehearsal, when he meets you by chance … he … makes everyone think … that he is the most intimate friend you have in the world" (*ibid.*, 3–4).

Antisemitic insinuations and touches thus often entered even where Jews and non-Jews seemingly mixed on the most equal terms in the salons of literature and science.

The National Renaissance and Zionism

The renaissance of Jewish solidarity and national thought that began in the 1860s continued and developed in the period under consideration. All the circumstances of the general growth of nationalism, the break-up of the Ottoman Empire, and above all, the feeling of Jews that they were not wanted in the social and cultural world around them with growing awareness that social and cultural understanding and acceptance mattered, led to a return to Judaism and to specific solutions for it. Leon (Judah Leib) *Pinsker suggested in his *Autoemancipation* (1882) that Jews could free both themselves and the world from the malaise of antisemitism if they would only make a sustained effort to return to the "state of nature" of a nation living in its own land and within its own social and economic framework, and if they ceased to frighten others by persisting in a ghost-like existence in exile. His ideas coincided to a considerable degree with ideas of other Jewish thinkers of different shades, like Nathan *Birnbaum, Moses Leib *Lilienblum, and Peretz *Smolenskin.

A supreme example of the Jew shocked out of complacent assimilation was Theodor *Herzl. Through his imaginative thought and charismatic leadership he rallied around his personality and ideas all those who wanted Jews to devote their efforts to the creation of a home of their own. Herzl stood outside most of Jewish culture, and was indifferent even to Hebrew. He put his trust mainly in diplomacy and in the possibility of obtaining a charter from the Ottoman Empire and shaping autonomous Jewish existence within it: methods and hopes that were destined to disappointment. Nevertheless, Herzl had the power to express openly his trauma, his consequent pride in being a Jew, and his political sense for symbols and forms of leadership, and to bequeath them to Zionism after him. His attempt in 1903 to lead Jews to a "*Nachtasyl*" in Uganda, mainly for the sake of alleviating the sufferings of Russian Jews, failed in a large measure due to the opposition of those very Jews (see *Uganda Scheme). The territorialists who later wanted to continue this trend of Herzl's thought were destined to fail in all their attempts, lacking the motive force of the historic attachment to Ereẓ Israel (see *Territorialism). The various organizational and financial instruments (see above) created in Herzl's lifetime and soon after his death were to assist the ultimate achievement of the Jewish state by enlarging their methods and including "practical" settlement work.

From the days of the *Bilu pioneers in the late 19th century Jewish settlement activity in Ereẓ Israel did not stop despite many problems and failures, and despite the political view that generated reluctance toward practical settlement efforts before the attainment of a proper charter. Baron Edmond de *Rothschild intervened to assist Jewish settlement from 1883. His methods were often bureaucratic. His officials lacked contact with the settlers, but the money poured in (1½ million pounds sterling over approximately 15 years) and the instructors he sent helped to save them from economic catastrophe and to embark on various agricultural and horticultural efforts.

The main problem of the Zionist settlers at the beginning of the 20th century was ideological and social. Tensions between them and the *ḥalukkah* settlers created a gulf between the "old *yishuv*" and the "new *yishuv*," as the two sectors in Ereẓ Israel came to be called. The settlers of the first villages soon accepted French culture, spread by the Alliance Israélite Universelle schools as well as by the officials of the Baron. Asher Ginsberg (*Aḥad Ha-Am) was shocked at what he saw in both the cultural superficiality of Zionist leadership and the emptiness of purpose in the settlements. He suggested a new "spiritual" Zionism. His positivist thought contributed much to the ideological buttressing of secular Zionism.

In 1904 the Second Aliyah began, and it continued until 1914. Its pioneers brought with them high standards of Jewish and general culture, lofty ideals of socialist collectivism and productivization, and a deep conviction that ideals may be proved only through living according to them. Among the approximately 40,000 who came in this way, many of whom left after a relatively short time, were several leading personalities. Some were destined to lay the foundations of and lead the State of Israel: David *Ben-Gurion, Iẓḥak *Ben-Zvi, Berl *Katznelson, Aharon David *Gordon, among many others. Gordon stressed the revolutionary and creative character of physical work and the supreme value of the return to nature. These people considered that work by Jews in the fields and roads of the Jewish settlements was a precondition to national revival as well as the path to individual renewal. They aimed to form a Jewish peasantry and a Jewish agricultural proletariat, hence their struggle for work by Jewish labor and for Jewish land, a struggle that continued up to the establishment of the State of Israel. The followers of Gordon organized the *Ha-Poel ha-Ẓair party in 1905. Some of them, more radical in outlook and adherents of Yiddish as the national language, organized in the *Po'alei Zion. By their joint effort the pioneers created the organization of agricultural laborers in 1911.

The greatest achievement – and, as it would now seem, a lasting contribution to the social organization of mankind – was made by these pioneers with the help of funds of the Zionist Organization and instruction by various experts (see Yehoshua *Ḥankin; Arthur *Ruppin) in creating types of communal living and agricultural settlement: the cooper-

ative *moshav and the collective communes of the kevuẓah and *kibbutz. The last two relate back as if instinctively to the old tradition of Jewish communes in the Second Temple period (see *Essenes; *Dead Sea Sect). They were influenced respectively by ideals of social justice and equality, and of national service. Both consciously and subconsciously, the kibbutz served, through its spirit of collective brotherhood, to maintain the high cultural level and intensive social life of the pioneers in conditions of hard physical effort and economic hardship.

Malaria, the hot climate, and despair that they might be unable to attain their objectives were the enemies against which the Jewish idealist settlers had to battle from the first days of the Bilu'im. Despite many attempts and failures, a relatively high rate of suicide, and the fact that some 40 existing agricultural settlements contained only a minority of the approximately 80,000 Jews in Ereẓ Israel by 1914, they formed a strong social and ideological core that remained ready to continue to expand as soon as the war ended in 1918.

Following the tradition of Jewish self-defense, true to the conception that everything should be done by the Jews themselves, inspired to generate a romantic renaissance that attached great importance to physical valor, the pioneers of the Second Aliyah decided to take the defense of the Jewish settlements into their own hands. In 1909 they created the *Hashomer organization. Those who formed it intended to be more than mere watchmen, and took for their model of behavior that of the warrior bedouin. This organization lost several of its first members in defending the Jewish settlements. Some of them, through their way of life and the courage they displayed, developed an ideal prototype for the role of the Jewish defender.

Before World War I Eliezer Ben-Yehuda had succeeded in bringing Hebrew back to life as a day-to-day language by personal example and propaganda for it as a living language. The wealth of its literary, legal, and philosophical strata considerably contributed to its revival. This became firmly established through the "language conflict" between the supporters of Hebrew as the only language to be used for every field and activity, and those who considered that German should be used for various subjects and spheres for which Hebrew was not considered ripe, in particular for teaching at the new *Technion in Haifa. After pressure by the *Hilfsverein der deutschen Juden in support of German, the determined stand of teachers and public opinion decided the day for Hebrew in 1913.

World War I and Its Aftermath

World War I tested Jewish nationality as a political concept in the international arena. Zionism was in disarray. Conceived as an international movement and organization for carrying out Jewish policies by modern political means, it found itself divided between the two warring camps. Its main offices were in Germany, while the main body of its supporters were in the lands of Germany's enemies or in neutral countries. From the days of Herzl, Zionist diplomacy had relied both on friendship with the Ottoman Empire, using the influence of Germany for this purpose, as well as on the friendship and support of England. Now these mainstays were in conflict. The Turks were gradually drawn into the war and when they entered it they had already become particularly suspicious of Jews and Zionists.

Jews everywhere found themselves in a similar predicament. Culturally they admired Germany; the Austro-Hungarian Emperor *Francis Joseph was considered a friend and protector of Jews. Russia and the Russians were hated and feared, in particular by the great mass of recent immigrants from Russia who now formed the great centers of Jewish population in the United States and England. On the other hand, the Western democracies, and in particular England, were traditionally considered the states and societies most favorably inclined toward Jews. The Turks, who became the allies of Germany in 1914, were considered cruel and unreliable. When German successes in the East brought great areas of the Pale of Settlement under German rule, the attitude of the Germans and the Austro-Hungarians toward the Jews compared favorably with that of the Russians. Jewish officers in the German and Austro-Hungarian army, in particular army chaplains, came in touch with the Jewish society in the conquered territories, and did much to assist it. This encounter also brought important results for the Jewish consciousness of the German Jews themselves. Many of these German Jews made the acquaintance of "*Ostjuden*" life and culture in its home and began to respect and even to admire it. Much of the later understanding between these two sections of Jewry in the period between the two world wars stemmed from this encounter. The Russians, on the other hand, often maltreated Jews during their retreat, and expelled many of them eastward, suspecting them of spying for the Germans. They thus broke up on their own initiative – as they thought temporarily – the structure of the Pale of Settlement. Jews in the West, in Germany, and Austria-Hungary, were well informed about the various aspects of the situation in the East. Left-wing radicals, both Jewish and non-Jewish, wished for the downfall of all autocratic rulers, but in particular prayed for the downfall of the arch-autocrat in Europe, the czar.

Most Jews served in the armies of their respective countries, and did not feel obliged to form a specific Jewish policy and attitude, except for scattered reflections and sentiments influenced by the considerations mentioned above. Army service had an important result for Jewish society, as at least one million Jews received a sound military training under conditions of war. This served to good effect after the war, when Jewish ex-servicemen took over the self-defense of Jewish communities in many places in Eastern Europe (see *Military Service).

A sector of the Zionist leadership and many of the rank and file thought and behaved on similar lines. Their main policy was to wait and see. They argued that it would endanger the Jewish population in Ereẓ Israel if Zionism took a stand against the Turks and it would harm the Jews in Russia if

Zionists entered into an agreement with the Turkish-German side. A small but very able and devoted minority thought otherwise. It included the veteran Zionist Max *Nordau, Chaim *Weizmann, Vladimir *Jabotinsky, Pinḥas *Rutenberg, Joseph *Trumpeldor, and Meir *Grossman. They considered that Zionism should have an active policy. They estimated that a victory for a side which included the Turks would mean an end to the whole of Jewish development in Ereẓ Israel. The phenomenon of the Polish legions who had served in the Napoleonic armies and the persistence of Polish national policy without a state of its own, the example of similar Italian units and policies before the attainment of Italian independence, and admiration for the symbolic figures of Garibaldi and Cavour influenced the thoughts of some of them.

They came to the conclusion that there could be no greater political asset than to create an activist, pro-Entente, Zionist-Jewish policy, and that there could be no finer expression of national behavior than to create Jewish units that would fight against the Turks, when, for the first time since the Jews had fought in alliance with the Persians and taken Jerusalem from Emperor Heraclius in 614, Jewish blood would again be part of the price for the ancestral Jewish homeland. Jews would obtain, so they hoped, basing themselves on these precedents, a seat and a say with the victors, and they were sure these would be the Western democracies. For some of them there was also the ideology of a renewal of the courage and warrior spirit of the Jewish nation through its formal and actual participation in the war. The behavior of the Turks in Ereẓ Israel was so outrageous that Aaron *Aaronsohn formed a spy group, *Nili, to serve the Allies.

The differences of opinion were decided by acts. Trumpeldor and his associates organized a group that was accepted as a unit of muleteers; this battalion served with distinction at Gallipoli. It was recruited mainly from Jewish refugees from Ereẓ Israel in Egypt. Trumpeldor forged, both through instruction and personal example, high morale and brave behavior among these soldiers. Jabotinsky in the meantime worked tirelessly in England for the formation of a *Jewish Legion in the British army to fight for the liberation of Ereẓ Israel. He seized on the fact that many of the Jewish immigrants were not due for army service in England; their exemption caused antisemitism, and from his point of view they were a ready reservoir for his intended unit. The British began to incline to his view as the war became prolonged and they saw that the opposition of the mass of the Jewish population in the United States to the Allied cause was a considerable hindrance to the U.S. entry to the war. One hundred and fifty of the *Zion Mule Corps, as Trumpeldor's unit was eventually called, joined Jabotinsky in London. In August 1917 the 38th Battalion of the Royal Fusiliers, or as they were called from the end of 1919, the "First Judeans," composed almost entirely of Jews, mainly from London, was officially instituted (see *Jewish Legion). In 1918 this battalion fought in Ereẓ Israel. Its commander was Colonel John Henry *Patterson, formerly commander of the Zion Mule Corps. In the U.S. Pinḥas Rutenberg, with the help of David Ben-Gurion, Iẓḥak Ben-Zvi and Chaim *Zhitlovsky, mobilized in 1917 approximately 6,500 men who were to form the 39th Battalion of the Royal Fusiliers. After the conquest of Ereẓ Israel by the British, the 40th Battalion was formed out of Ereẓ Israel volunteers, many of whom later became activists of the *Haganah, like its leader Eliyahu *Golomb.

Activist policy carried the day on the diplomatic and political fronts also, thanks to the actions of Chaim *Weizmann and his supporters. Despite many obstacles put in the way by Jewish assimilationists, the *Balfour Declaration was issued on Nov. 2, 1917. Thus, at the end of World War I, clearly conceived Jewish policies were brought into effect through the importance of the new Jewish concentration in the United States, the ability and readiness for sacrifice among the intelligentsia circles of Russian origin, and the devotion and courage of the pioneers in Ereẓ Israel. The latter also had not only kept the Jewish settlements intact under the hostile Turkish regime, but had undergone the ordeal of severe persecution after the discovery of the Nili spy group.

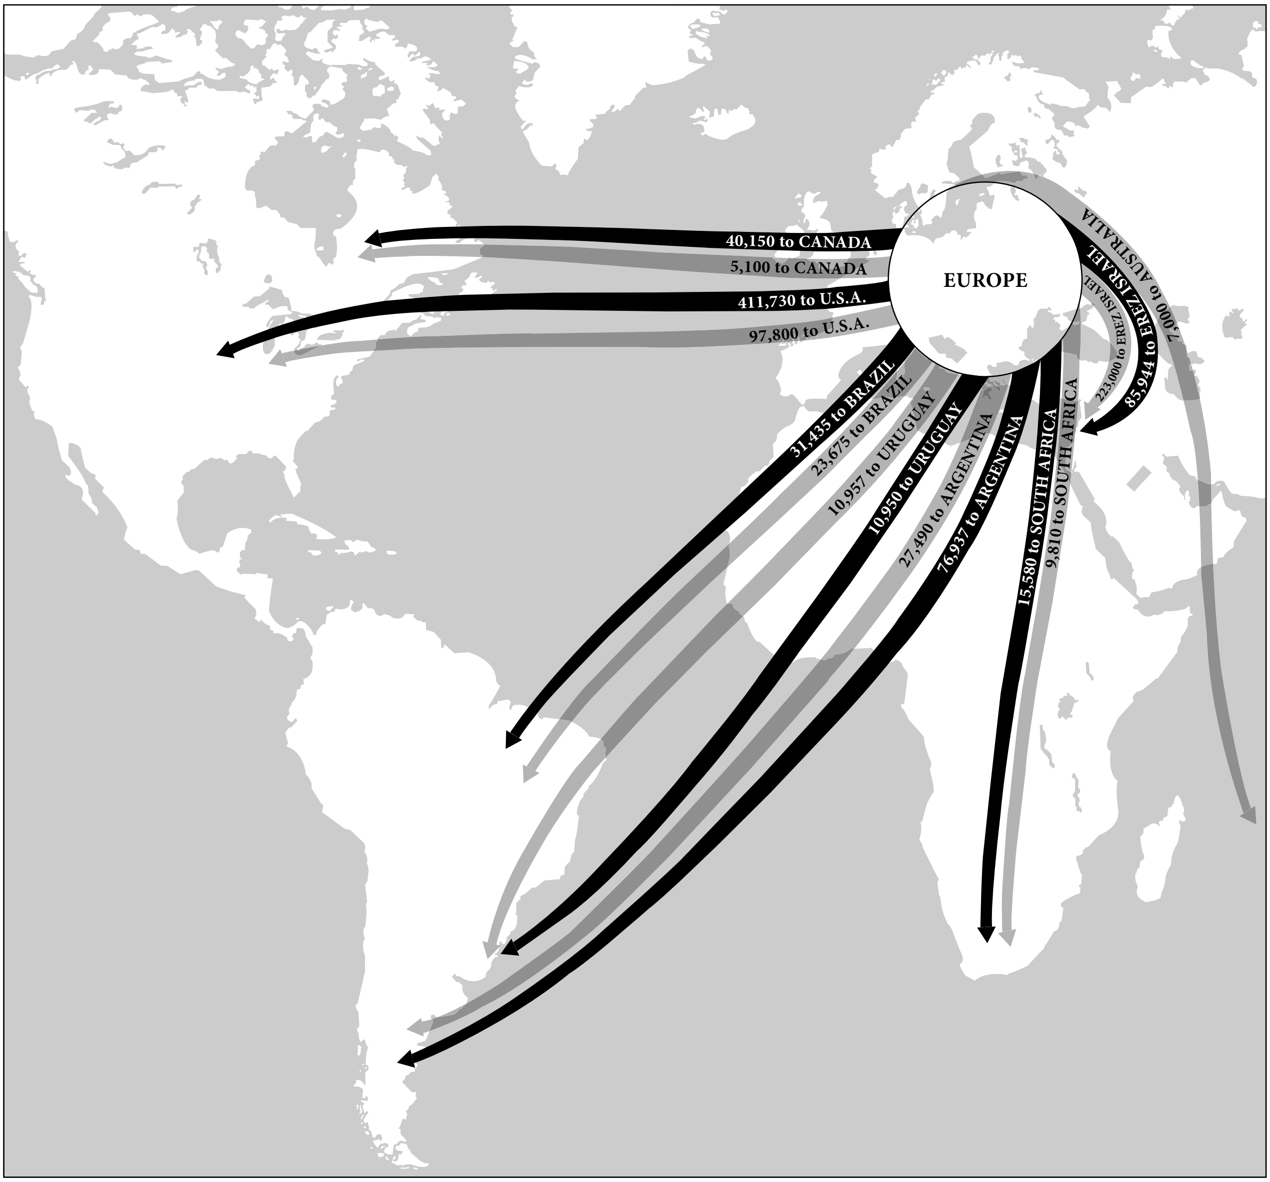
The years 1917 to 1921 were decisive from many aspects in Jewish history. In 1917 the Jews in Russia acquired full emancipation and the Pale of Settlement there was abolished by the democratic Provisional Government. Legal emancipation was eventually attained by Jews in all of Europe. Despite the sufferings and confusion caused by the civil war, and the Communist policies with regard to Jewish society and culture, this achievement still formally remains in force, though with the terrible interlude of the years of Nazi domination. The institution of *minority rights and treaties seemed to ensure, in countries to which they applied, the right of Jewish self-government, cultural hegemony, and a means of maintaining Jewish identity and cohesion on the basis of international guarantees. No longer pertinent, they were important between the two world wars. The Balfour Declaration and, later on, the *Mandate for Palestine conferred on the British, opened the long and tortuous path to the State of Israel. At the time many saw the opportunity and did not estimate the difficulties. United States Jewry emerged as the great political force and financial mainstay for all Jewish activity. At the same time the massacres perpetrated by the Ukrainian and White Russian bands and armies against Jews in pogroms in the Russian civil war, the cruelty and hostility displayed toward them by many of the new national states in Europe, and the social and spiritual crisis in Germany presaged future dangers and complexities. Communist domination in Russia cut off one of the most devoted sectors of Zionist activity, Jewish cultural creativity, and pioneer spirit from the main body of Jews in the world and from participation in the settlement of Ereẓ Israel.

The Yishuv in Ereẓ Israel

The impetus of Zionist successes brought the quick reorganization of Jews in Ereẓ Israel, under patterns suggested by Zionism, in the Keneset Yisrael all-country structure, through the *Va'ad Le'ummi, and the Chief Rabbinate, which had as its first head the leading spiritual personality of Abraham Isaac

*Kook. Circles of the "old *yishuv*" opposed this development and refused to participate in the common organization, basing their argument partly on their opposition to voting rights for women. They appealed to the *League of Nations and obtained the right of secession. They were supported by the Agudat Israel. Though unpleasant, their secession and opposition could not hinder Zionist and *yishuv* activity in Ereẓ Israel.

Life and development in Ereẓ Israel between the two world wars were influenced by and decided through a number of processes and events. Arab national opposition within the country to the Jews and their enterprise hardened with every success attained by other Arab countries to achieve independence or to approach it, and with every success attained by Jewish settlement and society in Ereẓ Israel. In a series of violent and cruel outbursts in the years 1921, 1929, 1933, and 1936–39, the Arabs tried to break Jewish morale and enterprise. The 1921 excesses achieved for them the Churchill *White Paper (1922), which gave a restrictive definition for the concept of the Jewish National Home, after the closure of Transjordan to Jewish settlement through the creation of a separate Arab emirate (later kingdom) there. Later outbursts brought in their wake commissions of inquiry, and diplomatic activity which in one way or another brought proposals of concessions to the Arab cause.



The history of relationships in the triangle between the Jews, Arabs, and British authorities in Ereẓ Israel is a long succession of flat Arab no's to a series of compromises loaded heavily in their favor. It is also a chapter in the history of colonial British officials the majority of whom were drawn to the romantic Arab against the ordinary European Jew. Jewish immigration to Ereẓ Israel was limited by various criteria and formalities; Jewish land acquisition was hindered in many ways. Only a minority of the British officials, and only in a limited number of cases and actions, fulfilled the mandatory power's obligation of furthering the "Jewish National Home."

Jews were divided among themselves as to the best ways of furthering their enterprise. In the dispute between Weizmann and Judge Louis D. *Brandeis there came to the fore the question of preference for individual initiative on accepted economic lines or preference for national and collectivist enterprises, sound from a social and ideological viewpoint more than from an economic one, which began to occupy Zionist attention from the time of this quarrel. Religious Zionist *Mizrachi circles complained about the secular and often anti-religious character of many of the settlers and settlements. The educational system set up by the new *yishuv* was divided between two networks: a modern Orthodox one and a "general" one with secularist leanings. The ultra-Orthodox circles maintained a network of their own. The readiness of Jews to come to Ereẓ Israel was often dependent on the political climate in the Diaspora. Thus the great immigration of Jews from Poland in the mid-1920s was nicknamed the "Grabski *aliyah*" after the Polish finance minister who through his discriminatory taxation policy influenced many to make *aliyah*.

Despite these hindrances and vacillations, progress continued unbroken throughout the period. The number of Jews in Ereẓ Israel grew in the 1920s about threefold, reaching 160,000. At the end of this decade there were 110 agricultural settlements (against 50 in 1920), cultivating 700,000 dunams (175,000 acres) of land. The electrification project of Rutenberg progressed, and the Potash Company successfully exploited the resources of the Dead Sea. The Plain of Jezreel became Jewish; irrigation for Jewish agriculture was swiftly developed. The new forms of the kibbutz and moshav proved themselves viable and were much admired by Jewish and general public opinion. In 1925 the first secular Jewish university was founded, the *Hebrew University of Jerusalem. This progress continued in the 1930s, accelerated by the needs and plight of German Jewry. In 1933 there were one quarter of a million Jews in Ereẓ Israel, and by 1939 half a million, 120,000 of whom lived in 252 agricultural settlements. These included 68 kibbutzim and 71 moshavim. Mixed agriculture became the main basis of the Jewish settlements' economy, freeing them from dependence on one source of income only, though citrus plantations were very successful. The skills, abilities, and money of German Jews did much to develop industry and advance technology.

Even the Arab Revolt of 1936–39 and frequent Arab attacks on Jewish settlements and traffic on the road did not succeed in halting the progress. The method of "*stockade and watch-tower" (*ḥomah u-migdal*) was invented to erect, overnight, settlements capable of defense. Fifty-five new settlements were founded between 1936 and 1939. World War II found the Jewish settlement in Ereẓ Israel strong, active, and alert socially and economically. By 1939 many were embittered against the mandatory government, which prevented Jews, then in mortal danger in Europe, from reaching a safe haven in Ereẓ Israel. As other states had already raised barriers in the 1920s against immigration (e.g., the quota of 1924 in the United States whose terms prevented the entry of many Jews there), Ereẓ Israel was at that time the only society willing and eager to receive them, but for the refusal of the British. Jews developed a network of *"illegal" immigration which smuggled tens of thousands of Jews into the country. Measures taken by the mandatory authorities to suppress this immigration caused further clashes.

The defense system, strategy, and tactics of the Jews in Ereẓ Israel were based from 1921 on the underground mass organization of the Haganah. It had to develop its training and arms supplies clandestinely. Up to 1945 strategically always on the defensive against the Arabs, it had to develop under pressure of attack new tactics to respond to different challenges. In the meantime there were differences of opinion over the share of various social circles in the leadership of the Haganah, expressed mainly in terms of right-wing and left-wing; different policies as to the methods and timing of reaction to individual acts of terror; and from the late 1930s also differences over the question if and to what degree to oppose by armed force the British anti-Zionist legislation and measures. These led to splits in the Jewish forces. A group of the minority right wing

Map 5. Intercontinental migrations, 1915–30 (black) and 1931–39 (gray). Based on data from H. Lestschinsky, "Jewish Migrations, 1840-1946," in L. Finkelstein (ed.), The Jews, *New York, 1960.*

advocating an activist response to Arab terrorization formed a separate armed underground, generally named the "Irgun Bet" in the 1930s. In 1937, after two splits, the *Irgun Ẓeva'i Le'ummi (IẒL) emerged and, in 1940, the *Loḥamei Ḥerut Israel (Leḥi). From many aspects these were more extreme developments of the former right-wing "Irgun Bet."

The Haganah attempted with considerable success to form legal Jewish militia and defense units in cooperation with the mandatory government. In the personality of Orde Charles *Wingate it found a devoted British officer who identified himself with the Jewish cause. On the eve of World War II a large number of the Jewish youth in Ereẓ Israel were organized one way or another for defense, and ready to serve. They supplied the volunteers for the various Jewish units, and later on the *Jewish Brigade Group in the British army of World War II was formed. In this unit, in turn, many who were later to be commanders of the Israel Defense Forces gained experience in large-scale training and operations. In the *Palmaḥ, the Haganah created a striking force of youth trained in commando style who through close links with social life in the kibbutzim were emotionally and ideologically devoted to the new Jewish society. Consciously and subconsciously all these various military and para-military organizations and units drew their inspiration from the conviction, crystallized in Russia at the time of the pogroms, that human stature demanded active armed defense by the Jews of their honor and their life. They were also inspired by historical memories revived on the soil of Ereẓ Israel: the acts of the Maccabees, the

example of the great revolt against the Romans (66–70), and the deeply implanted readiness for *kiddush-ha-Shem*, which had already assumed a secularist form in sacrifice for an ideal in the activities of Jewish revolutionaries in Europe from the second half of the 19th century.

Hebrew and Yiddish

Between the world wars at one and the same time Hebrew was finally transformed from a literary language into a full-scale living language and Yiddish was transformed into a language for literary and scientific expression from a spoken popular dialect. The attainments of Hebrew before World War I were now broadened and deepened by a rich literary creation – much of it begun before World War I but reaching a peak and social recognition between the two world wars (Ḥayyim Naḥman *Bialik, Saul *Tschernichowsky, Zalman *Shneour, Nathan *Alterman, Shemuel Yosef *Agnon, among a galaxy of poets and writers). In the Hebrew University at Jerusalem, the Technion in Haifa, and in all aspects of everyday life, in the elementary school and kindergarten, in the units of the defense organizations as in professional work and writing, old mishnaic, talmudic, and midrashic terms were given new meanings and connotations to serve modern needs. Many new terms were coined. Many Jews in the Diaspora began to study and use Hebrew as a living language, considering it and forging it into a powerful bond and rich symbol of unity with the Jewish past and of participation in the emerging new Jewish spirit in Ereẓ Israel.

Yiddish also continued to evolve and diffuse literary works on a high level before World War I and after it (Mendele Mokher Seforim (see Sholem Yankev *Abramovitsh), who through his work and personality formed a link between Hebrew and Yiddish literature; Shalom *Aleichem; Sholem *Asch; *Der Nister; Peretz *Markish; David *Bergelson; and many others). It was cultivated and perfected, and attained precision in expression and grammar, in academic institutes (see *YIVO), and school systems. For many Jews – mostly anti-Zionist or left-wing, but also some among the Orthodox – Yiddish became a symbol of the greatness of European Jewish culture of the Ashkenazi type, and of what they considered the abiding value of continued Jewish existence in the Diaspora. Nathan *Birnbaum, an early pioneer of Zionism, served through his leadership and personality as a link between these various groups of "Yiddishists." In the Soviet Union, mainly through the ideology and activities of the Yevsektsiya circles, as well as among radical circles of the Yiddishist camp elsewhere, Yiddish became a symbol of the break with the religious "clerical" and the "bourgeois nationalist" past. It was used to work for and express total secularization as the basis for specifically Jewish life and creativity in the new society. This found technical expression in the adoption of changes of spelling and vocalization to wipe out the last traces of Hebrew and religious influence from the language.

Thus, on the eve of the Holocaust, Jews had two fully developed national languages, two competing conceptions as to the center of gravity of Jewish achievement and Jewish continuity, and two incipient conceptions of the relation to the past and the character of future culture. Two sets of literature were being developed and sustained at a high level; two parallel structures of scientific and educatory effort were being activated successfully. Hebrew stood for a hope for the eventual unity of Jews throughout the world, on the basis of a common past rooted in biblical, mishnaic, and talmudic times and striving for a renaissance in the land of Israel. Its secular tendencies were also directed toward the transformation of this past unity and those past treasures into new forms capable of containing the entire former complex. Yiddish expressed the feeling that what had happened in Europe from approximately the tenth century onward, and more or less north of the Pyrenees, was what mattered and should be handed on to be transformed and used. It stood for the belief in "*Doyigkeyt*" (the value of what is here and now in Jewish life, meaning Europe and the European communities overseas, and the elements that were present and activating in their culture in the 20th century). It was intended to be the abiding vehicle of autonomous secular Jewish culture and life in the Diaspora based on a European Jewish Ashkenazi cultural pattern. The Holocaust cut the existential plane from under Yiddish. Its achievements, and goals, and the conceptions it expressed remain in its literature and in the progress it made in competition with established Hebrew in a relatively short time. In the Soviet Union Yiddish was helped by the prohibition of Hebrew and by state aid provided for Yiddish institutions and literature. This also vanished with the anti-Jewish stands adopted by *Stalin and the "liquidation" of many Yiddish writers and artists after the end of World War II. Tension between the "Hebraists" and "Yiddishists" was considerable between the two world wars. After the Holocaust, it became a matter of the past.

World War II and the Holocaust

World War II found the Jews everywhere, unlike the outbreak of World War I (see above), united in the war against Hitler. The Molotov-Ribbentrop Pact of August 23, 1939, caused some fanatical Jewish communists to deviate for a short time from this natural course, to which they returned gladly in 1941 with Hitler's attack on Soviet Russia. Each German victory – a series unbroken up to the end of 1942 – spelled horror and doom for the Jews who came under German rule. As clearly evident now from documents captured and from the torsos of "Jewish museums" that Hitler began to erect, his clearly formulated plan and avowed intention was to exterminate first all the Jews in Europe and later all Jews in the world, so that future generations could see what Jews were only as museum exhibits. The Nazis saw and pointed to Jews as the vermin of humanity whose house had to be cleaned of them in order to be made fit for the future great culture under pure Aryan domination.

The Nazi methods in dealing with Jews were an unvarying compound of deception, human cruelty, and the use of both psychological pressure and technical harassment to

break the spirit of the victims and dehumanize them before their final dispatch. In the ghettos, in the various *Aussiedlung* actions, and in the death camps, the same pattern of sadistic torture proceeded, creating a constant and worsening situation of hunger, epidemics, arbitrary executions and torture, and in the end death for the emaciated body, taking the maximum care to use every ounce and particle possible for the benefit of the great Aryan German culture. Under this pattern it was intended that the victims lose all sense of time and individuality; the humanly impossible was always possible in the organized chaos and nightmare surrounding the Jews. Degradation was as much the aim as killing. This system was applied in the full to Jews, though it was also applied to other enemies and opponents of the "thousand-year Reich."

Despite this satanic dehumanization by a mighty state machine, there were indeed Jewish uprisings, in the *Warsaw Ghetto, and several other ghettos, and in the *Treblinka death camp as well as several others. There were Jewish *partisans wherever they could find shelter, which was often denied to them by non-Jewish partisans.

The Nazis were able to deceive their decent victims because no ordinary human being could conceive the existence of such depths of vileness in the human mind, even having read *Mein Kampf* and meeting with the Nazis. The Nazis used a series of cover names and cover conceptions to confuse the Jews. The terms "*ghetto," or "elders of the Jews" (*Judenrat), "*Judenpolizei*," the slogan "labor makes free" at the entrance to death camps, and the fiendish invention of sending Jews to a "shower-room" that was really a gas chamber, constituted a mixture of medieval concepts, which apparently ensured life with humiliation, and modern concepts of service and cleanliness, so that the Jews should not realize their fate (cf. *Nazi-Deutsch).

The process of actual extermination frequently began with mass pogroms in the old czarist style. It continued in the nightmarish journeys in freight trains under horrible conditions to the ghettos in Poland. On Jan. 20, 1942, the details for the final mass extermination were settled at the so-called *Wannsee Conference at Berlin. At this conference the liquidation of 11 million Jews was envisaged, and from the following year was largely implemented at *Auschwitz and the other camps. The Warsaw Ghetto revolt of April–May 1943 was a last stand manifesting Jewish courage and belief in the future and the human spirit. By the time the Nazis had been defeated between four-and-a-half and six million Jews were already dead; the Holocaust was carried out in such a way that exact numbers are difficult to ascertain (see *Holocaust). When the gates of the death camps were opened at *Buchenwald, *Bergen-Belsen, *Dachau, and elsewhere, hundreds of thousands of living skeletons were found in them. They had to be brought back to ordinary human life.

The Holocaust showed the inhumanity to which antisemitism and racism could lead, not only despite, but in the main through, mass culture, mass education, and the use of mass media for propaganda and indoctrination. The executioners were dehumanized beyond recovery in the process. The victims were intended to reach this state but the Jewish vitality and spirit, and the demonstration of Jewish brotherhood quickly brought back most of the survivors to personal integration and proud human stature. The numbers that had been tattooed on their skins in the camps were not obliterated: most of those Jews learned to live with them, and gained a renewed belief in humanity.

The Holocaust was organized by the Germans. The German people knew of it. Such an operation could be carried out only by means of the technology at its disposal, and the victories achieved by its sons, but many other peoples of Europe, in particular of Eastern Europe, took part in the initial mass pogroms, and collaborated in the murders. It was not by accident that Hitler chose Poland in which to carry them out. Some nations – the Dutch, the Danes, the Swedes, the Bulgarians and many Italians – showed courage in helping and hiding Jews (cf. *Righteous of the Nations). Few came out openly on their side. A notable exception was the mass action of the Amsterdam port workers. The Western allies were afraid of German propaganda and on many occasions took good care not to be trapped into specific and open actions of help to the Jews as Jews. The bombing of Auschwitz was considered impossible on technical grounds, while aid by air to the Polish insurgents in Warsaw was conceived and carried out despite Russian opposition. On general grounds of condemning torture and inhumanity the Allies included the account of the Jews in their warnings to the Germans of the day of reckoning to come. But they refused to counter the singling out of Jews for destruction by the Nazis by singling Jews out themselves for help and protection.

It seemed, after the Holocaust, to many, friends and enemies alike, that with regard to the Jews Hitler had achieved his purpose of breaking their spirit, though he had failed in achieving their total extermination. In looking at the physical wrecks in the camps, and in counting the scanty remnants of European Jewry, it seemed to the foreign secretary of the Labor government, Ernest *Bevin, as well as to many other level-headed statesmen, that the time had come to liquidate the enterprise of European Jewry in Ereẓ Israel after its virtual liquidation in Europe. Emancipation had again returned formally to Jews all over the world; the antisemitism of Stalin was yet to be seen. The pressure of the Jewish masses for immigration to Ereẓ Israel seemed to be gone with the annihilation of these masses. Economically rich countries were ready to receive the remnants; why imagine that they would insist on going to a poor, dangerous, and effort-demanding little country? The Jews of Ereẓ Israel had witnessed the horror of the destruction of millions of Jews, of the conception of Jews as subhuman beings, and the passivity of the democratic and communist pro-Jewish world. It seemed that ensuring the guaranteed status of an autonomous and prosperous minority in an Arab state should satisfy the Jews of Ereẓ Israel, while rehabilitation and immigration to other countries would help what remained of European Jewry.

Rescue of the Remnant
This view and plan was upset by the spirit and readiness to undergo mortal risks and physical sufferings by three elements of the Jewish people. The greater part of the remnant in Europe refused to be lured by comfort in other Diasporas. Even the many who went to the countries of Western Europe and the United States, and even those who found it possible to return to live in German cities, conceived that they could see no other compensation for their humiliation, for the torture and death of their brethren – and no other surety or hope that a Jew could continue to live among men and be considered a fellowman – but the creation of an independent political and social existence in a Jewish state in Ereẓ Israel. The Jews of Ereẓ Israel showed themselves at this juncture ready to face both Arabs and ultimately British might and to risk everything for the creation of a Jewish state. The cooperation of the soldiers of the Jewish Brigade in Europe was enlisted, paratroopers were dropped behind Nazi lines during the war (see Hannah *Szenes), emissaries of the Haganah and IẒL were sent to Europe, and they began again to organize "illegal" immigration (cf. *Beriḥah). The attempts to enter Ereẓ Israel were met by the British authorities with expulsions. The immigrant ship *Exodus* was intercepted and went from port to port in Europe. Later on the immigrants were concentrated at Cyprus, but the immigrant ships – congested and unseaworthy – continued to arrive off the shores of Ereẓ Israel at night. The story of their embarkation, journeyings, perilous disembarkation, and running the cordon of British military and police in the country, lit a flame and became a legend, a record of devotion and heroism. The IẒL, and in particular the Leḥi, turned to acts of sabotage and individual terror against the British. Undeterred by the specter of mass antisemitism and the enmity of states and statesmen, and not heeding allegations of "dual loyalty" and "Jewish lobby," U.S. Jewry poured its enthusiasm, its money, and its position as Americans, into the struggle to assert a proud Jewish identity to offset the image of the skeletons in the camps. They were joined by many non-Jews who felt that their support was not only a matter of justice to the Jews but even more of giving back trust in humanity to small nations.

Prelude to Independence
The Jews had been ready in 1937 to accept in principle the proposition of the Peel Commission of inquiry for the partition of Ereẓ Israel, though not all the details of the plan. In 1942, at a conference in the United States, the *Biltmore Program was accepted by the Zionist organization which set forth clearly the goal of the creation of a Jewish state. Now even the most pro-British elements among the Zionists began to waver in their loyalty to the mandatory power. Other commissions were sent to Ereẓ Israel, searches for arms were made by the British in Jewish settlements (see *Yagur), there were arrests, and hints were frequently thrown out that the British might leave the Jews to their fate, withdrawing their protection and leaving them on their own to face the Arabs. A mixed Anglo-American committee of inquiry proposed in April 1946 the immediate entry of 100,000 Jews mainly from the "*displaced persons" camps in Europe to Ereẓ Israel. The U.S. president, Harry S. *Truman, supported this recommendation; the British prime minister, Clement *Attlee, refused it by attaching a condition requiring disbandment of the Jewish illegal armed organization and handing in of their weapons. The struggle continued. From the end of 1945 the Haganah also took part in actions against the British. When in 1946 the British arrested the leaders of the *yishuv*, the IẒL reacted by organizing the bombing of the King David Hotel in Jerusalem where many government officials were killed.

The fate of the ship *Exodus* in 1947 aroused world opinion against the British government. The British then at first proposed the "Morrison Plan for Partition," which was rejected by both Jews and Arabs. In April 1947, Ernest Bevin carried out his threat and turned to the United Nations, withdrawing from the principle of sole British responsibility for Ereẓ Israel. The Jews refused to be frightened. To the surprise of many, the Soviet government joined that of the United States in supporting partition and the creation of a Jewish state in Palestine. On Nov. 29, 1947, the *United Nations General Assembly adopted, by a majority of 33 votes against 13, a resolution on the partition of Palestine. The actual plan was very disadvantageous to the Jews, but the Arabs immediately proclaimed war against it. The Jews had to prepare for this war clandestinely; the Arabs had the support of their states and the sympathy of the British government to help them in their preparations.

Establishment of the State of Israel
When war broke out on May 15, 1948, with the proclamation of the establishment of the State of *Israel, the armies of seven Arab states invaded the territory intended for the Jewish state. In a series of battles, during which they had to organize and improvise under fire, the Jews repelled these armies. They proved in the process the value of their underground organizations and of the approximately 25,000 trained men who had fought in one way or another in World War II, as well as the valor of thousands of volunteers who flocked from many Diaspora countries to fight for their nation. The *War of Independence, in its two phases (interrupted by a short-lived cease-fire), not only enabled the State of Israel to exist; its course also changed the map of the proposed Jewish state in the latter's favor. The borders of the Rhodes *armistice of 1949 were much more viable than those of the U.N. resolution of 1947. The war took a toll of thousands of lives. In besieged Jerusalem alone about 1,600 civilians were killed by the shellings of the Jordanian Arab Legion, then commanded by British officers.

Since then the State of Israel has been surrounded by the hostility of the Arab world, which considers itself at war with Israel and likes to think of Israel as being in a state of siege to be ended with Arab victory. The Arabs not only proclaim a **jihad* against Israel but also organize systematically, as a matter of declared policy, an anti-Israel economic *boycott. The

attitude of the Arabs was to see the State of Israel as a "non-state," destined ultimately for obliteration.

This Arab hostility brought about the consummation of the process of the "Ingathering of the Exiles" from the Muslim countries, which had already begun well before World War I. The enthusiasm of Yemen Jews for *aliyah* had been manifested from ancient times, and began to be realized with the stimulus given by the mission of Shemuel *Yavnieli. After the War of Independence almost all went to Israel; for many of them their air flight was an abrupt transition from conditions of tenth-century Muslim technology and life to the 20th-century society of Israel. Their adjustment was miraculously rapid and successful. Yemen Jewry has enriched Israel culture with its traditions in song and dance, colorful dress and customs. The Jews of Syria and Iraq remained in continuous contact with Ereẓ Israel. They made up a not inconsiderable part of the "illegal immigration" during the mandatory period – often undergoing danger and persecution in the countries of departure. After the establishment of the state they left for Israel "illegally," having to organize self-defense and an underground movement in circumstances of mob hostility and brutal persecution by the state. Most of them had to abandon all their possessions to go to Israel (see also *Asia, *Iraq, *"illegal" immigration; *Syria). A large number of the Jews in Iran also left the country, though they did not face state enmity there.

With the increase of hostility in North Africa many – though by no means all – of the Jews there went to Israel. This ingathering of exiles has created, for the first time since the dispersion of the Jews, a meeting of the diverse varieties of Jewish culture and social life that have crystallized over a period of at least 2,000 years in widely differing environments and circumstances. A vast, almost unprecedented, process of reacquaintance and mutual acculturation has thus begun, and is, it seems, successfully under way. The Hebrew language, the educational system, and army service serve as accelerating and cementing factors, though there remains still much tension and misunderstanding between the various Jewish groups.

To Jews everywhere the creation of the State of Israel was not only a reassertion of their humanity, but a fulfillment and an obligation to strive for further human and Jewish perfection and service. This has been stated as follows:

> To sum up: the political rebirth of Israel is the very essence of Jewish history. She has absorbed into herself the experiences and activities of generations, the covenant of generations. She has renewed the covenant with the land out of a longing, through the creation of a new community, to develop the Covenant of Man into an Eternal Covenant (B.Z. Dinur, *Israel and the Diaspora* (1969), 186).

In this period the State of Israel victoriously fought two wars (in 1956, in the *Sinai Campaign; in 1967, in the *Six-Day War). It carried the burden of terror tactics and guerilla warfare almost continuously. At the same time it gathered in hundreds of thousands of Jews from the Arab states, and as the behavior of the population has shown during the Six-Day War of 1967, it succeeded within this short span in imbuing most of its immigrants with its ethos and with a serviceable acquaintance with European technology and scientific methods. The Jewish state has up to the present proved itself to be democratic in the full sense of the term, in its conduct of the political process and in the freedom of press and discussion. Hebrew culture is continuously developing. In the *Law of Return (1950) the state asserted its basic Jewishness in proclaiming that every Jew has the right to go there and become an Israeli citizen. The State of Israel is not only far from being besieged to all practical intents and purposes but has become one of the important advisers to developing countries in Africa and Asia. Basically secular, it does much toward maintaining links to Jewish law and tradition, though the extent of this application is at the center of heated public discussion.

World Jewry in 1970

All over the world emancipation is formally in force for Jews, with a few unimportant exceptions (Saudi Arabia; Yemen). In practice Jews are severely persecuted in most Arab countries, and suffer governmental harassment and total denial of rights to develop their own culture in all communist countries. There is proof, however, that the cultural activity and consciousness continues as always, even under persecution. The open fight of Soviet Jews for links with their brethren outside the country and for *aliyah* to Ereẓ Israel has become one of the focal phenomena in Jewish life the world over and their redemption a central challenge for the entire Jewish people (see *Russia, Struggle for Soviet Jewry). In many communist countries the number of Jews is diminishing to vanishing point (Poland; *Czechoslovakia).

In the Western world Jews everywhere are active in parties of all shades and occupied with the problems that face the societies to which they feel allegiance. At the same time their ties with other Jews, and in particular with the State of Israel, are strong. The tense atmosphere in the Diaspora during the weeks preceding the Six-Day War showed their devotion at a time of crisis. On the other hand, Jews in the United States are facing, as many Jewish societies have done in modern times, an imponderable problem from without in the emergence of "black" antisemitism among black society. Inside their own camp Jews are facing strong manifestations of Jewish "self-hate," in particular among intellectuals of the New Left, often in the guise of anti-Zionism, so that there now exists not only "left-wing antisemitism" – an old phenomenon dating from the times of Marx and *Bakunin – but also "Jewish antisemitism." Conversely, many Jews now contribute to general culture with a conscious and articulate stress on and expression of their Jewishness, as they understand it (like Arnold *Wesker in England, or Bernard *Malamud and Saul *Bellow among many in the United States). Some have even elevated Jewish existence in exile to the status of a paradigm and symbol of the alienation of modern man.

In many respects the Jewish nation stands at present in a similar situation to that at the time of the Second Temple. It has its independent and creative center in Ereẓ Israel. It has

great and creative centers in the Diaspora, especially in the United States which has been compared in this connection with those of Hellenistic Alexandria or ancient Babylonia with their roles in the development of Jewish culture. Cultural hostility toward Jews, and certainly vulgar antisemitism, is far from disappearing. Despite Pope *John XXIII's great humanist attempt to sever the old Christian attitude to the Jews, this has not disintegrated. The phrases used by Arnold Toynbee designating the Jew and his culture as a "fossil of the Syriac civilization" making the Arab refugees "the new Jews" form but one striking instance of modern "*Salon Anti-semitismus*." Jews are economically active in many specific spheres; while in Jewish society the trend to megalopolization and intellectualization continues and even sharpens, this activity has established in the State of Israel a flourishing modern agriculture and a full range of modern social stratification. The number of Jews in the professions is constantly rising. With the present importance of science, sociology, and psychology for immediate military, industrial, and social needs the service of Jews to society in these fields has become of increasing importance, and their standing is becoming more assured and rewarding, socially and spiritually, both in regard to the society of the environment and in their own estimation.

The problems facing Jews have not disappeared. Many of the old dangers, opportunities, tasks, and ideals remain under a change of guise.

> Each and every chapter in the long history of our people and each and every real point of our historical reality embodies the mystery of old periods, past and future …. They are planted in the heart of every man, through them the place of Israel amongst the nations will be marked in the future (Y. Baer, *Yisrael ba-Amim* (1955), 117).

[Haim Hillel Ben-Sasson]

Into the Millennium

In the 35 years that have passed since Haim Hillel Ben-Sasson concluded his magisterial survey of medieval and modern Jewish history for the first edition of the *Encyclopaedia Judaica*, momentous events have occurred in the Jewish world. These, however, cannot be assessed as yet from a historical perspective; rather, they reveal trends and processes that are still unfolding.

The most dramatic event of these years was undoubtedly the mass exodus of Soviet Jewry from the former Soviet Union in the 1990s after the collapse of the Communist system. The million Jews who left arrived mostly in Israel, with significant numbers also settling in the United States and Germany. Contrary to the expectations of some, they have not changed the face of Israel but have rather become another immigrant group undergoing a steady process of acclimatization and assimilation, not unlike, for all the differences, the East European Jews who arrived on the shores of America in another era.

In Israel itself, the euphoria of the great victory in the Six-Day War of 1967 soon gave way to a national depression in the wake of the *Yom Kippur War of 1973 as the myth of Israel's invincibility was shattered along with confidence in its Old Guard leaders. The immediate consequence was the election upset of 1977, bringing Menahem *Begin and the *Likud to power. The leading motifs of the Begin years were debilitating inflation under the banner of free enterprise and the morass of the war in Lebanon. More significant, however, was the disintegration of the country's socialist ethos and the rapid transformation of Israel into a Western-style consumer society with its inevitable by-products. Ironically, this process had been initiated not by the trauma of the Yom Kippur War but by the Six-Day War, which had served to open new psychological vistas and divert the country's economic energies from the common effort to the private plane.

Politically the Yom Kippur War initiated an ongoing peace process whose end was not in sight after 10 years of negotiations and two intifadas. Though it had yielded peace treaties with Egypt and Jordan and the general shape of a settlement with the Palestinians seemed to be understood by everyone, the situation in the Middle East seemed no less precarious than before, with global terrorism and the Iranian nuclear threat now part of the mix.

Outside Israel, Jewish communities showed mixed and even, at first glance, contradictory trends: a general downward movement of population levels as a result of assimilation, low birth rates, and immigration to Israel (a decline from 10.1 to 7.8 million between 1970 and 2005) and an upsurge of Jewish life in these very same communities. One might think of steady erosion at the outer edges of these communities while at the core a (false?) sense of security prevailed. In the United States, committed Jews seemed increasingly secure in their Jewish identities, synagogue-centered communal life flourished, and Jewish academic studies revealed a vitality unknown 35 years ago. Individually, Jews continued to distinguish themselves with remarkable achievements in hospitable environments.

What do these trends signify?

Perhaps it may be said that two illusions characterize our perception of the Jewish world at the outset of the new millennium. One is that the ultimate political and social direction of the State of Israel will be determined ideologically. The other is that the upsurge and vitality of Jewish life in various Diaspora communities will serve as a brake against continuing assimilation and forestall the ultimate disappearance of these communities as living Jewish organisms.

The perception of Israel as divided into two opposing political camps – right and left – whose rival ideologies – zealous nationalism and peace-loving humanism – are locked in a struggle to determine the face of Israel is naive to say the least. Not only are historical and political forces at work which will make all debate seem academic but the ideologies themselves are marginal to the mainstream of Israeli life, which has settled into a comfortable materialist phase whose values are those associated with middle classes everywhere. In the modern West, this middle class determines both a country's social order and political options. It is dedicated to personal freedom and the pursuit of happiness and it eschews national symbols and as-

pirations, as Spengler has put it. It is therefore not farfetched to suggest that the future of Israel – politically, socially, economically – will be determined by its center, a vocal majority increasingly worshiping at the shrine of private life.

In the United States, assimilation and extremely high rates of intermarriage will no doubt continue. In effect, half the Jews in the United States – the unaffiliated half – are moving toward total alienation from their Jewish roots. For the others, excluding the Orthodox population, it cannot be guaranteed that the present-day attractions of Jewish community life will exert the same influence in the next generation, and the next. On the contrary, it may be anticipated that a very natural dropout rate will establish itself here too, further diminishing the Jewish population. It is questionable whether a Judaism that consumes only a small part of an individual's life can generate the force and energy needed to ensure its survival.

These are issues for the long term – the ultimate character of the State of Israel, the ultimate fate of Diaspora Jewry – but they are vital questions for a people whose history is measured in millennia. To lose such a history would be tragic, to perpetuate it will require a great national effort. This is the challenge faced by the Jewish people at the start of the 21st century.

[Fred Skolnik (2nd ed.)]

HIT, town on the Euphrates, approximately 90 mi. (144 km.) W. of Baghdad; site of the Mesopotamian city of Is. An old *Karaite community, dating back to the 10th century at least, existed in Hit. Persecution and ill-treatment by the authorities brought about a gradual reduction of its size and by the middle of the 19th century it numbered only 20 families. The community was headed by the *Mu'allim* ("teacher, sage") whose home also served as the religious school and house of prayer (after the decrepit synagogue that had existed in the town was abandoned in the second half of the 19th century). The community went to Israel shortly after the establishment of the State, settling in Beersheba.

[Abraham Haim]

HITAḤADUT (Heb. הִתְאַחֲדוּת; full name Mifleget ha-Avodah ha-Ẓiyyonit "Hitaḥadut"), a Socialist-Zionist party formed in 1920 by the union of the Palestine Workers' Party, *Ha-Po'el ha-Ẓa'ir, with a majority of the *Ẓe'irei Zion groups in the Diaspora. Ẓe'irei Zion groups had been formed in Russia at the beginning of the 20th century by young Zionists who espoused the views of Ha-Po'el ha-Ẓa'ir and intended to join that party upon their settlement in Ereẓ Israel. The program of Ẓe'irei Zion, announced at its second congress in Petrograd in 1917, postulated the necessity to establish a Jewish labor commonwealth in the Land of Israel and redirect the Jewish masses in the Diaspora to productive occupations. Ẓe'irei Zion groups were organized in other East European countries, as well as in Germany and Austria (in these last two, under the name Ha-Po'el ha-Ẓa'ir). Later they were also formed in the U.S., Argentina, and South Africa. At the World Conference of Ha-Po'el ha-Ẓa'ir and the Ẓe'irei Zion in Prague (1920), most of the Ẓe'irei Zion groups united with Ha-Po'el ha-Ẓa'ir to form a Zionist party originally called the World Union of the Ha-Po'el ha-Ẓa'ir and Ẓe'irei Zion. At the Third World Conference of the Hitaḥadut in Berlin in 1922, however, its name was changed to Mifleget ha-Avodah ha-Ẓiyyonit "Hitaḥadut" (United Zionist Labor Party, "Hitaḥadut"). A few of the Ẓe'irei Zion groups which espoused a more left-wing, class-oriented

ideology formed a separate league, which eventually merged with *Po'alei Zion.

Hitaḥadut, which was represented in the World Zionist Organization and its various bodies, devoted its energies primarily to fostering the *He-Ḥalutz (pioneering) movement in the Diaspora and stimulating immigration to Palestine. It functioned very effectively in both these spheres during the 1920s. It was also able to create an active pioneering movement in Soviet Russia, with a membership of thousands, despite the persecution of Zionism by the Soviet regime. In its Diaspora-oriented activities Hitaḥadut devoted its attention primarily to cultivating economically productive labor. The movement had representatives in the parliaments of several countries (Poland, Lithuania, Latvia, and Romania), in municipal councils, and in the governing bodies of Jewish communities. Unlike other Jewish socialist groups which supported Yiddish, Hitaḥadut championed the revival of Hebrew. It was one of the prime movers of the *Tarbut movement in Eastern Europe, and much of the teaching and administrative personnel of the Hebrew schools came from its ranks. Hitaḥadut also supported the founding of a special pioneering youth movement that crystallized in the late 1920s under the name *Gordonia. Hitaḥadut and Po'alei Zion usually appeared conjointly at Zionist Congresses, and when Ha-Po'el ha-Ẓa'ir and *Aḥdut ha-Avodah in Palestine merged to form the Mifleget Po'alei Ereẓ Yisrael (*Mapai, 1930), the former two groups also amalgamated in 1932 at their world conference in Danzig, and formed the Iḥud Olami.

[Aryeh Tartakower]

°**HITLER, ADOLF** (1889–1945), chief of the German National Socialist Party from 1920 and chancellor of the Reich from 1933. Hitler was the man who planned the extermination of the Jews, took the total decision, created the required organizations, and followed passionately its implementation.

Early Years

Hitler was born into the family of an Austrian customs official. His father had worked his way up to a responsible position from exceptionally poor beginnings as an illegitimate child. This latter fact has led to speculation that Hitler's grandfather might have been Jewish, but since there were no Jews in the town where Hitler's grandmother worked, this story, however often repeated, has no basis in fact. While the boy Hitler clearly did not get on well with his father, primarily because he neither applied himself to his schoolwork nor aspired to a substantial career as his father had, he very much loved his mother. He was devastated when she died of cancer in spite of the efforts of her Jewish doctor to whom Hitler always remained extremely grateful for the care he had provided.

The boy did not do particularly well in school, in part because he preferred to play rather than study and in part because he simply would not study hard. As a youngster he moved to Vienna, living with a friend who was studying seriously while Hitler was denied entrance to the arts academy, refused to admit to this failure to his family, and lived on the pension from his deceased father and funds provided by family members. As his money ran out, he moved into cheaper housing and in part supported himself by painting local buildings and scenes for sale to tourists. During the years in Vienna he evidently began to absorb some of the racist and antisemitic ideas that would dominate his subsequent elaboration of and dedication to them. Perhaps equally important, he observed the electoral politics of the time. In doing so, he simultaneously developed an understanding of how to appeal to masses of people, a vehement aversion to democratic procedures, and a hatred of Slavic peoples. These people were represented in the Vienna of his time primarily by Czech families from Bohemia who had moved to the city for jobs.

In May 1913 Hitler left Vienna for Munich to escape service in the Austrian army; his obsessive hatred of the Hapsburg dynasty clearly goes back to an early date. Obliged to return, he was found physically incapable of military service. This did not keep him from volunteering for the Bavarian part of the German army in August 1914 and being accepted into it right after the outbreak of World War I. He served, primarily as a messenger, on the Western Front. Although he was decorated for bravery, he was promoted only to the rank of private first class. He experienced the end of the war in a hospital at Pasewalk because of a temporary blindness evidently caused by hysteria rather than gas as often claimed. He was cured of his blindness by hypnosis.

Emerging into a defeated Germany, Hitler was shattered by this event. It would affect his outlook on the world – and his conduct of World War II – thereafter. Convinced that the German army had not been defeated at the front, he would join those in the German government, military, and society at large who attributed the nation's defeat to a legendary "stab-in-the-back" by domestic enemies among whom Hitler, like many others, saw the Jews as a central element. Remaining for a time in the postwar German army – his first real home – he was assigned to speak to soldiers confused by the situation and then to observing political movements in the Munich area for the local military command. It was in this process of speaking and observing that Hitler increasingly formulated and systematized his view of the world. It was as an observer for the army that he came into contact in September 1919 with the small party that he would come to control completely in July 1921, and that took the name of National Socialist German Workers Party.

Race and Space

Hitler's view of the world, embodied in the book *Mein Kampf*, which he dictated in two installments after he was jailed briefly for leading an attempted coup in Munich in November 1923,

can be summarized as revolving around the concepts of race and space. Race is the key factor for understanding world history in the past, present, and future. In this view, history is the record of the struggle of different races for space on which to feed themselves, provide for their children, and conquer additional space as the latter needed it. Racial purity would strengthen while racial mixture would weaken each racial group in this struggle. The so-called Aryan race, to which the Germans allegedly belonged, was the most superior, and in the descending order of other races, the Jews were considered the most inferior. The latter were, however, especially dangerous because of their inclination both to infiltrate other races and societies and also to dominate them. They were therefore in his opinion the greatest threat to Germany's ability to reach its destiny. As Hitler explained to a cheering beer hall audience in April 1920, they had to be exterminated "root and branch." A racially aware and purified Germany with only one party led by the man who understood these ideas – namely himself – was guaranteed to win a series of wars, having come so close against a host of enemies the last time. In these wars victory in each would pave the way for victory in the succeeding one until the Germans dominated – and inhabited – the globe, a position to which their racial superiority entitled them. The inferiors would have to disappear because their racial nature could not be changed: the space on which they lived, not the inhabitants, would be Germanized.

Since the bulk of European territory lay in the East, that would be the first direction of German expansion. Hitler believed that this would be easy. In his racial concept of history, the Bolshevik revolution was a stroke of good fortune for Germany. He believed that it had led to the replacement of what had been the Germanic element that had held together the racially inferior Slavic peoples in the past, by Jews and other completely incompetent individuals. A Germany that had defeated Russia in the preceding war – while much of its army was fighting on the Western Front – could therefore count on an even easier victory in the next war against Russia.

In the first of the big wars Hitler anticipated, against France, Italy would be Germany's logical ally because the expansionist ambitions of that country under the leadership of Benito *Mussolini, whom Hitler greatly admired, would necessarily clash with French interests in Southeast Europe and the Mediterranean. Britain might also be a temporary ally, but Hitler would abandon this concept in 1934 at the latest. When the Nazi Party did very poorly in the German May 1928 parliamentary election, he attributed this to the unpopularity of his advocacy of an alliance with Italy. He dictated, but never published, another book in which he insisted on the correctness of his foreign policy views in very much greater detail than in *Mein Kampf* and also explicitly called for war with the United States. The new immigration legislation enacted in the United States in 1924, which was designed to restrict immigration and favored people from northern and western Europe over those from eastern and southern Europe, was seen by Hitler as making that country stronger over time – as it drew the racially best out of Europe – and hence it had to be confronted by Germany sooner rather than later.

The Prelude to the "Final Solution"

In the late 1920s Hitler allied his party with the other parties opposed to the Weimar Republic and attained an increasing audience and following. The way in which the world depression affected Germany helped to disillusion Germans about their government, but certainly did not oblige them to turn to the advocate of new wars after their experience of the last one. By 1930 Hitler's party received the largest share of the country's votes, and the coterie around President Paul von Hindenburg persuaded the latter to appoint him as chancellor on January 30, 1933.

In a few months Hitler succeeded in ending all constitutional freedoms and all other political parties in the country. The one-party dictatorship immediately began a vast rearmament program and other public works. In June 1934 he had his predecessor as chancellor along with numerous others murdered as a sign of his total control. In the following month, he had the chancellor of Austria murdered also, when that country did not join Germany as Hitler preferred. He accomplished this goal by an invasion in March 1938. The most violent persecution of Jews in Austria was initiated immediately after the country's annexation with the enthusiastic participation of substantial elements of the non-Jewish population.

Racial policies that included persecution of Jews and compulsory sterilization of those Germans believed likely to have defective children on the one hand and policies to promote marriage and large numbers of children by the "right" Germans on the other hand had been initiated in Germany in 1933. These measures were intensified in the following years. Jews were removed from government positions. Increasingly they were barred from such public facilities as theaters and swimming pools. Numerous restaurants and whole communities adopted the practice of putting up placards that Jews were not to enter. A steady series of new legal restrictions were imposed on the country's Jewish population, which had been less than one percent at the beginning of the Nazi dictatorship. Some Jews emigrated, but this was a slow and difficult process. In the years of the great worldwide depression countries were reluctant to admit immigrants whose assets had largely been stolen from them. Furthermore, since Jews had lived in Germany for centuries under restrictions of which the last had only been lifted in 1919, most did not realize that the restrictions now placed on them were steps toward a new aim rather than a return to a prior situation that Jews had not liked but under which they had long lived in the country.

In 1935, the German parliament was summoned to a special meeting in the city of Nuremberg to enact a group of laws that essentially deprived German Jews of all citizenship rights and also criminalized any sexual contact between Jews and non-Jews. Furthermore, those defined by the Nazis as "*Mischlinge*," that is, descendants of mixed Jewish-non-Jew-

ish couples, were subjected to special restrictions that became ever more stringent over the years of Nazi rule.

In 1938 Hitler intended to start his first war, that is the war against Czechoslovakia, but drew back at the last moment in the face of domestic doubts and Mussolini's urging. Regretting the Munich agreement that added substantial lands to Germany at the expense of Czechoslovakia but without the war that he would have preferred, Hitler determined to go to war against France and England in 1939. Since victorious wars would bring more Jews under German control, he authorized an escalation of persecution in the hope of driving as many Jews as possible out of the country before war started. On the same day that he called on the German media to prepare the public for war, he had the party unleash the pogrom of November 1938. Almost all synagogues in Germany were set on fire, some 30,000 Jewish men were taken to concentration camps, numerous stores and apartments of Jews were vandalized, and a substantial number of Jews were killed. In the following weeks, a dramatic new set of laws was decreed. Jews were heavily fined, barred from the public school system, and increasingly deprived of the opportunity to earn a living. The process of taking over Jewish businesses and homes, a process referred to as "aryanization" and already under way, was radically accelerated.

When Hitler threatened the killing of Europe's Jews if there were a new war in his speech to the German parliament on January 30, 1939, he had already decided that no one would deprive him of war that year. Since the Poles were unwilling to subordinate themselves to Germany while that country fought France and England, he ordered an attack on that country on September 1, 1939, after temporarily aligning Germany with the Soviet Union. With Britain and France declaring war two days later, Germany was in a new world war. With war now actually under way, Hitler authorized the first of the German systematic killing programs, that of the handicapped. This began in 1939–40 and would provide a way to experiment with and initiate the procedures and train some of the personnel for the subsequent mass killing of Jews.

The Extermination of European Jewry

The partition of Poland with the Soviet Union brought under German control a majority of Poland's more than three million Jews. While thousands of Jews were murdered in the initial weeks of the war, literally hundreds of thousands were uprooted from the portions of Poland that were annexed directly into Germany. Soon thereafter, in the so-called Government General, the rest of German-controlled Poland, the Jewish inhabitants who primarily lived in the cities were driven into ghettoes. In the ghettoes, conditions were deliberately made so terrible by the Germans that mortality from hunger and disease rapidly escalated. In Poland and subsequently in other parts of German-occupied Europe, large numbers of Jews were forced to work for the Germans, frequently under conditions designed to kill them in a very short time. Hitler's main role in these events was to point the direction of German policy. He left it to his associates and to the local German authorities to develop and argue over the details. Similarly he left it to German industrialists to make their profits out of exploiting slave laborers until these could no longer work when they were murdered and replaced by other slave laborers.

In the spring of 1940 the Germans conquered Denmark, Norway, the Low Countries, and France. In these newly occupied areas, the Germans immediately began the persecution of Jews, including those who had sought refuge there from Germany in prior years. The Germans also instituted a vast program of stealing the property of the Jewish population. Hitler failed to subdue England in the summer of 1940 and decided to invade the Soviet Union in the following year. It was in the context of preparations for that invasion that, according to the latest evidence, Hitler in February or March of 1941 directed that the Jews in the territory of the Soviet Union that he expected to defeat in a short campaign were to be killed. There are those scholars who argue that the decision to kill the Jews in the newly occupied areas was not arrived at until after the initial German victories. However, both the orientation on policy provided to Germany's Romanian ally before the invasion and the assignment of special units, the *Einsatzgruppen*, and large numbers of police battalions to the killing of Jews – on which they regularly reported from widely separated points in the summer of 1941 – support the views of those scholars who believe that a decision had been reached and communicated to the German police well before June 22, 1941, the date of the invasion.

The early stages of the campaign in the East certainly demonstrated that the mass killing of Jews by the special units and police battalions assigned to this task received the full support and frequent assistance from the German military rather than objections and resistance as had occasionally occurred in the initial stages of the occupation of Poland in 1939. There were also local pogroms very much encouraged by the Germans; and, especially in newly occupied Lithuania and parts of the Ukraine, many local inhabitants participated in the killing of their Jewish neighbors. The early great victories of the German military, furthermore, seemed to show that the campaign was going as well and as rapidly as Hitler and his military advisers had expected. It was in this context that in the second half of July 1941 Hitler decided that the killing of Jews could and should be extended to all areas of Europe under German control. When the campaign appeared to be resuming its rapid advance in October-November 1941, Hitler thought that the time had come to extend the killing program to the Middle East and to the rest of the world as he personally explained to the Grand Mufti of Jerusalem in late November. The military campaign against the Soviet Union did not proceed as Hitler anticipated, but the decision to kill all Jews that the Germans could reach stood. Although the Germans were kept out of the Middle East by the Red Army's defense of the Caucasus and the British army's defense of Egypt, the surrender of Italy in September 1943 opened to the Germans not only the Italian-controlled portions of Europe but also the

Dodecanese Islands, including Rhodes – areas that the Germans considered as being a part of Asia. The Jews from there were also murdered.

While Hitler was occasionally consulted about details of what has come to be called the Holocaust, he entrusted his faithful police chief Heinrich *Himmler with the implementation. There was considerable concern about the psychological burden of mass murder on the killers who spent their "working" time shooting Jews and were in some instances coming apart psychologically in spite – or because – of large rations of alcohol. It was for this reason that the creation of a group of special killing centers was initiated, beginning in the fall of 1941. Many of these were established in occupied Poland, though the most notorious, Auschwitz, was in a part of Poland annexed into Germany and destined to be a model German city in the regime's planning for the postwar world. In order to draw all German government agencies into the increasingly extensive killing program, a special conference, known by the location where it was held as the *Wannsee Conference, took place on January 20, 1942; but there is no evidence to show that Hitler was personally concerned.

In his public speeches during the war Hitler repeatedly referred back to his threat of January 30, 1939, misdating it to September 1, 1939, along with the assertion that those who had laughed at his prophecy then were no longer laughing. The deliberate misdating can surely be seen as an indication of the way that the war and the Holocaust were parts of the same process in his thinking. The public references to the ongoing murders can also be seen as a way of alerting the German public to what was happening with the implication that they had burned all their bridges behind them and should harness their efforts to the war lest defeat bring a similar fate to them.

The German dictator could rely on his subordinates to implement the basic policy, and this would remain true into the last days of the war. If a combination of true belief in the racial doctrines of the regimes combined with hopes for loot, decorations, promotions, and careers in a victorious Germany inspired the killers in the early stages of the Holocaust, relative safety from alternative and vastly more dangerous employment at the fighting front served to inspire them in the latter stages of the war. Hitler himself devoted most of his time during the war to the details of running military operations, the development and production of weapons, and the appointment and replacement of generals and admirals. Whatever the other pressures, needs, and eventually defeats of the Germans, the high-priority program of killing Jews went forward as Hitler wanted. Attempts by internal opponents to kill Hitler, culminating in the attempt on his life on July 20, 1944, failed, and the killing program continued as all German authorities recognized its centrality to their assignments.

As the Germans retreated, major efforts were made to conceal the evidence of the crimes that had been committed. Installations and records were destroyed and mass burials were exhumed and replaced by huge fires. There were also death marches as those Jewish and other workers who were considered possible slave laborers for the German war effort were driven into ever more crowded and miserable camps inside the shrinking perimeter of the Third Reich. Large numbers were killed in this process, at times because the weakened slaves were unable to keep up, at times simply to keep them from being liberated. When Red Army forces fought their way into Berlin, Hitler married his mistress of many years. In his last testament before committing suicide on April 30, 1945, he blamed the war and all disasters on the Jews and called on the German people to continue his racial policies in the future.

Arguments have at times been advanced that the absence of a written order for the systematic killing of Jews by Hitler shows that he did not personally order this to be done. There is, however, ample evidence of his personal role. The leader who insisted that he personally be consulted on the question of whether a particular German officer married to a woman one of whose grandparents was Jewish could be allowed to continue to command a company at the front was not uninvolved in a multi-year program to kill millions of Jews. On at least two occasions, in July and November 1941, he personally explained the killing program to foreign leaders. Others carried out the program and quarreled endlessly over details and jurisdiction, but there cannot be any doubt that they were acting to implement and simultaneously to profit from a policy established at the highest level.

Writings

Hitler wrote two books; both are available in English: *Mein Kampf*, translated by R. Manheim (1943); and *Hitler's Second Book: The Unpublished Sequel to Mein Kampf*, translated by Krista Smith, edited by Gerhard L. Weinberg (2003). For Hitler's speeches in English, the best source is *Hitler: Speeches and Proclamations 1932–1945; Commentary and Notes by Max Domarus*, published in four volumes by Bolchazy-Carducci (1990–2003). There are also the two volumes edited by N.H. Baynes, *The Speeches of Adolf Hitler, April 1922 – August 1939* (1942). Hitler's military directives may be found in H.R. Trevor-Roper (ed.), *Blitzkrieg to Defeat: Hitler's War Directives, 1939–1945* (1965). Stenographic reports on his military conferences are in *Hitler and His Generals: Military Conferences 1942–1945*, edited by H. Heiber and D.M. Glantz, introduction by G.L. Weinberg (2002). There are several editions in various languages of Hitler's wartime conversations but none without serious problems. Until a definitive edition appears, the currently available English language ones are both edited by H.R. Trevor-Roper, *Hitler's Table Talk 1941–1944* (1953), and *The Testament of Adolf Hitler: The Hitler-Bormann Documents* (1961).

[Gerhard L. Weinberg (2nd ed.)]

HITMAN, UZI (1952–2004), Israeli pop singer-songwriter. Like many of his contemporaries, Hitman started his musical career as a member of an army entertainment troupe. On his release from the IDF in 1973, he joined forces with singer Lior Yeini in a program of Hebrew versions of songs made famous by Greek vocalist Mikis Theodorakis. This was followed by a successful duet with Noga Shalem, singing "Little Bird." In 1974 Hitman achieved some measure of national prominence – though as a backup artist – when he supported star singer Ilanit in that year's National Song Contest, placing second. It was around this time that Hitman began to become known as a songwriter, writing compositions for such top performers of the time as Avi Toledano, Yizhar Cohen, and Dudu Zakai. The song he wrote for Zakai, "Why Don't the Grownups Learn from the Little Ones," won third place at the Children's Song Contest.

His first big break came in 1976, when he sang *Adon Olam* together with Oded Ben-Hur at that year's Ḥasidic Song Contest. The song was a smash hit, both in Israel and abroad, and became something of an anthem for Hitman. Later that year he started a fruitful long-term collaboration with singer Shimi Tavori. In 1978, Hitman produced another hit, *Ratziti she-Teda* (*Elohim Sheli*) ("I Wanted You To Know (My God)"), which was inspired by the historic visit to Israel of Egyptian President Anwar Sadat and was an entry in that year's Children's Song Festival. By now, Hitman had made a name for himself as a major contributor of children's songs and, in the 1980s, he became a household name as presenter of the popular children's television program *Pretty Butterfly*.

In addition to his popularity in the junior market sector, in the 1980s Hitman varied his output, writing numerous songs for so-called Mediterranean singers, such as Zohar *Argov, Haim Moshe, and Margalit Tzanani. In 1985 Hitman's career took another turn when he teamed up with veteran singer Yigal Bashan and American-born singer-fiddler Jonathon Miller to perform *Kemo Ẓo'ani* ("Like A Gypsy") at the 1985 Pre-Eurovision Song Contest. The song became a hit and the threesome embarked on a series of successful national tours and television appearances. In 1989 and 1993 Hitman released two unsuccessful albums, although several well-received singles came out of them. Throughout the 1990s Hitman released several highly popular videotapes of children's songs, and wrote more hits for other artists, particularly *Kan* ("Here") for husband-wife duo Orna and Moshe Datz, which placed third in the 1991 Eurovision Song Contest.

In 2001 Hitman received a Life Achievement Award from ACUM (the organization responsible for protecting Israeli artists' rights) and in 2004 began work on a new album. Sadly, later that year Hitman died of a heart attack at the age of only 52. The following year, a double album of Hitman's compositions featuring such top artists as Ariel Zilber and Uri Harpaz, entitled *Akhshav ha-Tor le-Ahavah* ("Now's the Time for Love"), was completed and released.

[Barry Davis (2nd ed.)]

HITSCHMANN, EDWARD (1871–1957), Austrian psychiatrist. Born in Vienna, he became a member of the Vienna Psychoanalytic Society in 1905, the year he was introduced to *Freud. In the early days Hitschmann was less convinced than some others of the incestuous roots of neurosis. While he wrote on many clinical problems and published his *Freuds Neurosenlehre* (1911; *Freud's Theories of the Neuroses*, 1913), he became interested in the psychoanalytic study of outstanding literary personalities. His first works in this field were on Schopenhauer whose saintliness he felt was a reaction against his sensuality, and Swedenborg whom he saw as suffering from religious paranoia as a result of the fulfillment of an infantile wish to surpass his father and of homosexuality. Hitschmann, like Freud, admired Goethe and in 1913 he wrote "Goethe als Vatersymbol." Hitschmenn felt that creation was evolved in two stages. The first was the moment of inspiration acknowledging something which had been in preparation a long time and the second phase was the elaboration. Creative power he felt was related to giving up daydreaming because of guilt feelings. His other works include psychoanalytic studies of Brahms, Schubert, Werfel, William James, Samuel Johnson, and James Boswell. Hitschmann founded the Vienna Psychoanalytic Clinic in 1922 and was its director until 1938. He left before the Nazis came to power, and after two years in London immigrated to Boston. In 1947 he wrote "New Varieties of Religious Experience." He saw belief as related to the overrated father of childhood. His *Great Men* appeared in 1956.

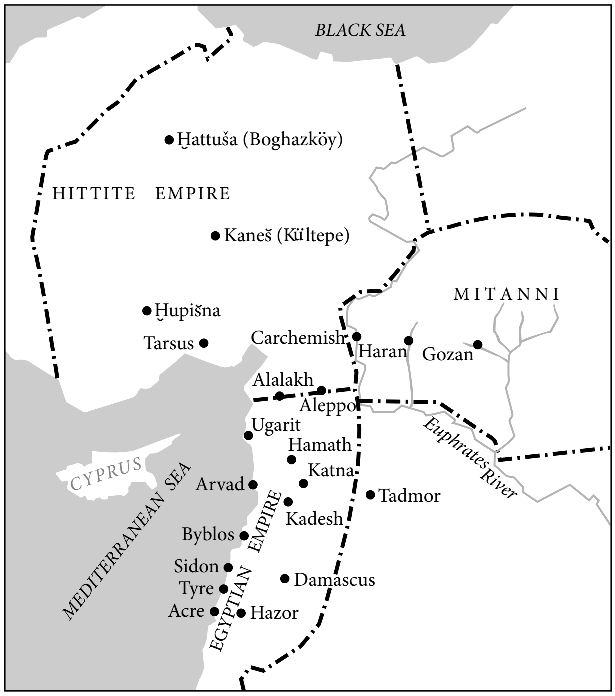
[Louis Miller]



HITTITES, an ancient people of Anatolia. The name Hittites is taken from the biblical Hebrew *Ḥitti* (gentilic), plural *Ḥittim*, which stems from the form *Ḥatti* found as a geographic term in cuneiform texts, the vowel change resulting from a Hebrew phonetic law. The form *Ḥatti* is used in Akkadian. Since this name always occurs in combination with a noun, such as "country of *Ḥatti*," "king of *Ḥatti*," etc., it is uncertain whether the final-*i* is part of the stem or rather the Akkadian genitive ending that would make the nominative *Ḥattu*. The occurrence of a term *Ḥattum* in Old Assyrian texts (with the-*m* suffix of the Old Period) had been cited in support of the second alternative. The problem is, however, complicated by the fact that the same sources mention a place called *Ḥattuš*, whose relation to *Ḥattum* is not clear, and that in later periods the Hittites themselves used the form *Ḥatti* for both the country and its capital when they wrote Akkadian, but *Ḥattuša*, also in both usages, when writing Hittite, while an adjective, *Ḥattili*, was derived from the short form. In writing these names the Hittites often used the word sign for "silver," writing SILVER-*ti*

for Akkadian *Ḫatti*, SILVER-*ša* for Hittite *Ḫattuša*. It is worth noting that one of the Ugaritic words for "silver" Ugaritic *ḫtt* is an Anatolian loanword (Tropper, 111, 122). Conventionally the form *Ḫatti* is used by moderns.

Ḫatti was originally the name of the region comprising the large bend of the river Halys (Kizil Irmak) and of the city whose ruins are at the village of Boghazköy (c. 100 miles directly east of Ankara). The Hittites who ruled that country during most of the second millennium B.C.E. were invaders speaking an Indo-European language; when they arrived they found a population that spoke a different language, of agglutinative type, and this non-Indo-European tongue they called *Ḫattili* – "belonging to *Ḫatti*." Although both the name Hittite and the term *Ḫattili* are derived from the same geographic name, they refer to entirely different entities. To avoid confusion scholars call the old indigenous language "Hattic" or "Proto-Hattic," the people "Hattians" or "Proto-Hattians," while reserving the term "Hittite" for the Indo-European-speaking newcomers, who took over much of the civilization of the indigenous population in material culture and religion. The reason that Hattic texts have survived at all is that the Hittites still used them in the cult. Thus, there is cultural continuity, the Hattian element being an integral part of the civilization of the Hittites. The Indo-European language called Hittite by moderns was called Nesian by the Hittites themselves, the name being derived from that of Neša, one of their early capitals (see below).

History

It is not known when or from where the Indo-European-speaking Hittites came. The problem becomes even more complex if the other Indo-European languages of Anatolia are considered. The documents of the Assyrian merchant colonies (see *Asia Minor) give only partial answers to these questions. Among the proper names of local persons there are some that contain Indo-European Hittite elements; accordingly, some individuals, at least, belonging to the newcomers were present in Kaneš in the 19th century B.C.E. The Hittites derived their own kingdom from the kings of Kuššar, a town, according to Old Assyrian documents recently made available, situated in the mountainous region southeast of Kaneš. An important source for the early period is the inscription of a certain Anitta, king of Kuššar, found in the Hittite capital and written in Hittite (COS I, 183–85). In it the king relates that his father, Pithana, conquered the city of Neša but spared its people. When he subsequently speaks of his own deeds Anitta mentions Neša as his own city to which he brings captives and booty and where he builds temples. Thus, despite the title King of Kuššar, Neša seems to have been the royal residence. Both Pitḫana and Anitta are attested to in the Assyrian merchant documents found in the later settlement at Kaneš (see *Asia Minor) where they apparently ruled. According to some scholars Neša and Kaneš are the same city; this theory, if correct, would greatly contribute to an understanding of the historical situation.

The Hittite empire of the second millennium B.C.E. (c. 1800–1200). Based on the Westminster Historical Atlas to the Bible, *Philadelphia, Pa., 1945.*

Anitta tells about a number of conquests, the most important being that of Ḫattuša, which he burned and whose site he cursed. Among the remains of Ḫattuša at Boghazköy, documents of the type representative of the later merchant colony were found in houses which had been destroyed by fire, perhaps indicative of the destruction by Anitta. Within the period of the later colony, Pitḫana and Anitta fall relatively late, perhaps in the middle of the 18th century B.C.E., or even later. Still, knowledge is lacking for the period between Anitta and the beginning of the Old Hittite Kingdom, whose founder was a certain Labarna, alternatively, Tabarna, king of Kuššar, indicating that the kingdom was still connected with that town. That Labarna founded a new dynasty seems likely because of the later tradition which carries historical accounts back to him, but no further; his name was taken by all later kings, so that it almost became a title (comparable to Roman "Caesar"). Labarna's conquests, learned of only from a later source, included Tuwanuwa (near Nighde) and Ḫupišna (Ereghli). Contemporary sources are for the first time available on his successor, who called himself Labarna (II) and King of Kuššar, but who was better known to posterity by his second name, Ḫattušili. This name is the gentilic derived from Ḫattuša, and, indeed, in his own inscriptions Ḫattuša figures as the capital. He moved there, apparently, despite the old curse. Labarna and his successors definitely were Indo-European-speaking Hittites; for Pitḫana and Anitta this is uncertain but not impossible. If one could reconstruct the course of events so that the Indo-European-speaking Hittites first held the eastern town of Kuššar and from there moved to Neša (= Kaneš?), then to

the region of Tyana (Nighde), and finally to Ḥatti, it would indicate that the last part of their movement was from East to West, which would favor the eastern route also for their entry into Anatolia. Hattušili I fought extensive wars, partly in Anatolia and partly in northern Syria. He boasts of having been the first to cross the Euphrates and of having destroyed Alalakh (Tell Atchana). As his successor Ḥattušili appointed an adopted son, Muršili (I), who continued the move toward the southeast by conquering the kingdom of Aleppo and even raiding Babylon, which marks the fall of the First Dynasty of Babylon, dated (in the "middle" chronology) 1595 B.C.E. This brings Labarna to about 1660.

Muršili was assassinated, and a period of dynastic struggle followed until King Telipinu (c. 1550) introduced strict rules for hereditary succession (COS I: 194–98). After him only the names of some rulers are known. About 1450 a new dynasty came to the throne, founding the so-called New Kingdom. After modest beginnings and serious setbacks, this kingdom rose to empire under King Šuppiluliuma (I) (c. 1370–45). Being a younger son, he usurped the throne, but his military and diplomatic success atoned for the usurpation. Having reconquered the lost territories in Anatolia, Šuppiluliuma moved against the kingdom of Mitanni in northern Mesopotamia, one of the great powers of the time. After an unsuccessful first attempt, he defeated Mitanni and conquered most of its Syrian territories as far south as Kadesh on the Orontes. At a later date he took advantage of dynastic struggles in Mitanni by helping one of the contenders and installing him as his vassal. In Syria the Hittites also threatened the Egyptian possessions; Hittite sources here supplement the information contained in the *el-Amarna letters. Thus a treaty concluded by Šuppiluliuma with Aziru, king of Amurru (COS II, 93–95), shows that the latter actually switched his allegiance from Egypt to Ḥatti despite the letters he wrote to the Pharaoh. Most characteristic of the Hittites' prestige is the request of the widow of Tutankhamen, who wrote to Šuppiluliuma asking for a Hittite prince whom she would marry and make king of Egypt. The plan failed because her opponents killed the Hittite prince when he arrived, and his father had to send an army to avenge him.

Šuppiluliuma's successors were, on the whole, able to maintain the empire. Muršili II (c. 1345–20) incorporated into the empire as vassals the Arzawa countries of southwestern Anatolia. Muwatalli fought the famous battle of Kadesh (1300 B.C.E.) against Ramses II of Egypt. Claimed as victory by both sides, the battle left the status of Hittite and Egyptian possession in Syria unchanged. Against the danger stemming from Assyria's rise to power, Ḥattušili III concluded a peace treaty with Ramses (1284 B.C.E.) and later (1271) gave him his daughter as wife. Friendly relations between the two powers continued from that time. Tudḫaliya IV (c. 1250) still held Syria, including Amurru; most of his military activity was in the west. During his reign one foreign power, Aḫḫiyawa, probably the Akhean kingdom of Mycenae and mentioned already by earlier kings, seemed to be aggressive in western Anatolia. Under Tudḫaliya's son, Arnuwanda, the situation in the west apparently further deteriorated. The last king, Šuppiluliuma II, tells of a naval victory over ships of Cyprus, but shortly thereafter the Hittite empire is destroyed. The end is marked by burnt levels in all sites and by the disappearance of written sources. However, it is not known how or by whom the destruction was brought about, or what role inner weakness may have played. The only information comes from the Egyptian records of Ramses III, which mention, in his eighth year (c. 1190), the attack of so-called Peoples of the Sea who are said to have overrun all the countries "from Ḥatti on."

The downfall is followed by a dark age at the end of which the map of Anatolia had been redrawn. Small states known as Late Hittite or Neo-Hittite, because of the inscriptions written in the so-called Hittite hieroglyphs found in the areas they occupied, extended far into Syria, Hamath on the Orontes being the southernmost. In contrast to the small states of Anatolia, some – but not all – of those in Syria were taken over by Arameans: Till Barsip on the Euphrates became Aramean Bit Adini about 950 B.C.E.; shortly after, the Aramean Gabbar founded a dynasty at Sam'al (Zinjirli), similarly the region around Arpad became the Aramean Bit Agusi about 890, while Hamath fell to the Arameans as late as about 820 B.C.E. In contrast, Carchemish on the Euphrates was ruled by "Late Hittites" (Luwians according to their language) until it became an Assyrian province in 717. The important point is that the Assyrians, who continually fought these small states until Sargon II finally incorporated them into his empire as provinces, continued to call the whole region Ḥatti, regardless of whether the people were Luwians or Arameans. Even more than a century after the last "Hittite" state had disappeared, the Babylonian chronicle introduces Nebuchadnezzar's first war against Jerusalem (598 B.C.E.) with the words "he went to Ḥatti." The name Ḥatti was now used in a vague sense for the entire Mediterranean littoral.

Hittites in the Bible

The Anatolian Hittites of the second pre-Christian millennium seem to have left no traces in the Hebrew Bible. Those books of the Bible that mention Hittites in connection with events of the monarchy clearly refer to the "late Hittites" of that same period: "Uriah the Hittite" under David (II Sam. 11:3; I Chron. 11:41); Solomon's Hittite wives (I Kings 11:1) and the horses sent by him to "all the kings of the Hittites and the kings of the Arameans" (I Kings 10:29; II Chron. 1:17; cf. also II Kings 7:6). In contrast to these passages are those that mention Hittites as part of the pre-Israelite population of Palestine (Gen. 15:20; 23; 26:34, et al., Ex. 3:8, et al.; Deut. 7:1; Josh. 3:10; 9:1; et al.; Judg. 3:5; I Kings 9:20 = II Chron. 8:7; Ezra 9:1; Neh. 9:8), especially of its mountainous part (Num. 13:29; Josh. 11:3). The Hittite empire of the second millennium never included Palestine. To explain these passages some scholars have adduced the so-called Khirbet Kerak ware, a kind of pottery similar to wares found in Anatolia and further east. If this pottery

really attests Anatolians in Palestine, they would be Hattians at best, and the time lapse from the Early Bronze Age to the conquest would be more than a millennium, a very long time for a name to be remembered. Others have adduced a Hittite source according to which, some time before Šuppiluliuma I, some Hittites migrated from Anatolia "into Egypt." If this means Egypt proper it has no bearing on the question (despite the convenient parallel it furnishes to the Children of Israel). Only if it is assumed that "Egypt" refers to Egyptian-held territory which happened to be Palestine can the phrase serve as an explanation for the mention of those early Hittites. Neither of these theories is convincing. It is rather that the writers of the Bible used the designations "Hittite" and "Canaanite," mostly pejoratively, for the aboriginal inhabitants of the country. Esau's Hittite wives (Gen. 26:34) are called Canaanites in Gen. 27:46. "The "Hittites" of David's time, Uriah (II Sam. 11:3, 17, 21) and Ahimelech (I Sam. 26:6), may have traced their descent to old pre-Israelite families. By the eighth century, *māt Ḥatti*, "Hittite land" in Neo-Assyrian sources, had acquired the sense of everything west of the Euphrates up to the Mediterranean. The phrase *ereẓ ha-ḥittim*, "the land of the Hittites" (Josh. 1:4) is a Hebrew reflex of this usage and is absent from the Septuagint to this verse.

[Hans G. Guterbock / S. David Sperling (2nd ed.)]

Hittite Hieroglyphic Writing

What used to be called "Hieroglyphic Hittite" is now more accurately referred to as "Anatolian Hieroglyphic" (Hawkins, Melchert). The preserved hieroglyphic texts are actually written in Luwian, like Hittite, an Indo-European language. Although closely related to the Hittite language, Luwian is distinct. The term "hieroglyphic" used for Hittite writing was borrowed from the Egyptian terminology, and it simply implies that the Hittite writing, like the Egyptian, is pictographic. In no way does it imply that the Hittite hieroglyphic writing was borrowed from the Egyptian hieroglyphic or that it was in any way related to it.

The Hittite writing was in use from about 1500 to 700 B.C.E. in a large area extending from central Anatolia to northern Syria. Two main periods are distinguished: the earlier from 1500–1200 B.C.E., and the later from 1200 to 700 B.C.E. The language of the "Hittite hieroglyphic" inscriptions is related to the so-called "cuneiform Hittite" (or "Nesian"), so named because it is preserved in the cuneiform writing borrowed from Mesopotamia. Both of these languages and writings were used at the same time in the Hittite Empire, but while the use of cuneiform Hittite was limited to a small area around Boghazköy, the capital of the empire, and died out at the time of the empire's collapse around 1200 B.C.E., "hieroglyphic Hittite" (i.e., Luwian) was used throughout the empire, and remained in use up to about 700 B.C.E. The deciphering of Hittite hieroglyphic writing was achieved only in the 1930s through the combined efforts of P. Meriggi, I.J. Gelb, E.O. Forrer, H.T. Bossert, and B. Hrozný. In the years after the Second World War, a great advancement in the deciphering of Hittite writing and language resulted from the discovery of bilingual Hittite and Phoenician inscriptions at Karatepe in Cilicia.

Two formal types of writing existed. The first was a monumental type with signs faithfully imitating the forms of pictures. The second, a cursive type, developed from the monumental type, with forms of signs so divergent from the original pictures that it is often difficult – if not impossible – to recognize their original pictographic form.

Hittite writing, like such other ancient Oriental systems as the Mesopotamian, Egyptian, and Chinese, represents word-syllabic type of writing. It consists of three classes of signs: logograms or word signs; syllabic signs, developed from the logograms by the rebus principle; and auxiliary marks and signs, such as punctuation marks and signs for determinatives, classifiers, or semantic indicators. In the use of logograms and auxiliary marks and signs, the Hittite system is identical or very similar to other word-syllabic systems. The normal Hittite syllabary consists of about 60 signs of the type *ta*, *ti*, *te*, *tu*, each representing a syllable beginning with a consonant and ending in a vowel. The writing does not indicate any distinction between voiced, voiceless, and aspirated consonants.

Nowhere but in the Aegean area in writings such as Linear B and Cypriote is there a syllabary identical to that of the Hittites. Accordingly, Hittite hieroglyphic writing can be assigned, together with Cretan writing and its derivatives, to the Aegean group of writings.

°HITZIG, FERDINAND (1807–1875), German Protestant theologian and Bible critic. Hitzig was a student of W. *Gesenius in Halle and of G. *Ewald in Göttingen. Hitzig directed much energy against confessional orthodoxy, the religious reaction to critical study manifest in the works of *Hengstenberg. He taught at the universities of Heidelberg (1829–32; 1861–75), and Zurich (1833–61). In his day he was considered one of the leading modern Bible exegetes, noted for ingenious, often bold, textual and exegetical hypotheses. He was among the earliest modern critics who dated the composition of some of the psalms to the Hasmonean period. He enunciated

his critical principles at the beginning of his career in a work titled *Begriff der Kritik am Alten Testament praktisch erörtert* (1831). In the series *Kurzgefasstes exegetisches Handbuch zum Alten Testament* he published his commentaries on the Prophets and Hagiographa: Isaiah (1833), Jeremiah (1841, 1866^2), Ezekiel (1847), the Minor Prophets (1838, 1881^4), Ecclesiastes (with W. Nowack, 1847, 1883^2), Proverbs (1847), Daniel (1850), Song of Songs (1855), Psalms (1863), and Job (1874). In 1869 his *Geschichte des Volkes Israel*, a history of the biblical period, appeared. *Vorlesungen über biblische Theologie und messianische Weissagungen des Alten Testaments* (1880), on biblical theology and the messianic concept in the Bible, was published posthumously. Other writings deal with the New Testament and Semitic linguistics.

HITZIG, JULIUS EDUARD (1780–1849), German author, publisher, and criminologist; member of the prominent Itzig family of Berlin and Potsdam, grandson of Daniel *Itzig (1723–1799). His original name was Isaac Elias Itzig, but in 1799 he converted and changed his name to Hitzig – which prompted Heine to satirize him as "H. Itzig." Hitzig studied law, and between 1799 and 1807 served as a Prussian official in Warsaw and Berlin. During his Berlin period, he was a member of the romantic group known as the Nordsternbund, and published poems in the group's *Musenalmanach* of 1804. In 1808 he founded a publishing house which, among others, published Heinrich von Kleist's *Berliner Abendblaetter.* In 1814, after the defeat of Napoleon, he resumed his law career in the service of the Prussian government. In 1824 he founded the Literarische Mittwochsgesellschaft, which became a center for the later Romantics and for aspiring young writers. Hitzig wrote biographies of two romantic writers he had come to know in Warsaw, Zacharias Werner (1823) and E.T.A. Hoffmann (1823), and the definitive biography of his lifelong friend, Adalbert von Chamisso (1839), the creator of Peter Schlemihl. He himself was best remembered after his death for *Der neue Pitaval* (1842–47, and frequently reprinted), a collection in many volumes of crime and detective stories of all lands and ages, in which he collaborated with W. Haering. His son was the German architect Friedrich *Hitzig (1811–1881).

[Sol Liptzin]

HIVITES (Heb. חִוִּי), the sixth of the 11 peoples or tribes descended from the sons of Canaan (Gen. 10:17) and one of the seven nations residing in Canaan at the time of the Conquest (Ex. 3:8, 17; 13:5; 23:23, 28; 33:2; 34:11; Deut. 7:1; 20:17; Josh. 3:10; 9:1; 11:3; 12:8; 24:11; Judg. 3:35; I Kings 9:20 = II Chron. 8:7). Most of the references to the Hivites occur in Genesis and Joshua, among the least historical sections of the Bible. Yet it is likely that some such group was known to ancient Israel. In the stories set in the "patriarchal period" the Hivites dwelt at Shechem (Gen. 34:2). In accounts of the Conquest of Canaan they were associated with the four towns of Gibeon, Chephirah, Beeroth, and Kiriath-jearim (Josh. 9:17), and with the land of Mizpah at the foot of Mt. Hermon (Josh. 11:3). According to the Book of Joshua, the Hivites of the four towns were exempt from Israel's holy war against the seven nations by a solemn treaty (Josh. 9:19; see *Gibeonites). Those who lived in the land of Mizpah were likewise unaffected, insofar as the area below Mt. Hermon was the limit of Joshua's conquest (Josh. 11:17; Judg. 3:3).

The term Hivites is unattested in extra-biblical sources. The suggestion that the Hivites are the Greek Achaeans, known from the Iliad, who appear in Egyptian documents as *akioasha*, seems linguistically dubious. E.A. Speiser noted the absence of any reference to the *Hurrians (Horites), who played a major role in Israelite history, in the biblical lists of Canaanite nations. He called attention to Hurrian personal names associated with Shechem and with other areas whose inhabitants the Bible calls Hivites. He further noted the juxtaposition of the Hurrian Jebusites and the Hivites in all but two of the biblical references to the latter. Thus he concluded that Hivite was a biblical term for Hurrian. Speiser supported his identification of the biblical Hivites with the Hurrians by reference to Genesis 36:2, and 36:20, where the terms Hivite and Horite are apparently used interchangeably. In the former verse Zibeon is called a Hivite, in the latter, a Horite. Other examples of the apparent interchange of the terms Hivite and Horite may be found by comparing the Masoretic Text and the Septuagint. Thus in Genesis 34:2 and Joshua 9:7 the Septuagint reads Horites for the Hivite of the Masoretic Text. These alternations have been the subject of considerable discussion. Some claim that the differences between the Masoretic Text and Septuagint are the result of the former's attempt to harmonize the narratives with the list of Canaanite nations in Genesis 10. It is difficult, however, to draw any conclusions from variants in the Septuagint.

Both Grintz and Speiser suggested a close connection between Hurrians and Hivites. Grintz, therefore, explained the Gibeonites' claim to have come "from a far country" (Josh. 9:6, 9) in the light of the Hurrians' origin in the area north of Mesopotamia and east of Asia Minor. Speiser, who found the name *Ḫu-ú-ia* among Hurrian names in Mesopotamia, suggested that the latter name, which passed into Hebrew as Hivite, became the general Hebrew term for Hurrian because the term Horite had been preempted for the pre-Edomite population of Seir (Gen. 36:20). S. Ahituv connects the Hivites with the land Ḫume, known from Neo-Babylonian sources. The Hebrew form with *waw* is linguistically defensible.

[Mayer Irwin Gruber]

ḤIWI AL-BALKHI (second half of ninth century, Ḥiwi, a misspelling of the Persian name Ḥayyawayh; al-Balkhi, of Balkh, in Khorasan, *Persia, now *Afghanistan), freethinker and radical Bible critic. Few details of Ḥiwi's life are known. His homeland was a meeting place of many religious streams – Rabbanite and *Karaite Judaism, Shi'ite *Islam in its various sectarian manifestations, Nestorian Christianity, Buddhism, and Zoroastrianism. It was the home of some of the greatest Islamic scientists and scholars of the first centuries of Islam. Ḥiwi was the author of a polemical work which contained 200 criticisms of the Bible. He belonged neither to the Rabbanites nor to the Karaites. In fact, both of these factions of Judaism condemned him. The work of Ḥiwi is no longer extant; its contents have to be reconstructed from the quotations by later Rabbanite and Karaite critics of his work. The language Ḥiwi wrote in is unknown, though it can be assumed he wrote in Arabic. From the polemical attacks against Ḥiwi, it can be ascertained that his main concern was to undermine the authority of the Bible. He censured the biblical concepts of God and the biblical commandments and stories. Modern scholars were only able to reconstruct approximately one-third of his 200 questions and criticisms. These questions can be subdivided into the following categories: God is unjust, without compassion, and favors evil; God is not omniscient; God is not omnipotent; God changes His mind, which is a sign that He is not consistent; God likes blood and sacrifices; the Bible is full of anthropomorphisms; God does not work miracles; the Bible admits the existence of many gods; the Bible contains contradictions; and many commandments and stories in the Bible lack reason. It is also evident that Ḥiwi did not believe in *creatio ex nihilo* and in free will. Ḥiwi, an eclectic, was not original in his ideas. Some of his criticisms can be traced to rabbinic sources, some to the works of the last defenders of Zoroastrianism, some to the works of Islamic heretics, and some to Christian heretics. The vehemence with which Ḥiwi was rebuked by Rabbanite and Karaite scholars alike testifies to the great influence of his writings upon his contemporaries and even later generations. *Saadiah Gaon, who succeeded in stemming the tide of Karaite Judaism in the Near East, felt – 60 years after the publication of Ḥiwi's work – the need to refute Ḥiwi's arguments in a special work, which he wrote in Hebrew rhyme. Fragments of Saadiah's refutation were preserved in the Cairo *Genizah* and were published by Israel Davidson in 1915. Two additional leafs were discovered and published by J.H. Schirmann in 1965. Ḥiwi's name would have been forgotten completely if Abraham *Ibn Ezra had not mentioned Ḥiwi's critical remarks in his commentary on the Pentateuch. Ḥiwi's name and work have been used in modern times for anti-religious propaganda by freethinkers, particularly in Soviet Russia.

[Judah M. Rosenthal]

ḤIYYA (also called **Rabbah**, "the Great"; end of the second century C.E.), *tanna* (BM 5a) during the transition period from the *tannaim* to the *amoraim*. Ḥiyya was born at Kafri, near Sura in Babylonia (Sanh. 5a). According to one talmudic tradition his family was descended from Shimei, the brother of David (Ket. 62b), but according to another from Shephatiah, the son of David's wife Abital (TJ, Ta'an. 4:2, 68a). After he immigrated to Ereẓ Israel from Babylonia (Ket. 5a), his father, Abba b. Aḥa, died (Pes. 4a) and because of his country of origin the sages referred to him as "the Babylonian" (Gen. R. 26:4). He frequented Judah ha-Nasi's company, studied in his *bet midrash* (Shab. 66b; Ḥul. 16a; et al.) as well as under him personally (Ned. 41a), asked questions of him (TJ, Git. 7:10, 49a; et al.), and transmitted halakhic statements in his name. Judah ha-Nasi authorized him to act as a *dayyan* (Sanh. 5a) and once sent him to sanctify the new month (RH 25a). He was the outstanding pupil of Judah ha-Nasi, and the Talmud gives a large number of queries addressed to him (TJ, Git. 7:10, 49a; BM 3:4., et al.). On one occasion Judah ha-Nasi was taken ill and forgot something which he had taught Ḥiyya, who reminded him of it (Ned. 41a). Ḥiyya also argued with his master on *halakhah* (TJ, Pe'ah 8:4) and there are even instances of Judah ha-Nasi asking questions of Ḥiyya (Hor. 11b). Judah ha-Nasi himself once said to a pupil of his, "Disregard my reply and adopt that of Ḥiyya" (Av. Zar. 36b). Much is told about their relationship. Although on occasions Judah ha-Nasi adopted a critical attitude toward him (see MK 16b, et al.), he held him in exceptionally great esteem calling him: "A great man, a holy man" (Gen. R. 33:3). Ḥiyya was regarded as second in learning only to Judah ha-Nasi and hence the sages wondered why Judah ha-Nasi had not on his deathbed designated him as the head of his *bet midrash*. Some explained it as due to Ḥiyya's being so extensively engaged in *mitzvot* and in spreading knowledge of the Torah, but others think he may have predeceased Judah ha-Nasi (Ket. 103b).

Ḥiyya had his own *bet midrash* which was famous chiefly for its preoccupation with *beraitot*. These are quoted frequently in the Talmud, many of them having been taught by Ḥiyya himself (Ber. 24a; BK 4b), who also transmitted to Oshaiah, his pupil, *beraitot* which the latter taught in his own *bet midrash*. The productions of these two schools in this field were regarded as the most authoritative and accurate, so that it was said that any *baraita* which did not emanate from them was a defective version and not to be cited in the *bet midrash* as a refutation (Ḥul. 14a–b). These *beraitot* included additional explanations to Judah ha-Nasi's Mishnah as well as halakhic material which Judah ha-Nasi had excluded from his compilation. In it Ḥiyya incorporated not only statements that were based on a ruling he had personally heard from Judah ha-Nasi (TJ, BM 5:7, 10c) but also some that were opposed to what Judah ha-Nasi had taught (Ket. 59b). Yet there was the well-known principle: "Since Rabbi Judah ha-Nasi has not taught this ruling, whence could Ḥiyya know it!" (Er. 92a; and parallel passages). A collection of *beraitot* on the *halakhot* of usury compiled in Ḥiyya's *bet midrash* is mentioned

in *Bava Meẓia* (62b, 65b). In the view of S. Zvi Kaplan Sherira *Gaon the Tosefta constitutes the collection of Ḥiyya's *beraitot* (see: *Tosefta).

Ḥiyya enjoyed the status of both a *tanna* and an *amora*, this dual capacity of his being reflected in a discussion in *Niddah* 26a. As a *tanna* he was permitted to disagree with other *tannaim* and hence his statements are quoted in *beraitot* (Shab. 20a; Ḥul. 27a; et al.), and by virtue of his status as an *amora* a large number of his halakhic pronouncements are cited in statements of *amoraim* to be found in all the tractates of the Babylonian and Jerusalem Talmuds. Among the sages with whom Ḥiyya discussed halakhic subjects, either agreeing with or opposing their views, mention may be made of Ishmael b. Yose (TJ, Er. 7:1), Yannai (TJ, Ber. 4:5), Simeon b. Rabbi (Er. 72a; et al.), and Bar Kappara (Yev. 32b; et al.). Little is known of Ḥiyya's personal life. His wife Judith, described as a harsh woman (Kid. 12b), bore him twin sons, *Judah and *Hezekiah, who were apparently born in Babylonia, became famous sages and immigrated with their father to Ereẓ Israel (Suk. 20a). They also had twin daughters, Pazi and Tavi (Yev. 65b–66a), one of whom died in her youth after being betrothed to Judah ha-Nasi's son.

The most distinguished of Ḥiyya's pupils was *Rav (see Ḥul. 110a; Ker. 21a; et al.), the son of his brother on his father's side and of his sister on his mother's side (cf. Rosenthal, 281ff.). Ḥiyya intervened with Rabbi Judah ha-Nasi on his behalf (Sanh. 5a). The relative intellectual stature of these three is described in the Talmud in the following: "Rabbi (Judah ha-Nasi) was the tallest man in his generation and Ḥiyya reached to his shoulder; Ḥiyya was the tallest man in his generation and Rav reached to his shoulder" (Nid. 24b). Rav also acted as Ḥiyya's interpreter (Yoma 20b), that is, one who at length and in a popular style expounded what the preacher or lecturer had indicated to him in brief. Some of Ḥiyya's other pupils were his nephew, Rabbah bar Ḥanah, Ze'iri (Shab. 156a), and Judah b. Kenosa (BK 81b). Ḥiyya devoted himself to spreading knowledge of and teaching the Torah. He would write out the five books of the Pentateuch, take them to towns which had no teachers for the young, and there teach them to the children. Judah ha-Nasi said of this, "How great are the deeds of Ḥiyya" (Ket. 103b; and parallel passages). Apparently his sons also participated in this work, as can be seen from Resh Lakish's remark reflecting the vast esteem that the early Ereẓ Israel *amoraim* had for Ḥiyya's achievements in this field: "When the Torah was forgotten from Israel, Ezra came up from Babylonia and established it. When [some of it] was again forgotten, Hillel the Babylonian came up and established it. When [some of it] was once more forgotten, Ḥiyya and his sons came up and established it" (Suk. 20a). The Talmud refers to Ḥiyya's diligent study of the Torah (TJ, Kel. 9:3) and his concern for orphans (BM 85b), his scrupulous consideration for the honor of others (Sanh. 11a), and his love of Ereẓ Israel (TJ, Shev. 4:7). He would pray: "May it be Thy will that Thy Torah may be our occupation, that our heart may not grieve nor our eyes be darkened" (Ber. 16b). When Ḥiyya and his sons led the congregation in worship, their prayer was immediately answered (BM 85b). It was due to their merit that in Ereẓ Israel "shooting stars and earthquakes, storms and thunder ceased, wine did not turn sour, nor was flax blighted" (Ḥul. 86a).

Ḥiyya discoursed in public on *halakhah* (see Ket. 34a) and *aggadah* (TJ, Sot. 1:4; et al.). His special method of exposition by the transposition of letters was known as "the *Atbaḥ* (אטב"ח) of R. Ḥiyya" (see Suk. 52b, and Rashi, ad loc.). Once, when seeing the first rays of dawn piercing the darkness, he said: "Even so is the redemption of Israel. At first it comes gradually, and the longer it continues, the greater it becomes" (TJ, Ber. 1:1). Yet Ḥiyya declared: "The Holy One blessed be He knows that Israel is unable to endure the cruel decrees of Edom [Rome], and therefore He exiled them to Babylonia" (Pes. 87b). Because of this he sought, against the wishes of Judah ha-Nasi, to obtain independence in teaching for the sages of Babylonia, so that they should not be subject to the central authority, then still in Ereẓ Israel (Sanh. 5a). Moreover, Rav, Ḥiyya's nephew and the founder of the academy at Sura, one of the pillars of Jewish life in Babylonia, had apparently emigrated there on the initiative and with the encouragement of his uncle. He maintained that the "Holy of Holies," to which, according to the sages, the worshiper is to direct his heart when praying, refers to the "Holy of Holies above," that is, Heaven. He interpreted the place-name Mount Moriah as the site "from which fear goes forth," and not, as Yannai held, "from which teaching goes forth to the world" (TJ, Ber. 4:5). These two sages' different interpretations of Jacob's dream in which he saw a ladder reaching to heaven (Gen. R. 68:12) is likewise related to these divergent approaches (cf. also Gen. R. 69:3). Ḥiyya's aggadic statements include remarks against imposing excessively restrictive measures: "You shall not make the fence higher than the essential object (the Torah), that it should not fall and destroy the shoots" (Gen. R. 19:3); and "Whoever rebelled against Divine justice did not emerge unscathed from under its hands" (Gen. R. 48:5). On the evil inclination he observed: "It is poor dough which the baker himself declares to be bad" (Gen. R. 34:10). Among his sayings is the statement originally made in connection with a halakhic problem: "The raven went to join the starling because it belongs to the same species" (*ibid.* 65:3). He was also the author of the saying: "Such is the punishment of a liar, that even if he tells the truth he is not listened to" (Sanh. 89b, and see Gen. R. 94:3). His extensive business dealings brought him into close touch with daily life. Thus it is known that he traded in silk (Gen. R. 77:2; cf. also BK 99b). His practical advice was: "A person should not put all his money in one corner" (Gen. R. 76:3). Legend embellished Ḥiyya's death (MK 28a). He was buried in a cave, in which his sons, Judah and Hezekiah were also interred on their death, one on each side of him (MK 25a). In the *aggadah* a graphic description is given of his great merit in the heavenly academy (see BM 85b; TJ, Kel. 9:3).

[Zvi Kaplan]

ḤIYYA BAR ABBA (TJ: **Bar Ba** or **Va**; third and the beginning of the fourth centuries C.E.), *amora*. Ḥiyya was born in Babylonia, of a priestly family (TJ, Ber. 3:1, 6a) but migrated to Ereẓ Israel (Shab. 105b; BB 107b) where he was able to attend upon such Palestinian *amoraim* of the first generation as Ḥanina (TJ, Hor. 3:4, 48b) and Joshua b. Levi (TJ, Shab. 1:1, 3a). He was the outstanding pupil of Johanan in whose name he transmitted many *halakhot* (Shab. 105b; Er. 54a, et al.). He was known for being exceptionally precise in transmitting the words of his teacher, and every 30 days revised what he had studied in his presence (Ber. 38b). He also studied under R. Eleazar. Ḥiyya was very poor and left Ereẓ Israel in order to gain a livelihood. On the recommendation of Eleazar he was appointed by Judah ha-Nasi II as his emissary to the Diaspora. In his letter of appointment Judah called him "a great man," to which another version adds: "wherein lies his greatness? – That he is not ashamed to say 'I have not heard'" (TJ, Ḥag. 1:8, 76d). His mission apparently brought him back to Babylonia for a time and he had discussions with its scholars (Ber. 15a, et al.). He also visited Syria (TJ, Meg. 3:1, 74a) and even reached Rome (TJ, Ma'as. Sh. 4:1, 54d). Wherever he came he introduced necessary **takkanot*, collected monies for the benefit of the yeshivah, and appointed heads of the community (TJ, Pe'ah, 8:7, 21a). In Ereẓ Israel too he paid visits to many localities, and evinced a lively concern with the spiritual situation in the various places, dealing with communal needs, and preaching to the congregations. He visited Gavla, south of the Dead Sea (Yev. 46a), Tiberias (TJ, Pes. 4:4, 31a), Sepphoris (TJ, Ta'an. 4:9, 69b), and Tyre, where he apparently stayed for some time (TJ, Av. Zar. 2:9, 42a, TJ, Ber. 3:1, 6a). He had many sons who were scholars: Abba, the best-known (Ber. 5a); Jeremiah (Lev. R. 23:8); Kahana (TJ, Shab. 1:7, 3d); and Nehemiah (TJ, Ber. 3:1, 6a). Ḥiyya was essentially a halakhist (Sot. 40a): "R. Abbahu and R. Ḥiyya b. Abba once came to a certain place. R. Abbahu expounded *aggadah* and R. Ḥiyya b. Abba *halakhah*. All the people deserted R. Ḥiyya and went to hear Abbahu. Ḥiyya was upset, but Abbahu said to him: 'I will tell you a parable. To what is the matter like? To two men, one of whom was selling precious stones and the other cheap ware. To whom will the people hurry? Is it not to the seller of the cheap ware?'" Nevertheless aggadic statements are found in his name. He expounded the verse (Jer. 16:11): "they have forsaken Me and not kept My law" – "Would they were to forsake Me, providing that they keep My law, for as a result of occupying themselves with it, its light will bring them back to the right path" (Lam. R., Proem 2, see also TJ, Ḥag. 1:7, 76c).

[Zvi Kaplan]

ḤIYYA BAR AVIN (in TJ, **Bar Bun**; beginning of the fourth century C.E.), Babylonian *amora*. Ḥiyya was the son of *Avin the Carpenter. He was a pupil of Huna (see Kid. 58a) and the *resh *kallah* at his yeshivah (see She'iltot, Berakhah 165). The teachings of Rav and Samuel, which he frequently transmits (Er. 81a; Ber. 30a; et al.), he received presumably from their pupil Huna. His halakhic discussions with his contemporary scholars are frequently cited in the Talmud. Later Ḥiyya migrated to Ereẓ Israel and studied in Tiberias in the yeshivah of Eleazar in whose name he sent instructions to Babylonia (Yev. 43a). In Ereẓ Israel he received many ancient traditions of earlier scholars. He held halakhic discussions with *Zera (Ber. 33b) and *Assi (Suk. 35a). He returned to Babylonia where he was held in the highest esteem. Rava referred to him as "the lion of the company" (Shab. 111b; et al.; some explain that the word *ḥavurah*, "company," was a name applied only to the yeshivah of Ereẓ Israel). Naḥman b. Isaac turned to him with his problems (Ber. 6a; et al.). After Ḥiyya's death, Rava transmitted to Ḥiyya's son the teachings he had received from him (Ket. 85b).

[Zvi Kaplan]

ḤIYYA ROFE (1550?–1618), rabbi of *Safed. Ḥiyya was born in Safed and studied in Solomon *Sagis' yeshivah there, where he distinguished himself already in his youth. Ḥayyim *Vital instructed him in *Kabbalah and he was ordained by Jacob *Berab II before 1599. He reestablished the yeshivah of *Tiberias in 1587 and headed it for a number of years. However, between 1590 and 1593 he again lived in Safed where he was regarded as one of its outstanding scholars. In 1607 he was living in *Jerusalem, but in about 1612 returned to Safed where he died. His opinions are quoted by contemporaries. Most of Ḥiyya's works have been lost. The little that has remained, novellae to various tractates of the Talmud and 27 responsa, were published by his son *Meir b. Ḥiyya Rofe, a *Hebron scholar, in the collection *Ma'aseh Ḥiyya* (Venice, 1652). It is a valuable source for the method of talmudic study employed by the scholars of Safed as well as for the quotations from many manuscripts of the Talmud which the author kept in the yeshivah of Safed.

HIZBOLLAH (Arab. "Party of God"), Lebanese Shiite-Muslim movement and militia based mainly in the southern suburbs of Beirut, in Balbek in the Biqa, and in South Lebanon. It was founded during the *Lebanon War of 1982, emerging out of a loose coalition of radical Shiite groups. Inspired by the Islamic Revolution in *Iran and originally aspiring to set up a similar Islamic state in Lebanon as an alternative to the existing multicultural state, it abandoned this goal in the early 1990s and ostensibly became part of the Lebanese political system, participating in parliamentary elections and maintaining a bloc of around 10 parliamentary representatives. Never disarmed by the weak Lebanese government and sponsored by Iran, it

became a virtual state within a state, launching violent attacks against American and Israeli targets. Under its charismatic leader Sheikh Hassan Nasrallah (1953–) and as the self-proclaimed champion of Arab resistance to the Israeli occupation, it began stockpiling thousands of Iranian- and Syrian-supplied rockets and building an extensive tactical infrastructure during a six-year lull in hostilities during the 2000s, until the illusion of tranquility was shattered in summer 2006. For a summary of the renewed hostilities, see *Israel, State of: Historical Survey; for a detailed review of Israel's war against terrorism, see *Israel, State of: Israel Defense Forces ("The War against Terrorism"). See also *Lebanon; *Lebanon War.

ḤLADIK, ABRAHAM (first half of 13th century), Bohemian scholar. The name Ḥladik, still found to this day as a family name in Prague, is evidence that Abraham came from Bohemia, and he is sometimes referred to as Abraham of Bohemia. His name is frequently mentioned in *minhagim books and in 13th-century commentaries on the prayers. He was in contact with *Abraham b. Azriel, though the nature of their literary dependence is still unclear. It seems that Ḥladik abridged some of Abraham b. Azriel's commentaries to *piyyutim*.

[Isaac Ze'ev Kahane]

HLOHOVEC (Hung. **Galgóc**; Ger. **Freistadtl**, **Freistadt**; in popular Slovak **Fraštak**), town in W. Slovakia, until 1992 Czechoslovak Republic, then Slovak Republic. The first Jews appeared in Hlohovec with the Romans. During the 9th-century Great Moravian Empire, Jews may have lived in the location of present Hlohovec. Since then, Germans who settled in the area bore hatred toward Jews, and in the 13th century Jews had to wear red markings on their clothes. After refusing to convert to Christianity, the Jews of the Hungarian kingdom were expelled in 1360. Before then, they could live in any part of the town. Upon their return four years after the expulsion, they were relegated to one "Jewish" street. In 1514 they were expelled again, during the peasant revolt. Hlohovec was located next to an important bridge over the river Váh; from the 15th to the 18th century, Jews collected the tax for crossing the bridge on behalf of the royal treasury.

In 1529, when Jews were being burned in the neighboring town of *Trnava, the Jews crossed the bridge and settled in Hlohovec. Most of the Jewish inhabitants of Hlohovec hailed from Moravia. They sold wine, grain, salt, and silverware, and some were glaziers. Another source of income was supplying food to soldiers of the imperial army fighting the Turks. They continued to act as military suppliers in the 17th and 18th centuries. Jewish businessmen from Hlohovec attended the fair in Leipzig, Germany. Hlohovec had a well-established Jewish community. In 1735/38 there were 128 Jews; in 1746 there were 133. Rabbi Mordechai Deutsch, a well-known Talmudic scholar, founded a yeshivah, serving as principal until his death in 1772. The Hlohovec Jews enjoyed the goodwill of the Erdoedy noble family, which owned the land. In 1750 the community erected its first synagogue.

In 1830/5 there were 556 Jews; in 1880, some 1,079 Jews lived in Hlohovec; and on the eve of the deportations in 1940, there were 727.

The *talmud torah* was opened in 1828, and a school in the German language operated from 1858 to 1862. In 1865 a new school opened its doors. A synagogue was constructed in 1830 and enlarged in 1890. A new edifice was erected in 1900. Following the Hungarian Jewish congress of 1868, a split occurred in the congregation. The majority chose Status Quo Ante, and the Orthodox minority established its own congregation. They shared the *ḥevra kaddisha*, the Torah scrolls, and the cemetery. The Orthodox community opened a school, as well as other religious institutions. In 1880 the two congregations united as Orthodox.

During the Hungarian commonwealth of 1848/49, many Jews enlisted with the Magyar troops. During World War I, 200 men were recruited into the army. After the war, the Zionist movement and the Jewish party appeared on the Jewish street. Party members were elected to the municipal council. Rabbi Moshe Schwarz headed a Torah va-Avodah yeshivah, where students received vocational training and engaged in rabbinic study.

In September 1938 Slovakia proclaimed autonomy, and on March 14, 1939, independence under the Third Reich. Persecution of Jews was among the state's main tasks, culminating in the deportation of Jews to camps in Poland. In April 1942, the Jews of Hlohovec and the vicinity were deported; very few returned. The authorities continued to persecute the remaining Jews, reducing the number of streets where they could live and expropriating Jewish public buildings. During the Slovak anti-Nazi uprising in August–October 1944, some fled the city and others were sent to extermination camps.

In 1947, only 27 Jews lived in Hlohovec. In 1949 there were 125. In 1968 a handful of Jews remained in the city, the rest having emigrated in 1948/49. They had a small prayer house, and services were conducted by Moshe Glueck, "the Ẓaddik of Hlohovec." In his capacity as caretaker of the local cemeteries, he discovered the 1772 grave of Sarele van Geldern, believed to be the forebear of German poet Heinrich Heine.

[Yeshayahu Jelinek (2nd ed.)]

HOBSBAWM, ERIC JOHN (**Ernest**; 1917–), British historian. Born in Alexandria, Egypt, Hobsbawm came to Britain in the early 1930s and was educated at Cambridge before becoming professor of economic history at Birkbeck College, University of London. Widely regarded as one of the most distinguished historians of his time, Hobsbawm is interna-

tionally known both for his works on labor history and social agitation, such as *Primitive Rebels* (1959), and for his magisterial four-volume account of modern European history – *The Age of Revolution* (1962), *The Age of Capital* (1975), *The Age of Empire* (1987), and *The Age of Extremes* (1994) – as well as for his survey of British economic history, *Industry and Empire* (1968). Always on the left politically, Hobsbawm remained an unorthodox supporter of the British Communist Party long after many other intellectuals had left it. More recently, he became known for his critiques of the British Labour Party. In 2002 Hobsbawm produced a widely noted autobiography, *Interesting Times: A Twentieth-Century Life.* He also wrote jazz criticism under the pseudonym of Francis Newton. In 1998 he was made a Companion of Honour (C.H.), a rare distinction for a historian.

[William D. Rubinstein (2nd ed.)]

HOBSON, LAURA Z. (**Zametkin**; 1900–1986), U.S. author. The daughter of the Yiddish writer Michael Zametkin, she worked for the *New York Evening Post* and later became copy chief for *Time, Inc.* She published short stories and novels from the mid-1930s, her best-known work being the novel *Gentleman's Agreement* (1947), a study of antisemitism in America. Her later novels include *The Other Father* (1950) and *The Celebrity* (1951). In *First Papers* (1964) she returned to the problems of the Jew in a non-Jewish environment. Her autobiography, *Laura Z: A Life,* was published in 1983.

HOCHEIMER, HENRY (1818–1912), U.S. rabbi. Hocheimer was born in Ansbach, Bavaria, of a well-known rabbinical family. From 1844 to 1849 he assisted his father as rabbi of Ichenhausen, but had to leave Germany in 1849 because of his political activities. On arriving in the United States he became rabbi of the Reform Baltimore Hebrew Congregation. Ten years later he took office with the Fell's Point (Md.) Hebrew Friendship Congregation, where he remained until his retirement in 1892. Hocheimer published several articles and pamphlets and enjoyed a reputation as a scholar and a wit, but he took little part in public life. His son LEWIS HOCHEIMER (1853–1929) was a noted Baltimore attorney and community leader, and the author of *Hocheimer's Criminal Law* (1899).

[Sefton D. Temkin]

°**HOCHHUTH, ROLF** (1931–), German playwright. Hochhuth, a Protestant, was a publisher's reader between 1955 and 1963 and was able to undertake, at the Vatican and elsewhere, the massive documentation needed for his controversial drama, *Der Stellvertreter* (*The Deputy*, 1964). This was produced in Berlin in February 1963 and appeared in print at the same time. The play immediately aroused a storm of protest in Catholic circles owing to its uncompromising condemnation of Pope Pius XII for his failure to condemn Hitler's Jewish policies. The two tragic heroes of Hochhuth's drama are Lieutenant Kurt *Gerstein, a dedicated Lutheran who infiltrated the Waffen-SS and tried to awaken world conscience to the Holocaust, and Father Riccardo Fontana, a Jesuit priest whose revolt against the silence of Pius XII eventually leads him to assume the role of "representative" of the Pope at Auschwitz. The character of Fontana is fictitious but in part inspired by the heroic Provost Bernhard *Lichtenberg of Cologne, whom the Nazis executed. Both the play and the appended documentation draw the conclusion that Pius XII sacrificed morality to the short-term financial and political interests of the Church. *Der Stellvertreter* appeared in England as *The Representative* and in the U.S. as *The Deputy* (published with Hochhuth's accompanying documentation, 1964). It provoked widespread reaction and was the subject of great controversy, bringing Pope *Paul VI to the defense of Pius XII. The 2002 film *Amen* was based on it.

Hochhuth continued to write controversial plays after he moved to Switzerland in 1963 and became resident playwright at the Basle Stadttheater. His 1978 play *A Love in Germany* focused on the governor of Wuerttemberg, Hans Filbinger, and his past as a military judge in World War II. The play stirred a debate which resulted in Filbinger's resignation. His play *McKinsey Is Coming*, which discusses modern social justice and criticizes big business, was read by some critics as an exculpation of left-wing terrorism, a charge denied by Hochhuth. An earlier play, *Soldiers, Necrology on Geneva* (1967), which depicts the British bomb attacks in World War II as crimes and portrays Winston Churchill as a war criminal, resulted in his friendship with the extreme right-wing British historian David *Irving, who was later accused of Holocaust denial. When Hochhuth defended Irving in a public remark in 2005, he came under heavy attack in the German press. Hochhuth later retracted his statement, claiming he was not familiar with Irving's extreme theses, and publicly apologized.

[Godfrey Edmond Silverman / Michael Brenner (2nd ed.)]

HOCHMAN, JULIUS (1892–1970), U.S. labor leader. Hochman was born in Bessarabia, the son of a tailor. At the age of 11 he was apprenticed to a tailor. Two years later he participated in an unsuccessful strike and decided to become a socialist. Immigrating to America at 15, Hochman worked as a skirt- and dressmaker in New York, and attended evening high school, the Rand School of Social Science, and Brookwood Labor College. In his early twenties Hochman became an effective International Ladies' Garment Workers' Union organizer of the Chicago, Boston, Toronto, and Montreal dress markets, and in 1925 was elected a vice president of the ILGWU. During the ensuing intra-union conflict between the left and

right, Hochman sided with the anticommunist Sigman group. His most important service to the union was in formulating programs for the stabilization of the garment industry. In 1929, appointed manager of the newly constituted New York Dress Joint Board, he was able to effect many of his ideas including piece-rate and time studies, which cemented labor-management cooperation aimed at increasing industrial efficiency. Hochman devoted his efforts to maintain New York as the nation's dominant dressmaking center. In 1941, through an agreement with dress manufacturers, he accomplished some of his most cherished objectives: obligatory standards of efficiency, an industry-wide planning program, and the establishment of the New York Dress Institute to make New York the world's fashion center. He wrote *Why This Strike* (1936) and *Industry Planning Through Collective Bargaining* (1941).

[Melvyn Dubofsky]

HOCHSCHILD, MAURICIO (1881–1965), engineer and mining magnate. Born in Biblis, Germany, Hochschild studied mining engineering, joined his uncle's metal trading firm, and was sent to Australia in 1907. In 1912, he left the firm and went to Chile, where he established his own company. During World War I he worked in Germany and Austria and afterward returned to Chile. In 1920 Hochschild went to Bolivia, where, after engaging in the purchase of ores for several years, he ultimately established one of the great Bolivian mining companies. When the Bolivian mines were nationalized, after the 1952 Revolution, Hochschild's company continued to operate throughout Chile, Peru, and Argentina and also purchased products from the nationalized mines in Bolivia. Though estranged from Judaism, Hochschild helped to bring Jewish refugees from Europe to Bolivia during the 1930s and employed some of them in his companies. He established an agricultural settlement for Jewish immigrants near Coroico, spending almost $1,000,000 on the project, which ultimately failed. While generously assisting thousands of Jews individually he refused to be identified with Jewish institutional life.

[Netanel Lorch]

HOCHSCHULE FUER DIE WISSENSCHAFT DES JUDENTUMS, center for the scientific study of Judaism and rabbinical seminary in Berlin. From the first half of the 19th century, leaders of the movement for modern scholarly study of the Jewish past, notably Leopold *Zunz and Abraham *Geiger, had argued for the establishment of a faculty for Judaica at a German university. As German institutions were reluctant to respond to such an idea, the plan was formulated in 1867 to found an independent, university-level center for Jewish studies in Berlin. According to its statutes, the exclusive purpose was to be the "preservation, advancement, and dissemination" of *Wissenschaft des Judentums* ("scientific study of Judaism"). The institution opened in 1872 with four teachers, Abraham Geiger, Hermann *Steinthal, David *Cassel, and Israel *Lewy, and 10 students in the most inadequate rented quarters. Tuition was free and students were accepted from all countries. Although the original intent was to serve pure scholarship, the school soon developed principally, but not exclusively, into a seminary for training rabbis and religious school teachers to serve a broad spectrum of German Jewry. Despite the best efforts of its trustees, headed by Moritz *Lazarus, the financial status of the Hochschule remained highly precarious during the first decades of its existence. From 1891 the institution was constrained to accept financial aid from the Berlin community. Only after the turn of the century did its position improve, allowing for the endowment of faculty chairs and the construction of its own building near the Berlin university. In 1907 the Hochschule was also able to begin publication of a series of scholarly studies by faculty and outside scholars to supplement the articles that usually appeared bound with the yearly institutional reports. Inflation after World War I and the depression of the 1920s brought new and extreme difficulties for the school. With the name Hochschule ("College") the founders had wanted to indicate the school's high academic level. However in 1883, during a period of intense antisemitism, the government degraded its title to Lehranstalt ("Institute"). After World War I the name was again Hochschule only to be reduced again to Lehranstalt by the Nazi government in 1934. The later faculty of the school included some of the most renowned Jewish scholars, men of both liberal and traditional views on religion. Among them were Ismar *Elbogen, Eduard *Baneth, Chanoch *Albeck, Julius Guttmann, and Leo *Baeck.

The regular student body grew slowly at first, reaching 61 before World War I. Aside from candidates for Jewish professional positions, the Hochschule attracted young scholars from abroad, Jewish students from various faculties of the university, Christian students of Judaica, and auditors from the community. After some fluctuation student enrollment reached its peak of 155 in 1932 and included 27 women. From the beginning, women were allowed to audit courses and, after 1907, were formally admitted as part-time students to the teacher training program but remained barred from rabbinic ordination. During the Nazi period the Hochschule served as a focus for the vast effort of adult education undertaken by the Jewish community to provide spiritual resistance against increasing oppression. Unlike the Breslau Theological Seminary and the Orthodox Berlin Rabbinerseminar, the Hochschule was permitted to remain open even after the *Kristallnacht pogrom of November 9, 1938. Plans to transfer the institution to Cambridge failed to materialize owing to the outbreak of World War II. Instruction at the Hochschule under the leadership of Leo Baeck continued for about a dozen students until all Jewish educational institutions were finally closed on July 19, 1942 and its valuable collection was confiscated.

[Michael A. Meyer]

HOCHWAELDER, FRITZ (1911–1986), Austrian dramatist. Hochwälder was born in Vienna. Being only a mediocre pupil, he left school to join his father in the upholsterer's trade and began to write in his off hours. Two of his early plays were performed in small theaters in Vienna. Unable to obtain an exit visa after the Anschluss, he crossed the border into Switzerland illegally in August 1938. His parents, who remained behind, were victims of the concentration camps.

As an illegal immigrant in Switzerland he was forbidden to work and this gave him the time to devote to writing. In the summer of 1942 he wrote *Das heilige Experiment* (*The Strong Are Lonely*), published in 1947, which was his greatest commercial success as well as being considered a modern European classic. It dealt with the utopian Jesuit community in Paraguay during the 18th century and its ideological conflicts. First performed in 1943, it was only after the war that the play received international recognition. He also wrote *Der Flüchtling* (*The Fugitive*; 1955), which was made into a motion picture, *Der oeffentliche Anklaeger* (1954), and *1003* (1964), an experimental play in the spirit of Pirandello. He wrote for radio and television; his television play *Der Befehl* (*The Order*; 1967) was commissioned by Austrian television to be shown by Eurovision. His work was significantly influenced by the Viennese Volkstheater, and the themes which are found throughout his work are the conflict between conscience and power, guilt and responsibility, and humanitarianism and selfishness.

Although he was granted the highest honors by the Austrian government, he chose to remain in Switzerland.

HOCK, SIMON (**Sinai**; 1815–1887), historian and journalist. A Prague businessman, Hock collected a vast body of material on old Jewish Prague, published in part in his friend Koppelmann *Lieben's *Gal-Ed* (1858), and mainly after Hock's death by David *Kaufmann, as *Mishpeḥot Prag* (1892). Writing anonymously because of the censorship, in the 1840s Hock was correspondent of the *Allgemeine Zeitung des Judentums* and the *Orient*, and during the 1848 revolutions reported for the *Oesterreichisches Centralorgan* on the anti-Jewish outbreaks connected with these uprisings. In a number of his articles he demanded that the Prague community be made more democratic. Especially interesting is the degree of Jewish national consciousness he displayed. Hock vigorously opposed radical reform, mainly as exemplified by Mendel *Hess and his *Israelit des XIX. Jahrhunderts*, claiming that from the champions of Reform would emerge a hierarchy suppressing freedom of religious practice such as Judaism had never known. He contributed articles on Jewish scholarship to I.H. *Weiss' *Beit Talmud* and other periodicals, and was among the founders of the *Afikei Yehudah association (1869). His unpublished correspondence is preserved in the Central Jewish Museum, Prague.

HODESS, JACOB (1885–1961), Zionist journalist. Born in Vanuta, Lithuania, Hodess moved to London at the age of 13. He started on his journalistic career at a young age, writing in Hebrew, Yiddish, and English. From 1911 to 1939 he was a member of the editorial staff of the *Jewish Chronicle* and also edited various periodicals in English and Yiddish, the most important of which was the Zionist weekly *New Judaea*, which he edited from 1924 to 1949. He settled in Israel in 1949 and became editor of the English-language quarterly *Zion*. He was also a contributor to the general British press and was the author of a booklet on Perez *Smolenskin (Eng., 1925). Hodess wrote a study on the Anglo-Jewish press (in *YIVO-Bleter*, vol. 43, 1966), which also contains reminiscences of his own work in the field.

[Getzel Kressel]

HOD HA-SHARON (Heb. הוֹד הַשָּׁרוֹן; "Splendor of the Sharon"), semi-urban community with municipal council status, in central Israel, created by the amalgamation of four villages: Magdi'el, founded in 1924 by immigrants from Russia, Poland, and Lithuania, and shortly after joined by a group from Holland; Ramatayim, founded in 1925 by immigrants from Poland; Hadar, founded in 1927 by middle-class immigrants from Eastern Europe; and Ramat Hadar, founded in 1938 by middle-class immigrants from Germany who were shortly after joined by a group of Italian Jews. After 1948 a large number of newcomers were absorbed in all four villages, the majority originating from Yemen and Iraq. In 1951, Ramatayim and Hadar were united into "Hadar Ramatayim," to which Ramat Hadar was joined in 1963, while the fusion with Magdi'el in 1964 created Hod ha-Sharon, which in 1969 had 12,500 inhabitants. In the mid-1990s, the population was approximately 27,200 and by 2000 it had grown to 38,600, with the municipal area covering 9.5 sq. mi. (24.5 sq. km.). Hod ha-Sharon's economy in 1969 was still predominantly agricultural, with 55% of its labor force working in farming. Citrus groves were prominent. About 20% of the employed worked in local industries and workshops. Commerce and services subsequently grew alongside the agricultural economy. In 1990 Hod ha-Sharon received municipal status. The Sha'arei Mishpat law college is located in the city.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HODMEZOVASARHELY (Hung. **Hódmezövásárhely**), city in S. Hungary. Jews first settled on the estate of the family of Count Károlyi within the boundaries of the city in 1748 but were expelled in 1770 because of the objections raised by the Greek Orthodox Church. In 1810 they began to organize themselves as a religious group but a regular community was not established until 1829; 28 Jewish families were registered in the area in 1838. A synagogue was built in 1857, a school having already been opened in 1845. The Jewish population numbered 56 in 1840, 1,312 in 1869, 1,658 in 1880, and 1,151 in 1930. In 1868, the community joined the Neologists. Among the most prominent rabbis of Hodmezovasarhely were Abraham Gruenhut (also known by the name A. Krol, officiated 1830–66); L. Seltmann, a noted author who wrote on life in the yeshivot (1879–1932); Meir Weiss (1933–37), later professor of Bible Studies at the Hebrew University, Jerusalem; and Aaron Silberstein, the last rabbi of the Holocaust period (1938–44), who published a monograph on the community. The Jews in Hodmezovasarhely mainly engaged in small trade, but there were also some wealthy merchants and even some industrialists.

Holocaust Period

Their economy was ruined in 1938 as a result of the first anti-Jewish restrictions. From 1940 the men were conscripted for labor battalions, and after the German occupation, on June 16, 1944, they were transferred to the ghetto in *Szeged. From there, 378 of them were deported to *Auschwitz and 500 to *Wiener-Neustadt, and other places in Austria, where members of the same family were not separated. About 400 Jews returned after the war, and there were 430 in 1948. The Jewish population decreased to 259 in 1955 and to 80 in 1969.

HODONIN (Czech **Hodonín**; Ger. **Goeding**), town in S. Moravia, Czech Republic. In 1648 the Jewish community is mentioned as having existed "for many years." It had two cemeteries in 1682, and by 1688 the Jewish quarter on an island in the Morava (March) river comprised 30 houses and a synagogue. Jews owned vineyards and wine cellars. In 1773 the community numbered 415. *Maria Theresa, herself the local lord, expelled the Jews in 1774, and 20 of them founded the community of Kostelec near *Kyjov. Later *Joseph II permitted 13 families to resettle in Hodonin. There were 109 Jews living in the town in 1836, 215 in 1853, 433 in 1869, 976 in 1900, and 797 in 1921. In 1930 the community numbered 670 (4.5% of the total population). Under Nazi rule it was constituted as a district community (1939). The Jews were sent to Kyjov and then Theresienstadt in 1942 and from there to extermination camps while the synagogue equipment was transferred to the Central Jewish Museum in Prague. In 1970 there was a small community in Hodonin affiliated to Kyjov. Virtually no Jews remained by the end of the century. The Austrian liberal politician, Joseph *Redlich, was a native of Hodonin.

HOECHHEIMER, MOSES BEN ḤAYYIM COHEN (c. 1750–1835), rabbi and Hebrew grammarian, known by his Hebrew pseudonym Hekhim (Heb. הֶעְכִים). Born at Hoechheim (Franconia, Germany), Hoechheimer served as *dayyan* in Fuerth and in 1793 became rabbi of Ansbach where he remained until his death. He was in contact with such leading rabbinical authorities of his time as Ezekiel *Landau of Prague and *Meshullam Zalman b. Solomon of Fuerth, who quoted his opinions in their responsa. He wrote a textbook on Hebrew grammar, *Safah Berurah* (Fuerth, 1790) with tables of conjugations, and published David *Kimḥi's work *Mikhlol*, with annotations by Elijah *Levita and a commentary by Hoechheimer himself (*ibid.*, 1793). Many of his poems have been printed in Hebrew periodicals.

[Joseph Elijah Heller]

°**HOELSCHER, GUSTAV** (1877–1955), German Bible scholar, born in Norden (Ostfriesland). He was professor in Halle (1915), Giessen (1920) and Marburg (1921) He was appointed to Bonn in 1929 but suspended in 1933 because of his anti-Nazi stance. He began to teach at Heidelberg in 1935, where, initially, his classes were boycotted. He remained at Bonn until 1949, and died at Heidelberg in 1955. Apart from the period of the Second Temple, to which he devoted a series of works, he dealt comprehensively with many subjects in the fields of biblical studies, even with metrics. His work *Geschichte der israelitischen und jüdischen Religion* (1922) is a short critical exposition of the history of the Israelite and Jewish religion. As a literary critic in the mold of J. Wellhausen, Hoelscher utilized the dating of sources in reconstructing the religious history of Israel. He dated Deuteronomy to the sixth century B.C.E. (in ZAW, 40, 1922), and concluded that large parts of the Book of Ezekiel are secondary (*Hesekiel, der Dichter und das Buch*, 1924). He traced the J and E sources of the Pentateuch up to and including the Books of Kings (*Geschichtsschreibung in Israel*, 1952). In a comprehensive exposition of the prophetic figures and traditions (*Die Propheten*, 1914) he located, following W. Wundt, the ecstatic phenomenon within the broader context of the history and psychology of religion.

[Rudolf Smend / S. David Sperling (2nd ed.)]

HOENIGSBERG (**Kapp**), Bohemian-Austrian family originating from Kuttenplan (Chodova Plana), Bohemia. LOEBEL (Leib, Loew) HOENIG amassed wealth as an army supplier in the War of the Austrian Succession (1740–48) and during the Seven Years' War (1756–63); in 1752 he and his sons leased the Prague tobacco monopoly concession for 10 years. Loebel obtained permission to build a synagogue in Kuttenplan in 1756. His eldest and most talented son, ISRAEL HOENIG (1724–1808), organized a consortium to lease the tobacco monopoly concession of Bohemia, Moravia, Silesia, and Lower and Upper Austria for 10 years (1765–74) for 900,000 florins annually, an immense sum at the time. Since consumers, the treasury, and the empress Maria Theresa were all highly satisfied with his services, he was also offered the tobacco concessions for the crown lands (1770), as well as Galicia and Lodomeria, and awarded the right to travel or settle anywhere in Bohemia and Moravia (1764). Israel generally employed Jews as his subcontractors. In 1774 another 10-year contract was signed (1,600,000 florins) for all Austrian lands. While Maria Theresa spurned repeated proposals that the state should acquire control of Israel's firm, Joseph II eventually transferred the tobacco concession to governmental control (1784), continuing to employ Israel and his brother as directors; Israel thereby became the first Jew to be an Austrian official. On Sept. 2, 1789 he became the first Austrian Jew to be raised to the nobility with a hereditary title; as Israel Hoenig Edler von Hoenigsberg he was permitted to acquire an estate in Lower Austria. Leopold II and Francis I confirmed his possession of this estate after four years of continuous negotiation, since Jews were not allowed to own land in Austria and Israel had refused to enter his estate in the records under the name of a Christian sponsor.

Israel had six sons and one daughter. MAXIMILIAN (1754–1832) was one of the founders of the Vienna Jewish community and its representative for 38 years; another son, ENOCH (1744–1815), was the great-grandfather of Isidor *Bush (Busch). Enoch's son LEOPOLD (Loew) fell under the influence of his father-in-law, Jonas Beer Wehle, leader of the *Frankists in Prague. On Nov. 9, 1800, he complained to the Prague police, accusing the rabbis of religious coercion and requesting protection. His fanatically anti-rabbinic 32-page protest was an open attempt to weaken and break rabbinical and communal authority. The majority of Israel's descendants were converted to Christianity.

Israel's brother and partner, AARON MOSES (1730–1787), had 10 children, six of whom were ennobled as Edler von Hoenigshofen in 1791. After the death of their mother in 1796 all were baptized; this line eventually died out. Another brother, ADAM ALBERT (1745–1811), became Von Hoenigstein in 1784, three years after his baptism (the name was later changed to Henikstein). MARIANNE, Israel's only sister, was grandmother of the poet L.A. *Frankl. SOLIMAN VON HOENIGSBERG (1804–1864) was secretary of the Prague Jewish community at the beginning of the 19th century and in 1848 published a pamphlet titled *Zur Judenfrage*.

The coat of arms of all three lines bore tobacco leaves and golden bees (*Honig* is German for honey). The lines intermarried and maintained business connections.

[Henry Wasserman]

HOENIGSWALD, RICHARD (1875–1947), German philosopher of Jewish origin. Hoenigswald received doctorates in medicine at Vienna (1902) and philosophy at Halle. In 1919 he was appointed professor of philosophy at Breslau and at Munich in 1930. After the Nazis came to power, he emigrated to the U.S. Hoenigswald belonged to the second generation of the neo-Kantian school. His philosophical development began in a controversy with Alois Riehl, who sought to introduce a realistic strain into Kantian philosophy by attributing existence to the "Ding an sich," in opposition to the Marburg school of Hermann *Cohen. His view is close to that of Cohen: "the given" is a condition of the object itself and, hence, it is impossible to speak about a "Ding an sich" outside of the "I." The "I" and the object exist only in mutual relationship. There is, at the outset, an affinity between the form and the content of thought. Hoenigswald's point of view acquired particular significance in the controversy with "psychologism," which attempted to subsume all philosophy under psychology and to abolish philosophy as an independent discipline. Hoenigswald endeavored to demonstrate the philosophical presuppositions upon which psychology itself rests by seeking to prove that all psychological experience is potentially rationalistic, since all experience is, basically speaking, thought. Hoenigswald made important contributions to the history of philosophy, which he regarded primarily as the history of philosophical problems. His book *Erkenntnistheoretisches zur Schoepfungsgeschichte der Genesis* (1932) attempts to show the specific aspects of the theory of cognition that distinguish the Genesis creation story from other narratives of this kind. His other important works are *Prinzipienfragen der Denkpsychologie* (1913), *Die Skepsis in Philosophie und Wissenschaft* (1914), *Die Grundlagen der Denkpsychologie* (1921; 1925²), *Die Philosophie von der Renaissance bis Kant* (1923), *Geschichte der Erkenntnistheorie* (1933), and *Philosophie und Sprache* (1937).

[Samuel Hugo Bergman]

HOENLEIN, MALCOLM (1944–), executive vice chairman of the Conference of Presidents of Major Jewish Organizations. Hoenlein was born in Philadelphia, received his B.A. from Temple University and his M.A. in international relations from the University of Pennsylvania. In 1971 Hoenlein came to New York to become the first head of the Greater New York Conference on Soviet Jewry, an organization established to coordinate all activities in the New York area on behalf of the cause of Soviet Jews. Working with all the New York Jewish organizations, Hoenlein planned and executed numerous protests and rallies throughout the New York area, including the annual "Solidarity Sunday" demonstration. In 1976 Hoenlein became the first executive director of the Jewish Community Relations Council of Greater New York (NYJCRC), which became a powerful coordinating voice for the Jewish community of New York.

Upon the death of Yehuda Hellman in 1986, Hoenlein was asked to become the head of the Presidents' Conference (or the *Conference of Presidents of Major Jewish Organizations, the umbrella body for 52 national Jewish organizations). As executive vice chairman, he developed the organization into the key address and contact for the voice of American Jews. The organization addressed all the major issues of the day, both within the United States, in Israel, and throughout the world from the perspective of how they affected American Jews. Hoenlein met with leaders in the United States and Israel and traveled with the lay chairs of the organization to meet with heads of state, political leaders, and Jewish leaders all around the globe.

For Hoenlein, maintaining consensus within the Presidents' Conference was a challenge which he generally mastered, although he was frequently tested by numerous constituent organizations from the right to the left and from all religious persuasions. Some of the biggest confrontations with which Hoenlein had to contend concerned defining American Jewry's role vis-à-vis the State of Israel and the government of Israel. In particular the Presidents' Conference has had numerous debates as to the extent to which the organization could or should take issue with Israeli government policy. Despite being often perceived by some of the member organizations as being too supportive of rightist Israeli governments and less so of others, no organization or leader has ever argued that Hoenlein's perceived enthusiasm was not based on his clear belief of what was best for Israel and for American Jews. Hoenlein was the recipient of numerous awards and honors from national and international Jewish organizations. Hoenlein was also the first senior professional of any major, national Jewish organization to be a *kippah*-wearing Orthodox Jew. He was a frequent writer and contributor to both the general and the Jewish media.

[Gilbert N. Kahn (2nd ed.)]

HOESCHEL (Joshua) BEN SAUL (d. 1749), German rabbi, named after his grandfather, *Joshua Hoeschel b. Jacob. He was the son-in-law of Naphtali Hirsch Mirels, *dayyan* in Berlin. Hoeschel is not known to have written any works, but was held in high esteem by his contemporaries as a talmudic authority. Among those who expressed regard for him was Solomon b. Aaron, the Karaite author of *Appiryon Asah* (1866). Of historical interest are two letters addressed to him: one from the kabbalist, Benjamin b. Eliezer of Reggio (wrongly assumed by many to have been addressed to Hoeschel b. Joseph of Cracow), and the other from Jekuthiel Gordon of Vilna. He died in Vilna.

[Samuel Abba Horodezky]

°HOESS, RUDOLF FRANZ FERDINAND (1900–1947), Nazi commandant of the *Auschwitz extermination camp. Born in Baden-Baden in southwest Germany, Hoess was an only son, the eldest of three children of a prosperous merchant's clerk and a housewife. In high school he trained for the priesthood, yet his father's death and the outset of war changed these plans. In 1916, he joined the army. Wounded three times, he was twice awarded the Iron Cross. He joined the East Prussian Free Corps (Freikorps) and took part in the suppression of disturbances in Latvia and in quelling workers who were staging a revolt in the Ruhr in 1920. A reunion of the Freikorps in early 1922 introduced him to Adolf Hitler for the first time. Hoess immediately joined the Nazi Party and renounced his affiliation with the Catholic Church. When France and Belgium entered and occupied the Upper Rhine region in January 1923, and extremist German elements responded with terror, Hoess participated in the assassination of Freikorpsman Walter Kadow on the estate of the man who was later to serve as Hitler's secretary, Martin *Bormann. Hoess was captured and sentenced to 10 years in prison. He was released in 1928 as part of the general amnesty. When Hitler came to power, Hoess joined the SS guard battalion at Dachau, serving under Camp Inspector (and future SS-*Gruppenfuehrer*) Theodor Eicke. Hoess's rise was rapid: first sergeant in March 1936, second lieutenant in September 1936, first lieutenant in September 1938, and captain in November 1938.

In 1939, he was named director of the concentration camp at *Sachsenhausen. In 1940, Hoess headed the commission charged to decide how to use the Polish army barracks at Auschwitz. His recommendations prompted Heinrich *Himmler's order on April 27, 1940, that established KL Auschwitz, which was planned to house about 10,000 prisoners. Hoess seized the opportunity to display his organizational talents, and was appointed commandant of the new camp on May 1, 1940. He tackled the tasks at hand with a passion, impressing Himmler with his skills. In March 1941 Himmler instructed Hoess to expand Auschwitz to hold the 30,000 prisoners expected to arrive in the course of the anticipated war with the Soviet Union. In addition, Himmler ordered that a camp for 100,000 prisoners of war be set up in nearby Brzezinka (KL

Auschwitz-Birkenau) and that a labor force of 10,000 prisoners be placed at the disposal of I.G. Farben to construct a chemical works.

When Hitler limited Himmler's grand plans for Auschwitz in 1941, Auschwitz was assigned a special role in the plan to kill European Jews, euphemistically termed the "final solution of the Jewish question." In his autobiography, Hoess maintained that he first learned of the plan, and the designation of Auschwitz as the hub of the Holocaust, in the summer of 1941. Accordingly, he modified his plans for Birkenau, and began implementing installations of mass extermination. An experiment was conducted at Auschwitz on September 3, 1941, using the prussic (hydrocyanic) acid gas known commercially as Zyklon-B. Six hundred Soviet POWs and 250 camp prisoners were gassed in the cellars of Block 11 with Hoess personally viewing the experiment.

During the lethal six months from July to December of 1942, Auschwitz served as a killing center. The killing process and the treasures looted from the victims led to widespread reports of corruption. Seven hundred SS men from various camps were either discharged from active service or put under arrest.

In Auschwitz, an investigation uncovered massive corruption; willful, unauthorized killing of prisoners (authorized killing by gas, hanging, and execution was permissible – indeed rewarded) and a special fund through which monies were funneled for officer-corps banquets. As a result, Hoess was reassigned – kicked upstairs – as chief of Department DI, the Central Office within SS-WVHA, in January 1944, where he coordinated all undertakings within the entire camp system. He controlled the activities of camp commandants and could submit proposals for personnel changes in the camps. Hoess's length of service and loyalty to the Nazi cause was rewarded by a mere mild punishment, which on paper looked like a promotion.

After the planned deportation of several hundred thousand Jews from Hungary to Auschwitz in May 1944, Hoess arranged for his successor at Auschwitz, Arthur Liebenhenschel, to be appointed commandant of the Lublin/Majdanek camp. Hoess then returned to Auschwitz, where he assumed the command of the SS garrison for several months. As such, the commandants of all the Auschwitz camps (KL Auschwitz I, II, and III) answered directly and formally to him. Thus, he presided over the murder of Hungarian Jews.

After the collapse of the Nazi regime, Hoess eluded capture for nine months. He was imprisoned in former army barracks at Heide, and then transferred to the main British center for interrogations of the most wanted war criminals. Surprisingly, Hoess was candid in his testimony, giving precise though passive answers. He corrected figures, when he knew them, and statements that he judged to be untrue.

Hoess neither protected anyone nor evaded his own responsibility. Instead, he viewed his deeds as a technical challenge, a triumph of coping with unprecedented circumstances. In prison after conviction, he wrote his memoirs.

His last words once again acknowledged his responsibility for all that occurred in Auschwitz. He did not appeal for leniency. He only asked for permission to send a farewell letter to his family and to return his wedding ring to his wife. On the morning of April 16, 1947, several dozen yards from his former villa near Crematorium I in the main camp, Rudolf Hoess was hanged.

He left behind a legacy of obedience to the Nazi cause and initiative in the implementation of the final solution. He left behind more than a million people murdered by gas and a memoir, which is remarkable for its detail and its detachment.

His description of the killing process is precise, detailed, ice cold:

> The extermination process in Auschwitz took place as follows: Jews selected for gassing were taken as quietly as possible to the crematories. The men were already separated from the women. In the undressing chamber, prisoners of the *Sonderkommandos, who were specially chosen for this purpose, would tell them in their own language that they were going to be bathed and deloused, and that they must leave their clothing neatly together, and, above all, remember where they put them, so that they would be able to find them again quickly after the delousing. The Sonderkommando had the greatest interest in seeing that the operation proceeded smoothly and quickly. After undressing, the Jews went into the gas chamber, which was furnished with showers and water pipes and gave a realistic impression of a bathhouse.
>
> The women went in first with their children, followed by the men, who were always fewer in number. This part of the operation nearly always went smoothly since the Sonderkommando would always calm those who showed any anxiety or perhaps even had some clue as to their fate. As an additional precaution, the Sonderkommando and an SS soldier always stayed in the chamber until the very last moment.
>
> The door would be screwed shut and the waiting disinfection squads would immediately pour the gas [crystals] into the vents in the ceiling of the gas chamber down an air shaft which went to the floor. This ensured the rapid distribution of the gas. The process could be observed through the peep hole in the door. Those who were standing next to the air shaft were killed immediately. I can state that about one-third died immediately. The remainder staggered about and began to scream and struggle for air. The screaming, however, soon changed to gasping and in a few moments everyone lay still. After twenty minutes at the most no movement could be detected. The time required for the gas to take effect varied according to weather conditions and depended on whether it was damp or dry, cold or warm. It also depended on the quality of the gas, which was never exactly the same, and on the composition of the transports, which might contain a high proportion of healthy Jews, or the old and sick, or children. The victims became unconscious after a few minutes, according to the distance from the air shaft. Those who screamed and those who were old, sick, or weak, or the small children died quicker than those who were healthy or young.
>
> The door was opened a half an hour after the gas was thrown in and the ventilation system was turned on. Work was immediately started to remove the corpses. There was no

noticeable change in the bodies and no sign of convulsions or discoloration. Only after the bodies had been left lying for some time – several hours – did the usual death stains appear where they were laid. Seldom did it occur that they were soiled with feces. There were no signs of wounds of any kind. The faces were not contorted.

The Sonderkommando now set about removing the gold teeth and cutting the hair from the women. After this, the bodies were taken up by an elevator and laid in front of the ovens, which had meanwhile been fired up. Depending on the size of the bodies, up to three corpses could be put in through one oven door at the same time. The time required for cremation also depended on the number of bodies in each retort, but on average it took twenty minutes.

[Michael Berenbaum (2nd ed.)]

°**HO FENG-SHAN** (1901–1997), Chinese diplomat in World War II; Righteous Among the Nations. In 1938, Ho served as the Chinese consul-general in Vienna. When Austria was annexed to Nazi Germany in March 1938, the 185,000 Jews there were subjected to a severe reign of terror, and for them to leave the country the Nazis required an entry visa or a boat ticket to another country. However, at the *Evian Conference, in April 1938, the nations of the world refused to budge from their restrictive immigration policies. In contrast to other diplomats, Ho Feng-Shan issued visas to China to all who requested it, even to persons who wished to travel elsewhere but needed to show a visa to be able to leave Nazi Germany. Many of those helped by Ho did indeed reach Shanghai, either by boat from Italy or overland via the Soviet Union. Many others availed themselves of the visa to reach other destinations, such as Palestine, Cuba, the Philippines, and elsewhere. Eric Goldstaub, one of the lucky recipients, who reached Canada, stated that he received a Chinese visa in July 1938 for his entire large family after "I spent days, weeks and months visiting one foreign consulate or embassy after the other trying to obtain visas for myself, my parents and our near relatives numbering some 20 people." Lilith-Sylvia Doron, in Israel, related that she met Ho by chance, as both watched Hitler's entry into Vienna on March 10, 1938, which was accompanied by physical attacks against the city's Jews. "Ho, who knew my family, accompanied me home. He claimed that thanks to his diplomatic status they would not dare harm us as long as he remained in our home. Ho continued to visit our home on a permanent basis to protect us from the Nazis." When Lilith's brother Karl was arrested and taken to the Dachau camp, he was released thanks to a visa from the Chinese consulate. The rush for visas assumed panic proportions during and immediately after *Kristallnacht,* in November 1938, when thousands of Jews were thrown into concentration camps and could only be released if their relatives produced visas or tickets for travel to other destinations. Gerda Gottfried Kraus, who reached Canada, testified that after *Kristallnacht,* her husband stood in a long line to be admitted into the Chinese consulate. Seeing a car approaching the Consulate's gates, he thrust his application form through the car's window. "Apparently, the consul-general received it, because [my husband] then got a call and received the visas." Ho refused to abide by the instructions of his superior, the Chinese ambassador in Berlin, Chen Jie, who forbade him to issue visas on such a large scale, estimated to run into the hundreds, perhaps even thousands. Again, it is worth remembering that although visas were not required for entrance to Shanghai, such a document was a prerequisite for Jews wishing to leave Nazi Germany. It is believed that the "demerit" which was entered into Ho's personal file in 1939 at the Chinese Foreign Ministry was linked to his insubordinate behavior on the issue of the visas toward his immediate superior, the ambassador in Berlin. After a long diplomatic career, Ho retired in 1973. It was only after his death that the story of his help to Jews was made public, through evidence submitted by survivors who benefited from Ho's aid. In 2000, Ho Feng-Shan was declared by Yad Vashem one of the Righteous Among the Nations.

°**HOFER, ANDREAS** (1767–1810), leader of the Tyrolean-Vorarlberg insurrection in 1809 against the Bavarian rule established by Napoleon. Hofer's insurrection and subsequent execution (glorified in a popular song) were an important part of the arsenal of German ultranationalism in Austria, whose protagonists carefully overlooked the considerable Jewish involvement in the revolt. Viennese Jewish bankers, particularly the *Arnstein and Eskeles firm, financed the revolt by circulating the *Tiroler Aufstandwechsel* (promissory notes), and the British government's subsidies to the insurrectionists were paid through these banks. One of the leading propagators of the uprising was Fanny von Arnstein, whose salon in Vienna was the headquarters of Hofer's co-insurrectionist, the Catholic priest Speckbacher; there he met the Prussian prime minister Karl August von *Hardenberg and also Jacob Salomon *Bartholdy, who joined the revolt, was wounded in the fighting, and later wrote its history (*Der Krieg der Tyroler Landsleute im Jahre 1809*, 1814). However the insurgents also attacked the Jews; they plundered five Jewish families in Innsbruck in 1809, and though the *Hohenems community had donated a large sum of money to them, ever larger sums were extorted on the threat of a repetition of the Innsbruck action. When Hofer was brought before the French military court, the Mantua lawyer Joachim Bassevi (1777–1868), later the dean of Milan lawyers, was appointed counsel for the defense. In spite of his efforts, Hofer was executed.

[Meir Lamed]

HOFF, HANS (1897–1969), Austrian psychiatrist. Born in Vienna Hoff was a student of Julius Wagner-Jauregg and later an associate of Otto Poetrl who was an early practitioner of insulin shock treatment in schizophrenia. Hoff's early medical work was in the field of encephalitis and malaria. He moved into psychiatry with studies of the brain function in vision and brain tumors. He left Austria in 1938, going first to the Royal Medical School in Baghdad and then to the United States. From 1945 to 1947 he worked as a neurologist at Presbyterian Hospital in New York and taught at Columbia University. He returned to the University of Vienna in 1949 where he was appointed to the chair of neurology. In addition he became the director of the Vienna neuropsychiatric hospital. Hoff conducted studies of anti-depressant agents and of insulin and drug therapy for schizophrenia. He disagreed with metaphysical concepts in psychiatry as well as with many Freudian theses. He did not, however, see drugs as a cure for mental illness but as a means of enabling the psychiatrist to communicate with the patient. In 1958–59 Hoff was the president of the World Federation for Mental Health. His address to its annual meeting in 1958, "Home and Identity," was concerned with refugees, the threat to their identity, and its restoration. He drew on his own experiences as a refugee. His major works were published after World War II. They include *Psychotherapy* (1949); *Organic Basis of Psychoses* (1950); *Die Zeit und ihre Neurose* (1956); *Psychosomatics* (1959); and *Manual of Treatment of Neurology and Psychiatry* (1966).

BIBLIOGRAPHY: A. Grinstein, *Index of Psychoanalytic Writings*, 2 (1957) and 7 (1964). **ADD. BIBLIOGRAPHY:** H.D. Kraemer, *Hans Hoff – Leben und Werk* (1975).

[Louis Miller]

HOFFER, WILLI (1897–1967), Austrian psychiatrist. Born in Vienna, Hoffer participated in a private seminar with Freud and became a member of the Vienna Psychoanalytic Society. In 1938 he moved to London. He edited the International Journal of Psycho-Analysis for seven years and was a director of the Sigmund Freud archives and a consultant to the Hampstead children's clinic directed by Anna *Freud from its inception in 1952. At his death he was the president of the British Psychoanalytic Society. Hoffer's writings deal mainly with children, dating from his first paper on the latency periods following on the resolution of the oedipal phase, and its disturbances. He was concerned especially with the earliest development of the ego and the differentiation of self from non-self in the infant through the mouth-hand relation, as in "Mouth, hand and ego-integration" (in R.S. Eissler et al. (eds.), *The Psychoanalytic Study of the Child*, 3–4 (1949), 49–56). Other papers of his appeared in the same collection.

HOFFER, YEḤIEL (1906–1972), Yiddish writer. Born in Warsaw and trained as a physician, Hoffer first wrote poetry in Polish. After spending the war in Russia and three years in Paris, where he published a volume of Yiddish poems, he immigrated to Israel in 1951. Several of his novels and short story collections, *A Hoyf oyf Pokorne* ("A Court in Pokorne," 2 vols., 1959, Heb. 1968), *A Hoyf oyf Muranov* ("A Court in Muranov," 2 vols., 1962, Heb. 1977), *Reb Zalman* (1960), *Amol* ("Once," 1963), *Reb Tankhum* (1966, Heb. 1968), vividly depict Jewish Warsaw, especially the ḥasidic courts. He also published a novel about life in a Soviet camp (1969, Heb. 1972). His literary essays were collected in *Mit Yenem un mit Zikh* ("With the Others and with Myself," 2 vols., 1964, 1976), and his poetry in a bilingual Yiddish-Hebrew posthumous volume (1976).

HOFFMAN, CHARLES ISAIAH (1864–1945), U.S. lawyer, Conservative rabbi, and journalist. Hoffman was born in Philadelphia. While a practicing lawyer, Hoffman was the first editor and publisher of the *Jewish Exponent*, one of the earliest and most important Anglo-Jewish weeklies, which represented a traditional religious view. He also worked with the Association for Jewish Immigrants and the Baron de Hirsch Fund, which helped settle new immigrants in agricultural colonies in New Jersey. After 15 years of law practice, Hoffman studied for the rabbinate and was ordained at the Jewish Theological Seminary in 1904. After a short period in Indianapolis, he became rabbi of Ohev Shalom Synagogue in Newark, a position he held for over 40 years. Hoffman was one of the founders of the Rabbinical Assembly and the United Synagogue, which he served as secretary for 25 years. He was a disciple and close friend of Solomon Schechter and helped edit some of his writings. His son ISIDORE B. HOFFMAN (1898–1981), a graduate of the Jewish Theological Seminary, served from 1934 as counselor to Jewish students at Columbia University.

[Jack Reimer]

HOFFMAN, DUSTIN (1937–), U.S. actor. Born in Los Angeles, California, his role in *The Graduate* (1967), his first motion picture performance, was considered the year's most significant screen debut. Hoffman was nominated for a Best Actor Academy Award for *The Graduate,* as well as for subsequent films *Midnight Cowboy* (1969), *Lenny* (as Lenny Bruce, 1974), *Tootsie* (1982), and *Wag the Dog* (1997). Hoffman won Best Actor Oscars, as well as Golden Globe Awards, for his performances in *Kramer vs. Kramer* (1979) and *Rain Man* (1988). His other films include *Little Big Man* (1970), *Straw Dogs* (1971), *Papillon* (1973), *All the President's Men* (as Carl Bernstein, 1976), *Marathon Man* (1976), *Straight Time* (1978), *Agatha* (1979), *Ishtar* (1987), *Family Business* (1989), *Billy Bathgate* (as Dutch Schultz, 1991), *Hook* (1991), *Hero* (1992), *Out-*

break (1995), *Sphere* (1998), *Moonlight Mile* (2002), *Finding Neverland* (2004), *I Heart Huckabees* (2004), *Meet the Fockers* (2004), and *The Lost City* (as Meyer Lansky, 2005).

Among his many other awards and nominations, Hoffman won an Emmy and a Golden Globe Award for Best Lead Actor for his portrayal of Willy Loman in the 1985 TV movie *Death of a Salesman*. In 1997 he won the Golden Globe's Cecil B. DeMille Award for his outstanding contribution to the entertainment field.

Hoffman was entered into *The Guinness Book of World Records* under the heading "Greatest Age Span Portrayed by a Movie Actor" for his role in *Little Big Man,* where he played the character Jack Crabb from age 17 to age 121.

Also successful on the Broadway stage, Hoffman performed in such plays as *The Subject Was Roses* (1964), *Jimmy Shine* (1969), *Death of a Salesman* (1984), and *The Merchant of Venice* (as Shylock, 1990), for which he was nominated for a Tony Award for Best Actor.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

HOFFMAN, JACOB (1881–1956). German Orthodox rabbi. Born in Papa, Hungary, Hoffman studied in the Pressburg (Bratislava) Yeshivah and at the University of Vienna, where he received his doctorate in 1919. After serving in the Montefiore Synagogue in Vienna (1906–8) and in Kostelets (Moravia) (1908–12), he was appointed in 1912 chief rabbi of Radauti and district, in Bukovina, where he remained until 1922. In 1923 Hoffman was appointed chief rabbi of Frankfurt on the Main, succeeding R. Nehemiah *Nobel. There he founded a unique yeshivah which combined rabbinic and secular studies and attracted students from all over Germany and beyond. On Hitler's rise to power he was appointed as the sole Orthodox member of the Reichsvertretung der Juden in Deutschland. In 1937 he was imprisoned by the Nazis and subsequently expelled from Germany. He emigrated to the U.S., where he was appointed rabbi of the Ohab Zedek Congregation, New York, remaining there until he resigned in 1953. In 1954 he settled in Israel, where he died.

While still a student, Hoffman was a delegate to the founding World Conference of the Mizrachi held in 1904, and was prominently connected with the movement all his life. He published two manuscripts by a disciple of Naḥmanides consisting of commentaries on the tractates *Ta'anit* (1951) and *Beẓah* (1956).

BIBLIOGRAPHY: J. Hoffman, *Perush Talmid ha-Ramban le-Massekhet Beẓah* (1956), Foreword.

HOFFMAN, JEFFREY (1944–), U.S. astronaut. Born in Brooklyn, New York, Hoffman received his B.A. from Amherst College in 1966, a Ph.D. in astrophysics from Harvard University in 1971, and a master's degree in materials science from Rice University in 1988. He worked at the Center for Space Research at the Massachusetts Institute of Technology (MIT) as project scientist in charge of an orbiting hard X-ray and gamma ray experiment (1975–78).

Selected by NASA in 1978, Hoffman became an astronaut in 1979. He participated in five space missions – on the space shuttles *Discovery* (1985); the *Columbia* (1990); the *Atlantis* (1992); the *Endeavor* (1993); and again on the *Columbia*, on a 16-day mission (1996). On his first mission he made a four-hour space walk in an attempt to rescue a malfunctioning communications satellite; on the fourth mission he repaired the faulty Hubble Space Telescope; on his final mission, Hoffman became the first astronaut to log 1,000 hours aboard the space shuttle. With the completion of his fifth space flight, Hoffman had logged more than 1,211 hours and 21.5 million miles in space. Among his many honors, Hoffman was awarded the NASA Distinguished Service Medal in 1994 and 1997.

A dedicated Jew, Hoffman took into space a Scroll of the Law (a mezuzah) and a silver Torah pointer. On his fourth flight, he celebrated Hanukkah in orbit with a menorah and a dreidel.

He left the astronaut program in 1997 to become NASA's European representative in Paris, where he served until 2001. He then began to teach at MIT, where he became a professor in the Department of Aeronautics and Astronautics, teaching courses on space operations and design. He also engaged in several research projects using the International Space Station.

Hoffman was a member of the International Academy of Astronautics, the International Astronomical Union, and the American Institute of Aeronautics and Astronautics, and codirector of the Massachusetts Space Grant Alliance.

In 1985, on his first space flight, Hoffman kept a personal audio diary on a tape recorder. It became a book titled *Astronaut's Journal* (1986).

[Ruth Beloff (2nd ed.)]

HOFFMAN, JULIUS JENNINGS (1895–1983), U.S. federal district court judge. Hoffman was born in Chicago, Illinois. He attended Northwestern University, earning a Ph.B. in 1912 and a J.D. in 1915, when he was admitted to the Illinois bar. Hoffman worked as associate and partner at law firms and as a general counsel for the Brunswick Company. In 1947, Hoffman was elected judge of the Superior Court of Cook County. In 1953, President Dwight D. Eisenhower nominated him to the U.S. District Court for the Northern District of Illinois in Chicago. He served in this court until his death in 1983.

During his long career as a trial judge, he presided over many important cases, including the suit to compel the desegregation of the public schools of Chicago and the deportation suit against Frank Walus, a Polish American in Chicago, falsely accused of being a Gestapo collaborator known as the "Butcher of Kielce."

Hoffman's reputation for wit and urbanity suffered

greatly in the case for which he is best remembered, the Chicago Seven Trial, in which several radicals were accused of conspiring to incite confrontations between the police and approximately 10,000 protestors against the Vietnam War, which occurred during the Democratic National Convention in Chicago in August 1968.

Mayor Richard J. Daley was determined not to allow war protesters to mar his efforts to showcase his city at the time of the convention. Daley's administration banned demonstrators from sleeping in Grant Park, near the site of the convention, and ordered the Chicago Police to enforce a curfew. Each night during the convention the police entered the park and used tear gas on the demonstrators who ignored the curfew.

Eventually seven political activists were indicted under the Anti-Riot Act: Rennie Davis, David Dellinger, John Froines, Tom Hayden, Abbie Hoffman, Jerry Rubin, and Lee Weiner.

All the actors in the courtroom drama insured that the political tensions of the era spilled over into the courtroom, but the "Battle of the Hoffmans" (Julius and Abbie) was the most prominent of these clashes. Abbie promised that the trial was "going to be a combination Scopes trial, revolution in the streets, Woodstock Festival and People's Park, all rolled into one." For his part, Judge Hoffman frequently manifested his distaste for the defendants and their attorneys. Hoffman refused to allow many defense witnesses to testify (singers, artists, and activists).

Although the jury acquitted two of the defendants, Judge Hoffman sentenced all seven to five years in prison and a fine of $5,000 each. Judge Hoffman also held all of the seven defendants and both of their attorneys in contempt of court and imposed criminal sanctions for disrespectful behavior, but these sanctions were overturned.

On November 21, 1972, all of the conspiracy convictions were also overturned because the court was found to have refused to allow sufficient scrutiny of the bias of potential jurors, committed several procedural errors, and manifested a "deprecatory and often antagonistic attitude toward the defense." Ironically, Judge Hoffman's judicial demeanor demonstrated the kernel of truth in Abbie Hoffman's view that the terms "legal and illegal" are "political, and often arbitrary, categories."

Hoffman continued to preside over cases until his death from natural causes in 1983.

[Edward McGlynn Gaffney, Jr. (2nd ed.)]

HOFFMAN, LAWRENCE A. (1942–), scholar. Born in Kitchener, Ontario, Canada, Hoffman became a leading scholar, teacher, and spokesperson for the North American Reform Movement, with influence extending well beyond the movement. He received his B.A. from the University of Toronto in 1964. He was ordained by Hebrew Union College in 1969. He completed his Ph.D. there in 1973, before he joined the faculty of Hebrew Union College in New York, eventually being named the first Barbara and Stephen Friedman Professor of Liturgy, Worship and Ritual. From 1984 to 1987, he also directed the college's School of Sacred Music.

For 30 years, Hoffman combined research, classroom teaching, and a passion for the spiritual renewal of North American Judaism. He wrote or edited 26 books, including *The Canonization of the Synagogue Service* (1979), the classic account of how the *siddur* and *maḥzor* came into being. His pioneer work applying ritual studies to prayer (*Beyond the Text* (1987)) was hailed as a paradigm shift for Christians and for Jews. Rather than study liturgy as text, he directed attention to the ritualization of that text as acted out in "the sacred drama" of worship. *Covenant of Blood: Circumcision and Gender in Rabbinic Judaism* (1995) combines a history of circumcision and an account of its symbolic meaning through the ages. As an early leader in spiritual worship renewal, he wrote *The Art of Public Prayer: Not for Clergy Only* (revised ed. 1999). Hoffman's non-technical writings include *The Journey Home* (2003), a study in Jewish spirituality derived from Jewish texts; *The Way into Jewish Prayer* (2000), and a revised version of *What Is a Jew?* (1993), probably the most widely read introduction to Judaism. His ongoing series, *My People's Prayer Book* (nine volumes published since 1997) provides liturgical commentary by modern scholars across the gamut of Jewish thought and practice. His articles, both popular and scholarly, have appeared in eight languages and on four continents, and include contributions to such encyclopedias and journals as *The Macmillan Encyclopedia of Religion*, *The Oxford Dictionary of Religion*, *The Oxford Handbook of Jewish Studies*, *The Encyclopedia of Judaism*, *Worship*, *Studio Liturgica*, and *The Fordham Law Review*. He syndicates a regular column commenting on *parashat ha-shavu'a*.

He is the first Jewish member and past-president of the North American Academy of Liturgy, the professional and academic organization for liturgists, and a recipient of their prestigious Berakhah Award for lifetime achievement in his field. Hoffman emerged as a leader in synagogue transformation by co-founding Synagogue 2000 (now 3000): a Transdenominational Institute for the Synagogue of the 21st Century. A beloved mentor and teacher, Hoffman is widely credited with influencing two generations of synagogue leadership to transform synagogues into "sacred communities" and "moral and spiritual centers for the new century."

[Ronald Wolfson (2nd ed.)]

HOFFMAN, PHILIP E. (1908–1993), U.S. attorney, business executive, and Jewish leader. Hoffman was born in New York and graduated from Yale Law School in 1932, where he was a member of the editorial board of the *Yale Law Review.* During World War II he served as assistant general counsel

of the War Production Board in Washington, D.C. (1942–45). Subsequently he was appointed hearing commissioner of the National Production Authority (1950–52) and chairman of the Jewelry Industrial Coordination Commission (1954–57). Hoffman was a partner in the law firm of Hoffman and Tuck and chairman of the diversified U.S. Realty and Investment Co. in Newark, New Jersey.

He began his career in Jewish affairs by serving as the youngest chairman of the United Jewish Appeal in Essex County, N.J. He became president of the Essex County Chapter of the American Jewish Committee, and then chairman of the Executive Board, Board of Governors, and Domestic Affairs Committee, and in 1968 was elected president. In this capacity, he traveled extensively to the countries of Eastern Europe, Western Europe, and the Middle East, including numerous trips to Israel. In 1964 he met with Pope Paul VI to discuss Jewish-Catholic relations, and in 1966 he met with Catholic scholars in Europe to discuss the removal of prejudiced references to Jews from religious textbooks. In 1972 President Nixon appointed Hoffman to the post of U.S. representative to the Commission on Human Rights of the United Nations. He was the recipient of numerous human relations awards.

[Julian J. Landau]

HOFFMANN, CAMILL (1878–1944), Czech poet, anthologist, and translator who wrote in German. A member of *Hofmannsthal's circle, Hoffmann wrote neo-Romantic and impressionistic verse and was considered an important lyric poet. In 1902 he collaborated with Stefan *Zweig in the translation and publication of an anthology of Baudelaire's works entitled *Gedichte in Vers und Prosa*, and he also published translations of Balzac and Charles-Louis Philippe. Hoffmann's first original collection of verse, *Adagio stiller Abende* (1902), was followed by *Die Vase* (1911) and *Glocken meiner Heimat* (1936). He was literary editor of the Viennese periodical *Die Zeit* and of the *Dresdner Neueste Nachrichten*. In 1912 he published a comprehensive anthology of Austrian poetry entitled *Deutsche Lyrik aus Oesterreich seit Grillparzer*. Hoffmann was a close friend of the Czechoslovak president, Thomas Masaryk, whose writings he translated into German. From 1920 until 1938 he was counselor at the Czech embassy in Berlin and head of its press bureau. Hoffmann was deported from Czechoslovakia by the Nazi regime and died in Auschwitz.

[Harry Zohn]

HOFFMANN, DAVID ẒEVI (1843–1921), rabbi and biblical and talmudic scholar. Hoffmann was born in Verbo (Slovakia) and studied at Hungarian yeshivot, as well as at the *Hildesheimer Seminary in Eisenstadt. He later studied in the universities of Vienna, Berlin, and Tuebingen. In 1873, when Hildesheimer established his Rabbinical Seminary in Berlin, he invited Hoffman to lecture on the Talmud and the *posekim*, and later also on the Pentateuch. After Hildesheimer's death in 1899, Hoffmann was appointed rector of the Seminary. He was member and later chairman of the *bet din* of the Adass Yisroel congregation in Berlin. Toward the end of his life he was regarded as the supreme halakhic authority of German Orthodox Jewry and was inundated by questions in *halakhah* from most of the German rabbis. In 1918, on his 75th birthday, he was awarded the title professor by the German government. Hoffmann was reserved by nature, but nevertheless he taught publicly and voiced his opinion on public matters. He was a member of the executive of Agudat Israel, but at the same time spoke on behalf of Zionism, although fearing the reaction of extremists he hesitated to publish his opinions.

His responsa, collected in the three volumes of *Melammed le-Ho'il*, are distinguished by a concern with contemporary conditions, and a tendency to leniency, wherever possible, in matters of *halakhah*, though he was a violent opponent of reform. Hoffman always based his lenient stance on firm halakhic ground, using such concepts as an emergency situation (*sha'at ha-deḥak*), potential financial loss, custom, and the prevention of a desecration of God's name. However, he knew how to be strict as well, prohibiting smoking in the synagogue and maintaining the Torah prohibition against a kohen having physical contact with a corpse. His responsa reflect the challenges of Jewish life in the late 19th century. Hoffmann dealt with such issues as being hospitalized in a non-Jewish hospital where only non-kosher food is served; taking prescription medicine that contains blood; and taking an oath before a gentile court with an uncovered head. Faced with the choice between maintaining the strict Halakhah or keeping Jews within the fold, Hoffmann chose the latter course of action.

In several of his works as, for example, in his apologetic book on the Shulḥan Arukh, he directed a polemic against antisemites – non-Jews and apostates – who criticized halakhic law. His biblical investigations, too, were directed against biblical criticism. These writings, which occupied him for many years, were viewed by Hoffmann as "a holy undertaking… an obligatory battle to answer decisively these new critics who come as oppressors to violate the holy Torah." In his work opposing Wellhausen, Hoffmann rejected the theories of "sources," but he did not formulate an original method of biblical investigation, relying on the basic assumption of "Torah from heaven." In his commentaries to Leviticus and Deuteronomy he relied on rabbinic homiletical and exegetical interpretations for an understanding of these books, as well as offering his own innovative ideas, often based on comparisons between biblical Hebrew and other Semitic languages. While his approach to biblical investigation was essentially the result of the conditions of his time and place, they have stood the test of time and are still studied.

On the other hand, Hoffmann advocated talmudic criticism as long as it does not negate the *halakhah*, and this aroused the anger of several rabbis, among them S.R. *Hirsch. Hoffman was the first among German Orthodox Jews who investigated and interpreted the Talmud by means of a critical method in German. Most of his talmudic studies, written in German, deal with tannaitic literature. In his investigation of the *Mishnah he concluded that there existed a "First

Mishnah," which was edited before the destruction of the Second Temple, and on which later *tannaim* were divided in their opinions. In his investigation of halakhic Midrashim, which is his most important work, he established the relation of different anonymous *beraitot* in halakhic Midrashim to two different schools, and formulated a system of dividing all halakhic Midrashim into two types: those originating in the school of R. Ishmael and those of the school of R. Akiva. He thus explained the differences in various Midrashim in terminology, in the names of *tannaim* mentioned, and in methods of interpretation. Though some later scholars strongly questioned his conclusions (see Ch. *Albeck), it is to Hoffmann's credit that he was the first to discuss the problem in all its manifestations, that he recognized the existence of the division of Midrashim and described the evidence of this division, and that he laid the foundation for further research on the tannaitic Midrashim. Hoffmann even attempted – especially by way of selections from the *Midrash ha-Gadol* – to reconstruct halakhic Midrashim which had been lost (*Mekhilta de-R. Simeon b. Yoḥai* and *Midrash Tanna'im*). It was proven, however, from manuscripts discovered later, that his method was not always sufficiently scientifically based. In 1876–93 Hoffmann edited, together with A. *Berliner, the *Magazin fuer die Wissenschaft des Judentums*, and in 1884–95 he edited the monthly *Israelitische Monatsschrift*. Hoffmann's area of interest and knowledge was comprehensive and also included Semitic and classical philology and even mathematics. He was a prolific and diligent scholar. In addition to his great works he wrote hundreds of articles which made a significant contribution to the development of the philological research into the Talmud. A Festschrift was published in his honor on the occasion of his 70th birthday, which opens with a bibliography of his writings compiled by L. Fischer (*Festschrift zum… Hoffmann's*, 1914).

Despite his greatness, Hoffmann was humble and modest. His outstanding qualities were manifest both in the scientific world and public life, and in his private life. Those who knew him considered him as one of the spiritual heirs and successors of the *Ḥasidei Ashkenaz.

His major books are *Mar Samuel* (1873); *Die erste Mischna und die Controversen der Tannaim* (1882, 1913²; Heb. *Ha-Mishnah ha-Rishonah u-Felugta de-Tanna'ei*, 1914); *Der Schulchan-Aruch und die Rabbinen ueber das Verhaeltniss der Juden zu Andersglaeubigen* (1885, expanded 1895²); *Zur Einleitung in die halachischen Midraschim* (1887; Heb. *Le-Ḥeker Midreshei ha-Tanna'im*, 1928); *Die Mischna-Ordnung Nisikin uebersetzt und erklaert mit Einleitung* (1893–97, 1899²); *Die wichtigsten Instanzen gegen die Graf-Wellhausensche Hypothese* (2 vols., 1903/1916); *Die Mechilta des R. Simon b. Jochai* (1905); *Das Buch Leviticus uebersetzt und erklaert* (2 vols., 1905/06); *Midrash Tannaim zum Deuteronomium* (2 vols., 1900/09); *Midrasch ha-gadol zum Buche Exodus* (2 vols., up to "Jethro," 1914/21); *Das Buch Deuteronomium uebersetzt und erklaert* (2 vols., 1913/22; *Melammed Leho'il* (responsa, 3 vols., 1926–32).

[Moshe David Herr / David Derovan (2nd ed.)]

HOFFMANN, JACOB (1891–1943), *Revisionist leader. Born in Yelizavetgrad (now Kirovograd), Russia, Hoffmann was the Zionist disciple of V. *Tiomkin, who resided in that city. He studied medicine at the universities of Berne and Dorpat. In his student days he was active in the student organization, *He-Ḥaver. He served as a medical officer in the Czarist army in World War I and was one of the few Jews to be awarded a military distinction. In 1920 Hoffmann settled in Riga, Latvia, where in 1923 he was instrumental in founding the Zionist students' association, Ḥashmonai, the union of Zionist activists (1923), which in fact became the first branch of the Revisionist movement; and the first group of *Betar (Berit Trumpeldor). He worked on behalf of the *Jewish National Fund in Latvia and was one of the founders of *Dos Folk*, a Yiddish newspaper, and of the Ha-Ko'aḥ sports organization. At Vladimir *Jabotinsky's invitation, he moved to Paris and headed the organizational department of the Revisionist movement. In 1934 he settled in Palestine.

[Getzel Kressel]

HOFFMANN, ROALD (1937–), chemist, Nobel Prize winner. Born in Zolochev, Poland, Hoffmann immigrated to the United States in 1949. After receiving a bachelor's degree from Columbia University in 1958, he attended Harvard University, where he was awarded an M.A. in 1960 and a doctorate in chemical physics in 1962. He has been associated with Cornell University since 1965: associate professor 1965–1968, professor of chemistry from 1968, and Frank H.T. Rhodes Professor of Humane Letters from 1996. He is the recipient of many awards, among them the American Chemical Society's Pure Chemistry Award for fundamental research in pure chemistry in 1969, the Arthur C. Cope Award for outstanding achievements in organic chemistry in 1973, and the Pauling Award in 1974. He was awarded the Nobel Prize in chemistry in 1981. His research focused on molecular orbital calculations of electronic structures of molecules and theoretical studies of transition states of organic and inorganic reactions. Hoffmann is a member of the U.S. National Academy of Sciences and numerous other societies. He also writes poetry (four published collections), plays, and essays (including *Old Wine,*

New Flasks: Reflections on Science and Jewish Tradition, with Shira Leibowitz–Schmidt).

HOFFMANN, YOEL (1937–), Hebrew novelist. Hoffmann was born in Hungary and came to Ereẓ Israel when he was a year old. He studied Japanese and philosophy, spent two years in a Buddhist monastery, and earned his doctorate in Japan. A professor of Japanese and Far Eastern philosophy at Haifa University, Hoffmann published *The Idea of Self: East and West: A Comparison between Buddhist Philosophy and the Philosophy of David Hume* (1980). Hoffmann also translated and edited collections of Japanese poetry and haiku, including *The Sound of the One Hand* (1975; German: 1978), *Radical Zen* (1978), *Japanese Death Dreams* (1986; German: 2000), *Rein in Samsara* (333 Zen-stories which appeared in German, 2002). Hoffmann began to write fiction in his late forties and in 1988 published his first Hebrew book: *Sefer Yosef* (*Katschen and the Book of Joseph*, 1998) with four prose texts. One of them is the novella *"Keẓkhen,"* which tells of a boy who following the early death of his mother is brought up by family members and later fails to integrate among kibbutz children. At the end of his voyage, Keẓkhen decides to follow his German-speaking father, who is considered to be mentally ill. This choice marks metaphorically the boy's rejection of the ubiquitous conventions and the notion of a monolithic Israeli identity in favor of his own genuine individuality and his inner world.

While in the early prose texts a certain plot-line and development can be discerned, the later texts display Hoffmann's idiosyncratic narrative techniques and unique style. The reader is confronted with a perplexing, untraditional, enigmatic prose: "novels" which are comprised of short texts, unpaginated though numbered prose miniatures in Hebrew that are interlaced with writing in various European languages, mainly German. Hoffmann creates a linguistic polyphony, unprecedented and bizarre, a mirror to a world of immigrants who came to Israel and yet are closely tied to their European roots. Typically, *Bernhart* (1989; English, 1989) depicts the world of German-Jews (yeckes) in Israel, torn between European reminiscences and sights and Israeli reality, between major historical events and the private experiences of daily life. Anecdotes and recollections, observations and deliberations, at times humorous, at times melancholy or earnest make up a prose texture that poses a challenge to readers. Hoffmann, no doubt one of the most original and exciting contemporary Hebrew writers, albeit still the preserve of insiders and cognoscenti, has also published the following books: *Kristus shel Dagim* (1991; *The Christ of Fish*, 1999); *Guttapershah* (1993), the story of two yeckes, Hugo and Franz, and a baby, real or imaginary, hanging between them; *Ma Shelomekh, Dolores?* (1995), a narrative tableau of an ordinary day in the life of a woman living in Ramat Gan; *Ha-Lev Hu Katmandu* (2000; *The Heart is Katmandu,* 2001); *Efraim* (2003), tracing the separation of a woman and a man who falls in love with another woman in Haifa; and *Ha-Shunra ve-ha-Schmetterling* (2003; *The Shunra and the Schmetterling*, 2004), in which Hoffmann recollects moments, smells, sounds and characters from his childhood in Ramat Gan.

[Anat Feinberg (2nd ed.)]

HOFMANN, ISAAC LOEW (1759–1849), Austrian financier; leader of the Vienna Jewish community. Orphaned at the age of 13, he studied Talmud in Prague and then was employed as tutor and bookkeeper in the house of J.B. Koenigswart (*Koenigswarter). Subsequently he married his employer's granddaughter and became manager of the business on its transfer to Vienna in 1788. In 1798 Hofmann established the manufacture of silk in Austria, thereby freeing the country from her dependence on Italian imports; for this purpose he was permitted to acquire an estate in Lower Austria. He also was instrumental in the development of a potash industry. In 1830 he unsuccessfully petitioned Francis I for a title, but under Ferdinand I, in 1835, he was knighted as Edler von Hofmannsthal. His coat of arms depicted a silkworm, a mulberry leaf, a poorbox, and the decalogue. Hofmann was very active in the Vienna Jewish community (from 1806). He was especially concerned with charitable institutions and the school system. He was one of the founders of the Vienna Temple, and deeply opposed extreme Reform tendencies within the community. On the Vienna board of deputies, Hofmann represented the conservative viewpoint and was influenced by Mordecai *Banet. He opposed I.N. *Mannheimer's reforms, and invited the Orthodox rabbi Lazar *Horowitz to Vienna. Hofmann's son Augustus, the father of the Aus-

trian poet, Hugo von *Hofmannsthal, became a convert to Roman Catholicism.

HOFMANNSTHAL, HUGO VON (1874–1929), Austrian poet and playwright; one of the outstanding exponents of Viennese impressionism and symbolism. He was a great-grandson of Isaac Loew *Hofmann but his grandfather and father both converted to Roman Catholicism. While the poet never denied his Jewish ancestry and in his early years even reflected on the meaning of being "Jewish" – as unpublished documents prove – the preoccupation with Judaism hardly entered his oeuvre. Hence there are only a few vague hints of it in his verse, such as the lines: "I cannot rid my eyelids of the weariness of forgotten races" ("Ganz vergessener Voelker Muedigkeit kann ich nicht abtun von meinen Lidern"). Hofmannsthal matured early and was still a schoolboy when he became the protégé of Arthur *Schnitzler, who introduced him to Theodor *Herzl as a promising writer for the newspaper *Neue Freie Presse*. Melancholy and solitary by nature, and revolted by the decadence of Viennese society, Hofmannsthal turned for solace to the great writers of the past, and many of his most important works are adaptations of Greek, English, and Spanish dramas. One of the most successful was *Jedermann* (1911), a modern version of the medieval English mystery play *Everyman*, commissioned by Max Reinhardt for the Salzburg Festival. Several of his plays were turned into operas by Richard Strauss, notably *Elektra* (1909) and *Der Rosenkavalier* (1911). *Der Turm* (1925–7), a tragedy inspired by one of Grillparzer's plays, introduces a Jewish character, Simon, who speaks in a typical Yiddish dialect.

[Sol Liptzin / Philipp Theisohn (2nd ed.)]

HOFSTADTER, RICHARD (1916–1970), U.S. historian. Hofstadter was born in Buffalo, New York. After teaching at the University of Maryland he joined the faculty of Columbia University in 1946 and was named professor in 1952. His *American Political Tradition and the Men Who Made It* (1948) synthesized the critical views of classic figures, rejecting Theodore Roosevelt, for example, as paranoid. *The Age of Reform from Bryan to FDR* (1955), which won a Pulitzer Prize, saw reformers as looking back to an archaic Jeffersonian ideal unsuited to modern needs. *Anti-Intellectualism in American Life* (1963) also won several awards. *The Paranoid Style in American Politics* (1965) emphasized right-wing failings. Hofstadter was a coauthor of *The Development and Scope of Higher Education in the United States* (1953), and *The Development of Academic Freedom in the United States* (1955).

[Louis Filler]

HOFSTADTER, ROBERT (1915–1990), U.S. physicist and Nobel Prize winner. Born in New York, Hofstadter earned his master's and doctorate degrees at Princeton; he also taught there and at City College, New York, where he had taken his B.S. degree. During World War II he worked as a physicist for the National Bureau of Standards, where he helped develop the proximity fuse device, an anti-aircraft weapon that detonated a shell when it detected objects approaching on the radar. In 1950 Hofstadter moved to Stanford University, California, where he was to remain until his retirement in 1985, at which time he held the position of Max H. Stein Professor Emeritus of Physics. He headed the High Energy Physics Laboratory at Stanford from 1967 to 1974.

Hofstadter was awarded a Nobel Prize in physics in 1961, together with Rudolph Moessbauer, for his investigation of the structure of atomic nuclei and nucleons and for his work on introducing order into the multiplicity of subatomic particles. He used the atom smasher at Stanford University to study how high-energy electrons were scattered by atomic nuclei. From this he obtained an insight into the structure of the nucleus. He deduced the possible existence of two powerful sub-particles – the rho-meson and the omega-meson, which were subsequently detected.

Hofstadter received the Townsend Harris medal from City College in 1961, while Brandeis University created the Robert Hofstadter Physics Library in his honor in 1968. He also enjoyed many honorary degrees and fellowships and was governor of the Israel Institute of Technology and the Weizmann Institute of Science. He wrote or edited many scientific papers and books. After his retirement, he remained active in scientific research, helping construct a gamma ray observatory and conducting research into techniques for exploring heart functions using radioactive substances as an alternative to intrusive devices such as catheters.

HOFSTEIN, DAVID (1889–1952), Yiddish poet. Born in the Ukraine, he had a traditional Jewish education and began to write in Yiddish, Hebrew, Russian, and Ukrainian. However, after the 1917 Revolution he wrote only in Yiddish, contributing to various publications. He was coeditor of the Moscow journal *Shtrom*, the last organ of free Jewish expression in Russia. The Communist Revolution of 1917 aroused Hofstein's enthusiasm. The poems in which he acclaimed the achievements of the Revolution established his popularity as one of the Kiev triumvirate of Yiddish poets, along with Leib *Kvitko and Perez *Markish. His elegies for Jewish communities devastated by counterrevolutionary pogromists appeared in 1922,

with illustrations by Marc Chagall. Exercising his newfound freedom, in 1924 he protested the banning of Hebrew and the persecution of Hebrew writers, but discovered that his protest made him suspect. He therefore left Russia, immigrating first to Germany and from there in 1925 to Palestine. In Palestine he wrote both in Hebrew and Yiddish. In 1924–25 he published in Yiddish the dramatic poem "Sha'ul – Der Letster Meylekh fun Yisroel" ("Shaul – the Last King of Israel") and an expressionistic drama *Meshiekhs Tsaytn* ("Messianic Times"). He returned to Kiev in 1926, where he soon found himself compelled to follow the Communist Party line faithfully, to praise Soviet achievements, and to describe Birobidzhan as the Promised Land where Jewish genius would flourish. His works there evidence the conflict between his sorrow over the disintegration of Jewish society and his pride in the salvation offered by the Soviet regime. When, in 1948, Israel came into existence with the support of the U.S.S.R., Hofstein hailed the new state with genuine enthusiasm; but, with the change in the Soviet attitude toward Israel, he was arrested and transported to Moscow, where the secret police fabricated the "conspiracy of the Jewish *Anti-Fascist Committee." He was shot on August 12, 1952, together with other leaders of the committee, including his fellow writers Dovid *Bergelson, Perez *Markish, Leib *Kvitko, and Itsik *Fefer. After the death of Stalin, Hofstein was rehabilitated as a victim of Stalinist repression. His selected works, which had appeared shortly before his arrest in 1948, reappeared in a Russian translation in 1958.

HOGA, STANISLAV (1791–1860), Hebrew translator. Born in Kazimierz (near Lublin) and educated in a ḥasidic home, Hoga served as an interpreter to Napoleon's army stationed in Poland and subsequently became a mediator on behalf of the Jews with the authorities. In 1817, he moved to Warsaw where he became the secretary of the "Jewish Committee" of the Warsaw Municipality. The post enabled him to convey valuable information in this capacity to the Warsaw Jewish leaders concerning edicts which were to be issued. In 1825, he converted to Christianity but continued to aid the Jews, and in a comprehensive essay, written in Polish, he refuted antisemitic claims. In 1833, he disappeared from Warsaw, later appeared in London where he worked as a missionary, and in 1839 translated into Hebrew A. MacCaul's conversionist missionary work *Netivot Olam* (1910[6]) followed by other works such as Bunyan's *Pilgrim's Progress* (2 vols., 1844). He also translated Christian prayers, other proselytizing literature, and was one of the editors of a Hebrew edition of the New Testament (1838) and published an English grammar in the Hebrew language (1840). In 1845, he returned to Judaism and published a number of articles on Jewish values and ethics. In his last years he patented a number of inventions, but nevertheless died in penury.

ḤOGLAH (Heb. חָגְלָה), moshav in central Israel, in the Ḥefer Plain, affiliated with Tenu'at ha-Moshavim, founded in 1933 by experienced agricultural workers. Citriculture, dairy cattle, poultry, flowers, subtropical orchards, and plant nurseries constituted the moshav's main farming branches. In 1969, its population numbered 189, rising to 280 in 2002. Recently the moshav became a partner in a joint venture with Kibbutz Ein Ha-Ḥoresh and *Mekorot to sell water from private wells to the Israeli Water Authority. The name Ḥoglah refers to the Ḥefer Plain, the biblical Hoglah being the granddaughter of Hepher (Num. 26:33; Josh. 17:3).

[Efraim Orni]

HOHENAU, town in N.W. Lower Austria, near the Czechoslovak border. Documents dating from 1620 make the first mention of Jews in Hohenau and the existence of a synagogue was recorded in 1638. Between 1652 and 1666 six Jewish families lived in the town. With the expulsion of the Jews from Vienna in 1670, the Hohenau community also ceased to exist. It was reestablished after 1861, and a cemetery was consecrated in 1879. With the establishment of a sugar refinery the whole town prospered; the Jewish founder later served as mayor. When the cemetery was desecrated in 1933, the Catholic priest took his congregation to hold a service there. In 1934, 70 Jews lived in Hohenau; they were forced to move to Vienna in 1938 because of the town's proximity to the border, and 26 members of the community later died in Nazi extermination camps. Only one Jew returned to Hohenau after World War II.

[M.La.]

HOHENEMS, town in Vorarlberg, Austria. In 1617 a ducal charter of privileges put a dozen Jewish families who had fled to Hohenems from Burgau on an equal footing with the Christian burghers in most respects. As tax, they were obliged to pay 10 gulden and two well-fed geese annually. By the middle of the 17th century the community had increased to around 30 families. Temporary expulsion (1676–88), increased taxation, and restrictive legislation characterized the late 17th and early 18th century. Eight years after Hohenems had passed to Austrian rule (1765), there were 227 Jews (10% of the total population) living in 24 houses, concentrated in one street, constituting a separate municipal body. A government edict promising protection for the Jews was issued in 1769. Under Bavarian rule (1805–14) the community was ordered to incorporate with the township (1813). The order was renewed

by *Francis I (1817) but never enforced. Until 1848 there was frequent strife between the Jewish community and the township over the question of taxation. Since they were prohibited from doing business in Vorarlberg province, Hohenems Jews became successful merchants in Switzerland and Italy. During the period from 1849 to 1878 the Jewish community was reconstituted as a municipality with its own mayor.

Under Rabbi J.L. Ullmann, a *ḥevra kaddisha* was founded (1760), and a synagogue opened (1772). Because of his attempt to introduce reforms, R. Abraham *Kohn (1833–44) was forced to leave Hohenems for Lemberg. The community possessed its own elementary school (1784), *mikveh*, and slaughter house, and boasted of 22 charitable and cultural foundations. In the middle of the 19th century many Hohenems Jews emigrated to the U.S. By 1860 the community had diminished by half. After the constitution of 1867 allowed Jews to settle freely in Austria, the community declined rapidly in number, from 455 in 1866 and 221 in 1869 to 165 in 1878. By 1939 only 10 Jews remained in Hohenems. The synagogue was severely damaged in 1938, and in 1940 the remaining Jews were deported to Vienna. The cemetery, consecrated in 1617, was cared for by the St. Gallen community after World War II. After the war, Stefan *Zweig was buried beside his mother in the local cemetery after committing suicide near Rio de Janeiro in 1942. Among Hohenems' more prominent citizens was Solomon *Sulzer, the Vienna *ḥazzan*.

BIBLIOGRAPHY: A. Taenzer, *Die Geschichte der Juden in Tirol und Vorarlberg*, 2 (1905).

HOHENZOLLERN, former Prussian province in S. Germany. The history of the Jews of Hohenzollern is largely the history of the three main communities: Hechingen, Haigerloch, and Dettensee. The former two were autonomous bodies with separate mayors and officials up to 1871 and 1837 respectively, when emancipation was granted.

Hechingen

There was a small Jewish settlement in Hechingen in the early 16th century, and a house was bought for use as a synagogue by the community of 10 families in 1546. In 1592 the burghers refused to conduct any commercial or financial transactions with Jews, who therefore left the town. There is no trace of Jewish settlement in the town during the next century. In 1701 Prince Frederick William I gave letters of protection lasting 10 years to six Jewish families in the neighboring villages; soon there were Jews living in the city as well. By 1737 there were 30 households, and a synagogue was built in 1761 which existed until 1870. From the end of the 18th century, the *Kaulla family of court financiers helped to improve the condition of the Jews. In 1803 they erected a *bet midrash* which remained in existence until 1850. Hechingen had 809 Jews (one-quarter of the total population) in 1842; the number declined to 331 in 1885 and 101 in 1931. The community was prosperous and owned most of the local industries. On the night of Nov. 9, 1938, the synagogue was demolished; 32 Jews from Hechingen were deported and murdered during World War II.

Dettensee

In 1720 the first Jews were admitted into Dettensee. The 23 Jewish families, mainly livestock dealers, were compelled in 1764 to live in only three buildings which housed the synagogue and schoolroom as well. In 1800 they were forced by the townspeople to quarter horses even though none of them owned stables. Repeated protests and requests for some amelioration of living conditions were of no avail. The number of families was restricted; younger sons had no option but to leave. Eleven out of 23 families lived on charity in 1807. However, a synagogue was opened in 1820 and a cemetery consecrated in 1830. At that time there were 173 Jews in the village; by 1890 the number had declined to 100 largely through emigration, and in 1932 only two were left.

Haigerloch

Jews lived at Haigerloch in early medieval times but in 1348 they were all burned during the *Black Death persecutions. Only in the latter half of the 16th century were a number of Jews readmitted to the town. Repeated protests by the burghers against Jewish moneylenders, peddlers, and beggars induced Duke Joseph to restrict the number of tolerated Jewish families in 1745 and to prohibit them from marrying in 1749; the latter order was subsequently rescinded. In 1752 the whole community escaped at night when forced to be present at Christian services. Only those prepared to attend church four times a year were allowed to remain. Twenty Jewish families lived in a special quarter, the "Haag," in 1780. The community numbered 323 in 1844 and 213 in 1933, and conducted an active religious and cultural life. They played a significant role in the industrial and commercial development of the city. On Nov. 10, 1938, the synagogue, school, and communal center were demolished; windows were smashed in shops and homes, and the men arrested and interned in *Dachau. Exactly a year later, Haigerloch Jews were again arrested. During the war Jews from Wuerttemberg were transferred to Haigerloch and at least 192 were deported.

°HOLBACH, PAUL HENRI DIETRICH, BARON D' (1723–1789), French philosopher, encyclopedist, and publicist, of German origin. He was the most radical critic of Jews and Judaism among the French rationalists and encyclopedists of his generation. As a disciple of the English *Deists, who condemned revealed religion, d'Holbach criticized Judaism as being the most particularist of all religions. According to him the Christian religion had wielded a most destructive influence over mankind for 1,800 years. His attack on Judaism as a faith and as a human society was based on the view that, beside being the corrupt origin of the Christian religion, it was also a corrupted faith and sect in itself. D'Holbach dealt with Judaism in a number of his works, two of which are de-

voted to this subject (see below). Others are interspersed with references to them.

According to d'Holbach, Moses was the worst and most harmful of the religious legislators. He established and consolidated the rule of the priests, and imposed many trivial precepts on the Jews with the sole objective of erecting a barrier between them and the rest of mankind. Moses indoctrinated the Jews with hatred of mankind, parasitism, and exploitation. The God of the Jews is the prototype of a fearful, cruel, and avenging god. From the fate of the seven Canaanite nations, d'Holbach infers that the God of the Jews is a bloodthirsty deity who justifies the Jewish proclivity toward genocide. The Patriarchs are described by d'Holbach as sensual men who do not honor their promises; and the Prophets as the principal initiators and propagators of religious fanaticism in the world. Religious persecution is based on the doctrines of the Prophets of Israel and the abolition of the influence of these doctrines will encourage religious tolerance. D'Holbach pays special attention to the messianic belief held by the Jews, which he regards as the principal cause of their hatred of other peoples. D'Holbach considered this belief to border on insanity because "how can logical people hope for an empire and at one and the same time the end of the world?" At times, however, d'Holbach and his colleagues adopted an inverted strategy, and attacked the arguments of the rabbis in order to disprove the supposed biblical prophecies on the advent of Jesus. His writings, and the names under which they were written, include *Tableaux des Saints: Part 1, Les Saints du Judaïsme ou de l'Ancient Testament* (1770); "J.B. de Mirabaud," *Opinions des Anciens sur les Juifs* (1769); "A. Collins," *L'Esprit du Judaïsme, ou Examen raisonné de la loi de Moïse, et de son influence sur la religion chrétienne* (1770); "M. Boulanger," *Le Christianisme dévoilé* (1756, 1766[2]), and "M. Boulanger," *L'Antiquité dévoilée par ses usages* (1766).

[Baruch Mevorah]

HOLBROOKE, RICHARD (1941–), U.S. ambassador to the United Nations and State Department official. Holbrooke was born in New York City. His parents were German-Jewish refugees who had immigrated to the United States. A graduate of Brown University (1962), he entered the Foreign Service. He served in Vietnam for three years; returning to the United States, he was assigned to the White House staff, where he served until 1967. He then returned to the State Department where he was a staff member at the Paris Peace Talks and then went on to head the Peace Corps in Africa (1970–72).

When he left the Foreign Service, he became a permanent member of the foreign policy establishment in the United States. From 1972 to 1977 he was managing editor of the influential American journal *Foreign Affairs* and was simultaneously director of publications for the Carnegie Endowment for Peace. With the Democrats back in power, he returned to government to serve as assistant secretary of state for East Asian and Pacific affairs. After the Carter administration, Holbrooke went into investment banking; he was a managing director at Lehman Brothers.

In 1993, he was named by President Clinton as United States ambassador to Germany during the post-unification period and when the capital of Germany was moving from Bonn to Berlin. He returned to Washington to serve as assistant secretary of state for European and Canadian affairs, a position from which he could apply pressure from within the State Department on American policy toward Bosnia. He tried his hand at shuttle diplomacy, Kissinger style, and pushed for bombing. The Pentagon was reluctant to commit American troops and to demonstrate American military power. He was asked by President Clinton to conduct the Dayton Accords, negotiating an end to the slaughter in Bosnia. He kept the delegates in Dayton, Ohio, in less than opulent conditions at an Air Force base and pressured them, alternating between brutal frankness and flattery, never deceiving himself as to the character of those with whom he was negotiating, including Slobodon Milosevic. A reviewer of his book wrote: "He can be vain, pompous and ridiculous, but he managed to carry off, almost by sheer force of personality, an accomplishment that eluded governments, world leaders and multilateral organizations for four years. He ended the war in Bosnia."

Frustrated and passed over for secretary of state (the position went to Madeline Albright), he again left government service. In 1997 he was named special envoy to Cyprus where he tried to settle the dispute between Greece and Turkey. He was recalled to government service when President Clinton nominated Holbrooke as U.S. ambassador to the United Nations. He served the remainder of Clinton's terms until 2001 and was active in the Gore campaign for president; his name was raised in both 2000 and 2004 as a potential secretary of state in a Democratic administration. He is married to Kati Marton, a Hungarian-born writer.

[Michael Berenbaum (2nd ed.)]

HOLDHEIM, SAMUEL (1806–1860), leader of *Reform Judaism in Germany. Born in Kempno near Poznan, Holdheim received a talmudic education, but began to study German and secular subjects after marrying a woman with a modern education, daughter of a Poznan rabbi. The marriage was unsuccessful and after his divorce he moved to Prague where he began to study philosophy at the university. In 1836 Holdheim was appointed rabbi in Frankfurt on the Oder. He preached in German, and in his sermons advocated educational reform which would adjust the younger generation to innovations in tradition. In 1840 he was appointed rabbi of the province of *Mecklenburg–Schwerin where he began to introduce slight reforms in the service, such as reading the Torah without cantillation. He was also instrumental in founding a modern religious school in 1841. In 1843 he published *Ueber die Autonomie der Rabbinen und das Prinzip der juedischen Ehe* in which he expressed the principles of his reform ideology. At the rabbinical conferences (*synods) in Brunswick (1844),

Frankfurt on the Main (1845), and Breslau (1846), Holdheim emerged as a representative of the extremist trend in the Reform movement. In 1847 he was asked to serve as rabbi of the new Reform congregation founded in Berlin where he officiated until his death. In Berlin he introduced radical reforms in the ritual. Services were conducted on both Saturdays and Sundays and after a while on Sundays only. After his death, his opponents, headed by M.J. *Sachs, unsuccessfully contested his burial in the part of the cemetery reserved for rabbis. His eulogy was delivered by Abraham *Geiger.

Holdheim's principal thesis was the separation of the religious and ethical content of Judaism (which should be binding) from the political-national content (which should not be binding), since Jews are citizens of the countries in which they are living. The Sabbath, for instance, is included in the religious category, while the prohibition on mixed marriages is of a political-national nature, and hence no longer binding. However, Holdheim fails to make a clear distinction between the two areas in his writings; in any case he was also ready to compromise in the religious sphere if the need arose in the country in which the Jews were to be integrated. Holdheim argued that just as during the period of the Temple the performance of sacrifices in the Temple took precedence over observance of the Sabbath, so in modern times the civic duties of clerks, teachers, physicians, and lawyers also take precedence. He publicly defended the right of uncircumcised children to be considered as proper Jews (*Uber die Beschneidung*, 1844). In *Ma'amar ha-Ishut al Tekhunat ha-Rabbanim ve-ha-Kara'im* (1861), a historical work written in Hebrew and published posthumously, Holdheim attempts, inter alia, to refute Geiger's opinion on the nature of the controversy between the Pharisees and the Sadducees and defends the traditional thesis that the principle in dispute was whether interpretation of the Scripture should be based on the primary meaning (Sadducees) as opposed to midrashic exegesis (Pharisees).

HOLDHEIM, THEODORE (1923–1985), Israeli composer. He immigrated to Israel in 1933 following the Nazi takeover. He joined the socialist youth movement Hashomer Hatza'ir, and from 1943 he was a member of kibbutz Beit Alpha in the Valley of Jezre'el. He studied piano with Buch and composition under I. *Edel, Sh. *Rosowsky, H. *Jacobi, and A.U. *Boskovitch. In 1952–54 he studied composition in Juilliard and then pursued a degree in physics and chemistry at the Hebrew University. He devoted himself to training music and science teachers at the School of Education of the Hebrew University. His deep communal involvement inspired him to contribute functional music for kibbutz festivities, such as incidental music, choruses, and arrangements. He also directed the kibbutz choir and instrumental ensembles.

Holdheim was ideologically opposed to avant-garde music and insisted on writing communicative and easily accessible music. His style was based on meticulous development of tiny motifs into large formal structures, under the influence of Bach, Brahms, Debussy, and Hindemith, into which he infused traditional Jewish and folk Israeli motifs. In 1978 he won the Libersohn Prize. His works include the opera *Continua*, and chamber and piano works.

[Jehoash Hirshberg (2nd ed.)]

HOLESOV (Czech **Holešov**; Ger. **Holleschau**), town in Moravia, Czech Republic. A Jew was mentioned in the town in 1391. A community was founded in the first half of the 16th century; its only relic is the breastplate of a Torah scroll of 1549, as the synagogue and all archives were destroyed in a fire. The synagogue was rebuilt in 1560. There were 50 Jewish houses in Holesov in 1629, and the oldest known tombstone dates from 1647. At the Holesov synod of 1653 the 311 **takkanot* of Moravian Jewry were emended. The community was at its height under the leadership of R. *Shabbetai b. Meir ha-Cohen (1662–68). In connection with Maria Theresa's plan to expel the Jews from Moravia (1742), the synagogue and its silver were seized and the notables arrested. Persecution, the Familiants Law and anti-Jewish measures forced many a Holesov Jew to seek new homes, and a good number of them settled in Upper Hungary (Slovakia of today). Among other places of settlement, they founded in 1720 the congregation of *Liptovsky Mikulas. For 10 years they continued to belong to the mother town, and used to go there for the High Holidays. In 1774, when a Christian maidservant was found murdered in a Jewish house, the Catholic clergy saved the household from the mob by surrounding the building with altars. There were 194 Jewish families (1,032 persons) living in 49 houses in Holesov in 1794, as against 554 Christian families (2,973 persons) dwelling in 256 houses. In the 19th century Holesov was one of Moravia's **politische Gemeinden*, the local lord serving as the mayor. In 1869 the community numbered 1,764 and in 1893 a new synagogue was built. As a result of antisemitic riots in 1899 many Jewish families left the town. During disturbances on Dec. 4, 1918, all but three Jewish shops were plundered and two Jews were killed. From 1,200 Jewish inhabitants in 1914, the community declined to 273 (4% of the total population) in 1930. Under the Nazi occupation, 200 Jewish families were deported from Holesov to extermination camps. The synagogue appurtenances were transferred to the Central Jewish Museum in Prague.

After World War II a small community was reestablished, affiliated to the *Kyjov community. The Jewish quarter was restored, including the cemetery and the old synagogue, which from 1964 housed a museum of Moravian Jewry, a branch of the Jewish State Museum in Prague. Community records, *ḥevra kaddisha* statutes, and other documents covering the

years from 1653 to 1914 were preserved in the National Library in Jerusalem and in the Bodleian Library in Oxford. Johanan b. Isaac, rabbi of the Hambro Synagogue of the London Ashkenazi community at the beginning of the 18th century, was a native of Holesov, as was Gerson *Wolf, the historian.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]

HOLINESS CODE, the name designating the collection of laws in Leviticus 17–26, which – according to the classical documentary hypothesis – constitutes a particular division within the so-called Priestly Source (P). One of the characteristics of the Holiness Code is the demand that Israel be holy and thereby imitate the Lord their God. Some dozen times and in several different formulations it contains the call: "You shall be holy for I the Lord your God am holy" (likewise: "Sanctify yourselves and be holy," or "You shall be holy to me, for I am the Lord who sanctifies you," and the like). The idea that it is obligatory for Israel to consecrate itself to God is found also in a few other places in the Pentateuch (Ex. 19:6; 22:30; Deut. 14:2, 21), but the above-mentioned call, in its typical form, occurs only in this collection, distinguishing it from the other parts of the Pentateuch. Therefore, A. Klosterman who first observed the singularity of this code, as well as its relation to Ezekiel, in 1877, gave it the epithet *Heiligkeitsgesetz* (Holiness Code) and the symbol H was assigned to it.

Characteristic Features

The singularity of H is discernible also in its structure and style. Except for the fact that it does not have a special heading, its structure is parallel to that of the *Book of the Covenant (Ex. 20:21–23:33) and the collection of laws of *Deuteronomy (Deut. 12–28). Like these two codes, H opens with a discussion of the proper place for making sacrifices and the legitimate form of eating meat (Lev. 17), and ends with admonitions and warnings to Israel to observe the laws contained therein (Lev. 26:3–45). The conclusion of H (Lev. 26:46) is similar to that of the Deuteronomic code (Deut. 28:69). This conclusion is repeated with minor variations in Leviticus 27:34, and it appears indeed that Leviticus 27 is a kind of appendix to the Holiness Code. The style of H is generally close to that of P, though it has certain features of its own. The style of the book of Ezekiel is close to that of P and of H, but its connection with H is much stronger than to the other parts of P. Ezekiel often enumerates a number of laws in the same order as the lists of H and the similarities in Ezekiel to the admonitions at the end of H are numerous. Characteristic of H are several phrases that do not occur, or occur only rarely, in the other parts of P, and which appear again, some of them rarely, others often, in the prophecies of Ezekiel. An example of such a phrase is: "I am the Lord," a typical conclusion to the presentation of a law, or a list of laws, which appears sometimes in conjunction with a few words before ("For holy am I the Lord") or after it ("Your God" "Who sanctifies you," "Who sanctifies them," and the like). Similarly, the following expressions are common in H: *ʾish ʾish* "whatsoever man there be" (sometimes with the added words "from the House of Israel"), an introductory formula to a law of warning; *ve-natatti panai ba* (*we-natatti panai ba-*), "And I shall set my face against so-and-so"; *ve-hikhratti oto mi-kerev ammo* (*we-hikhratti ʾoto mi-qerev ʿammo*), "And I shall cut him off from the midst of his people" (but in P's style always: *ve-nikhrat me-ammav (we-nikhrat me-ʿammaw*), "And he shall be cut off from his people"); *ḥukkotai u-mishpatai* (*ḥuqqotai u-mishpatai*), "My statutes and ordinances"; *ve-yareta me-Elohekha* (*we-yareʾta me-ʾElohekha*). "And you shall fear your God"; *demehem bam*, "Their blood will be upon them." Similarly, the code is characterized by the use of the following idioms: *ʿamit*, "neighbor," "fellow-man"; *sheʾer* meaning a relative; *shabbetotai*, "my sabbaths" (in the plural declined in the first person); *leḥem Elohav* (*leḥem ʾElohaw*) "the bread of his God," as an epithet for sacrifice, and others. All the laws of H concern everyday affairs of the Israelite community and individual. In this respect, H serves as a collection of the civil, "secular" laws of P, and its content is different from the rest of the sections of the source, which all concern the cultic ceremonies themselves and problems of ritual impurity. There are also cultic laws in H, but they are presented mainly from the point of view of the life of the citizen. The text is not interested in them so much from a ritualistic point of view as from the point of view of the daily needs of the Israelites: how they will eat meat and where they will bring their sacrifices (Lev. 17); how long they may eat the meat of the peace offering after they have offered the sacrifice (19:5–8); which animals they will pick for the sacrifice (22:17–30); and the like. Even the laws concerning the priests are dealt with in H from the point of view of the everyday life of the priest as "citizen": how he should behave in his mourning and from which women he may choose a wife (21:1–15); no one with a blemish may serve as priest (21:16–24); how he should consume the holy gifts given him by the Children of Israel (22:1–13); and the like. Moreover, even the matters of the oil for the lighting of the Temple (24:1–4) and the showbread (24:5–9) are referred to in H only because Israel is obliged always to supply oil and fine flour in order to fulfill these two ritual activities in the sanctuary, as is hinted in the text (24:2: "Command the Children of Israel that they bring unto you…" and 24:8: "From the Children of Israel…"). Since H contains the civil or secular legislation within P there are in it several points of similarity to the Book of the Covenant; at any rate, of all parts of P it is the closest in its content and character to the Book of the Covenant. In H, as in the Book of the Covenant, there are many short apodictic laws (given without reasons), as well as casuistic laws. There are in the two collections a number of parallel laws, such as the *lex talionis* (Ex. 21:23–25; Lev. 24:19–20). In addition, in H the conditions of life in the land of Canaan are reflected, whereas in P the matters are discussed against the background of the camp in the wil-

derness. In a number of sections of H the agricultural mode of life is explicitly mentioned and the importance of husbandry as an expression of religious life is emphasized (this quality is also representative of the appendix, Lev. 27). Again, H is the only part of the P source in which the threat that Israel would be uprooted from its land is found (Lev. 18:28; 20:22; 26:32; 41). Such a threat appears in the Pentateuch again only in the warning of Deuteronomy (Deut. 28:36–37, 63–68).

Priestly Editing

Before turning to more recent views (see below) it is useful to outline what had been generally accepted. The character of the material embedded in H is composite in part, because in its present form it is found in a priestly garb. While scholars are divided in distinguishing the exact extent of the priestly element in these chapters, the great majority agree about the existence of this element in H in its present form. Signs of the priestly pen are discernible in chapter 17. There are those who claim that such signs are also discernible in chapters 21–22 and 25. Obvious signs of the priestly source are recognizable in chapters 23–24. Moreover, in the latter chapters the relation between the basic elements has changed so that passages that originally belonged to H have been incorporated into P pericopes (likewise, signs of P stand out clearly in the appended chapter, 27). Consequently, it would seem that H has not been preserved in its original form, for the priestly scribes who incorporated it into P made certain changes in it. In several portions the priestly scribes apparently made only minor changes, whereas in others they went so far as to set down portions of their own in which they incorporated only fragments from H. Nevertheless, the priestly scribes preserved the general pattern of H and did not change much in its original order, for, despite the priestly editing and the fragmentation of the body of the code in several places, it still remains a unified collection of laws, whose structure resembles the structures of the other law codes in the Pentateuch. In contrast, traces of the special style of H are found in several places in P outside Lev. 17–26. Such traces are recognizable in the pericope dealing with the impurity of animals (Lev. 11; see verses 43–45), the passage dealing with fringes (Num. 15:37–41), and one of the passages dealing with the Sabbath (Ex. 31:12–17). Some scholars assert that these pericopes and passages, in whole or in part, primarily belonged to H and were subsequently removed from it (Kuenen, Dillmann, Baentsch, Eissfeldt, et al.). It should be noted that these passages deal with civil matters and pertain to the everyday activities of the Israelite, as do the commandments collected within the Holiness Code.

Content

The Holiness Code is divided into sections, each of which is devoted to a specific subject, or to several subjects, and constitutes in itself a literary-rhetorical unit. Every section is divided into internal paragraphs and generally opens with an introductory formula and ends with a concluding formula. It appears that originally each of these sections constituted an individual tablet or tiny scroll and the general composition was made by joining together a series of such tablets. Such a mode of literary consolidation is characteristic of P in general and was probably also used in the original composition of H. The Holiness Code in its priestly edition contains the following sections:

1. Laws concerning sacrifices and the legitimate form of eating meat (chapter 17). This section is divided into the following paragraphs: Introduction (17:1–2); the prohibition of non-sacrificial slaughter (17:3–7); the obligation to offer every sacrifice only at the Tent of Meeting (17:8–9); the prohibition of eating blood and the obligation to sprinkle it on the altar (17:10–12); the obligation to pour out the blood of game animals and birds and cover it with dust (17:13–14); the prohibition of eating animals that died a natural death or were torn apart by beasts (17:15–16).

2. A series of prohibitions concerning sexual intercourse and sexual abominations (chapter 18), between which the prohibition of sacrificing children to Moloch (18:21) is inserted. The series of prohibitions is set between a rhetorical introduction (18:1–5) and a conclusion (18:24–30).

3. A collection of ethical and ritual laws (chapter 19) opening with an introductory section (19:1–2). The laws are arranged in groups and many of them have parallels in the Ten Commandments, the Book of the Covenant, and Deuteronomy. Most of the groups close with the expressions "I am the Lord," "I am the Lord your God." The words: "Who brought you out of the land of Egypt" (19:36) appear at the conclusion of the whole collection, followed by an additional warning (19:37).

4. A list of prohibitions concerning sexual intercourse and sexual abominations (chapter 20), parallel to chapter 18. This series is also set between an introductory (20:1–8) and concluding formula (20:22–26). In this section, however, the prohibition of sacrificing to Moloch is part of the introduction (20:2–5). In addition, there are in this section prohibitions concerning mediums and wizards – both in the body of the introduction (20:6) and in one verse (27), which apparently became separated from the principal series and emerged at the end of the chapter. The conclusions of the two chapters (18 and 20) are also similar in content and theme.

5. Laws concerning priests and sacrifices (chapters 21–22), which include: listings of those relatives for whom the priest is allowed to defile himself, prohibitions concerning mourning and enumeration of the types of women whom the priest is forbidden to marry (21:1–15); a law forbidding a blemished priest from officiating (21:16–24); laws concerning the eating of sacrifices of minor grade (22:1–16); a law forbidding the bringing of blemished animals for sacrifices (22:17–25); additional laws concerning sacrifices (22:26–30); conclusion (22:31–33).

6. A list of the days of the year that are to be made holy convocations (chapter 23). While enumerating these days the text explains how one is to observe them; however, it is interested principally in listing the days themselves. (In this respect, this section is different from another section in P (Num. 28–29) whose main interest is the listing of sacrifices to be of-

fered on the days that are holy convocations.) The Sabbath is enumerated at the beginning of the list, but the scribe meant to list especially those days that do not recur in the same year, and, therefore, he repeated the introductory formula (23:4) after mentioning the Sabbath (23:3). These are the days: the first and seventh of the Feast of Unleavened Bread, the Feast of Weeks, the first and tenth of the seventh month, the first of the Feast of Tabernacles and the Eighth Day of Assembly – altogether, seven days of holy convocation in the year, besides the Sabbath. In connection with the account of the Feast of Unleavened Bread, the priestly scribe includes a passage from the original H (23:9–22) that deals with the waving of the sheaf (*ʿOmer*), the Feast of Weeks, and the counting of the 49 days in order to establish the date of the holiday.

7. A priestly section (chapter 24) dealing with three matters: The oil for the lighting of the Temple (24:1–4), the showbread (24:5–9); and a story, accompanied by a legal conclusion, of a man in the camp who cursed the Name (24:10–23). The group of laws that are incorporated into this story (24:16–22) was probably taken by the priestly scribe from H (note the ending there, verse 22: "For I am the Lord your God").

8. Laws concerning the sabbatical year and jubilee and matters connected with them (chapter 25), consisting of the following sections: The sabbath of the land (25:1–7); the jubilee year (25:8–17); laws concerning warnings to be fastidious in the observance of these two laws (25:18–24); laws concerning the system of calculating the price of land in order to redeem it before the jubilee (25:25–28); laws of redemption and jubilee for houses (25:29–34); laws prohibiting the charging of interest (25:35–38); laws concerning the freeing of Israelite slaves in the jubilee (25:39–46); and the obligation to try to redeem them even before the jubilee (25:47–55).

9. Two small groups of laws similar to those found in chapter 19 (26:1–2), which have close parallels to the beginning of that chapter (19:3–4; see also 19:30). This section seems to be a fragment from some scroll or the beginning of a collection of laws similar to chapter 19.

10. Admonitions and warnings that serve as a conclusion to the collection of laws (26:3–46). These are divided into promises of blessing (verses 3–13) and a series of threats (verses 14–46).

Date of Composition

There are a few indications that the writing of H was not original, and that several literary compilations of legal material preceded it and were incorporated into it. One indication of this is the two parallel chapters 18 and 20, which are related to each other in content, theme, and even in structure. If it is assumed that both of them were composed by the same scribe, there is the problem of why the scribe would deal with the same material twice. It would be much simpler to assume that these are separate compilations of common legal material and that the writer of H used both of them in his code. This thesis is further confirmed in that several laws appear in H more than once, an indication that they were included in different scrolls e.g., 19:30 and 26:2; 19:31 and 20:6. However, this legal material did not necessarily originate even in those literary compilations which preceded H. Sometimes these literary compilations were preceded by oral traditions, by means of which legal materials were transmitted from an early period. There are then two aspects to the problem of the dating of H: its date as a specially individualized collection of laws (or the time of the earlier literary compositions that were incorporated into it) and the time of the origin of the legal material itself. The legal material is not equally ancient, but, like the rest of the pentateuchal law codes, it has very early elements, some of which go back even to remote periods.

Most scholars maintain that H definitely preceded P. In this view it was the priestly scribes who arranged H as it now appears in the Pentateuch and absorbed it into their larger composition. More recently, Knohl has argued that H represents a late level of Priestly material attributable to a Holiness School (HS), which was responsible for the final recension of the earlier Priestly material, to which he refers as Priestly Torah (PT). In PT the festivals were not related to agriculture and were severed from their historical contexts. Nor were the rituals designed with human welfare in mind. The Sabbath in PT was marginal and its prohibition on labor unmentioned. It was HS which added the human dimension and raised the status of the Sabbath. In addition, Knohl maintains that the work of HS extends considerably beyond Leviticus 17–26. Indeed, Knohl argues that HS is responsible for the final editing of the Torah, including the addition of Deuteronomy. According to him, the work of HS began in the eighth century B.C.E. and extended into the post-Exilic period.

While some of Knohl's dating of both PT and HS can be challenged as too early, certainly a hint of the beginnings of the activity of HS can be found in the law forbidding the sacrificing of children to Moloch (18:21; 20:1–5). This ritual spread in Israel in the days of Ahaz (II Kings 16:3; cf. Isa. 30:33) and Manasseh (II Kings 21:6). Josiah, however, desecrated the Topheth in the valley of Ben-Hinnom, where people passed their children through fire (II Kings 23:10). Consequently, the earliest work of HS appears to have preceded Josiah. Another hint of the ultimate origins of H can be found in the prohibition of the medium and the wizard (Lev. 19:31; 20:6, 27). These existed in Israel during the monarchy (I Sam. 28:3, 7–25), became widespread in the days of Ahaz (cf. Isa. 8:19; 19:3; 29:4) and Manasseh (II Kings 21:6), and were finally uprooted in Josiah's reforms (II Kings 23:24). One may claim that these prohibitions provide evidence only for the dating of the specific scrolls from which they were taken (chaps. 18 and 20), i.e., those same literary compositions that preceded H. Nevertheless, it seems that the kernel of HS and, consequently, of the Holiness Code also preceded the destruction of the first Temple.

[Menahem Haran / S. David Sperling (2nd ed.)]

HOLITSCHER, ARTHUR (1869–1941), German novelist and essayist. Born in Budapest, Holitscher worked as a bank clerk for six years, before fleeing to Paris in 1895, where his literary career took off. After the publication of his symbolist novel *Weisse Liebe, ein Roman aus dem Quartier* in the same year, Holitscher was engaged by Albert Langen as an editor for the satirical weekly magazine *Simplicissimus* and moved to Munich and eventually Berlin, where he made his home in 1910. While his dramatic ambitions were frustrated – his play *Der Golem* (1908), in which he reworked the famous legend of the miracle-worker R. *Judah Loew b. Bezalel of Prague, turned out to be a failure – the genre that finally earned him his reputation was the travelogue, beginning with his greatest success *Amerika – heute und morgen* (1910), which had considerable influence not least of all on Franz *Kafka. Further voyages led Holitscher several times to early Soviet Russia and twice to Palestine. His account *Reise durch das juedische Palaestina* (1922) is an important record of early Zionist achievements and reveals the author's admiration for the kibbutz system. Throughout all his works, Holitscher kept a focus on the correlation between cultural, economical, and social conditions, taking the standpoint of a revolutionary socialist. After Hitler's takeover, he left Berlin and settled in Geneva, where he died in October 1941. Accounts of his life are to be found in his autobiographical works *Lebensgeschichte eines Rebellen* (1924) and *Mein Leben in dieser Zeit* (1928).

[Rudolf Kayser / Philipp Theisohn (2nd ed.)]

HOLLAENDER, German family of Leobschuetz, Silesia. Its best-known member was the theater critic, director, and novelist, FELIX HOLLAENDER (1867–1931). He first wrote social novels, but his collaboration with Lothar Schmidt in a melodrama, *Ackermann* (1903) led him to the theater and to a long and close association with Max *Reinhardt. Hollaender took charge of Reinhardt's public relations and, with Arthur *Kahane, edited the *Blaetter fuer das deutsche Theater.* Hollaender succeeded Reinhardt as director of Berlin's Deutsches Theater, and later took over the directorship of the Grosses Schauspielhaus. Production, however, was not his forte and he turned to criticism, writing for the *Berlin 8-Uhr Abendblatt*. A volume of his penetrating reviews appeared in 1932 under the title *Lebendiges Theater.* Hollaender's fiction included the novels *Jesus und Judas* (1891), *Der Weg des Thomas Truck* (2 vols., 1902), and the autobiographical *Unser Haus* (1911). His collected works were published in six volumes in 1926. Other members of the family were prominent musicians. An elder brother of Felix, GUSTAV HOLLAENDER (1855–1915), was an eminent violinist and music teacher. After studying under Ferdinand *David and Joseph *Joachim, he became concertmaster in various important German orchestras and was then head of the violin department first at Kullak's Neue Akademie der Tonkunst in Berlin and later at the Rheinische Musikschule in Cologne. Gustav Hollaender was also a cofounder of the Berlin subscription concerts for chamber music, and he made many concert tours. From 1895 until his death he was director of the Stern'sches Konservatorium in Berlin. His compositions include light pieces and studies, mainly for the violin. Another brother, VICTOR HOLLAENDER (pseudonym Arricha de Tolvens, 1866–1940), was a composer. He began his musical career in Berlin and, from the age of 20, was a conductor and resident composer in various German opera houses, also making frequent appearances in Britain and the United States. He wrote over 50 successful operettas, revues, and farces which, though an integral part of the Berlin operetta school, avoided its prevalent vulgarity. During World War I his song "Annemarie" was a favorite of the German troops. Victor Hollaender shared the direction of the Stern'sches Konservatorium with his brother Gustav, but in 1934 he emigrated to the U.S., and he died in Hollywood. Victor's son FRIEDRICH HOLLAENDER (1896–1976), also a composer, was born in London. Like his father, he wrote light music for the German stage. However, from 1929 he devoted himself to music for the newly invented talkies, achieving his greatest success with the film *Der blaue Engel* ("The Blue Angel"). In 1934 he settled in Hollywood, where he continued to compose music for the movies.

HOLLAENDER, LUDWIG (1877–1936), lawyer; from 1921 to 1933 leader of *Centralverein deutscher Staatsbuerger jue-

dischen Glaubens, the largest Jewish organization in Germany. From 1909 he edited the Centralverein's organ *Im Deutschen Reich*, and in 1919 he founded the *Philo Verlag publishing house. Hollaender also took a prominent part – from his student days in Munich – in the affairs of the *Kartell-Convent, Deutscher Studenten Juedischen Glaubens, as well as in those of the Grand Lodge of B'nai B'rith. A man of strong personality and idealism, he used his considerable intellectual and political abilities to promote German-Jewish national consciousness and to defend the equality of German Jews against the rising tide of German and eventually Nazi antisemitism. He intended to organize the whole of German Jewry within the ranks of the Centralverein, whose aim was to expose to non-Jews the irrationality and injustice of antisemitism. Hollaender engaged in a running debate with Zionists who disdained the apologetic tone of his statements. The advent of Hitler destroyed the foundations of Hollaender's work. Apart from numerous articles published in the German-Jewish press, he wrote *Deutschjuedische Probleme der Gegenwart* (1929).

HOLLANDER, FRANKLIN (1899–1967), U.S. physiologist. Born and educated in New York City, Hollander became assistant professor of physiology at New York Medical College from 1927 to 1932. From 1936 until his death, he was chief of the Gastrointestinal Physiology Research Laboratory at New York's Mount Sinai Hospital and assistant clinical professor of physiology at Columbia University's College of Physicians and Surgeons. He was consultant to a number of hospitals and health institutes. He wrote extensively on gastrointestinal physiology and served on several editorial boards of medical journals.

HOLLANDER, ISAIAH BEN AARON (1806–1872), *dayyan* of Altona. In his youth Hollander and his friend, Jacob Cohen (1808–1905), studied for 10 years at the yeshivah of Moses *Sofer in Pressburg. On their teacher's instructions they returned to Altona and taught Talmud in accordance with the method of *pilpul* prevalent at the Pressburg yeshivah. They also assisted in the yeshivah of Jacob *Ettlinger and for a number of years Hollander was a member of Ettlinger's *bet din*. Some of his Torah novellae were published in the periodical *Shomer Ẓiyyon ha-Ne'eman* (no. 201 (1885), 400b f.). In 1834 Moses Sofer referred a problem (responsa *Ḥatam Sofer*, OḤ no. 4 (1845) 2a) to Hollander and Cohen, addressing them as "my distinguished young pupils."

[Yehoshua Horowitz]

HOLLANDER, JOHN (1928–), U.S. poet, literary critic, and editor. His precise, often ironic and intricate verse was published in several volumes, among them *A Crackling of Thorns* (1958), *Tales Told of the Fathers* (1975), *Blue Wine and Other Poems* (1979), *Harp Lake* (1988), *Tesserae: & Other Poems* (1993), and *Figurehead & Other Poems* (1999). He also published critical works, such as *Rhyme's Reason: A Guide to English Verse* (1981) and *Melodious Guile: Fictive Pattern in Poetic Language* (1988). Among the works he has edited are *The Oxford Anthology of English Literature* (with Frank Kermode, 2 vols., 1975); and *American Poetry: The Nineteenth Century* (2 vols., 1993).

HOLLANDERSKY, ABRAHAM ("**Abe the Newsboy**"; 1887–1966). U.S. boxer credited with fighting more bouts than any other boxer in history; heavyweight champion of Panama. Hollandersky was born in Berznick, in the Russian Pale of Settlement, the son of a pants presser. His father immigrated to New London, Connecticut, to earn money to bring the rest of the family, which arrived when Hollandersky was seven. His father had gone blind, forcing Abe to support the family by selling newspapers to Navy men, who adopted him and taught him how to box. In 1906 President Teddy Roosevelt, reviewing the fleet aboard the presidential yacht *Mayflower*, was introduced to Hollandersky, who stood 5′ 4″. Roosevelt grabbed Hollandersky's ears playfully and said that lots of people believed "a Jew won't fight." Hollandersky promptly pummeled the president in the ribs. "My cauliflower ears showed that I could take it, and my jabs to his ribs showed I was boring in for more," Hollandersky wrote. When Roosevelt returned to the White House, he created a new post for Hollandersky: Newsboy of the Navy, permitting him to travel on any Navy ship anywhere in the world and sell newspapers. Hollandersky sold papers during the day and boxed at night, fighting exhibition rounds for the benefit of the Navy Relief, fighting 1,309 boxing matches and 387 wrestling matches between 1905 and 1918. His professional record was 4–3–1, with Hollandersky winning the Panama championship on August 11, 1913, and wrestling's welterweight championship in 1907, in a bout that took four hours and 18 minutes. He also took on animals, wrestling a muzzled bear in New York but losing to a kangaroo in Australia when the animal knocked Hollandersky out of the ring with his tail. Hollandersky is the author of *The Life Story of Abe the Newsboy, Hero of a Thousand Flights, the Newsboy with the U.S. Navy* (1930), which he published himself and reprinted many times.

HOLLIDAY, JUDY (**Judith Tuvim**; 1922–1965), U.S. actress. Born in New York, her father, Abraham Tuvim (1894–1954), was executive director of the Foundation for the Jewish National Fund. Holliday made her professional debut in 1938 as part of the nightclub act The Revuers, which also starred aspiring playwrights Betty *Comden and Adolph *Green. She made her Broadway debut in 1945 in *Kiss Them for Me*. A year

later she starred in the comedy *Born Yesterday* as the "dumb blonde" Billie Dawn. Her subsequent Broadway roles were in *Bells Are Ringing* (1956–59) and *Hot Spot* (1963). In 1957 she won a Tony Award for Best Actress in a Musical for *Bells Are Ringing.*

She then played in the film version of *Born Yesterday* and won an Academy Award and a Golden Globe for Best Actress in 1951. She appeared in several other films as well, which included *Adam's Rib* (1949), *The Marrying Kind* (1952), *It Should Happen to You* (1954), *Phffft!* (1954), *The Solid Gold Cadillac* (1956), *Full of Life* (1957), and *Bells Are Ringing* (1960).

Although she was an accomplished actress, she was mainly cast as the effervescent airhead. But, as Holliday was once quoted as saying, "You have to be smart to play a dumb blonde over and over and keep the audience's attention without extraordinary physical equipment." She put that skill to good use when, in 1952, she was summoned to testify during the McCarthy Communist witch hunt. Playing her "ditzy blonde" character to the hilt on the witness stand, she so confounded the House Un-American Activities Committee that she ended up being the only person ever called before HUAC not to be blacklisted or forced to name names.

HOLLZER, HARRY AARON (1880–1946), U.S. jurist and Jewish community leader. Hollzer was born in New York and raised in San Francisco. He moved to Los Angeles in 1909 where he gained recognition as a lawyer and public figure. Hollzer served from 1924 on the Superior Court and the Court of Appeals, and from 1931 until his death he was judge of the United States District Court. For several years he was chairman of the National Conference of Judicial Councils. In the Jewish community Hollzer occupied important positions in numerous local and national organizations. His outstanding contribution was as founder of the United Jewish Community of Los Angeles in 1933. Hollzer was instrumental in expanding it to become the Los Angeles Jewish Community Council in 1937, and served as its president until his death.

HOLMAN, NATHAN (Helmanowitch, "**Nat**," "**Mr. Basketball**"; 1896–1995), U.S. basketball pioneer, professional player with the Original Celtics, coach of City College of New York, which won NCAA and NIT titles in 1950; member of Basketball Hall of Fame. Holman was the seventh of 10 children born on Norfolk Street on New York's Lower East Side to Orthodox Russian immigrants Mary (Goldman) and Louis, who operated a grocery store and kept a kosher home. Holman learned sports from his six brothers, and from playing in the local Seward Park and at the local settlement houses. Holman graduated Commerce High School, where he was unanimously chosen as goalie for the All-Scholastic Soccer Team, left halfback on the All-City Football Team, unanimous All-Scholastic pick in basketball, and pitcher and second baseman for the school baseball team. Holman then received a degree from the two-year Savage School for Physical Education, while at the same time launching his professional career with the Knickerbockers, playing 80 games his first season and getting paid $5 a game.

Holman also began working at City College as coach of soccer and freshman basketball, and after a year in the Navy he returned to CCNY as head coach beginning in the 1919–20 season, becoming at 23 the youngest college coach in the country. While earning a master's degree at NYU, Holman continued playing professionally for some dozen teams in the Eastern League and Penn State League, including Bridgeport, Syracuse, Scranton, and Germantown, but it was when he joined the Original Celtics at the end of the 1921 season that he became the greatest basketball player of his day, known for his exceptional ball-handling, accurate shooting, and court savvy. Holman's extraordinary skills as an adroit passer and floor leader revolutionized the way basketball was played, and made the Celtics virtually unbeatable: the team won 90 percent of its games over the next eight years winning 720 of 795 games, including a 204–11 record in 1922–23 season, 134–6 in the 1924–25 season. The team disbanded in 1928 and Holman played two more seasons with Syracuse and Chicago, retiring from competition in 1930 to devote time to his head coaching duties at City College, and to the newly built 92nd St. YMHA. At CCNY he introduced the street-smart style of basketball that came to be known as the "City Game," emphasizing ball handling, speed, and passing. Holman was also an early proponent of keeping files on potential opponents, and convinced CCNY to pay for scouting films of college games played at Madison Square Garden.

Holman retired in 1960 after compiling a 423–190 record in 37 seasons at CCNY, highlighted in 1950 when his Beavers becoming the only college team in history to win both the NCAA and NIT tournaments. Two years later the team was implicated in a gambling scandal that led to Holman's being dismissed by the New York City Board of Higher Education, but he appealed the decision to the New York State commissioner of education, which rescinded the ruling and reinstated Holman at CCNY.

In 1949, Holman was the first American to coach in Israel and train Israeli youth. He was a lifetime supporter of sports in Israel, raising millions for the effort, and was president of the U.S. Sports for Israel Committee, sponsors of the U.S. delegation to the Maccabiah Games, from 1973 to 1977.

Holman was enshrined in the Helms Hall of Fame in 1934, the Basketball Hall of Fame in 1964, the Boys Athletic League Hall of Fame in 1976, and had the CCNY gym (1977) and the Wingate Institute School for Coaches and Instructors (1978) named after him. He was named the third-greatest player on the Associated Press' First Team of the Half-Cen-

tury (1900–50). Holman wrote four books: *Scientific Basketball* (1922), *Winning Basketball* (1932), *Championship Basketball* (1942), and *Holman on Basketball* (1950).

HOLOCAUST. The entry is arranged according to the outline below. Bibliographies appear after sections marked (†).

THE EVENTS

Introduction

"Holocaust" is the term used for the systematic state-sponsored murder of millions of Jews by the Nazis and their collaborators during World War II. Some historians and writers restrict the use of the term to the murder of Jews; others use the term more widely to include those civilians victimized by Nazi Germany – trade unionists, political opponents of the regime, Jehovah's Witnesses, homosexuals – who were persecuted but not systematically murdered, as well as mentally retarded and physically handicapped Germans and Roma and Sinti (Gypsies), who were murdered by gassing.

The term Holocaust was not contemporaneous with the events. Winston Churchill called the murder of the Jews "a crime without a name." The Germans named their program accurately but euphemistically "The Final Solution to the Jewish Question." The word "Final" was all too apt. The goal of the Germans was to eliminate all Jewish blood, to wipe Jews and those of Jewish origin from the face of the earth. The systematic murder of an entire people would end the problem. At the core of Nazi doctrine was a racist view of the world that envisioned a hierarchy of peoples with the Aryan-Nordic-Germans as the "master race" and the Jews as parasites on the German nation; their elimination was essential to national well-being.

The Holocaust is also known as the Catastrophe, the Ḥurban, and the Shoah. The word's most likely connotation is death by fire, signifying the means by which the Jews were cremated after gassing in the ultimate manifestation of the Nazi universe, its death camps. The Holocaust is written with a capital H, signifying this specific event, which by the early 21st century was regarded as the paradigmatic manifestation of evil, an event without parallel, singular in its barbarism, intensified by the power of the modern state, fueled by technological and scientific progress, and unchecked by moral, social,

religious, or political constraints. The fact that the Holocaust was perpetrated not by an archaic, maniacal fringe but by the most cultured and scientifically advanced Western society of the era is an indictment of that very civilization and presents a challenge to historical interpretation. The historian Lucy *Dawidowicz termed the Nazi program of destruction "the War against the Jews" in a book of that title. Her distinction is important. The Germans fought two wars, a World War and a War against the Jews. Even while they were losing the battle against the Allied armies, they pursued their second war with unabated vigor, discipline, and determination. The final line of Hitler's last testament was a plea to his nation to continue the battle. "Above all, I enjoin the government and the people to uphold the race laws to the limit and to resist mercilessly the poisoner of all nations, international Jewry." Dawidowicz's perception of two wars also helps to understand the Allied response: the Allies fought the world war with complete dedication; they did not respond to the war against the Jews.

The persecution of the Jews – but not their murder – began with Hitler's rise to power in January 1933, and it continued in different forms with diverse policies, goals, and instrumentalities throughout the 12 years of his reign, until the defeat and unconditional surrender of the Third Reich on May 8, 1945. The systematic killing of the Jews did not begin in earnest until the German invasion of the Soviet Union on June 22, 1941, and the evolution of that destruction was related to World War II. The war freed the regime from constraints and united the German people. It also brought more Jews under German control, and the tide of war often dictated the timetable of murder.

As the racial war against the Jews evolved; so did their suffering. At first it was limited to Germany. As the Reich expanded into territories, countries, and entire regions, more and more Jews came under their domination. Discrimination, harassment, and persecution gave way to systematic social, political, and economic elimination, segregation, and apartheid. With the conquest of Poland came ghettoization. With the introduction of the Final Solution in 1941, the murder of the Jews also evolved. At first, mobile killers were sent to stationary victims. When this proved difficult for the killers – emotionally and logistically – the process was reversed and the victims were made mobile: they were put on trains and sent to stationary killing centers where they were systematically murdered by gassing – liquidation and extermination were the terms the Nazis used. Toward the end of the war, in the winter of 1944–45, when the killing centers were about to be overrun, the victims were again made mobile, this time by foot; they were sent overland toward Germany, which had once cast them out, and forcibly marched to the end of their strength. Some were sent to concentration camps in Germany, which broke down under the waves of newly arriving prisoners, and other prisoners were marched and marched until the war ended. Then came the liberation of the camps, and the terrible truth became known.

European Jewry in the Early 1930s

As the 19th century ended, Jewish life was in ferment throughout Europe. In Eastern Europe, many Jews lived in shtetls, villages that were predominantly Jewish. They spoke Yiddish, read Yiddish books, both sacred and secular, and attended Yiddish theaters and movies. Many wore traditional black caftans and continued to observe the practices of their grandparents. Jewish religious life in all its forms was fervent. The religious community was piously observant; the secularists ardently secular, seeking to overturn the power of religious authority and to embrace the ideological movements of Communism and socialism. Many a young Jew left the yeshiva to enter a German university, casting aside traditional garb and practice and ardently embracing the teachings of the West. Despite antisemitism and cultural constraints, Germany was the place where Jews were best able to participate in intellectual and cultural life. They assimilated rapidly. Intermarriage was widespread; so was conversion. A vibrant Sephardic culture flourished in North Africa in Algeria, Tunisia, Libya, and Morocco, where the dominant culture was Arabic and French, and the most significant religious influence Islamic.

At the beginning of the new century, civil equality in Germany was guaranteed by law, but social barriers were slow to fall. Sigmund Freud's revolutionary teachings on sexuality were delivered to the B'nai B'rith chapter in Vienna. His psychoanalytic teachings were dismissed as "a Jewish science," and he desperately courted a non-Jew, Carl Jung, to promulgate his new theories. Still, Jewish artists, writers, scholars and scientists thrived in a new climate of openness. Einstein launched a new era in physics, as Freud had in psychology. Chagall and Modigliani were in the forefront of modern art. Einstein was only the first among peers: between 1905 and 1931, ten German Jews won the Nobel Prize in a variety of scientific fields.

Most Jews were neither prominent nor affluent. Contrary to the image that all Jews lived like Rothschilds, most lived in very ordinary circumstances. Many were poor. They were stevedores in Salonika, Greece; factory workers in Lodz, Poland; small shopkeepers in Amsterdam; Yeshiva students in Kovno, Lithuania; and professors in Berlin. They worked to create a home and sustain their families.

When the Nazis came to power in 1933, more than 9 million Jews lived in the 21 European nations where Germany would come to dominate either through occupation or alliance. The 560,000 Jews who lived in Germany itself were less than one percent of the population. Within Central Europe there were 445,000 Jews in Hungary, 357,000 in Czechoslovakia, 225,000 in France (many of them immigrants), and about 160,000 in the Netherlands; Belgium had some 60,000 Jews concentrated in Antwerp and Brussels. The Jewish population of Denmark was 6,000, of Finland, 1,800 and of Norway, 1,500. In southern Europe, Greece had about 100,000 Jews, Yugoslavia 70,000, Bulgaria 50,000, and Italy some 48,000. In eastern Europe, Romania, within its pre-World War II borders, had almost a million Jews and Poland had some three million;

Lithuania had 155,000 and Latvia 95,000, while there were an estimated 2.5 million Jews in the Soviet Union. Within a dozen years, two out of three of the 9 million were dead.

Germany in the Early 1930s

The Germans did not expect to lose World War I. The German people had been told that their war efforts had been successful. The Versailles treaty that followed imposed harsh penalties on the German nation, the loss of territory, demilitarization, and burdensome reparations. In the early 1920s, inflation wiped out the savings of the middle class and caused major economic dislocation. Billions of marks were needed to buy a loaf of bread as the German currency became worthless. In 1929 Germany was impacted by the worldwide Depression; its gross national product fell by 40%. Politics turned violent with the Communists on the left and the National Socialists on the right. The political center was weakened, and because of the perceived ineffectiveness of the Weimar Republic, support for democracy was waning. Little consensus could be achieved; elections were frequent and indecisive and German governments were short-lived. There was a sense that only strong leadership would pull Germany out of its morass.

NAZI RACISM. Racism was the dominant theme of Nazi ideology. It shaped social policy in Germany between 1933 and 1939, was a major factor in the way the Germans conducted the war, motivated German policy in occupied countries, and, when carried to its ultimate conclusion, resulted in the Holocaust.

Hitler's obsession with racial purity, his hatred of both Marxism and democracy, his belief in German racial supremacy, and his notion that an Aryan master race would take over the world were not secrets to German voters. They were stated clearly in his book *Mein Kampf* ("My Struggle"), first published in 1925. It was the "sacred mission of the German people… to assemble and preserve the most valuable racial elements… and raise them to a dominant position."

"All who are not of a good race are chaff," Hitler wrote. The Aryan race was destined to be superior, therefore the German people "are the highest species of humanity on earth." In the racial struggle of history, the "master race" would dominate if it preserved its purity. Otherwise, it would be polluted, corrupted, and destroyed by inferior races.

It was necessary for Germans to "occupy themselves not merely with the breeding of dogs, horses, and cats but also with care for the purity of their own blood." These notions were not original. Hitler simplified racial doctrines propounded in the nineteenth century, particularly in the writings of the French aristocrat *Gobineau and the English-born disciple of the composer Richard Wagner, Houston Stewart Chamberlain.

Whatever the theoretical underpinnings of Hitler's racial beliefs, Nazi racism under his direction was far from theoretical. Blood mixture was abhorrent. Procreation by inferior races was to be discouraged, at first through forced sterilization, later by systematic murder. The obsession with the Jews was central to Hitler's worldview and became the operative ideology of the German state under his rule.

The Nazi Party's attitude toward the Jews is expressed in the coarse slogan *Deutschland erwache, Juda verrecke* ("Germany wake up, Judah drop dead") and in the words of the battle cry of the party's paramilitary, the SA (*Sturmabteilung*, "Storm Division," known as the Brownshirts or Stormtroopers): "*Wenn das Judenblut vom Messer spritzt, dann geht's nochmal so gut*" ("When Jew blood spurts from the knife, things will go twice as well"). What could be expected from the party and its affiliated organizations was demonstrated by numerous acts of violence at the hands of Hitler's stormtroopers before the seizure of power, beginning in 1924, as well as by unrestrained propaganda (books, pamphlets, and periodicals such as *Der *Stuermer*, published from 1923 on), in which the Jew was represented as a subhuman (*Untermensch*), a parasite, a phenomenon of decay (*Faeulniserscheinung*), and the main cause of all German misfortunes. "It is our duty," Hitler said in 1920, "to arouse, to whip up, and to incite in our people the instinctive repugnance of the Jews."

HITLER'S ASCENT TO POWER. Adolf Hitler came to power legally on January 30, 1933 as the head of a coalition government. He was appointed by the aging President Paul von Hindenburg on the assumption that that since he and the Nazi party were a source of German political instability, terror, and violence, the responsibilities of the chancellorship as a minority leader in a coalition government would force Hitler to the center. Political leaders assumed that he could be controlled either personally or by his circumstances. They underestimated him as they overestimated their own resources.

Ironically, Nazi power had reached its peak before Hitler was named chancellor. It was in decline by the time he came to office. The National Socialist (Nazi) Party had won just 12 seats with 2.8 percent of the vote in May 1928 and could still be dismissed as marginal, but in September 1930 its total rose to 107 in the 608-seat Reichstag (Parliament) after winning some 6.4 million votes (18 percent). The party improved in the elections of July 31, 1932, when it received 37.3 percent of the vote and 230 seats. But in the elections of November 6, 1932, the last free elections before Hitler came to power, the Nazis received only 33.1 percent of the vote. The number of their seats was reduced to 196. The master German propagandist Joseph *Goebbels had predicted: "We come like wolves descending upon a herd of sheep. We will become members of the Reichstag in order to disable the Weimar order with its own acquiescence."

Once in office, Hitler's first objective was to consolidate power and eliminate political opposition. The burning of the Reichstag on February 27, 1933, which the Nazis claimed had been done by a Communist, provided a pretext to strengthen Hitler's position. The next day, he received emergency powers from von Hindenburg and immediately ordered a hundred Communists arrested. In the March 1933 election, the Nazi Party received 288 seats in the Reichstag with 44 per-

cent of the vote. Special Nazi courts were established to deal with dissidents and the first concentration camp, *Dachau, was established outside Munich to house the newly arrested. Emergency provisions of the Weimar Constitution were invoked to dismantle constitutional protections and give Hitler dictatorial powers. Articles 25 and 48 allowed the president to usurp the powers of state governments and suspend constitutional guarantees of civil liberties, and with a two-thirds majority of those present and voting the chancellor could be granted temporary legislative powers. On March 23, 1933, the Enabling Act was passed, giving Hitler just such legislative powers. One hundred and seven legislators, Communists and Social Democrats, were either under arrest or in hiding and were therefore not present and did not vote. In the first 60 days after the passage of the act, there were attacks against the Jews, but the major focus was on the suppression of Hitler's domestic political opposition.

By July 14, 1933, the Nazi Party was the only legal political party in Germany. Unopposed in the next election, it received 93 percent of the vote. A law for the Revocation of Naturalization and the Annulment of German Citizenship stripped of their citizenship East European Jews who had immigrated to Germany. A law for the Prevention of Offspring with Hereditary Diseases provided for the sterilization of unfit parents or potential parents and the euthanasia of defective offspring. "Useless eaters," they were termed. Jews felt their condition to be precarious, but so did others who belonged to political or racial categories not sanctioned by Nazi ideology. On July 20, 1933 the Vatican signed a Concordat with Germany, a treaty governing the status of the church, which Pope *Pius XI believed protected Catholic rights. The Concordat provided greater legitimacy for the Third Reich in the eyes of lay people and the church hierarchy. In August, the Haavara (Transfer) Agreement was signed between the German Ministry of the Economy and the World Zionist Organization, which permitted German Jews to meet British entry requirements (which included the possession of £1,000 in capital), in addition to German emigration taxes, and migrate to Palestine. As with all Jewish negotiations with the Nazis during this period, and most especially during the world war that followed, these were negotiations between unequal parties. Under the provisions of the agreement, the assets of Jews leaving for Palestine were placed in special accounts; portions of these accounts could be drawn upon in Palestine in the form of German goods. This agreement enabled some 40,000 Jews to leave Germany for Palestine and arrive there with at least some resources to begin new lives. The agreement was consistent with the goal of German policy during the prewar period, to make Germany *judenrein*, free of Jews, not by murder but by making it impossible for Jews to live there, virtually forcing them to emigrate.

THE ASSAULT AGAINST THE JEWS. The assault against the Jews began with the April 1, 1933 boycott of Jewish businesses. The boycott was originally scheduled to be an ongoing phenomenon but lasted one day. Some Germans supported the boycott; others made it a point of honor to call on Jewish friends, to patronize Jewish shops. Signs announcing the boycott were printed in English as well as German. They were intended as a warning to the Jews of America that any strong response to the Nazi rise to power, such as the proposed boycott of German products or a repeat of the mass rally sponsored by the American Jewish Congress in Madison Square Garden on March 27 that year, would endanger German Jews. In contacts between American and German Jews, the latter urged caution lest an already difficult situation be exacerbated. The question of how, publicly, Jews could oppose the persecution of Jews in other countries without worsening their situation was not new in Jewish history. It remained a problem throughout the Nazi years.

On April 7, the Law for the Restoration of a Professional Civil Service was promulgated, and Jews were dismissed from the civil service. These included lawyers working for the state, physicians employed by state-run health plans and hospitals, and even professors at state universities. By the end of the month, Jewish attendance at German schools was restricted by a quota. Such quotas were not unusual. They were present in Poland and even in the United States. On May 10, Hitler's 100th day in office, thousands of Nazi students along with many professors stormed university libraries and bookstores in thirty cities throughout Germany to remove tens of thousands of books written by non-Aryans and those opposed to Nazi ideology. The books were tossed into bonfires in an effort to purify German culture of "un-Germanic" writings. Some were by Jewish authors; others were not. Works that were politically offensive to Nazism were destroyed alongside works by Karl Marx, Sigmund Freud, Albert Einstein, and other Jewish writers. Joseph Goebbels proclaimed at the bookburning opposite the Berlin Opera house, "The age of Jewish intellectual domination has ended." A century earlier, the German poet of Jewish origin, Heinrich Heine, had said, "Where one burns books, one will, in the end, burn people." In Nazi Germany, the distance between book burning and people burning was to be eight years.

Well integrated into German society and comfortably assimilated, the German Jews felt the assaults as a shock. One hundred thousand Jews, about one in six, had fought for Germany during World War I; 12,000 had lost their lives. During the Weimar period, they had achieved national prominence in literature and science, the arts and philosophy. Ten German Jews were among the approximately thirty Germans who had won Nobel Prizes for their work. They felt at home in German society and even spoke of the unique German-Jewish symbiosis. Years later, Gershom *Scholem, the great scholar of Jewish mysticism and Zionist dissenter from German culture, described the "symbiosis" as a German-Jewish monologue, Jews speaking to themselves of how deeply German they were. Religiously and culturally the community had also been flourishing during Weimar times, as some young Jews were rediscovering their Judaism. A small Zionist movement

had emerged. Theological seminaries, Liberal and Orthodox, and great German universities were attracting not only German Jews but East European Jews who wanted to share the best of Western culture and integrate it into their Jewish learning and living. Joseph Dov Baer *Soloveitchik and Abraham Joshua *Heschel, Menachem Mendel *Schneersohn and Alexander *Altmann were among them. The remnant that survived was to come to prominence on three continents in the next generation. Few German Jews perceived the full extent of what was to follow, but how could they? The pessimists prepared to leave. Others regarded Nazism as an aberration, antithetical to German values and German tradition. This would pass, they believed. Jewish leadership sought clarification of its legal status. Deprived of their confidence as Germans, some Jews re-embraced their tradition and their identity. In a front-page article in the *Juedische Rundschau*, Robert Weltsch proclaimed: "Wear it with pride, the yellow badge." Others despaired; a few committed suicide. Turning inward, attempts at legal clarification, appeal to Jewish pride, emigration, self-loathing and despair characterized Jewish responses throughout the initial assault. Certainly most German Jews did not perceive how precarious their situation was and how much worse it was to be become.

JEWISH LIFE UNDER THE SWASTIKA. Discrimination increased through 1933. Jews were banned from journalism and music, broadcasting and theater, even farming. Laws of increasing severity, scope, and detail were promulgated not only against the Jews but also against other groups targeted for discrimination and persecution by Nazi ideology. The Jewish situation was insecure, but did not necessarily appear fatal.

In 1934, there were fewer new anti-Jewish laws, as Hitler and his loyalists were consolidating their power, both within the party and in the country as a whole. They destroyed the leftist, socially radical wing of the Nazi party, including its leader, Ernst Roehm, who was murdered on Hitler's orders, as was Gregor Strasser, who had once been the second-ranking party leader. In August, with the death of von Hindenburg, the presidency was abolished and Hitler became the sole ruler of Germany, both "Fuehrer" (leader) and chancellor. Even the army swore allegiance directly to the man – not to the constitution and not to the people.

Over the next years Jewish economic activities and possibilities were severely restricted.

As exclusion of Jews and restriction of their activities increased, German law required a legal definition of who was a Jew and who was an Aryan. The Nuremberg laws passed by the Reichstag and promulgated at the annual Nazi Party rally in the Bavarian town of Nuremberg on September 15, 1935 – the Law for the Protection of German Blood and German Honor and the Reich Citizenship Law – became the centerpieces of anti-Jewish legislation and the precedents for defining and categorizing Jews in every land Germany controlled. Marriage, as well as sexual relations between Jews and citizens of "German or kindred blood," was prohibited. Only racially "pure" Germans were entitled to civil and political rights. Jews were reduced to the status of subjects of the state. The Nuremberg laws formally divided Germans and Jews, yet neither the word "German" nor "Jew" was defined. That task was left to the bureaucracy, which filled in the gap by November. Two basic categories were established: Jew – anyone with three Jewish grandparents – and Mischling (mixed breed). Thus, the definition of Jews was based not upon the identity they affirmed or the religion they practiced, but on categories derived from race "science." Raul Hilberg has argued that this definition was the first stage of the destruction of the Jews.

As the outside world became increasingly hostile, Jews turned inward. Martin *Buber led an effort at adult Jewish education, preparing the Jewish community for the long journey ahead. Rabbi Leo *Baeck circulated a prayer for Yom Kippur (the Day of Atonement) in 1935 that gave Jews instructions on to how to behave: "We bow down before God, we stand erect before man." Baeck, together with Otto *Hirsch, represented the Jews before German authorities in the Reichsvertretung der deutschen Juden (Representation of German Jews, founded in September 1933) that was to undergo a change of names and a reduction of authority and function over the first years of Nazi rule. Yet while few, if any, could foresee its eventual outcome, the Jewish condition was increasingly perilous and was expected to get worse.

For Jewish children, the first blow often came in school, where they met with hostility from their classmates and their teachers and where appeals to the principals or other authorities were often met with stony silence, if not with sympathy for the harassers. The Jewish community established Jewish schools, within whose walls Jewish children could feel safe even if they met with danger en route. The Jewish community was also forced to provide economic assistance as more Jews lost their livelihoods. Jewish cultural activities organized by the *Kulturbund provided employment for artists, performers, and musicians while it fortified a growing sense of Jewish identity.

Meanwhile, Hitler sought greater international legitimacy for his regime. To bolster its standing, Germany served as host to the 1936 Olympics. Efforts in several countries (the strongest in the United States) to organize a boycott failed. The American Olympic Committee received assurances that all German athletes had a chance to compete on German teams, yet only Nazi sports clubs continued to operate. For a period of time, Berlin was "sanitized" for the international press and foreign visitors. Antisemitic signs were removed, rhetoric toned down. Some Jews mistakenly felt that the worst had passed. In the United States, the 1936 Olympics are usually remembered for the great achievements of Jesse Owens, the African-American sprinter who won four gold medals, to the annoyance of Nazi race theorists, but little attention was paid to the exclusion of Jewish athletes from the German team, so the façade of normality can be said to have worked quite well. After the games, President Franklin Delano Roos-

evelt told Rabbi Stephen Wise, "The synagogues are full and apparently there is nothing wrong."

In 1937 the process of Aryanization was accelerated. Jewish businesses were transferred to "Aryan" ownership, and Jews were forbidden to remain corporate officers or stockholders. Their economic disenfranchisement led to economic vulnerability. Property had to be sold at well below market value. Banks profited by lending money to "Aryan" purchasers and charging exorbitant fees for the transaction. Over time, the well-established Jewish community became increasingly impoverished. When business owners held out for more favorable conditions, they often found themselves in a more vulnerable situation, which in turn diminished the value of their assets.

The Expansion of the Reich

Hitler felt that Germans were cramped within unnatural borders and were entitled to seize the *Lebensraum* (living space) he felt they needed in central and Eastern Europe, intending to "Germanize" these areas through dispossession and settlement. In this way all German "Aryans" would be brought "*heim ins Reich*," "home" within a nation that would rightfully dominate Europe and the world. Above all, perhaps, he was determined to restore the German honor he believed had been lost at Versailles with the 1919 treaty that embodied Germany's surrender, formally ending World War I and forcing Germany to take responsibility for the war, pay reparations, give up territory, suffer occupation by foreign troops, and disarm. Expansion, however, complicated Hitler's goal of ridding Germany of Jews through forced emigration. Each territorial expansion brought more Jews under German control. The Saar region, in the Rhineland, was returned to Germany on March 1, 1935. In German Upper Silesia, where the Jews were under the protection of the German-Polish Convention of May 15, 1922, the restrictions imposed by the Convention on the exercise of German sovereignty terminated on July 15, 1937. Austria was annexed in March 1938, and the Czech area known as the Sudetenland was handed over on October 1, 1938, by virtue of the Munich Agreement. Ultimately Czechoslovakia ceased to exist when the Protectorate of Bohemia and Moravia was created in March 1939. The Memel region, formerly part of East Prussia and now in Lithuania, was annexed at the same time. When Germany invaded Poland on September 1, 1939, the "Jewish problem" became urgent. By the time the division of Poland between Germany and the Soviet Union was complete, more than two million more Jews had come under German control.

THE EVIAN CONFERENCE. By the late 1930s, there was a desperate search for countries of refuge. Those few who could get visas to the United States and qualify under stringent quotas emigrated to America. Many went to Palestine, where the small Jewish community was willing to receive refugees. Still others sought refuge in neighboring European countries, later to be overrun by the German invasion. Most countries, however, were unwilling to receive large numbers of refugees.

Responding to growing domestic pressures to act on behalf of Jewish refugees, U.S. President Franklin Roosevelt convened, but did not attend, a conference in Evian, France, in July 1938. The invitation foretold its limited achievements. National leaders were told that no laws would have to be changed and no government funds would be expended. Only philanthropic (Jewish) funds would be used for resettlement. The British were told that Palestine would not be on the agenda. The United States was unwilling to expand its quotas on German and Austrians seeking entry, mainly Jews. The conference spoke of the "refugee crisis," when everyone understood that this was a euphemism for Jewish refugees, unable to find asylum in numbers adequate to their need. Two days after Roosevelt announced the Evian Conference, Adolf Hitler gloated:

> I can only hope that the other world which has such deep sympathy for these criminals [Jews] will at least be generous enough to convert this sympathy into practical aid. We on our part are ready to put all these criminals at the disposal of these countries, for all I care, even on luxury ships.

For nine days, delegations from 32 nations met at the Royal Hotel on Lake Geneva along with representatives of 39 private relief agencies, 21 of which were Jewish. The world press covered the event intensely.

One by one, delegates from each country rose to profess their understanding of the refugees' plight. One by one, they gave excuses why so little could be done: Canada would accept farmers – small comfort for urbanized Jews fleeing Germany. Holland and Denmark offered temporary refuge for a few. "Australia does not have a racial problem, and we are not desirous of importing one," its delegate proclaimed. Colombia's delegate was not "prepared to resign himself to the belief that two thousand years of Christian civilization must lead to this terrible catastrophe." Colombia itself could offer nothing. The delegate from Venezuela was reluctant to disturb the "demographic equilibrium" of his country. In short, no Jewish merchants, peddlers, or intellectuals were wanted in Venezuela. Only the Dominican Republic offered to receive 100,000 Jews. In the end only a few went there.

In a formal response to Evian, the German Foreign Office gloated: "…since in many foreign countries it was recently regarded as wholly incomprehensible why Germans did not wish to preserve in its population an element like the Jews… it appears astounding that countries seem in no way anxious to make use of these elements themselves now that the opportunity arises."

The implications for Nazi policy were clear. Forced emigration would not succeed. No one wanted the Jews. The desperate struggle of the refugees became even more difficult.

THE NOVEMBER POGROMS: KRISTALLNACHT. In October 1938, the Polish government revoked the passports of Jews who had lived outside Poland for more than five years. The Swiss government requested that German passports be marked with the letter *J* for *Jude*, thus preventing Jews from passing themselves off as Christians and finding temporary shelter in

Switzerland. On October 28, Polish Jews living in Germany were expelled and Poland refused to repatriate them; they found temporary shelter in Zbaszyn, a frontier town on the Polish-German border. The *Grynzspan family wrote a desperate letter to their teenage son Hershel, who was in Paris. After receiving the letter he set off to the German Embassy and mortally wounded the third secretary of the German legation, Ernst vom Rath.

Ostensibly in response to Grynzspan's desperate act, on the evening of November 9, 1938, carefully orchestrated anti-Jewish violence "erupted" throughout the Reich, which since March had included Austria. Over the next 48 hours, more than 1,000 synagogues were burned and 7,000 businesses were ransacked and their windows broken. Some 30,000 Jewish men between the ages of 16 and 60 were arrested and sent to newly expanded concentration camps. The police stood by as the violence – often committed by neighbors, not strangers – raged on. Firemen were instructed to ensure that the flames did not spread to adjacent Aryan property, but not to put out the fires at the synagogues. Thus, most of the synagogues left standing were small synagogues that were part of other buildings. The November pogroms were given a quaint name to obscure what actually happened: "Kristallnacht" (Crystal Night, or the Night of Broken Glass). In its aftermath, Jews lost the illusion that they had a future in Germany.

The response in the West to the November Kristallnacht pogroms was strong. It dominated the news. The U.S. ambassador to Germany was recalled, though diplomatic relations were not severed. The act was public and the violence problematic for the Germans, as glass had to be imported.

Behind the scenes, matters deteriorated even further for the Jews. On November 12, 1938, Hermann *Goering, head of the Luftwaffe (air force) and the number two man in the Nazi party hierarchy, convened a meeting of Nazi officials to discuss the damage to the German economy from pogroms. The Jewish community was fined one billion Reichsmarks. Jews were made responsible for cleaning up. German Jews, though not foreign Jews, were barred from collecting insurance. In addition, new restrictions were enacted: Jews were denied entry to theaters, forced to travel in separate compartments on trains, and excluded from German schools. These were added to earlier prohibitions, such as those forbidding graduation from universities, owning businesses, or practicing law or medicine on non-Jews. Jewish property continued to be confiscated under the Aryanization program. Goering concluded the November meeting on a note of irony: "I would not like to be a Jew in Germany!"

Enemies of the State (Non-Jewish Victims of Nazism)

While Jews were the primary victims of Nazism as it evolved, and were central to Nazi racial ideology, other groups were victimized as well – some for what they did, some for what they refused to do, and some for what they were.

Political dissidents, trade unionists, Communists, and Social Democrats were among the first to be arrested. Additionally, German and Austrian male homosexuals (there was no systematic persecution of lesbians) were arrested and, like the others, later incarcerated in concentration camps. They were antithetical to the Nazis' concept of German manhood and useless for the procreation of the master race. Jehovah's Witnesses were a problem for the Nazis because they refused to swear allegiance to the state, register for the draft, or utter the words "Heil Hitler." Twenty thousand in number, many Witnesses were incarcerated. They were in one sense the only voluntary victims of Nazism. If they filled out a form severing their religious affiliation and promising to cease to proselytize, they could be freed. Jews, even those who had converted, were offered no such choice. The Nazis also singled out the Roma and the Sinti, known collectively and pejoratively as the gypsies. Their persecution began locally; only later did initiatives come from Berlin. Freemasons were persecuted at first; their lodges were regarded as a cover for a Jewish conspiracy to attack Christianity, but gradually the persecution of Freemasons slackened and by 1938 an amnesty was declared. Their services were needed by the regime. Until the arrest of Jewish men aged 16–60 on Kristallnacht, these non-Jews constituted the majority of people incarcerated in concentration camps.

The Invasion of Poland and the Beginning of World War II

On the sixth anniversary of his ascent to office, January 30, 1939, Hitler warned the Reichstag: "If international-finance Jewry [Hitler's term, for the supposed conspiracy of Jewish bankers] inside and outside of Europe should succeed once more in plunging nations into another world war, the consequence will not be the Bolshevization of the earth and thereby the victory of Jewry, but the annihilation of the Jewish race in Europe."

On September 1, 1939, Germany invaded Poland. Two days later France and Great Britain declared war on Germany and World War II began in what became known as the period of the phony war, for there were no battles in the West until the spring of 1940. The United States remained neutral for more than two years; only a direct attack by Japan on Pearl Harbor impelled America to enter the war. On August 22, 1939, speaking to German army generals, Hitler had defined a new type of war. "Our war aim does not consist in reaching certain lines, but in the physical destruction of the enemy. Accordingly, I have placed my deathhead formations in readiness – for the present only in the East – with orders to send to death, mercilessly and without compassion, men, women, and children of Polish derivation and language. Only thus shall we gain the living space (*Lebensraum*) which we need."

In a surprise move, especially considering Hitler's stated opposition to Marxism, on August 23, 1939, Germany and the Soviet Union signed the Ribbentrop-Molotov Pact, pledging mutual nonaggression. A secret protocol called for the division of Poland between them. German troops would enter from the west and Soviet troops from the east. German progress was swift. Within six days Cracow was conquered, within eight days Lodz, Radom, and Tarnow, and within four

weeks Warsaw fell to the Germans. The Germans targeted the Poles for decimation. Polish priests and politicians were murdered, the Polish leadership was decimated and, over time, the children of the Polish elite were kidnapped and raised as "Aryans" by their new German "parents." A common enemy, the occupying Wehrmacht, and even the fury that the Nazis unleashed against Polish culture and Polish nationalism, did not lead to solidarity among the Jews and Poles but intensified tensions that were already high between the two communities. In the first weeks of battle, more than two million additional Jews came under German domination; thus, for the Germans the already problematic Jewish question had only become more acute.

THE IMPACT ON THE JEWS OF POLAND. The full thrust of German occupation policy was directed at the Jews, who were soon isolated and gradually cut off from the neighboring communities. On September 21, 1939, Reinhard *Heydrich, security service chief of the SS (*Schutzstaffel*, "Defense Squadron"; a Nazi party elite paramilitary organization that was the chief instrument of the Final Solution), ordered the establishment of the *Judenraete* (Jewish Councils; singular **Judenrat*). Composed of 24 men – rabbis and Jewish leaders – they were to be made personally responsible in "the literal sense of the term," as Heydrich decreed, for carrying out German orders. From Heydrich's perspective, the Judenrat was an instrument of German control, a means of freeing his forces for other tasks.

He also ordered the deportation of Jews from smaller communities of less than 500 to larger urban centers, where they were to be concentrated in Jewish residential quarters, a euphemism for ghettos. His order spoke of the "final aim" – not the "Final Solution" – which would be implemented over time, and the stages leading to the fulfillment of the final aim, which were to be implemented swiftly.

Individual Jews, especially within the border area, faced the difficult choice of whether to move westward toward areas of German control or to move eastward into territories of Soviet domination. Those who relied on past experience, on the lessons of history, found that they were deeply mistaken. For more than a century, freedom, progress, and opportunity were to be found by moving west. The German army had been relatively well behaved during World War I; it had treated Jews and the rest of the Polish population far better than Russian forces.

THE FIRST KILLINGS BY GAS: THE SO-CALLED EUTHANASIA PROGRAM. In an order backdated to September 1, 1939, to give it the appearance of a wartime measure, Hitler instructed his personal physician and the chief of the Chancellery to put to death those Germans who were considered "life unworthy of living." His signed order read: "Reich leader Philip Bouhler and Dr. Brandt are charged with responsibility for expanding the authority of physicians, to be designated by name, to the end that patients considered incurable according to the best available human judgment of their state of health, can be granted a mercy killing."

This evolved over time into the "*euthanasia program" in which mentally retarded, physically infirm, and chronically ill Germans, who according to Nazi ideology were an embarrassment to the myth of Aryan supremacy, were put to death. At first, passive means were used, starvation and withholding of medicine. Gradually, more active measures were introduced, such as injections and sedatives. Finally, gas chambers were employed, staffed by physicians and nurses in a process of medical killing. While the T-4 program, named after its headquarters at Tiergarten 4 in Berlin, might seem unrelated to the Holocaust, it was a prefiguration. As the Final Solution killing centers came on line in 1942, they were staffed by T-4 workers, veterans of mass murder. The organized transportation of the handicapped foreshadowed the mass deportations of the Jews. During the German euthanasia program, psychiatrists were able to save some patients, at least temporarily, but only if they cooperated in sending others to their death. They faced no penalty if they refused to cooperate. Ultimately, in the Jewish communities of the territories conquered by the Germans, Judenrat leaders were coerced – under the threat of death – to make similar choices. Yet the programs were different in two respects: the so-called euthanasia program was halted because of domestic disquiet and protest; concerned parents and aroused clergy protested and the murders were formally halted (they were resumed in a disguised fashion). And there were no consequences for the few psychiatrists who refused to participate. There were no such protests against the murder of the Jews. Judenrat leaders were "personally responsible" for carrying out German orders. Those who refused were killed. Some, but not all, Judenrat leaders accepted the dire consequences.

Blitzkrieg, or the German Invasion of Western Europe

The events of World War II had a direct impact on all the Jewish communities of Europe. On April 9, 1940, Germany invaded Denmark and Norway. On May 10, Germany invaded Holland, Belgium, France, and Luxembourg. German victories were swift. The German strategy, as in the earlier Polish campaign, was given the name *Blitzkrieg*, lightning war. By June an armistice had been signed with France; the north and west of the country came under German occupation, a portion in the southeast was ruled by Italy, and the remainder came under the control of a collaborationist French government based in Vichy.

The nature of the German occupation differed according to country, but it is axiomatic that Germany treated Western countries more respectfully than it did the populations in the East, who were considered racially inferior by Nazi ideology. In Denmark, the civil service remained in place and German occupation was restrained. The German and Austrian model served as a blueprint for the treatment of the Jews in the countries of Western Europe. Jews were defined according to the principles of Nuremberg; civil rights were curtailed and property was confiscated. Unlike those in Poland, Jews in the West were not confined to sealed ghettos; they were, how-

ever, forced to wear yellow stars marking them as Jews, since in most cases Jewish identity could not otherwise be determined visually. In France the quasi-independent Vichy regime imposed anti-Jewish laws, including the systematic confiscation of Jewish property and the transfer of Jewish businesses in a process of "Aryanization" modeled on the earlier German pre-war policies. In the summer of 1942, Jews were rounded up – mostly by French police – in both German-occupied and Vichy France. On July 16–17, 12,884 Jews in Paris were forced into the Veledrome d' Hiver, a sports arena, and held without food or water. Children were gathered with their parents and then parents were separated from their children and shipped to the transit camp of Drancy. More than 40,000 Jews were transported to the "East" in 1942. One in three was from Vichy France. Transit camps were established in countries other than France as well. From 1942 on, as the death camps came into operation, more transit camps were established in Europe (in German-occupied France, Pithiviers, Beaune-la-Rolande, Compiègne, and *Drancy; in unoccupied Vichy France, alien Jews were concentrated in Gurs and Rivesaltes; in Serbia, Topovske Šupe, Šabac, and Sajmište in Belgrade; in Croatia, Jasenovac; in the Netherlands, *Westerbork and *Vught; in Belgium, Breendonck and Dassin-Malines); Jews were deported to these from their homes and were then sent on to the death camps.

On April 6, 1941, German troops invaded Greece and Yugoslavia, setting off a war in the Balkans. Their progress was less swift than expected, which was significant because it delayed the German invasion of the Soviet Union from the spring until the summer of 1941 and resulted in the Germans having to stop short of their goals due to the onset of the harsh Russian winter.

Ghettoization

Following the German invasion of Poland, the Jewish population was herded into ghettos. Warsaw contained the largest of German-occupied Poland's approximately 400 ghettos. When it was sealed in the fall of 1940, the Jews – 30 percent of Warsaw's population – were forced into a district of 2.4 percent of the area of the city, with a density of over 200,000 per square mile and 9.2 people per room. Living conditions were difficult, the population faced hunger and famine, and soon conditions gave rise to diseases and epidemics. The death rate in Warsaw was one in ten in 1941, before the deportations and the killing.

There are two perspectives on the ghetto: to the German rulers, the ghetto was a temporary measure, a holding pen, until a policy of what to do with the Jews was established and implemented. To the Jews, ghetto life was the situation under which they thought they would live until the end of the war. Jews were biding time until…

JEWISH RESPONSES. How does one live under these circumstances? Families, living with others in squalid and crowded conditions, lost elementary privacy. Parental authority was compromised, and the ability of mothers and fathers to protect their children was limited at best. Some Jews collapsed under the pressure, many floundered; a few rose to the occasion, but most muddled through. As schools closed, makeshift forms of education were established. Since religious services were forbidden, prayer quorums and study houses were created secretly. Amateur historians documented the times in which they lived. Self-help groups arose, as did building committees and soup kitchens. Smugglers brought food into the starving ghetto; some for self-enrichment, most for basic survival. The motto of smugglers was described in one diary as "eat, drink and be merry, for tomorrow we die." The painful truth was masked with humor.

Warsaw was connected to the rest of the city by a sewer system that could not be blocked. This underground system facilitated illicit commerce and exchange. In Lodz, the second largest ghetto in Poland was entirely separated from the city. In Warsaw, Emanuel *Ringelblum established a documentation center where records were kept and even research was undertaken. Diaries portrayed daily activities; they were personal but they also were intended to establish a historical memory. Documents were saved and later hidden. If individuals were not to survive, at least historical memory would bear witness to their demise and to their life under the intolerable conditions. Underground newspapers were published, and even theater performances and concerts were held in the ghetto.

The Jews gave their efforts a name: *Iberleben*, to outlive, to endure, to survive. Rabbi Yiẓḥak *Nissenbaum of the Warsaw ghetto spoke of **kedushat ha-ḥayyim*, the sanctification of life, as opposed to **kiddush ha-Shem*, traditional martyrdom, the sanctification of God's name. In the past, remaining faithful to Jewish tradition, sanctifying God's name, had deprived the enemy of their ultimate victory. Since the Nazis intended to impose the "Final Solution to the Jewish Question," to murder all Jews, remaining alive, sanctifying life, would deprive the Nazis of their victory.

JEWISH LEADERSHIP. Ghettos took a variety of forms and were led by men of diverse talents, egos, and integrity. Jewish leadership, like the ghetto itself, must be viewed from two perspectives. To the German masters, Jewish leadership was an indispensable instrument of German control; to the Jews, Jewish leaders imposed German domination on the ghetto and represented – usually without much success and in the end with absolute and total failure – Jewish needs to the Germans. They were caught with the most limited power in a dilemma not of their own making with meager resources and massive needs under the total domination of their captors, who ultimately ordered the liquidation – deportation to death camps – of the ghetto population. The head of the Warsaw Jewish Council, Adam *Czerniakow, an engineer by training, permitted laissez-faire capitalism. In Lodz, Mordechai Chaim *Rumkowski made himself and the Jewish Council the central and controlling arm of the besieged ghetto. He pursued a strategy of "survival by work." He reasoned that if the ghetto could become a productive work force making

materials essential to the Wehrmacht (the German army), the Germans would be reluctant to destroy it. He was willing to pay the price of his strategy. Unlike Czerniakow, who sought to protect the children of the Warsaw ghetto, Rumkowski preserved the productive and was willing to consent to the deportation of the young and the old, sacrificing some while saving more inhabitants. On September 4, 1942, he gave an anguished speech. "Fathers and mothers, give me your children… A broken Jew stands before you… I reach out to you with my broken and trembling hands and I beg: give into my hands the victims so that we can avoid having other victims. A population of 100,000 Jews can be preserved." Alongside formal Jewish leadership, there were informal Jewish leaders. Soup kitchens were organized, apartment houses became a beehive of opportunity, rabbis continued to teach Torah and youth activities grew more intense and urgent. Jews continued their cultural life, even within the ghettos. Theater was produced, concerts were organized. The very survival of the Warsaw ghetto depended upon the activities of smugglers, who produced the food supplies that supplemented the bare rations provided by the Germans.

In retrospect – but only in retrospect – it is clear that the ghettos were a temporary measure containing the Jews until the infrastructure for their murder could be created. Most ghettos lasted for two or at most three years, until the great deportations of 1942 and 1943. Lodz was an exception. It endured until the summer of 1944. And Rumkowski, whom many considered a villain in Jewish history, might have emerged a hero had the Soviet Army liberated his ghetto before the Germans deported the last Jews of Lodz in August 1944.

In the pre-war period, the goal of German policy was to make Germany *Judenrein*, free of Jews. During the initial war years, two other policies were discussed and historians differ as to the seriousness of those discussions – to transport the Jews to reservations in Nisko and Lublin; or the Madagascar plan, to ship the Jews to an island off the coast of Africa. With the evolving war, neither plan was feasible, if even seriously considered.

The German Invasion of the Soviet Union

Historians differ as to the date of the decision to systematically murder Jews, the so-called "Final Solution to the Jewish Problem." There is debate whether and when there was one central decision or a series of regional decisions in response to local conditions, but there is no debate as to when the systematic murder of Jews began. It commenced with the German invasion of the Soviet Union.

Code named "Operation Barbarosa," the German invasion began on June 22, 1941. The scope of the operation was vast: more than three million German soldiers, accompanied by half a million additional personnel from Germany's allies (Finland, Romania, Hungary, Italy, Slovakia, and Croatia, and a contingent of troops from Spain). The attack was broad, from the Baltic Sea in the north to the Black Sea in the south. Unprepared for the assault because the Soviet leadership refused to believe early and accurate warnings, the Red Army was initially overwhelmed. Three German army groups advanced deep into Soviet territory. Millions of Soviet soldiers were encircled, cut off from supplies and reinforcements, and forced to surrender. Many, if not most, were to die due the harsh conditions of their captivity in the winter of 1941–42. Those who survived the winter found their chances of survival improved as Germany understood that success would not be immediate and the labor of captured POWs could be valuable.

Before the onset of fall in September 1941, German forces were at the gates of Leningrad in the north, Smolensk in the center, and Dnipropetrovsk in the south. They came to the outskirts of Moscow. The *Wehrmacht* was clearly exhausted and its supply lines were stretched to the breaking point. German troops were unprepared for winter fighting, as they expected an early Soviet surrender. The onset of the harsh Soviet winter made military operations more difficult and exacted a toll on German soldiers.

In December 1941, the Soviet Union launched a counteroffensive that was initially successful in forcing a German retreat from the outskirts of Moscow. But by spring the front was stabilized east of Smolensk. Germany was poised to move to the offense, with a massive attack in the south toward the city of Stalingrad on the Volga River and the oil fields of the Caucasus. By August 1942, German forces neared the city. With the battle for Stalingrad, German domination of Europe was at its height.

EINSATZGRUPPEN. Three thousand men of the *Einsatzgruppen*, or special (killing) units, entered the Soviet Union in June 1941 together with the *Wehrmacht* and other Axis armies. Their assignment was to enter cities and towns, villages and hamlets, to round up Jews, Soviet commissars, and gypsies, to confiscate their property, and to systematically murder them. They did not operate alone. The *Wehrmacht* and other Axis armies, local gendarmeries, and native antisemitic groups assisted them. They entered a city, arrested the victims (often by calling for their assembly using deceptive promises of relocation), marched them to the edge of the city, and murdered them one by one. Their victims were men, women, and children, entire families, whole communities, entire regions. One can plot the progress of the *Einsatzgruppen* week by week. Reports were written to their superiors, maps were drawn up marking their accomplishments, with coffins and numbers of Jews killed. Sometimes, the mere presence of German troops in an area was sufficient to spur a massacre. The Polish population of the village of *Jedwabne murdered its Jewish neighbors. For years the massacre was blamed on the Germans, though everyone knew that the local population had turned against its Jews. In Babi Yar near Kiev, Ukraine, 33,771 Jews were murdered on September 28–29 in the week between Rosh ha-Shanah and Yom Kippur. In the Rumbula Forest outside the ghetto in Riga, Latvia, 25,000 to 28,000 Jews were murdered on November 30 and December 8–9. More than 60,000 Jews were murdered at Ponary, the killing field

adjacent to Vilna (Vilnius) in Lithuania, and 9,000 Jews, half of them children, were slaughtered at the Ninth Fort adjacent to Kovno (Kaunas), Lithuania, on October 28, 1941.

Mass shootings continued unabated, wave after wave. It is conservatively estimated that 1,400,000 Jews were killed in these shootings. When the killing had ended, and it appeared as if Soviet forces would again control the killing fields, special units returned to dig up the dead and burn their bodies to destroy the evidence of the crime. The operation, conducted by SS Kommando 1005 under the command of Paul Blobel, was called "Operation Blot Out." Erasing the evidence would permit the denial of the crime.

AN EYEWITNESS ACCOUNT. Translation of document 2999-PS submitted to the International Military Tribunal, Nuremberg:

> I, Hermann Friedrich Graebe, declare under oath:
>
> From September 1941 until January 1944 I was manager and engineer in charge of a branch office in Sdolbunow, Ukraine, of the Solingen building firm of Josef Jung. In this capacity it was my job to visit the building sites of the firm. Under contract to an Army Construction office, the firm had orders to erect grain storage buildings on the former airport of Dubno, Ukraine.
>
> On 5 October 1942, when I visited the building office at Dubno, my foreman Hubert Moennikes of 21 Aussenmuehlenweg, Hamburg-Haarburg, told me that in the vicinity of the site, Jews from Dubno had been shot in three large pits, each about 30 meters long and 3 meters deep. About 1500 persons had been killed daily. All of the 5000 Jews who had still been living in Dubno before the pogrom were to be liquidated. As the shootings had taken place in his presence he was still much upset.
>
> Thereupon I drove to the site, accompanied by Moennikes and saw near it great mounds of earth, about 30 meters long and 2 meters high. Several trucks stood in front of the mounds. Armed Ukrainian militia drove the people off the trucks under the supervision of an SS man. The militia men acted as guards on the trucks and drove them to and from the pit. All these people had the regulation yellow patches on the front and back of their clothes, and thus could be recognized as Jews.
>
> Moennikes and I went direct to the pits. Nobody bothered us. Now I heard rifle shots in quick succession, from behind one of the earth mounds. The people who had got off the trucks – men, women, and children of all ages – had to undress upon the orders of an SS man, who carried a riding or dog whip. They had to put down their clothes in fixed places, sorted according to shoes, top clothing and underclothing. I saw a heap of shoes of about 800 to 1000 pairs, great piles of underlinens and clothing. Without screaming or weeping these people undressed, stood around in family groups, kissed each other, said farewells and waited for a sign from another SS man, who stood near the pit, also with a whip in his hand. During the 15 minutes that I stood near the pit I heard no complaint or plea for mercy. I watched a family of about 8 persons, a man and woman, both about 50 with their children of about 1, 8 and 10, and two grown-up daughters of about 20 to 24. An old woman with snow-white hair was holding the one-year old child in her arms and singing to it, and tickling it. The child was cooing with delight. The couple were looking on with tears in their eyes. The father was holding the hand of a boy about 10 years old and speaking to him softly; the boy was fighting his tears. The father pointed toward the sky, stroked his head, and seemed to explain something to him. At that moment the SS man at the pit shouted something to his comrade. The latter counted off about 20 persons and instructed them to go behind the earth mound. Among them was the family, which I have mentioned. I well remember a girl, slim and with black hair, who, as she passed close to me, pointed to herself and said, "23." I walked around the mound, and found myself confronted by a tremendous grave. People were closely wedged together and lying on top of each other so that only their heads were visible. Nearly all had blood running over their shoulders from their heads. Some of the people shot were still moving. Some were lifting their arms and turning their heads to show that they were still alive. The pit was already ⅔ full. I estimated that it already contained about 1000 people. I looked for the man who did the shooting. He was an SS man, who sat at the edge of the narrow end of the pit, his feet dangling into the pit. He had a tommy gun on his knees and was smoking a cigarette. The people, completely naked, went down some steps which were cut in the clay wall of the pit and clambered over the heads of the people lying there, to the place to which the SS man directed them. They lay down in front of the dead or injured people; some caressed those who were still alive and spoke to them in a low voice. Then I heard a series of shots. I looked into the pit and saw that the bodies were twitching or the heads lying already motionless on top of the bodies that lay before them. Blood was running from their necks. I was surprised that I was not ordered away, but I saw that there were two or three postmen in uniform nearby. The next batch was approaching already. They went down into the pit, lined themselves up against the previous victims and were shot. When I walked back, round the mound I noticed another truckload of people which had just arrived. This time it included sick and infirm persons. An old, very thin woman with terribly thin legs was undressed by others who were already naked, while two people held her up. The woman appeared to be paralyzed. The naked people carried the woman around the mound. I left with Moennikes and drove in my car back to Dubno.
>
> On the morning of the next day, when I again visited the site, I saw about 30 naked people lying near the pit – about 30 to 50 meters away from it. Some of them were still alive; they looked straight in front of them with a fixed stare and seemed to notice neither the chilliness of the morning nor the workers of my firm who stood around. A girl of about 20 spoke to me and asked me to give her clothes, and help her escape. At that moment we heard a fast car approach and I noticed that it was an SS-detail. I moved away to my site. Ten minutes later we heard shots from the vicinity of the pit. The Jews still alive had been ordered to throw the corpses into the pit – then they had themselves to lie down in this to be shot in the neck.

Who were these men? What were their motivations? After the war, they claimed that they were merely following orders. Raul Hilberg described them: "The great majority of the officers of the *Einsatzgruppen* were professional men. They included a physician, a professional opera singer and a large number of lawyers. They were in no sense hoodlums, delinquents, common criminals or sex maniacs. Most were intellectuals.… There is no indication that any of them requested an assignment to a Kommando. All we know is that they brought to their new task all the skills and training that they were capable of contributing. In short, they became efficient killers."

In a well received work, *Ordinary Men: Reserve Police Battalion 101 and the Final Solution in Poland*, Christopher Browning described the members of the units as ordinary men placed in extraordinary circumstances where conformity, peer pressure, careerism, obedience to orders, and group solidarity gradually overcame moral inhibitions. Daniel Jonah Goldhagen, whose book *Hitler's Willing Executioners* became an international bestseller and triggered discussion on three continents, disputes Browning's account and views them not as ordinary men but ordinary Germans who had embraced Hitler's vision of eliminationist antisemitism and were able to embrace its next phase, exterminationist antisemitism. The systematic murder, what the Germans called extermination – something that is done to rodents or bugs, not people – was not a pleasant task, but necessary.

Both Browning and Goldhagen concur that no *Einsatzgruppen* member faced punishment if he asked to be excused. They may have slowed their career advancement, they may have lost face, they may have disappointed their comrades, but they had a choice whether to participate or not. Almost all chose to become killers.

The SS remained proud of its achievement. In a speech to SS Major Generals at Poznan on October 4, 1943, some two hours into his three-hour ten-minute speech, Heinrich Himmler paused to speak of the Jews. He spoke openly and directly. "The Jewish people is going to be annihilated."

He spoke with pride in his men, pride in their toughness, pride in their moral integrity: "Most of you know what it means to see a hundred corpses lie side by side, or five hundred, or a thousand. To have stuck this out and – excepting cases of human weakness – to have kept our integrity, that is what has made us hard."

He spoke the unspoken. He spoke but urged silence. "This is an unwritten and never-to-be-written page of glory [in German history]."

He spoke of the Jews, but not only the Jews. Of the Soviet POWs who were killed or allowed to die in the millions, he spoke with regret in the most utilitarian of tones. He regretted the loss of their labor potential. "At that time we did not value this human mass the way we value it today as raw material, as labor."

He spoke candidly, "What happens to the Russians, what happens to the Czechs, is a matter of total indifference to me." Germany was the center. Other nations concerned him only insofar as needed. "It is a crime against our own blood to worry about them."

This form of killing imposed a burden on the killers. Alcohol was needed, after the killing and later even before and during. Some broke under the strain. Many found their duty difficult. And the killing was public, which had significant consequences even to an acquiescent native population.

The experience of Jews in the territories where the *Einsatzgruppen* killers engaged in mass killing differed from that of the Jews of Poland in two major respects. In Poland, ghettoization preceded the mass killing. Further to the east, killing came first. The ghettoized Jews could have no doubts regarding German intentions, no doubts that they were intent on killing them. Some ghettos were surrounded by large forests, which could be used for hiding. These facilitated escape because there was somewhere to go. They also served as a base for Partisan groups. Murder in these areas began in 1941; ghettoization in Poland had begun some 18 months earlier.

The Wannsee Conference

On January 20, 1942, Reinhard Heydrich convened a conference at a Berlin lakeside villa at Wannsee to coordinate the "Final Solution to the Jewish Problem." Heydrich had received special responsibilities on the Jewish question some six months earlier and the meeting was originally set for December 9, 1941, but the bombing of Pearl Harbor and the entry of the United States into the war forced its postponement. Around the table were 15 men representing government agencies necessary for the implementation of so bold a policy. Seven had doctorates. They were able and experienced, what might be termed "the best and the brightest." Language was an important means of deceit and concealment – deceit of the victims, even self-imposed deceit of the killers. The language of the meeting was direct, the protocols prepared by Adolf *Eichmann, an SS officer who headed the Jewish affairs department in the Reich Central Security Office (*Reichssicherheithauptamt*, RSHA), were circumspect: "Another possible solution to the [Jewish] problem has now taken the place of emigration, i.e., evacuation to the East… Practical experience is already being collected which is of the greatest importance in the relation to the future final solution of the Jewish problem." "Evacuation to the East" was understood as deportation to killing centers. Practical experience was understood as the experimental gassing in September at *Auschwitz, the use of mobile gas vans at *Chelmno on December 8 for mass murder. Thirty closely guarded copies of the protocols were prepared; only one was discovered after the war.

The conclusions of the *Wannsee Conference can be seen in what happened next. In the winter of 1942, death camps were opened at *Treblinka, *Sobibor, and *Belzec. These three camps were almost exclusively dedicated to the murder of Jews; their impact was total. There were two known survivors of Belzec, where some 500,000 Jews were murdered in 10 months; perhaps 50 survivors from Sobibor, where an uprising had occurred and where 250,000 Jews were killed; and perhaps twice that many from Treblinka, where an uprising also took place and between 750,000 and 870,000 were killed.

DEATH CAMPS. The death camps were the essential instrument of the Final Solution and a unique feature of the German program of mass murder. The *Einsatzgruppen* had been sent to their victims. In the camps, the process was reversed. The victims were sent by train, often in cattle cars, to their killers. The camps became factories producing dead corpses at minimal physical and psychological cost to German personnel. Assisted by Ukrainian and Latvian collaborators and prisoners of war, a few Germans could kill tens of thousands each month. At

Chelmno, the first of the killing centers, mobile gas vans were used. These were trucks in which gas from the exhaust system was sent directly to the rear compartment. Local mechanics tinkered with the trucks to make them more "efficient." Later the mechanics requested that the rear axles be strengthened and the rear doors reinforced, as Jews were rushing toward the rear to escape the fumes. Elsewhere, the gas chambers were permanent buildings, linked to the crematoria or to open pits where bodies were burned. Carbon monoxide was the gas of choice at most camps. Zyklon B, an especially lethal killing agent, was employed primarily at Auschwitz.

Auschwitz, perhaps the most notorious and lethal of the concentration camps, was actually three camps in one: a prisoner-of-war camp (Auschwitz I), a death camp (Auschwitz II–Birkenau), and a slave labor camp (Buna-Monowitz). Upon arrival, Jewish prisoners faced a *Selektion*. With a German physician presiding, the young and the old, pregnant women, young children, the handicapped, sick, and infirm were sent directly to the gas chambers. As necessary, the able-bodied would be sent to work in the factories adjacent to Auschwitz, where one German company, I.G. Farben, invested 700 million Reichsmarks in 1942 to take advantage of forced labor. Others followed suit. Deprived of adequate food, shelter, clothing, and medical care, the prisoners were literally worked to death. Periodically, they would face another *Selektion*. Those unable to work would be transferred to Birkenau, where they would be gassed. At Auschwitz, the Roma and Sinti (gypsies) were gassed as well. Historians estimate that 1.1 to 1.3 million people were murdered at Auschwitz; nine out of ten were Jews.

While the death camps of Auschwitz and *Madjanek also used inmates for slave labor and other types of forced support of the German war effort, the camps of Belzec, Treblinka, Chelmno, and Sobibor had one task alone: killing.

A TESTIMONY OF LIFE INSIDE THE CAMPS. Lilly Applebaum Lublin, born in Antwerp, Belgium, was twelve years old when the Germans invaded her country in 1940 and 15 when she arrived at Birkenau. She had lived in hiding for three years until being captured and sent to the transit camp at Malines (Mechelen), Belgium, to await transport to Auschwitz. She recalled, "We were pushed in the cattle cars – like sardines. We were dirty with buckets for our urine and bowel movements. There was a small little window with barbed wire over it, and we had no air except what came from that little window. And we traveled like this, I think for three or four days."

The train rides were so horrible that surviving prisoners thought that they had survived the worst. They were mistaken. Lilly remembered her arrival. "It was like dawn. And I saw lights, and we saw fire from far away. And like a chimney, with fire going. And I thought they were factories. And I said, 'Good. We will be able to work.'"

Upon arrival all possessions were confiscated. "They told us to leave our luggage. And whatever packages we had with us we had to leave on the ground." Lilly had arrived at the ramp, from which a rail spur took the Jews directly into Birkenau, within site of the gas chambers. She then faced *Selektion*.

> They separated the men from the women. I didn't even have time to say goodbye to my uncle and my aunt. And as we came in front of the Germans, one tall fellow – I didn't know who he was – guided us to go to the right or to the left. He told me to go to the right, and he told my aunt to go to the left. I never saw her again… I was fifteen years old, and I was all alone in this hell.
>
> They told us to undress and that we were going to be showered and that they were going to give us clothes. The place was freezing cold. We stayed there for hours to wait for our clothes. No towels to dry, we had no food. And finally they gave us the clothes, and then they put us in barracks.
>
> They tattooed me; and they told us from now on, this is my name. My name is A-5143… From now on, you do not answer by your name…
>
> I felt like I was not a human person anymore. They had shaved our heads; and I felt so ashamed. And also when they told us to undress and to shower, they made us feel like… like we were animals. The men were walking around, and laughing and looking at us. And you take a young girl at that age, who had never been exposed to a person… to a man, and you stay there naked… I wanted the ground to open, and I should go into it.

Living conditions were primitive. Primo *Levi, who was in Auschwitz when Lilly arrived, said that if the camps had lasted a little longer a new language would have had to be invented. Ordinary words are not adequate to describe the conditions. Lily recounted: "We were packed like sardines. The beds were bunks, three layers. I was on the top layer… If one person wanted to turn, we all had to turn so that we could move around."

The transition between sleep – however disturbed – and the reality of waking up in Auschwitz was so great that survivors tell of deliberately waking up early so that they could shield themselves from the shock of waking to yet another dreadful day.

> Each day there was the morning roll call, the counting of prisoners, who stood in the mud for hours in freezing weather. I used to say to myself, "What did I do to deserve this, to be here for the Germans to do this to me? What did we do to them?" The questions were never answered.

Food was scarce and portions were small – watery soup, ersatz coffee, bread that tasted like sawdust. Prisoners were often hungrier after they ate than before. Lilly recalled:

> They gave me, finally, little rations of hard, dried-up bread which was half mildew, I could hardly eat it. And a tin can of soup; which was so rotten and vile, when I tasted it I couldn't eat it… I just ate the bread and drank a little water, which was just rust running out from the sink that they had over there… And finally when I got so hungry and I knew I had to eat the soup, I couldn't eat it. It was so vile. It was so terrible. I never ate anything like that in my whole life. I said, "If I want to survive… I have to eat the soup." So I started eating the soup. And I… I remember forcing the soup down my throat, and big tears coming down my face. Eating and crying, eating and crying, this is how I was in Birkenau.

Life was an ongoing struggle:

> Every day, I woke up and I would find one or two people who wanted to end their lives and couldn't take it anymore. They would throw themselves to the electric wires and make an end of it. And every once in a blue moon, I couldn't take it anymore. I would try to sneak out of the barracks late at night… and I would see the sky… And I would talk to myself; and I would say, "I can't believe that these stars are looking down at us in this Hell, in this camp, and the same stars are shining at the outside of the world. And other people are looking at the same stars, and they are free. And they are free to do what they want to do. And they are living a good life. And we are here in Hell – human beings worse than animals. And nobody is doing anything about it."

She asked questions unanswerable then or now:

> As young as I was, I… I was asking myself these questions. And I would say, "Where is the world? Why isn't the world doing anything about this?" And then I would question God; and I would say, "Where is God? How can He let us be killed like that?" And after I cried myself out real good, I would go back to the barracks.

Armed Resistance

It is often asked why Jews did not make greater attempts at armed resistance. Jews had almost no access to arms, were surrounded by native antisemitic populations who often collaborated with the Nazis or were not unsympathetic to the elimination of the Jews, and were alone against a German war machine zealously determined to carry out the Final Solution. Unlike conventional insurgency operations, where the fighters blend in and are protected by the local population, Jews stood out. They were often different in appearance and in their language and accent. Jewish men were circumcised; most European men were not. Also, the Germans went to great lengths to disguise the ultimate nature of their plans. Deception was an essential part of the Final Solution.

In the ghettos, because of the German policy of collective and disproportionate reprisal, Jews were often hesitant to resist. To escape was to endanger those who were left behind. To resist subjected the entire ghetto to punishment. Jews were also bound by family ties. Resistance was not an issue of courage; resistance fighters had no monopoly on valor. It took courage for Janusz *Korczak to defy Nazi orders and refuse to wear the Jewish star armband and especially to march with his orphans to the Umschlagplatz, the deportation point, in Warsaw, as he did in August 1942. He had been offered shelter and could have survived, but would a teacher abandon his students, could he leave his children?

While in the aftermath of the Holocaust many Jews focused on resistance as a way of salvaging pride and grappling with accusations of collaboration, Jews were traditionally skilled in the practice of defiance. They attempted to hide children in convents, or with friends and even strangers, doing virtually anything to save them. They used false papers. There were two types of concealment: passing oneself off as a non-Jew and hoping not to meet anyone who knew you from a former life or finding a place where one could live indefinitely in a sequestered fashion. Every manner of escape was a form of defiance. Yehuda *Bauer, a historian of the Holocaust, attempted to broaden the definition of resistance by speaking of "any group action consciously taken in opposition to known and surmised laws, actions or intentions directed against the Jews by the Germans and their supporters." Saul Esh wrote of the "dignity of the destroyed."

Attitudes toward armed resistance changed when the Germans ordered the final destruction of the ghettos, and it became clear to the residents that they all were going to die. As long as there was hope for survival, the inhabitants of the ghetto were reluctant to resist. Some understood their desperate situation earlier than others; some who understood what was to happen were paralyzed by grief and fear. Others, usually the young and able-bodied, those without young children or elderly parents for whom they were responsible, were willing to fight.

Jews resisted in the forests, in the ghettos, and even in the death camps. They fought alone and alongside resistance groups in France, Yugoslavia, and Russia. As a rule, full-scale uprisings – last stands – occurred only at the end when the reality of impending death was impossible to deny. They were not intended to defeat the enemy – that was impossible – but to make a statement through one's life and one's death; to uphold Jewish honor; to avenge Jewish losses; to see the "superman" bleed like a mere mortal. In Warsaw, there was no resistance during the great deportations of the summer of 1942, when, between July 23 and September 12, more than 265,000 Jews were deported to Treblinka. Armed resistance began on January 18, 1943; the clash was short and sharp and the deportations, which were planned by the Germans to be limited, were halted. On April 19, 1943, the second day of Passover, a full-scale uprising began in the Warsaw ghetto, led by 23-year-old Mordecai *Anielewicz. In Vilna, the underground leader, Abba *Kovner, who had intuitively recognized the full intent of Nazi policy toward the Jews, called for resistance in January 1942. He proclaimed: "Hitler wants to destroy all the Jews of Europe and the Jews of Lithuania have been chosen as the first in line." Yet an uprising did not begin until September 1943. Some United Partisan Organization (FPO) members shot at the Germans but the Jewish population refused to join them; thus the Partisans realized that they had no choice but to escape to the forest or risk internal conflict. At Treblinka and Sobibor, uprisings occurred when the inmates perceived that the death camps were being dismantled and the remaining prisoners were soon to be killed. This was also true at Auschwitz, where the *Sonderkommando, the prisoner units that worked in the vicinity of the gas chambers, destroyed a gas chamber just as the killing was coming to an end in October 1944 with Russian troops advancing.

As a rule, armed resistance was the domain of the young and the able, those capable of fighting and those not bound by responsibilities for aging parents or young children, but in the forests of Belorussia the *Bielski brothers established

a unique family camp with a dual purpose of rescue and resistance. They accepted children and the aged and not only able-bodied men and women.

The Fate of the Jews in Other Countries

In Romania, the slaughter of the Jews was conducted by the Romanians themselves. In a sense they imitated the Germans; they had their own *Kristallnacht* in January 1941, when synagogues were burned, shops destroyed, and homes ransacked; 120 Jews were killed in Bucharest. Three days after Romania joined Germany in the invasion of the Soviet Union, a massive pogrom took place in the Northern Romanian city of *Jassy. On June 30, 4,332 Jews who survived the pogrom were put on trains, but instead of being offloaded at a death camp they rode the rails of Romania until they expired from heat, dehydration, starvation, and exhaustion. Jews from Bessarabia and Bukovina were expelled to *Transnistria, which also became a destination of Ukrainian Jews. Over 100,000 Ukrainian Jews were killed there while under Romanian administration. Toward the end of the war, when the defeat of Germany was all but certain, Romania found more value in living Jews who could be held for ransom or used as leverage with the Allies.

Bulgaria, which was an ally of Germany, permitted and participated in the deportation of Jews from neighboring Thrace and Macedonia, which it controlled. But when it came to its own Jews, segments of the population protested publicly and the Bulgarian Orthodox Church weighed in heavily. Jews were sent to work camps and persecuted, but in the end Jewish citizens of Bulgaria were not deported.

France was invaded by the Germans in May 1940. Its defeat was swift. France signed an armistice with Germany in June 1940; northern France and the Atlantic coast came under German occupation, part of southeastern France came under Italian occupation, and Alsace and Lorraine were annexed to Germany; the remainder, most of southern France, was unoccupied and governed by the French Vichy regime. Antisemitic legislation was passed that excluded Jews from public life, the civil service, and the army as well as the professions, commerce, and industry. In 1942, Jews were rounded up by French police in both the occupied and unoccupied zones and sent to transit camps such as the one at Drancy, and from there to Auschwitz. The last deportation from France was in the summer of 1944; by then some 75,000 Jews, mostly foreign-born, had been deported. In France, the Jews under fascist Italian occupation in the south fared better than the Jews of Vichy France, where collaborationist French authorities and police provided essential support to the understaffed German forces. The Jews in those parts of France under direct German occupation fared the worst.

The Germans invaded Belgium in May of 1940 and imposed a military administration that coexisted with a civilian administration. Jews were initially used for forced labor, working in clothing and armaments. There were 65,000 Jews in Belgium, mostly in Antwerp and Brussels; 25,000 avoided deportation by hiding. Between 1942 and 1944 more than 25,000 Jews were deported to Auschwitz via the transit camps of Malines and Breendonk.

There were more than 3,000 Jews in Luxembourg, which was invaded by Germany in May 1940 and annexed in 1942. Jews were interned in the Fuenfbrunnen camp in northern Luxembourg and then deported to the death camps. Almost 2,000 Jews from Luxembourg where killed and the country was declared judenrein; more than 1,000 Jews had fled and some survived in hiding. Jews in mixed marriages were exempt from deportation.

Germany invaded the Netherlands in May 1940. Arthur *Seyss-Inquart was installed as the German commissioner. He ordered the registration of all 140,000 Dutch Jews in January 1941; all had to move to Amsterdam. Deportations began in 1942. Foreign or stateless Jews were interned in the transit camp at Westerbork; others, mainly Jews from outside Amsterdam, were sent to Vught. In late June deportations began to Auschwitz and to Sobibor. No better than the French police, the Dutch police participated in rounding up the Jews for deportation. More than 100,000 Jews were deported; fewer than one in four Dutch Jews survived the war.

Under Mussolini the Italians passed antisemitic laws and confined Jewish refugees to internment camps where families lived together. Italy was an ally of Germany and it enjoyed the fruits of early German victories, occupying territories in Yugoslavia, Greece, and southern France. Despite its alliance, however, it did not cooperate in the Final Solution, neither at home nor in the territories it occupied. In 1943, after the Allied invasion, Mussolini was overthrown and in September a ceasefire was negotiated, but it did not last. Germany invaded and occupied northern and central Italy and reinstalled Mussolini, who was now its puppet. It was then that the Germans imposed the Final Solution in Italy. In November 1943 Jews were rounded up in Genoa, Milan, Florence, Trieste, and other northern cities and sent to transit camps. There were deportations from Rome, despite the presence of the Vatican, which did not protest. Eight thousand Jews were shipped from Italy to Birkenau and other concentration camps; more than five times that number survived in Italy. Two thousand more Jews were deported from Rhodes.

Germany invaded Yugoslavia and Greece in April 1941, supported by Italy, Bulgaria, Hungary, and Romania. When the Balkans were subdued, Yugoslavia was partitioned. Hungary received the Backa region and part of northern Croatia. Bulgaria annexed most of Thrace and Macedonia (from Greece and Yugoslavia); Italy annexed the Istrian peninsula, much of Slovenia, and most of the Dalmatian coast, and occupied Montenegro, Albania, and much of northwestern Greece; Germany together with Italy administered Athens, while Germany alone occupied the region of Salonika with its large Jewish community.

Germany also occupied Serbia; Jews there were interned in concentration camps and in August 1941 most Jewish men in the camps were shot. The murder of Serbian Jewish women in 1942 was the intermediate link between the euthanasia pro-

gram, instituted in 1939, the Einsatzgruppen killings, which began in the summer of 1941, and the development of stationary killing centers, established in Poland in 1942. Jewish women and children were interned at a concentration camp on the abandoned exhibition ground of Semlin, within view of Belgrade. Between March and May 1942 they were murdered in mobile gas vans.

The Jews in the camp were deceived but the general population understood precisely what was happening. They could point to these mobile gas vans and see them functioning. The technical design of the gas vans was turned over to the motor pool, to talented and not so talented auto mechanics. The chief of the Motor Vehicle Administration turned to an automotive specialist to ask his chief mechanic if exhaust gas could be directed into a closed truck to kill the passengers.

Immediately thereafter, five Sara trucks were secured. They were furniture vans with a storage compartment about five meters long and two meters wide and were painted field gray. Within weeks, 40 naked Russians were led into a locked truck; after 20 minutes all were dead. They were pink when they died, which indicated they died of poisoning, and not of suffocation. Then a firm was contracted for 30 converted vans. It gave the contract to Sara, but they used Opel and Blitz and Diamond vehicles as well, which were also converted. The last held 25 while the Sara models held 50 people.

There were complaints; not about the murders but about how they were being done. The first problem was how the vans were to be unloaded, because people pushed against the rear in order to get out. Next, the rear axle collapsed from the surge of weight and the brakes required frequent repairs; therefore the effort was made to prevent any failure so that these trucks could perform their murderous mission in a satisfactory manner. There was no concern about causing the victims agony, but the task of unloading was burdensome. Mechanics did not complain about their task but were upset when their craftsmanship was challenged. By December 1941, 5,291 Jewish women and children had been interned. The general estimate is that by January and February the number had grown to about 7,500. The murder of Serbian Jewry was divided between well-educated and sophisticated organizers and lower-middle-class executioners – the grunts. The decision to commit the murders practically evolved of itself. If Belgrade wanted to get rid of Jewish women and children, Belgrade officials would have to do it themselves. All they could get from Reinhard Heydrich were the instruments, and local pressures caused the authorities to provide the means for the locals to do the job, at least until the structure of the death camps was ready.

In Croatia, the Germans established a puppet state, and more than 20,000 Jews were killed in the Jasenovac concentration camp near Zagreb. In 1942–43, another 7,000 were deported, mainly to Auschwitz and Birkenau. Some Croatian Jews escaped to Italian-occupied territories, where they were sent to a camp but not deported.

In Salonika, an area under direct German control, the Final Solution followed a familiar course. In mid-July 1942, Jewish men aged 18 to 45 were publicly humiliated, released, and then registered for forced labor. They were ransomed in exchange for large sums of money raised by the Jewish community. In February 1943, the Jews of Salonika were concentrated in two ghettos, one in the east of the city and one in the western Baron de Hirsch section of the city, near the railroad station. Adolf Eichmann's deputies, Dieter Wisliceny and Alois Brunner, were dispatched to arrange for the deportations. When the train transport was in place, more than 45,000 Jews were sent between May and August to Auschwitz-Birkenau. Three out of four of them were gassed upon arrival. The remaining Jews were used for slave labor. Jews holding Spanish citizenship living in Salonika (and later in Athens) were deported to Bergen-Belsen. One group of "protected Jews" was actually repatriated to Spain.

In Athens, Jewish property was confiscated on October 7, 1943. In March of the next year the Germans used the ruse of the distribution of matzah, unleavened bread required to observe Passover, to arrest some 800 Jews in Athens. On March 24–25, the first days of Passover, they were arrested and shipped to Auschwitz. Some 500 additional Jews were arrested in their homes and some Jews from outside Athens were also rounded up. Other Athenian Jews went into hiding. Germany then continued to round up the Jews of the islands, including 2,000 Jews of Corfu, who were arrested in June 1944 and of whom only 200 returned, and the 1,700 Jews of Rhodes, who suffered a similar fate and were deported in 1944.

Czechoslovakia became a casualty of German expansion even before the war began. The Sudetenland was surrendered in September 1938 in exchange for Hitler's pledge of peace. On March 15, 1939, he violated the Munich agreement and Bohemia and Moravia became a German "protectorate." Slovakia became an independent state, allied with Germany.

Slovakia became a one-party state. Its authoritarian leader Jozef *Tiso, a Roman Catholic priest, was an extreme nationalist. Jews were persecuted and anti-Jewish legislation was introduced along with a Jewish Code resembling the Nuremberg laws. Jews lived under curfew and were not allowed to assemble. Beginning on March 27, 1942, Jews were sent eastward from Slovakia, which paid a fee to the Germans for each deportee. Between March and June some 54,000 Jews were deported, mainly to Auschwitz and Majdanek. Jewish leaders, such as Gisi *Fleischmann and Rabbi Michael Dov *Weissmandel, a Zionist woman and an ultra-Orthodox Jew, joined together in a group associated with the local Judenrat, known as the Working Group, to stop the deportations by bribing Nazi officials. When the deportations were halted in October, they believed that the Jews could be bought and pleaded with international Jewish organizations for help for adequate sums to ransom all the Jews. Weissmandel, who lost his family on a transport to Auschwitz, was particularly bitter that massive help was not forthcoming. In May 1944

the Working Group received the Auschwitz Protocols from two Auschwitz escapees, Rudolph Vr'ba and Alfred Wetzler, detailing the scope of gassing activities at the largest of the Nazi death camps. They pleaded, through the World Jewish Congress and other Jewish organizations with whom they were able to maintain contact, that Auschwitz be bombed, but it was not.

When Germany invaded Norway in April 1940, there were 1,700 Jews in the country, among them 200 refugees from other countries. Beginning in the fall of 1942 and through February 25, 1943, at the initiative of Vidkun Quisling, whose name has become synonymous with a puppet leader, 763 Norwegian Jews were deported to Auschwitz, where 739 died. The local population, including its church leadership, protested. A letter read in the churches of Norway had a simple but eloquent message: "God does not differentiate among people." In Norway itself, 23 Jews were killed. Aided by the underground, 900 Jews escaped to Sweden, which was willing to take assimilated Scandinavian Jews.

In November 1941, the Germans established the *Theresienstadt ghetto in an old fortress town. Tens of thousands of Jews were deported there: the majority of Prague Jewry as well as Jews from Brno, Moravska, Ostava Olomouc, and other towns of the Protectorate. Theresienstadt was actually a ghetto, a concentration camp, and a transit camp. For a time it housed prominent Jews from Central Europe, Germany and Austria, the Netherlands, and Denmark. About 144,000 Jews were deported to Theresienstadt, 88,000 were sent from Theresienstadt to Auschwitz, and 33,000 died in the camp itself. Of the 15,000 children sent to Theresienstadt, fewer than 100 survived.

When Danish Jews were deported to Theresienstadt, the Danish government did not lose interest in their fate. It demanded an accounting of its citizens' fate and insisted that the Red Cross visit the ghetto. The Germans permitted the visit, but on their terms. They presumed that they could outmaneuver the Red Cross delegation. In the weeks before the visit, deportations were intensified. The model ghetto/transit camp/concentration camp was beautified. Gardens were planted, houses painted, sidewalks washed, and new barracks built. Turf was laid on the village green. A building was refitted to serve as a social center, concert hall, and synagogue. A monument was even erected to honor dead Jews.

Fearful that any slip of the tongue or crack in the veneer of peaceful village life would further endanger the beleaguered Jews of Theresienstadt, Paul Eppstein, the head of the Jewish Council of Elders, greeted the guests in a black suit and top hat. A band played light music. A cafe created for the occasion was filled with customers. Goods were displayed in store windows. When the delegation came to the soccer field, a goal was scored on cue. Danish Jews, no more than two or three in a room, were visited in their freshly painted quarters. A children's opera, *Brundibar*, was performed for the guests.

The hoax succeeded so well that a propaganda film showing how well the Jews were living under the benevolent protection of the Third Reich was made at Theresienstadt. When the filming was over, most of the cast, including nearly all of the children, were deported to Auschwitz.

THE DESTRUCTION OF THE JEWS OF HUNGARY. Nowhere was the Holocaust more intense and more condensed than in Hungary. What took place over twelve years in Germany occurred over fifteen weeks in Hungary. Beginning the war as a German ally, Hungary had persecuted its Jews but not permitted deportation, at least not of Hungarian Jews. Jews from territories annexed to Hungary – foreign Jews – were deported as early as July–August 1941 to Kamenets-Podolski in the Ukraine, where *Einsatzgruppen* executed them. Hungarian Jews remained untouched. After the German and Hungarian military defeats of 1942–43, Admiral Miklos Horthy, the Hungarian dictator, concluded that Germany would probably lose the war. His government attempted to contact the Allies about a truce in 1942, and resisted German demands that Hungary send it Jews for forced labor. With the situation deteriorating in the Balkans, and fearing the defection of the Hungarians to the Allies, Germany invaded Hungary on March 19, 1944. Horthy remained in power, but a pro-German government was installed under Dome Sztojay. The consequences for the Jews were immediate.

By mid-April the Jews were ghettoized. On May 15, deportations to Auschwitz began. Over the next 54 days, 437,402 Jews were deported from Hungary, primarily to Auschwitz, on 147 trains. Nowhere in German-occupied Europe was the pace of deportations as rapid; nowhere did it begin so late in the war. The operations were personally supervised by Eichmann, who had moved to Budapest for the purpose.

The only remaining Jewish community in Hungary was in Budapest. At this time Himmler, through Eichmann, made an overture to the Allies for a separate armistice and used the Jews of Budapest as bait. In July, the deportations were halted and in August the Sztojay government was dismissed. There was strong outside pressure on behalf of the Jews brought to bear on the Hungarian authorities, intensified by the deteriorating German war situation and the desire of Horthy to cut a deal with the Allies. Following the surrender of the Romanian government in August, and with the looming approach of the Red Army, Horthy, while negotiating with the Germans, again attempted to begin discussions for an armistice with the Allies. In October, Germany responded by arresting Horthy and installing an *Arrow Cross government. Jews in Budapest were then killed on a daily basis. Jews were sent to the banks of the Danube and shot; more than 70,000 were sent on a forced death march to Austria.

The most extraordinary exception to the bleak picture of the fate of European Jews was the experience of Danish Jews. German-occupied Denmark rescued most of its own Jews, spiriting them out of the country in October 1943 by

sea to Sweden. Such an action was possible in part because the German presence in Denmark was relatively small. Also, unlike many other countries where antisemitism in the general population led to collaboration with the Germans, Jews were an integrated part of Danish culture. Danish humanitarianism flourished under these unique circumstances. Unlike other churches, which did not speak out against antisemitism, or the German puppet state of Slovakia, whose president was a Roman Catholic priest who presided over the deportations, the Lutheran bishop of Copenhagen, H. Fuglsang-Damgaard, openly urged Danes to protect the Jews, proclaiming: "Whenever persecutions are undertaken for racial or religious reasons, it is the duty of the Christian Church to protest against it." His protest was all too rare among Christian clergy, Protestant and Catholic, during the Holocaust.

Still, such an action was also only possible because it occurred in 1943, when Germany appeared to be losing the war, and because Sweden consented to receive the Danish Jews. Denmark alone of the German-occupied countries looked after its Jewish citizens once they were deported to a concentration camp, e.g.: Theresienstadt, which had the unique status of being a ghetto, a concentration camp and a transit camp.

Rescue

Throughout German-occupied territory, the situation of Jews was desperate. They had meager resources and few allies and faced impossible choices. A few people came to their rescue, often at the risk of their lives. The Swedish diplomat Raoul *Wallenberg arrived in Budapest on July 9, 1944, in an effort to save Hungary's sole remaining Jewish community. Over the next six months, he worked together with other neutral diplomats (Charles Lutz of Switzerland and Giorgio Perlasca, an Italian Fascist who pretended to be a Spanish diplomat), with the Vatican, and with the Jews themselves to prevent the deportation of these last Jews. Le *Chambon, a French Huguenot village, became a haven for 5,000 Jews. In Poland, where hiding a Jew was punishable by death, an underground organization, Zegota, rescued a similar number.

In all occupied countries, there were individuals who came to the rescue of Jews, often without assistance, offering a place to hide, some food, shelter for days, weeks, or even for the duration of the war. Most of the rescuers did not see their actions as heroic, but they felt bound to the Jews by a common sense of humanity. (Israel has recognized rescuers with honorary citizenship and the planting of trees at *Yad Vashem, Israel's memorial to the Holocaust; see *Righteous among the Nations.)

German Retreat

The winter of 1942–43 ended the unbroken streak of victories for the German army. Stalingrad was decisive. A Soviet counteroffensive began in November 1942, surrounding the German army of 250,000 troops. By February, German forces were reduced to 91,000 and the Soviet Army went on the offensive. By the end of 1943, the German army was forced to the banks of the Dneiper and by the end of 1944 they were at the borders of eastern Prussia. In January 1945, the Red Army was on the banks of the Oder and from there it launched its final assault on Berlin.

The Allied force under the command of General Dwight D. Eisenhower launched its assault on D-Day, June 6, 1944, storming the beaches of Normandy and securing the beachhead. Two million Allied soldiers invaded France, opening the long-awaited second front. By August 25, 1944, Paris was liberated. France was liberated by the end of the month. The Allies advanced steadily, facing a huge and surprising counterattack in what became the Battle of the Bulge in December 1944. Nonetheless, the Allies forced Germany into a general retreat. By February they were at the Rhine, and in March the Rhine was crossed and Allied troops moved steadily toward Berlin.

Liberation

In the summer of 1944 the Soviet Army entered Majdanek, and captured it whole. Reports from the camp were carried widely in Western newspapers. W.H. Lawrence, in the *New York Times*, wrote: "I have just been to the most terrible place on earth." The Germans were determined not to allow the capture of a camp nor of its prisoners. In the winter of 1944–45, with Allied armies closing in, desperate ss officials tried frantically to evacuate the concentration camps and conceal what had taken place. They wanted no eyewitnesses remaining. Prisoners were moved westward, forced to march toward the heartland of Germany. There were 59 different Death Marches from Nazi concentration camps during this final winter of German domination, some covering hundreds of miles. Goldhagen called the death marches the ambulatory analogue of deportation. The Nazis, who had wanted to make Germany *judenrein*, free of Jews, and had therefore shipped them eastward by train to death camps, were now bringing them back into their borders on foot. The prisoners were given little or no food and water, and hardly any time to rest or take care of bodily needs. Those who paused or fell behind were shot. In January 1945, just hours before the Red Army arrived at Auschwitz, 66,000 prisoners were marched to Wodzislaw, where they were put on freight trains to the Gross-Rosen, Buchenwald, Dachau, and Mauthausen concentration camps. Almost one in four died en route. When they arrived at their destination, the concentration camps of Germany were overwhelmed by the new inmates. The system broke down. Prisoners were not fed, sanitation was impossible, epidemics broke out, and even the dead could not be carried away. Conditions were so catastrophic that some survivors remember that Bergen-Belsen in March and early April 1945 was worse than Auschwitz.

In April and May 1945, the United States and British forces en route to military targets entered the concentration camps from the west and caught a glimpse of what had taken place. Even though tens of thousands of prisoners had per-

ished, these camps were far from the worst. Yet even for the battle-weary soldiers who thought they had seen the worst, the sights and smells and the emaciated survivors they encountered left an indelible impression. At Dachau they came upon 28 railway cars stuffed with dead bodies. Conditions were so horrendous at Bergen-Belsen that 13,000 inmates died after they were freed and the entire camp had to be burned to prevent the spread of typhus. Most of the SS fled Buchenwald before the American armies arrived. The newly freed prisoners, at least those who could still move, greeted entering American soldiers as liberators. The Army had to perform tasks for which they were ill-trained: to heal the sick, comfort the bereaved, and bury the dead. For the victims, liberation was not a moment of exultation. Viktor Frankl, a survivor of Auschwitz, recalled: "Everything was unreal. Unlikely as in a dream. Only later – and for some it was very much later or never – was liberation actually liberating."

Numbers

It has become commonplace to speak of six million Jewish dead. The number was an estimate derived by a comparison between pre-war and post-war Jewish populations, subtracting from the total those who emigrated to the West or to the East, taking the known numbers of those who were killed in the Nazi death camps and the concentration camps; and those who were casualties of the mobile killing units and those who died in the ghettos of German-occupied Poland. There is considerable discussion and legitimate debate among scholars regarding the numbers killed. Raul Hilberg, the dean of American Holocaust historians, basing his calculations primarily on German documents, estimates the figure of those killed at 5.1 million Jews. The *Encyclopedia of the Holocaust*, edited by the respected Israeli historian Israel Gutman, estimates the number at 5,596,000 to 5,860,000. Wolfgang Benz, the German historian, estimates the figure of Jewish dead in excess of 6 million. In some countries the figures are known and well researched and the names well documented.

The question of number is illustrated by the history of numbers at Auschwitz. For years the figures varied. Some wrote of four million killed; this was the quasi-official number given by the Communist government of Poland, though not accepted by Western historians. Rudolph Hoess, the commandant of Auschwitz from 1940–43 who also supervised the murder of Hungarian Jews at Auschwitz in 1944, gave two different figures. He wrote: "According to my calculations, at least 2.5 million people were put to death, gassed and subsequently burned there; in addition, 500,000 people died of exhaustion and illness, which gives a total of 3 million victims." He later repudiated these figures, claiming that he received them from Adolf Eichmann. The figure he later reported was 1.13 million, one virtually identical with the figures of Jews deported to Auschwitz.

In post-Communist times, Fraticek Piper, the respected chief historian of Auschwitz, undertook painstaking historical research by triangulating the figures, detailing the number of inmates who arrived at Auschwitz, the number of those shipped from Auschwitz elsewhere and the number who remained in the camp. He thus had a clear picture of the numbers who were killed at Auschwitz and their nationality, for nine out of ten of those killed at Auschwitz were Jews, but Roma and Sinti – gypsies – and Soviet POWs and Poles were also killed at Auschwitz. Piper calculated that between 1.1 and 1.3 million people were killed at Auschwitz, the epicenter of the Holocaust. Ninety percent were Jews.

Until recently, historians cited 600,000 as the number of Jewish victims killed at the Bełżec death camp. This estimate was based on the pre-war population of Jewish communities thought to have been transported to Belzec and is too high, because it does not account for large numbers of Jews murdered in the ghetto deportation operations or shot in other locations because transport to Belzec was too difficult.

To date, only one known document, a report from the coordinator of *Aktion Reinhard*, Höfle, to Eichmann at the RSHA in Berlin on January 11, 1943, gives an exact figure of Jews killed in Bełżec: 434,508. As it has been confirmed by direct perpetrators that in Belzec there was no detailed count of victims and even some transports could not be included in Höfle's count, the Bełżec Memorial estimates that the actual death toll for Jews at Belzec may have been as high as 500,000. Groups of non-Jewish Poles and Roma and Sinti were murdered at Belzec death camp, too. Their number, according to testimonies of various witnesses, could range from some dozens to some hundreds. There were only two known survivors of Belzec.

There is one figure that is unknown and perhaps unobtainable, even to the most dogged of researchers, and that is the number of Jewish dead within the Soviet Union. One has difficulty going from the pre-war 1939 census to the post-war population because the Soviet Union did not take a 1949 census; it delayed it by another decade and thus there is a twenty year span to evaluate the Jewish population. From the discrepancy between 1939 and 1959 statistic, one must subtract the natural deaths during a span of two decades, those who died in the war, in Stalinist purges, and in the Holocaust. An estimated figure has to be correlated with the *Einsatzgruppen* Reports and their activities to arrive at their conclusions.

For fifty years, Yad Vashem has undertaken to compile a list of the Jews who were killed in the Holocaust one by one, affidavit by affidavit signed by a witness or by a relative of those who were killed. The list of names is contained in a haunting memorial room at the end of its permanent exhibition and is available on line to those who surf the internet. More than three million people have been identified by name, one by one by one. It reinforces a truism that people are not numbers, not statistics, but individuals whose lives were ended, whose narratives were prematurely concluded by killers.

[Michael Berenbaum (2nd ed.)]

A HOLOCAUST CHRONOLOGY

1932

July 31 National Socialist (Nazi) Party receives 37.3% of the vote, giving it 230 of 608 seats in the Reichstag.

August 13 Adolf Hitler rejects an offer by German President Paul von Hindenburg to become vice chancellor.

November 6 In new election the percentage of votes for the Nazis declines to 33.1% and the number of their seats in the Reichstag is reduced to 196.

December 3 Conservative leader General Kurt von Schleicher is named chancellor of Germany.

1933

January 28 General von Schleicher resigns after serving only 55 days.

January 30 President von Hindenburg appoints Hitler as chancellor; Franz von Papen is named vice chancellor.

February 2 Political demonstrations are banned in Germany.

February 27 The Reichstag building is set on fire. Communists are blamed.

February 28 Using a provision of the Weimar Constitution, Hitler is granted emergency powers as constitutional protections are suspended.

March 4 Franklin Delano Roosevelt is inaugurated as president of the United States.

March 22 The first concentration camp is opened at Dachau, near Munich.

March 27 The American Jewish Congress organizes a mass protest against the Nazis at Madison Square Garden in New York. A boycott of German goods is threatened if Germany makes good on its promise to boycott Jewish goods in Germany.

April 1 The German government institutes a boycott of Jewish stores and professionals. Expected to last three days, it is suspended after one.

April 7 Law for the Restoration of Professional Civil Service bans Jews from government, including lawyers and university professors as well as government workers.

April 25 The Law Preventing Overcrowding of School and Schools of Higher Education restricts Jewish enrollment in German schools.

April 27 The German government prohibits sheḥitah, the ritual slaughter of animals required by Jewish dietary law.

May 10 German students and their professors remove and burn "un-Germanic" books from libraries and bookstores. More than 20,000 books are burned opposite the University of Berlin. Authors include Jews, opponents of Nazism, and others defined as un-Germanic.

July 14 The National Socialist Party is made Germany's only legal party. East European Jews living in Germany are stripped of their citizenship. Laws are enacted permitting the sterilization of "unfit" parents and so-called "euthanasia" of "defective and useless people," those who are deemed "unworthy of living."

July 20 The Vatican signs a concordat with Germany, negotiated by Eugenio Cardinal Pacelli, the future Pope Pius XII, granting Hitler much-needed political recognition and in return seemingly protecting the rights of Catholics in Germany.

August 25 The Ha'avarah Agreement is signed between the German government and the Zionist Organization enabling Jews to leave Germany and transfer, at a significant loss, some of their holdings to Palestine.

September 22 Jews are banned from journalism, theater, music, art, literature, and broadcasting.

September 29 Jews are banned from farming in Germany.

November 12 The Nazi Party, now the only party permitted to run in the elections, wins 93% of the vote for the Reichstag.

1934
